My immediate concern is with respect to pages 102 and 103 of the Budget Committee report on the first budget resolution. On page 102, the committee talks about future-year choices. Item (2) is railroads: Rail rehabilitation in future years when the administration produces its promised programs. It seems to be the hallmark of this administration that they are going to have a comprehensive program always next year. They seem to have a lot of comprehensive programs but very little comprehensive accomplishments.

But be that as it may, on page 103, item (2), in reference to railroads, again there is no mention of utilizing the existing funding in the title V program of the act for rehabilitating railbeds to haul coal in this upcoming year 1979.

I understand the concern of the Budget Committee. The FRA seems to view itself more as a minor OMB. They seem to be more interested in presiding over rail abandonments than spending money that Congress has appropriated. I hope that will change under Mr. Sullivan, and I am still optimistic that he will have some impact in that direction.

But, Mr. President, I want to ask the chairman, though the Budget Committee reports does not mention rehabilitation of railbeds for coal hauling on page 103, is it correct to say that the committee does not mean to prevent existing title V programs—now that the purpose clause has ben changed—being used to rehabilitate the railbeds to haul coal?

I raise the question, because with the language on pages 102 and 103 of the report, it could be argued that there is no intent on the part of the Budget Committee that money will be spent in fiscal year 1979 to rebuild the railbeds for coal hauling out of the existing and ongoing funds in title V. I gather the answer is that is not the intent of the Budget Committee to give that impression, but I would like to hear from the chairman.

Mr. MUSKIE. It has no such intent.

May I say to the Senator that beginning with the budget process created 4 years ago, rail rehabilitation has been a priority in the view of all members of the Budget Committee, past and present. We have been somewhat frustrated that plans for rehabilitation related to specific objectives and transportation have been so slow in developing. But we have been more than ready to provide funds to do so.

With respect to the future year issues and that language that disturbs the Senator, the only purpose of that part of the committee report is to identify for the information of Senators future challenges that Congress faces in terms of the need for budget resources. It is not to suggest a postponement of what we ought now to be doing but rather to identify the big challenges, and some of the smaller ones, that face us.

We regard rail rehabilitation not only as a challenge today, but probably a growing challenge of sizable proportions that we are going to have to face.

The purpose there is to gear us up to the effort we are going to need over the long pull as well as the short pull.

Now, with respect to the short pull, let me say this: The Budget Committee targets already include $600 million in both budget authority and outlays above current policy for Mission 2, which is rail transportation.

Now, that increase will permit additional Federal investment for the continued rehabilitation of ConRail. But then in current policy the targets are adequate to accommodate the President's request of $279 million for national rail rehabilitation, and it is not clear that even this amount will be fully utilized. It represents the balance of the $600 million authorized by section 505 of the Railroad Revitalization and Regulatory Reform Act of 1976, the shorthand title of which is the 4R Act, as the Senator knows.

In the 2 years since the 4R Act was enacted, all DOT has received only $400 million in applications for these funds and has approved less than $100 million.

The 4R Act provides additional financial assistance for rail rehabilitation which is not used.

Section 511 of the act authorizes Federal loan guarantees of up to $1 billion. But in 2 years DOT has received applications for less than $200 million and has approved less than $50 million.

We would like to see the commitments of funds moving faster than that, so we think there are funds sufficient to serve the Senator's objective, in which I wholeheartedly concur. I doubt if there is any area of the country in which the railroads are in such bad shape, and I say that not on the basis of any personal survey but just personal impression, as they are in our native New England. So rail rehabilitation is very much in the interests of the region.

We have provided that money, and there is not that much competition for that money as there is for the energy money the Senator was talking about earlier.

All we need is some prodding from Congress directed at DOT and maybe the stimulation of some applications within our region for the available funds.

Mr. DURKIN. I think one of the problems is the desire of the Department of Transportation not to spend the money which frustrates the will of Congress and those who are concerned with the railbed situation. I suspect that this morning the people in Bowling Green, Ky., are rather concerned with the deteriorating railbeds inasmuch as they had a derailment last night. We are going to have to get after DOT about these problems. DOT has been dominated by the highway builders, and they have not stressed rail revitalization. The FRA would rather preside over abandonments and not spend the money. In fact, I hope under Mr. Sullivan, and I hope under Secretary Adams, that we will see some fairly immediate changes, because it is a very serious problem.

But inasmuch as the chairman of the Budget Committee has indicated that the language on page 102 and page 103 cannot be used by Members of Congress and, more importantly, by the administration and DOT, to frustrate the ongoing programs, I am satisfied with the chairman's answers, and I ask to withdraw my amendment on the basis of the statements made.

Mr. MUSKIE. As a matter of fact, I will give the Senator a statement now which will be in the RECORD to which the Senator can refer.

Mr. DURKIN. All right.

Mr. MUSKIE. I think I can safely urge on behalf of the Budget Committee that DOT push forward with this program as vigorously as possible. We see it as a high priority need in the field of transportation, and I personally would join with the Senator from New Hampshire in pressing for action.

Mr. DURKIN. I thank the Senator.

Mr. President, I ask to withdraw amendment No. 1806, and I yield back the remainder of my time.

The PRESIDING OFFICER (Mr. SARBANES). The amendment is withdrawn.

Mr. DURKIN. I want to thank the distinguished chairman.

Mr. MUSKIE. I thank my good friend from New Hampshire.

The PRESIDING OFFICER. Who yields time? Is the Senator from Virginia seeking recognition?

Mr. HARRY F. BYRD, JR. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. Against whose time is the quorum call to be charged?

Mr. MUSKIE. I ask unanimous consent that it be applied against the bill.

The PRESIDING OFFICER. The time will be charged against the bill. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. HARRY F. BYRD, JR. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered. Who yields time?

Mr. BELLMON. Mr. President, how much time does the Senator require?

Mr. HARRY F. BYRD, JR. Let me say to the Senator from Oklahoma that the Senator from Virginia will not need much time. I would like to reserve 20 minutes for the Senator from Arkansas (Mr. HODGES) and 10 minutes for myself.

Mr. BELLMON. Mr. President, I yield 10 minutes to the Senator from Virginia.

Mr. HARRY F. BYRD, JR. I would like to make this request, if I might, of the Senator from Oklahoma: I am prepared to call up an amendment at this point, but I would like to request that before the amendment is voted on, as I understand it, there will be some back-to-back votes. The amendment might be voted on immediately, but there are some back-to-back votes. Therefore, I would ask that just prior to the vote each side could have 2 minutes.

Mr. BELLMON. Mr. President, I am sure there would be no objection. I am not aware of any unanimous-consent agreement for back-to-back votes.

The PRESIDING OFFICER. The Chair would inform the Senate that if votes were to be ordered between now and 12:30, they would then occur back to back, as the first vote is scheduled to take place at 12:30 on the Domenici amendment.

At the moment that is the only vote that is ordered, and that has been ordered, and that has been ordered to take place at 12:30.

Mr. BELLMON. Let me say I am sure there would be no objection to taking some time on the bill for comments just prior to the vote, if a vote is set for later on.

Mr. HARRY F. BYRD, JR. Then suppose I propound this unanimous-consent request; I ask unanimous consent that my amendment No. 1807 be debated now, but voted on after the Domenici amendment is voted on, and that prior to the vote on amendment 1807 each side have 2 minutes.

The PRESIDING OFFICER. The request is that following the vote on the Domencini amendment there be 2 minutes to each side on the amendment which the Senator from Virginia is about to call up, then to be followed by a vote on that amendment; is that correct?

Mr. HARRY F. BYRD, JR. That is correct.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

AMENDMENT NO. 1807

Mr. HARRY F. BYRD, JR. Mr. President, I call up amendment No. 1807.

The PRESIDING OFFICER. The clerk will state the amendment.

The assistant legislative clerk read as follows:

The Senator from Virginia (Mr. HARRY F. BYRD, JR.), for himself and Mr. HODGES, proposes an amendment numbered 1807:

On page 1, line 11, delete the numeral and insert—

Mr. HARRY F. BYRD, JR. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 1, line 11, delete "$566,100,000,000" and insert in lieu thereof "$564,000,000,000".

On page 2, line 2, delete "$498,900,000,000" and insert in lieu thereof "$496,800,000,000".

On page 2, line 5, delete "$55,600,000,000" and insert in lieu thereof "$53,500,000,000".

On page 2, line 7, delete "$853,800,000,000" and insert in lieu thereof "$851,700,000".

On page 2, line 9, delete "$101,800,000,000" and insert in lieu thereof "$99,700,000,000".

On page 3, line 24, delete, $31,600,000,000" and insert in lieu thereof "$31,497,000,000".

On page 3, line 25, delete "$31,200,000,000" and insert in lieu thereof "$31,097,000,000".

On page 4, line 2, delete "$52,700,000,000" and insert in lieu thereof "$50,924,000,000".

On page 4, line 3, delete "$49,500,000,000" and insert in lieu thereof "$47,724,000,000".

On page 4, line 5, delete "$192,500,000,000" and insert in lieu thereof "$192,279,000,000".

On page 4, line 6, delete "$159,900,000,000" and insert in lieu thereof "$159,679,000,000".

Mr. HARRY F. BYRD, JR. Mr. President, I ask unanimus consent that the name of the Senator from North Carolina (Mr. HELMS) be added as a cosponsor of the amendment.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HARRY F. BYRD, JR. Mr. President, this amendment offered by myself, the Senator from Arkansas (Mr. HODGES), and the Senator from North Carolina (Mr. HELMS) would make a reduction in HEW programs amounting to one-third of the lowest estimate of misspending in those programs made in the recent report of HEW's own inspector general. His low estimate of HEW misspending, which misspending he said was caused by waste, mismanagement, and fraud, was $6.3 billion. That was his low estimate. His report stated that the waste was somewhere between $6.3 and $7.4 billion. But knowing the attitude of the Senate toward reducing appropriations, reducing the spending of tax funds, I have framed this amendment to deal only with the low estimate of $6.3 billion. My amendment would make a cut of $2.1 billion in the total HEW budget.

In calculating the reductions in the three budget categories to which this amendment applies, Senator HODGES, Senator HELMS, and I disregarded the waste which the Inspector General attributed to excess hospital beds in some communities, because it could be argued that this is basically a State and local problem. The reduction to eliminate one-third of the misspending reported by the Inspector General is distributed among the functions in the same proportions as is the waste, mismanagement, and fraud attributed to HEW by the Inspector General's report.

A summary of the figures in the amendment is as follows:

Total reduction in the budget, $2.1 billion.

Distribution among budgetary functions as follows:

Function 500: A $101 million reduction.

I might say that the budget resolution for function 500 carries, in round figures, a total of $32 billion. This amendment would reduce that $32 billion by $103 million.

Function 550: A reduction of $776 million.

The concurrent resolution now before the Senate provides, in round figures, for outlays under function 550 of $49.5 billion. This proposed reduction would be a very small percentage of that figure.

Function 600: A reduction of $221 million.

I might say that outlays for function 600 in the concurrent resolution now before the Senate are listed at $160 billion. This amendment would propose to reduce that amount by only $221 million.

Mr. President, I realize that a great many of my colleagues feel that deficit financing is appropriate. Many Senators feel that the economy is such that it would be stimulated and helped by a $56 billion deficit, as envisioned in the concurrent resolution. I do not happen to agree with that philosophy, but I respect the sincerity of those who adhere to that view.

Mr. President, the pending amendment deals with a problem that I think Congress has a responsibility to deal with; namely, the documented waste, mismanagement, and fraud, documented by the Inspector General of HEW himself.

This is the resolution in which that issue should be dealt. Of course, the Congress, if it does not wish otherwise, can totally ignore waste, mismanagement, and fraud which is going on in government. I submit we have an obligation to do something about it.

This amendment would take notice of that, and it would say to HEW, "You must tighten up on your handling of tax funds. You have been given so much money, you have been given such huge sums to spend, that a minimum of $6.3 billion, according to the Inspector General of your own Department, have been misspent through waste, mismanagement, and fraud."

We ought to feel an obligation to make an effort to have the Congress do something about this. I realize that the attitude of the Congress is such that the odds are against the Senator from Arkansas (Mr. HODGES) and the Senator from Virginia succeeding. I think there is an obligation on the part of the Congress to recognize just what has been going on in the Department of Health, Education, and Welfare, allegations made not by outsiders, not by Members of the Congress, but by the Inspector General of that Department himself.

The figures I cite are not figures developed by the Senator from Virginia; they are figures developed by the Inspector General of HEW and submitted in a formal report on April 3.

Mr. President, I yield to my distinguished colleague and cosponsor of this proposal, the Senator from Arkansas (Mr. HODGES).

Mr. HODGES. I thank the distinguished Senator from Virginia for yielding.

I have hesitated in sponsoring this amendment and becoming involved, because I have tried to adopt, since I have been in the Senate, a Calvin Coolidge philosophy that it is better to keep one's mouth closed and be thought a fool than to open it and remove all doubt.

I was greatly troubled over this report and by the reaction of the Senate to the report. I voted for the first amendment of the distinguished Senator from Virginia, though I realized that in amount it might be unrealistic; but I was equally troubled by the arguments against it.

The amount of fraud and mismanagement in HEW programs is astonishing. I am serving in the Senate with the considerable burden of having only recently come from the people. Where I lived, considering the amount of money that I earned, and the amount of money available in my State, $6.3 billion is a considerable amount of money, although I am aware it is not a large amount in Washington, D.C.

I was also concerned about the Senate's approach to this problem and the arguments which were made. I was reminded of a story of a stranger who stopped at a small country store. As he walked up the step to go onto the porch an old man was sitting there. Next to the old man was a dog. The dog was in front of the door. As the stranger went up the steps, the dog began to growl and the closer the stranger came to the door the meaner the dog got until his teeth were bared and the hairs were raised on his neck.

So he asked the old man, "Does your dog bite?"

The old man said, "No."

So the stranger started to go through the door and the dog bit at his leg and almost got him. He jumped back angrily and said, "I thought you said your dog didn't bite."

He said, "Mine doesn't. This isn't my dog." [Laughter.]

Well, whose dog is this $6.3 billion? What are we going through with this process of the Budget Committee?

I am perfecly aware of the arguments which were made by the distinguished Senator from Maine, the arguments that this reduction will come from entitlements and will not affect management. My question is, how is that so? If it is so, and if it is going to take some time to cut out this fraud, mismanagement, and abuse, then I think it is entirely proper and in order for us to take now only one-third of that and take it out at this time.

There are those who say, and I think the argument of the distinguished Senator from Maine simply was, "How are you going to do it and where will it come from?"

We constantly see in the Senate that in government there is more work to be done than people to do it. Each of our offices cost about $1 million a year. We are not the only ones, surely, working on the problems of this Nation. HEW, according to the distinguished Senator

from South Carolina, has 1,217,000 employees.

Let me repeat that: 1,217,000 employees.

It exceeds the Army of the United States. It exceeds our combat ready troops in all four parts of the service. They total only about 1 million. Surely, out of 1,217,000 people we can come up with someone who can determine how to stop $6.3 billion from falling through the cracks. That is no small amount of money.

If every Government agency lost proportionately that amount, then perhaps we could not make this argument. Social security loses, however, about 1 percent to fraud, mismanagement, and abuse. Surely some of these other programs can begin to correct their own problems.

What concerns me is that we, in effect, were saying in the colloquy the other day between the distinguished Senator from Virginia, the distinguished Senator from Maine, and the distinguished Senator from Oklahoma that there really is not a great deal we can do about it.

I read the letter from Secretary Califano, who said, "Give us this money now and we are going to do something to correct it. Give us more laws."

Is that the only answer we know in Washington—that more laws, more money, more employees will solve the problems? I think not.

When we approve this budget, we are setting policy. We are setting a policy, in effect, saying, that "We will write your budget this year the same as last, which included somewhere around $7 billion in fraud, mismanagement, and waste. We are writing that back in again."

Secretary Califano says those are rough figures. Rough figures in what sense? On the low side? On the high side?

I am concerned both as a citizen and as a Senator that we have not given a sense of direction to HEW about our concern.

I know the Senator from Oklahoma and the Senator from Maine share the concern. I hope they will share with us the solution, also. That is to cut it by one-third.

We are not cutting everything. We are cutting simply the amount they have admitted is fraud, mismanagement, and waste.

I think it is a good amendment. I think it is a proper amendment. But my greatest concern is that our failure to adopt it is simply, tacitly, approving mismanagement, fraud, and abuse and saying that this is a problem we will get to later. I support this strongly and I urge my colleagues to support it also.

I thank my distinguished friend from Virginia.

Mr. HARRY F. BYRD, JR. I thank the able Senator from Arkansas (Mr. HODGES) for his excellent speech to the Senate today on this vitally important matter. As the Senator from Virginia sees it, the Senator from Arkansas put the matter in appropriate perspective; that is, in considering the concurrent resolution as to how much in tax funds will be spent during the upcoming year, this is the place to register our views as to whether we shall continue to permit waste, mismanagement, and fraud on such a gigantic scale and not attempt to do anything about it.

This is not a reduction. The proposal offered by the Senator from Arkansas and the Senator from Virginia is not a reduction in the amount of funds being spent by HEW this year. The Inspector General's report dealt with fiscal year 1977. This budget provides for a $43 billion increase in just the three items of the budget, three functions of the budget that the Senator from Arkansas and the Senator from Virginia are attempting to direct the Senate's attention to. Since the fraud, waste, and mismanagement were discovered and reported by the Inspector General, if the new figures in the budget are adopted, that will be $43 billion more in just these three functions than the Inspector General found in the fraud of $3 billion to $7 billion in the past fiscal year.

So it is not a reduction in what they have now. It is a reduction of the increase in the Budget Committee proposes to give to this Department in just these three functions.

The able Senator from Arkansas mentioned the legislative budget for each of the Senate offices. It so happens that the $6 billion which the Inspector General of HEW says was misspent by that Department, that $6 billion is almost exactly six times the total amount of all funds spent by the entire legislative branch of our Government, including the GAO. The entire legislative budget funds—the Senate, the House, all of the Senate attachés, all the Senators, all the Congressmen, all the staffs, all the other facilities that Congress has—amount to a little over $1 billion. If we do nothing about it, if we do nothing in this concurrent resolution about the amendment offered by the Senator from Arkansas and the Senator from Virginia, the Senate is closing its eyes to the fact that one Department of Government misspent, through waste, mismanagement, and fraud, six times the amount of money spent on the entire legislative process.

I happen to think that the $1.1 billion that is spent by the legislative branch is too much. We do not need all these funds. It is too much. But, regardless of that, the total amount spent is a little over $1 billion, $1.1 billion and this one Department is misspending, has misspent, six times that amount in just 1 year.

The Senator from Arkansas mentioned that in his State, $6 billion is a lot of money. I agree. I happened to check the figures as to how much income tax the 5 million people in the State of Virginia pay to the Federal Government. This $6 billion of waste, mismanagement, and fraud is twice the total amount of all the income taxes paid by all of the people of Virginia into the Federal Treasury.

To look at it another way, to obtain that $6 billion, it takes the total income tax payments of 4 million families with a family income of $15,000 each. Those 4 million families with a family income of $15,000 each paid into the Treasury just about enough money to take care of the waste, the mismanagement, and the fraud of that one department of Government.

I am grateful to my distinguished colleague from Arkansas for his strong support.

Mr. MUSKIE. Mr. President, I hesitate to say anything on this amendment in the light of the observation of the Senator from Arkansas that my arguments the other day, apparently, fired up his indignation about this problem and prompted him to support this amendment. Obviously, I was not persuasive with him then and I do not expect I will be now.

I must say, Mr. President, I reject the assumption of both my distinguished colleagues that unless we support their amendment, No. 1, we do not care about the problem; and, No. 2, we do not think anything can be done about it. I do not think anything I have said on this subject supports that kind of conclusion or that kind of implication. Nor am I prepared to concede that my two colleagues have found the magic answer for dealing with this problem. I certainly would not join in the chorus of their hallelujahs that their amendment, if adopted, will eliminate fraud and abuse in these programs. If we can get that kind of guarantee from these two gentlemen, it would be a valuable addition to the record.

The amendment would include reductions in the health function, 550, of $1.8 billion in budget authority and $1.8 billion in outlays.

Now, I wonder whether these Senators have read the report. The report discloses that 42 percent of the overspending in Medicare and Medicaid, that is a total of $1.9 billion, is due to, what? Excessive hospital beds, unnecessary surgery, and unnecessary hospital stays.

Mr. HARRY F. BYRD, JR. Will the Senator yield for just a moment?

Mr. MUSKIE. I will when I finish this. I am trying to straighten out the record that has been made by the distinguished Senator from Virginia and the distinguished Senator from Arkansas. I sat here listening to their implications about my own motivations and my own objectives, my own reasons for the position I have taken.

Unnecessary surgery. Who orders it? Do the Senators tell me the Secretary of HEW orders it?

Unnecessary hospital stays. Who orders them?

Excessive hospital beds. Where are they? Do the communities involved concede they are excessive?

I have two communities in my State whose hospitals were ordered closed by HEW. Rural towns, far removed from any city. But to HEW standards, and I assume, the Inspector General who put this report together, those beds were excessive and part of the misspending of which my two colleagues complain.

HEW standards said they were excessive. The communities did not agree. When I went up there, I did not agree, and we saved some of those hospitals. But they were part of the misspending.

Would these two Senators somehow impose their judgment from afar on whether excessive hospital beds are ex-

cessive, in fact? Can the Congress do that?

And now are we going to get at that unnecessary surgery?

Mr. HODGES. Will the Senator yield?

Mr. MUSKIE. Monitor the office calls of all the doctors of this country, and the surgeons?

I mean, how are we going to pay the medicare bills of perfectly innocent beneficiaries when they apply? Should we wait until we get some of those doctors who ordered unnecessary surgery to identify their bills?

We will not pay their bills, we will pay yours with the money. How in heaven's name are we going to prevent fraud by this kind of an amendment to a budget resolution?

After we eliminate the fraud and abuse of unnecessary surgery and unnecessary hospital stays what are we going to do about people who apply for benefits who are not eligible? Who draws out their applications? They do. Who are they? They are not employees of HEW. They are citizens, walking the streets of your communities and mine. Many of them are innocent, applying because they think they may be eligible. Some of them may be fraudulent, applying when they know they are not eligible. But that kind of abuse has been disclosed, after the fact.

But how does HEW pay the medicare bills of perfectly innocent beneficiaries? Does it suspend them while it goes hunting around our countryside to identify these abuses by private citizens?

Congressional hearings upon which the Inspector General relied for much of his report disclosed there has been abuse by doctors, by hospitals in the private sector, overcharging, charging for services never rendered, overprescribing medicines.

Do we put the Secretary of HEW in jail for that? Do we deny benefits to people that Congress has declared are eligible for these entitlement programs because there is this abuse, some of it criminal, in the private sector?

Of course, we care about this problem, and I do not yield to the Senator from Arkansas or the Senator from Virginia in that respect.

Of course, I think we need to do something about it, and any implications that the other day I suggested to the contrary, I reject. If somebody will point to the RECORD in which I could be said to imply that, I will correct it.

But could any piece of legislation offered in an emotional response to a problem automatically become the effective instrument for solving that problem?

We know where the legislative responsibility for this problem rests, in the committee that has jurisdiction over these entitlement programs, and that is the Committee on Finance. The Senator from Virginia is a member of that committee.

Three times in the last 3 years, including this year, we in the Budget Committee have made assumptions about savings that could be achieved in these entitlement programs for one reason or another, and the current budget includes an assumption of $1 billion of assumptions as to savings that can be achieved by better management and eliminating abuses.

What is a reasonable figure for it? We have a billion in it. The other day Senator BYRD thought $5.6 billion was reasonable. I assume he still thinks that is reasonable. I have not heard him concede his first amendment was a mistake.

Mr. HARRY F. BYRD, JR. It was a good amendment. I approve it.

Mr. MUSKIE. All right. He thinks $5.6 billion is reasonable.

I would like these Senators, instead of belaboring me and the Budget Committee with their rhetoric that we do not care, to specify how and when, how much and how soon, savings of that magnitude can be achieved.

If they can make a case, I will buy it.

One of Senator BYRD's arguments is that some of us believe in deficit spending and that is why we are for fraud and abuse.

How do we answer a non sequitur like that?

My economic philosophy and the economic philosophy of no Senator in this Chamber is based upon an acceptance of fraud and abuse. I reject that argument.

I say to the Senator, if he does not have a case on the merits, if he does not have a concept of management and how it is to be implemented, what forces are to be used, what personnel, what procedures are to be used, investigative, management, otherwise, I do not regard it as responsible to argue that we can pick up $5.6 billion in fiscal year 1979 by eliminating unnecessary surgery, eliminating unnecessary hospital stays, eliminating excessive hospital beds.

We are going to achieve those results and get cash for it that we can apply to pay the benefits of perfectly innocent Americans who are entitled to benefits, who are not guilty of fraud, who are not guilty of abuse? What are we going to do, hold their benefits hostage and the Budget Committee unreasonable because we care about them?

I care about getting the guilty. I also care about protecting the innocent.

What do they want to do, declare a moratorium on these entitlement programs? That is carrying logic to the extreme.

Are we to declare a moratorium on all these entitlement programs until we have all those who have abused them and recovered their ill-gotten gains, so that we can apply those ill-gotten gains to the budget?

Why do we not do that?

Senator LONG is the chairman of the Finance Committee. He was not here the other day. I have sent word that this debate is going on, because I would like to ask him a question: "Senator, these two Senators believe that if Congress discharges its responsibility properly, we can realize as much as $5.6 billion in savings from these documented abuses, which we can apply to the 1979 budget, making it possible for us to reduce your functional totals by that amount. Can you do it?"

That is the question I would like to put to Senator LONG. If Senator LONG tells me—and that is the oversight committee—that we can do it, bless you gentlemen; I will cosponsor your amendment, gladly, and raise the same hallelujahs I have heard here this morning.

Mr. HODGES. Mr. President, will the Senator yield?

Mr. MUSKIE. I yield.

Mr. HODGES. I think the amendment calls for approximately $1 billion, not $5.6 billion, as the Senator contends.

Mr. MUSKIE. I understand that, but Senator BYRD just mentioned, and still sticks by, his figure of the other day.

Mr. HODGES. Mr. President, will the Senator yield for a further observation?

Mr. MUSKIE. If the Budget Committee is wrong, not to buy either of these amendments, then Senator BYRD is wrong to reduce his amendment, by the strained kind of logic I have been hearing around here.

Mr. HARRY F. BYRD, JR. Mr. President, if the Senator will yield, the Senator reduced his amendment only because there are not enough votes to approve it.

Mr. MUSKIE. The Senator is doing exactly what I said.

Mr. HARRY F. BYRD, JR. I hope there will be enough votes to take the view that at least we want to take steps to reduce one-third of the misuse through waste, mismanagement, and fraud, even though apparently we are not willing to reduce the total amount.

One other comment, and I will not say any more. I am sure the Senator wants to be accurate in his assertions.

Mr. MUSKIE. I hope we are both accurate.

Mr. HARRY F. BYRD, JR. I hope we are both accurate.

The Senator mentioned an abundance of hospital beds. I referred to this in my opening statement, and I will refer to it again.

In calculating the reductions in the three budget categories which are affected by this amendment, we—the Senator from Arkansas and the Senator from Virginia—disregarded what the Inspector General attributed to excess hospital beds, as it could be argued that basically that is a statement of local problems.

So that is not involved in any way in this amendment. We specifically eliminated that item from consideration.

Mr. MUSKIE. Well, that is nice; that is really nice. In other words, if the Secretary managed to eliminate some excess hospital beds and achieved some savings, the Senator would not give him any credit against the total that the Senator is mandating. Is that what the Senator is saying?

Mr. HARRY F. BYRD, JR. That is right, because the Senator from Maine has just made the argument that he could not be expected to have control over those hospital beds.

Mr. MUSKIE. How about the remainder of the argument of the Senator from Maine? What kind of legislative amendment is this? The Senator from Virginia uses this report, which makes no distinction. In the first place, it is a very rough thing, as described by its authors.

Second, the Senator's amendment does not say where the saving is to be

achieved. He says orally and in the record that he excludes any savings that might be achieved by eliminating excess hospital beds, even though that is an important part of the record—a $1.2 billion part of the record.

Mr. HARRY F. BYRD, JR. The fact is that I am taking the figures submitted by the Inspector General of the Department of HEW. It may not be an accurate report. The Inspector General's report says that between $6.4 billion and $7.3 billion was misspent last year.

Mr. MUSKIE. The Senator charges me to be accurate. The report says "fraud, abuse, misspending." Fraud and abuse have been committed by citizens; and the Senator, when he shorthands his remarks, puts them all under misspending. There is a distinction.

Mr. HARRY F. BYRD, JR. I think the Senator will find that the report stated that the $6.3 billion to $7.4 billion which was misspent was spent through waste, mismanagement, and fraud.

Mr. MUSKIE. I know, but the Senator said that the word "misspending" implies——

Mr. HARRY F. BYRD, JR. I know.

Mr. MUSKIE. Why can the Senator not be accurate? He uses "misspending" to imply that somehow the Secretary, with his own hands, has misspent, when a lot of this is fraud committed by citizens, abuse committed by citizens, and beyond the Secretary's control in any direct way that he can cash in for the benefit——

Mr. HARRY F. BYRD, JR. Will the Senator——

Mr. MUSKIE. It is my time. I have listened to the Senator's arguments, and he is repeating them, and I would like to respond to them.

How do you fund the budget of HEW out of the ill-gotten gains of citizens out in the countryside who have abused these particular programs? I do not know how you do it.

This year, the President has proposed a hospital cost control measure to save $2.9 billion by curbing excessive hospital costs. The President also asked for savings from improved management amounting to $400 million.

The Finance Committee rejected both of these savings as unrealistic, in its March 15 letter to the Budget Committee.

Speaking of that, we have assumed $1 billion in savings in the health function, attributable to quality control and cost control, both of them related to the objective of my two friends; and for our pains we are told that we do not care about the problem or we do not think anything can be done about it. When we suggest to the Senators that the Finance Committee, of which one of the Senators is a member, has the direct responsibility, the Senators brush it off onto the Budget Committee. If this is responsible legislation, I fail to see it.

Express concern, of course; Senators should express concern. If the Senator submits a resolution to that effect, he will get 100 votes.

I have been in government for some 30 years, and I have seen attempts to get at abuses in AFDC programs and in social security programs. It is a never ending task, because individual citizens, whether they are doctors or applicants or beneficiaries, seem to have an almost unlimited source of ingenuity to get around the regulations and to get around the rules and to get around the administrators.

When you try to take that out of those who are obeying the law and are applying only for what the law provides and who are not abusing it, by cutting their appropriations, I do not see the equity, frankly. Maybe I am blind; maybe I am stupid; but I think that getting at these abuses is a much more sophisticated kind of problem than cutting back the budget resolution for health, education, and income security in this way.

I suppose I am no more persuasive today than I was the other day. What is frustrating about it all is that it is not really my problem, whatever the Senators say. I have no way and no authority to oversee the administration of these departments and agencies.

That is in the Finance Committee. My two friends refused to put the pressure on the Finance Committee. They want to put it on me. That is fine.

Mr. HODGES. Mr. President, will the Senator yield the floor?

The PRESIDING OFFICER. Who yields time?

Mr. NELSON addressed the Chair.

Mr. HODGES. Go ahead.

The PRESIDING OFFICER. The time is under the control of the managers of the resolution and the Senator from Virginia has time.

Mr. HARRY F. BYRD, JR. Mr. President, I yield such time as he may need to the Senator from Arkansas.

The PRESIDING OFFICER. The Senator from Virginia yields time to the Senator from Arkansas.

(At this point Mr. HODGES yielded to Mr. NELSON who called up amendment No. 1801, a colloquy thereon ensued, and the amendment was withdrawn. Pursuant to unanimous-consent request the proceedings are printed later in today's RECORD.)

Mr. HODGES. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. HODGES. Is there to be a vote at 12:30?

The PRESIDING OFFICER. There is to be a vote at 12:30 on the unprinted amendment of the Senator from New Mexico.

Mr. HODGES. Mr. President, I wish to respond, within the limited time available, to the argument of the distinguished Senator from Maine.

There was certainly nothing in my remarks that could be construed as personal or attacking his concern. As a matter of fact, I think that if he had listened, he would have heard me say at the very beginning of my remarks that I realized he had previously stated he also was concerned about fraud, abuse, and waste.

I think the issue, though, is very simple: When and in what forum are we going to begin to do something about it? I say that the proper forum is today, on the budget resolution.

As we look at the broad outlines of the budget, I am reminded of a second story, a famous Jerry Clowers story, of a man who went coon hunting one night.

If you are not familiar with coon hunting, the coon is in the treetop, and someone has to go up in the tree and knock the coon out. This man took a stick and climbed the tree, and got involved with something a lot larger than a coon. It was snarling, and growling, and screaming, and hollering, and the man down below had a gun. The man in the tree kept yelling, "Shoot, shoot, shoot the coon!" Well, because the man in the tree was turning around in the top of the tree so much, the man down below could not get a clear shot, and he yelled back, "I can't get a clear shot."

Finally the man in the tree said, "Just shoot up amongst us, then, because one of us has got to have some relief."

Mr. President, that is the way the American taxpayer has become. I am able to say that because I recently came from among them, and I will return to them shortly. If we cannot cut out one-third of the mismanagement, fraud, and waste out of this budget—we are not cutting specific line items. The Senator from Maine certainly understands that. He must have been a lawyer, and probably a defense lawyer, because he excels in dragging that red herring across the track. He says, "Oh, we are going to hurt those people by drawing down this line or that line." Mr. President, that is not what it is about at all. That is an emotional response to the issue.

The question is, what are we going to do about the $6.3 billion of fraud, abuse, and waste that has been admitted in their own report? Moreover, they say it is recognized that additional sources of fraud and waste are missing, so this is not even all of it.

The Senator asks the usual question, "How can we do it and where do we cut?" I say that an agency that has 1,217,000 employees, more than our Army and Marine Corps combined, can surely find someone to institute a management system to cut out some of this fraud, abuse, and waste. I think ours is a reasonable amendment; it is not one that is going to deprive people of these things. It is a cut by function, not by line item, and it does not cut specific programs.

Mr. CHILES. Mr. President, will the Senator yield?

Mr. HODGES. Yes.

Mr. CHILES. I just wanted to take this opportunity to compliment the Senator from Arkansas and the Senator from Virginia for the amendment they are proposing. I am going to vote against it, since I am on the Budget Committee, but I think this is the way these issues should be brought up on the Senate floor. You have specified the functions that are to be cut; it is not a 5-percent cut or a $3 billion cut. I think that is the thing Senators like to write letters back home about, and say, "I attempted to cut the budget by 5 percent or $5 billion," and I think this is a much more reasonable way.

I think every Member of the Senate has a right to propose such cuts when the budget comes to the floor. We are

talking about a national debate on priorities, and if this is where you think some priorities should be cut, you have a right to try to do that, and I compliment you for attempting to do it and to do it in that way.

On the Budget Committee, as we go through all the items and go through that process a couple of times, what we attempt to do is to set the whole pie.

I have never been one of those who said, "You can only have this part of government but you cannot have that part."

We have to have an adequate defense and at the same time we have to do something for the people. We have to have something in those areas.

What we have attempted to do is to make a rational determination. We obviously think we have made a good one. We have reduced the budget. I think the Senator's amendment is very important and I compliment him for it.

UP AMENDMENT NO. 1247

The PRESIDING OFFICER. The hour of 12:30 having arrived the question is on the Domenici amendment, unprinted amendment No. 1247.

Mr. MUSKIE. Mr. President, I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

The PRESIDING OFFICER. The yeas and nays have been ordered and the clerk will call the roll.

The legislative clerk called the roll.

Mr. STEVENS. I announce that the Senator from Illinois (Mr. PERCY) and the Senator from New Mexico (Mr. SCHMITT) are necessarily absent.

I also announce that the Senator from Tennessee (Mr. BAKER), the Senator from Utah (Mr. GARN), and the Senator from Kansas (Mr. PEARSON) are absent on official business.

The result was announced—yeas 36, nays 59, as follows:

[Rollcall Vote No. 136 Leg.]

YEAS—36

Allen	Goldwater	McIntyre
Biden	Griffin	Metzenbaum
Byrd, Harry F., Jr.	Haskell	Morgan
Chafee	Hatch	Nunn
Church	Hatfield, Mark O.	Proxmire
Curtis	Hayakawa	Roth
Danforth	Helms	Sasser
DeConcini	Hollings	Schweiker
Dole	Johnston	Scott
Domenici	Laxalt	Thurmond
Eagleton	McClure	Wallop
Ford	McGovern	Zorinsky

NAYS—59

Abourezk	Hansen	Moynihan
Anderson	Hart	Muskie
Bartlett	Hatfield, Paul G.	Nelson
Bayh	Hathaway	Packwood
Bellmon	Heinz	Pell
Bentsen	Hodges	Randolph
Brooke	Huddleston	Ribicoff

Glenn	Melcher	Williams
Gravel		Young

NOT VOTING—5

Baker	Pearson	Schmitt
Garn	Percy	

So Mr. DOMENICI's unprinted amendment No. 1247 was rejected.

(Mr. ZORINSKY assumed the chair.)

Mr. ABOUREZK. I move to reconsider the vote by which the amendment was rejected.

Mr. MUSKIE. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

AMENDMENT NO. 1807

Mr. MUSKIE. Mr. President, I understand there is now to be 4 minutes of debate, evenly divided between the Senator from Virginia and myself.

The PRESIDING OFFICER. The Senator is correct.

Mr. MUSKIE. And that, following that, there will be a vote on the amendment of the Senator from Virginia (Mr. HARRY F. BYRD, JR.)

The PRESIDING OFFICER. That is correct.

Mr. MUSKIE. I ask for the yeas and nays on the Byrd amendment.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

Mr. MUSKIE. I yield my time to the Senator from Louisiana (Mr. LONG).

Mr. LONG. Mr. President, the Senator proposes a $2 billion reduction in the funds available for the Health, Education, and Welfare programs on the theory that there is waste and there is mismanagement in these programs. I have no doubt that that is correct. But, Mr. President, it is very difficult to get at it. For example, in trying to get at the amount of waste in the welfare program, we run afoul of the person's right to privacy.

Mr. MUSKIE. Mr. President, may we have order?

The PRESIDING OFFICER. Will the Senator from Louisiana suspend for a moment?

Will the Senators please take their seats and cease their private conversations?

The Senate is not in order. The Senator will suspend until we have order in the Senate.

The Senator from Louisiana.

Mr. LONG. I would like to do a lot more by way of intruding on someone's right of privacy, to challenge eligibility to welfare payments, and the majority of the Members of the Senate are willing to do so, but we do the best we can.

It said that in the health programs we have excessive hospital beds. Well, are we going to do something about that? We will do what we can, but we will not be able to get all the waste out, or eliminate all unnecessary hospital beds, any more than we will be able to eliminate all the unnecessary surgery, or that we will be able to eliminate the hospital stays beyond the bare essential days a person should be in the hospital.

There is a lot of waste. We are not able to get at every item of waste that exists in programs, and we have been trying to eliminate it for the last 29 years I have been here, but we will do the best we can, and because we are not able to find and eliminate it all, there will still be a lot of it left in these programs, just as there is in every other Government program, by the time we are through with it.

The PRESIDING OFFICER. The Senator's 2 minutes have expired.

The Senator from Virginia (Mr. HARRY F. BYRD, JR.).

Mr. HARRY F. BYRD, JR. Mr. President, I yield 1 minute to the Senator from Arkansas (Mr. HODGES), who is a cosponsor of this amendment.

Mr. HODGES. I thank the Senator.

I think we need to be clear that this amendment does not involve cutting regular, ordinary funds. It deals with fraud, waste and abuse, and our own Inspector General indicated there is $6.3 billion of that.

We are simply taking one-third of that amount and cutting it and saying, "Let's do something about it."

There is time to start. They have 1,217,000 employees in HEW. Surely, somewhere among them there is someone who can do something about it.

Social security has reduced fraud, waste, and abuse to 1 percent. We are talking about cutting programs where it is up to 10 percent and the taxpayers are sick of it.

I ask the support of Senators on this amendment.

The PRESIDING OFFICER. The Senator from Virginia now has 1 minute.

Mr. HARRY F. BYRD, JR. Mr. President, the present concurrent resolution adds to the three functions involved in this amendment, adds a total of $25 billion of what is being spent in the current fiscal year.

This amendment would reduce that increase by $2.1 billion. It is prompted, Mr. President, by the official report of the Inspector General on HEW in which he said that there is a minimum of $6.3 billion to $7.4 billion of misspent funds through waste, fraud, and mismanagement.

I wish to read one sentence from that report. Here is the Inspector General's own statement:

> In our view, this $6.3 billion to $7.4 billion, misspent funds through waste, mismanagement and fraud, is a conservative measure of the extent of fraud, abuse and waste in key HEW programs.

All this amendment does is ask that we reduce the total by $2.1 billion.

Mr. President, I ask unanimous consent that chapter 1, from the Department of HEW, Office of Inspector General, annual report, be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

CHAPTER 1: AN INVENTORY OF "BEST ESTIMATES" OF FRAUD, ABUSE AND WASTE IN HEW PROGRAMS

A wealth of information has resulted from Congressional hearings, GAO audits, HEW audits, quality control surveys, and other studies dealing with problems of fraud, abuse, and waste in HEW programs. Some of these span many years and reveal chronic failures to take corrective action. Others reveal dramatic progress in reducing losses due to errors and ineligibility rates. But no summary or analysis of these findings has ever been compiled. Hence, it was decided to com-

pile an inventory of the "best available estimates" we could locate.

It must be stressed that this summary is no more than an initial inventory. It is not an independent study, although we believe the data are reasonable estimates. Because the sources are not complete, the inventory is not complete. Despite these limitations, it is the best perspective that has yet been assembled. In our view, it portrays a conservative measure of the extent of fraud, abuse, and waste in key HEW programs, and their causes.

It must also be acknowledged that it is virtually impossible to distinguish sharply between *fraud, abuse,* and *waste,* since frequently one problem involves all three. For purposes of rough definition, we have adopted the following:

Fraud is defined as the obtaining of something of value, unlawfully, through willful misrepresentation.

Abuse covers a wide variety of excessive services or program violations, and improper practices not involving prosecutable fraud.

Waste is the incurring of unnecessary costs as a result of deficient practices, systems or controls.

As summarized below, this inventory of best estimates reveals that for programs involving Federal outlays in FY 1977 of $136.1 billion, the incidence of fraud, abuse and waste—at a minimum—ranged between $6.3 and $7.4 billion. (Exhibit 1)

The PRESIDING OFFICER. All time has been expired. The question is on agreeing to the amendment of the Senator from Virginia. The yeas and nays have been ordered and the clerk will call the roll.

The assistant legislative clerk called the roll.

Mr. CRANSTON. I announce that the Senator from South Dakota (Mr. ABOUREZK) is necessarily absent.

Mr. STEVENS. I announce that the Senator from Illinois (Mr. PERCY) is necessarily absent.

I also announce that the Senator from Tennessee (Mr. BAKER), the Senator from Utah (Mr. GARN), and the Senator from Kansas (Mr. PEARSON) are absent on official business.

The result was announced—yeas 38, nays 57, as follows:

[Rollcall Vote No. 137 Leg.]

YEAS—38

Allen	Goldwater	Morgan
Bartlett	Griffin	Nunn
Bentsen	Hansen	Proxmire

NOT VOTING—5

Abourezk	Garn	Percy
Baker	Pearson	

So the amendment of Mr. HARRY F. BYRD, JR. (No. 1807) was rejected.

Mr. MOYNIHAN. Mr. President, I move to reconsider the vote by which the amendment was rejected.

Mr. MAGNUSON. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. MOYNIHAN. Mr. President, I am particularly pleased that before the last vote the distinguished Senator from Virginia asked that chapter 1 of the Inspector General's report be printed in the RECORD. It is an informative, careful, and competent statement. It also says something with which I think the Senator from Virginia might agree. It shows that the great area of loss in welfare programs is now in the medical field, that welfare, which has been a subject of calumny over the years, is relatively limited, possibly because it is responding to congressional attention.

I would love to see the study of the median income of the benefactors of much of the fraud, mismanagement, and waste of the present system which makes it even less conscionable.

Mr. HARRY F. BYRD, JR. I thank the Senator from New York.

If I could suggest to the Senator, the Senator from Virginia feels, also, Congress should be very careful how it goes into the national health insurance programs because of the waste, mismanagement, and fraud which already exist in a relatively small program compared to what might be forthcoming if we go into a national program.

Mr. MAGNUSON. Mr. President, will the Senator yield?

Mr. HARRY F. BYRD, JR. I yield.

Mr. MAGNUSON. I must say I did not vote with the Senator from Virginia, although I am very conscious of this problem, but last year in the Committee on Appropriations we were able to cut $1.5 billion under the budget for medicaid and welfare because the rolls have been going down. I attribute that to better enforcement this year.

So the reason I did not vote with the Senator is because I want to see the figures again, and I am sure the Appropriations Committee is not going to come anywhere near the budget, but we want flexibility until we know that someone will not get hurt who did not deserve to get hurt. This is the problem.

Mr. HARRY F. BYRD, JR. I thank the distinguished chairman of the Appropriations Committee.

I do not think anyone could possibly have gotten hurt under the amendment offered by the Senator from Virginia.

Mr. MAGNUSON. Maybe so.

Mr. HARRY F. BYRD, JR. That is so because the amount of funds in this concurrent resolution for the three functions covered by the amendment of the Senator from Virginia have been increased by $25 billion.

Mr. MAGNUSON. Yes.

Mr. HARRY F. BYRD, JR. And I sought to cut only $2.1 billion from that increase. Also, the Inspector General in his report, of which I had the cover page printed in the RECORD, said that his estimate of fraud, waste, and mismanagement, which he figures at somewhere between $6.3 billion and $7.4 billion, is a conservative estimate.

Mr. MAGNUSON. Yes.

Mr. HARRY F. BYRD, JR. I am mighty glad the able Senator from Washington will take a keen look at this problem when it comes before his Appropriations Committee.

Mr. MAGNUSON. There is one thing on which I am like the Senator from New York. I appreciate the Senator from Virginia taking a close look at these things.

There is one thing the Appropriations Committee is going to take a close look at finally after 2 or 3 years. We had always asked the question, how many people are employed in HEW. They would say: "Oh, there are 140 programs." I said: "No, how many do the taxpayers pay out of the till for HEW programs?" They said: "In some cases we pay half and the State pays half." I said: "Well, if you pay half on two that is one."

Mr. HARRY F. BYRD, JR. That is good.

Mr. MAGNUSON. Finally, Mr. Califano came up and he hesitated. He said:

I am almost ashamed to say this, but there are 1,144,000 people paid for out of the Federal till for the programs of HEW.

Mr. HARRY F. BYRD, JR. That is an astonishing figure.

Mr. MOYNIHAN. My Lord.

Mr. MAGNUSON. That is more than the U.S. Army.

Mr. HARRY F. BYRD, JR. More than the Army and almost more than the Army and Navy combined.

Mr. MAGNUSON. Yes.

Of course 1,144,000 includes a lot of social security offices all over the country. That is everything. But that comes out of the till.

Mr. HARRY F. BYRD, JR. Yes.

Mr. MAGNUSON. We pay that, the Federal taxpayer.

Mr. HARRY F. BYRD, JR. The taxpayers pay that.

Mr. MAGNUSON. Yes; 1,144,000 people.

Mr. HARRY F. BYRD, JR. I am glad the Senator from Washington has a keen eye on that.

Mr. MAGNUSON. I will look at that, also, when we get down there.

Mr. HARRY F. BYRD, JR. I apologize to the Senator from New York for taking so much time.

Mr. MOYNIHAN. I thank the Senator from Virginia.

(The following proceedings occurred during the consideration of amendment No. 1807, and are printed at this point in the RECORD by unanimous consent.)

Mr. NELSON. Mr. President, will the Senator from Arkansas yield for a question?

Mr. HODGES. I yield to the Senator from Wisconsin.

Mr. NELSON. At some point I wish to call up an amendment, upon which I will not ask for a vote, for a brief colloquy with the Senator from Florida and the Senator from Maine.

Mr. HODGES. I will be happy to yield for that purpose.

Mr. NELSON. Mr. President, I ask unanimous consent that the colloquy en-

gaged in at this time on amendment 1801 be placed in the RECORD at the appropriate place so that it does not interrupt the debate that has been occurring on the amendment of the Senator from Virginia and the Senator from Arkansas.

The PRESIDING OFFICER. Without objection, it is so ordered.

AMENDMENT NO. 1801

(Purpose: To increase budget authority for the income security function and total budget authority by $6,100,000,000 in order to recognize liabilities the Federal Government has incurred as a result of benefits provided under the Civil Service Retirement System)

Mr. NELSON. Mr. President, I call up amendment No. 1801 and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment of the Senator from Wisconsin will be stated.

The legislative clerk read as follows:

The Senator from Wisconsin (Mr. NELSON) proposes amendment numbered 1801.

Mr. NELSON. Mr. President, I ask unanimous consent that the reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 1, line 11, strike out "$566,100,000,000" and insert in lieu thereof "$572,200,000,000".

On page 4, line 4, strike out "$192,500,000,000" and insert in lieu thereof "$198,600,000,000".

Mr. NELSON. Mr. President, this amendment proposes to increase the budget authorization in this resolution from $566,100,000,000 to $672,200,000,000.

Mr. President, I am raising this question for purposes of having a discussion with representatives of the Budget Committee concerning the liabilities of the Federal civil service retirement fund.

The Federal civil service retirement fund will incur additional liabilities of $6 billion for benefits accruing in fiscal year 1979 under the Civil Service Retirement System.

The overall unfunded liability of the Federal civil service as of today is $117 billion. The unfunded liability is projected to reach $360 billion by the year 2000 unless changes are made to remedy this situation.

So this amendment would increase the budget authority of the income security function—function 600—set forth in the first concurrent budget resolution by $6.1 billion to reflect the liability the Federal Government will incur in fiscal year 1979 as a result of the Federal retirement benefits provided to Federal employees through the civil service retirement program. Currently, the Federal agencies report only their annual matching contributions, not the total associated with providing civil service retirement benefits to Federal workers. This amendment would increase budget authority under function 600 to reveal the present and future costs in fiscal year 1979 of the largest Federal retirement system—the civil service retirement program.

It is time for the Congress to acknowledge that the Federal Government has assumed monumental liabilities associated with the civil service retirement program, and reflect these retirement costs in the Federal budget.

In 1974, Congress enacted the Budget Control Act. This legislation established an annual discipline through which Congress, after consideration of the President's proposed budget and with the advice of its legislative committees and other knowledgeable persons, sets forth expenditure and revenue targets for Federal programs. The amendment I am offering today is designed to fulfill the goals and objectives of this process. Civil service retirement benefits have significant budgetary implications for Federal Agency operation costs that should be reflected in the congressional budgeting process.

Right now, there are some 68 different retirement systems covering Federal employees, although 7 of these plans cover 98 percent of all Federal employees. These seven retirement systems include: civil service, Foreign Service, uniformed services, U.S. Tax Court judges, Tennessee Valley Authority, Federal judiciary, and the Federal Reserve Board. The civil service retirement program, however, covers 75 percent of all Federal civilian employees.

The fiscal year 1979 budget recommendations sent to the Congress by the President do not reveal how much it costs American taxpayers to support the retirement benefits of personnel within Federal agencies. This is true for virtually every agency of the Federal Government, ranging from the Department of Health, Education, and Welfare to the Department of Commerce.

Budgets of the Federal agencies indicate only a portion of the costs associated with the civil service retirement system. The portion of retirement costs which these budgets do reveal is the amount which the agency is required to contribute as its match to the employee contribution. Agencies whose employees are covered by the civil service retirement system are required to make a matching contribution to the retirement fund. This agency match is generally 7 percent of payroll throughout the Federal Government, where the employee works in the Government.

This approach to the reporting of the agency contributions to the civil service retirement programs on behalf of their employees does not reflect the full costs to the Federal Government of the primary Federal retirement program. In fact, the employee and agency contributions together do not pay for even one-half the cost of the civil service retirement program.

Data prepared at my request by the chief actuary of the civil service retirement fund demonstrates that, at a minimum, the Civil Service Retirement System in fiscal year 1977 cost 29.3 percent of payroll with the Federal Government paying 75 percent of these costs. Employees contributed 7 percent, agencies another 7 percent, and general revenue contributions were 15.3 percent, making for a total Government contribution of 22.3 percent of payroll. Virtually all the other Federal retirement programs are similarly situated—employee and agency contributions are not paying the full cost of retirement benefits.

I ask unanimous consent that a report prepared for me by the chief actuary of the Civil Service Retirement System, which illustrates the true total costs of the Civil Service Retirement System be printed in the RECORD.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

CONTRIBUTIONS OF THE CIVIL SERVICE RETIREMENT FUND AS A PERCENTAGE OF COVERED PAYROLL

[In percent]

Fiscal year	Employee contribution	Government contribution: Agency	Government contribution: General revenues	Government contribution: Total Government contribution	Total

[1] Combined employee Government contributions.
[2] With 4 percent CPI, 4.5 percent salary increase, and 5 percent interest on trust funds.

Mr. NELSON. Because Federal agencies indicate only a portion of the costs accruing to the Government for providing benefits under the civil service retirement program, the actual cost of Federal Government operations is being seriously understated, and some agencies whose operations are intended to be self-supporting are annually receiving large unrecognized subsidies.

The amendment I am offering today would insure that the fiscal year 1979 first concurrent budget resolution acknowledge and anticipate the liabilities the Federal Government will incur in the next fiscal year as a result of the benefits promised to Federal employees by the civil service retirement program.

In my judgment, Congress should recognize these civil service benefit costs in the budget process, and require that the agencies recognize the costs in their budgets, so that the Congress and the American public will be provided with realistic information on the actual cost of Federal retirement systems, and therefore the total cost of operating programs and agencies. With this information, our ability to make sound fiscal and legislative decisions on funding or amending Federal retirement and agency programs would be significantly enhanced.

This is not a new idea. It has, in fact, been recommended by the General Accounting Office in a report entitled "Federal Retirement Systems: Unrecognized Costs, Inadequate Funding, Inconsistent Benefits," and in an Office of Manage-

ment and Budget Circular, numbered A–76.

The General Accounting Office, in its report on the Federal retirement systems, reached this conclusion:

Funding of Federal retirement systems remains a serious, growing problem that needs further attention. We believe that retirement costs for all systems should be determined and funded on a dynamic basis. The Congress, employees, and the taxpayers should not be misled by unrealistic estimates of retirement costs. When the full costs are not recognized, there may be a tendency to adopt added benefits which could jeopardize the eventual affordability of the retirement systems. Lack of full cost recognition also results in the understatement of the costs of Government programs, including subsidies to agencies whose operations are intended to be self-supporting. Furthermore, without full funding, the Government's retirement system liabilities are not totally reflected in the public debt.

We recommend that the Congress enact legislation requiring all Federal retirement systems to be funded on a dynamic normal cost basis and that the difference between dynamic normal cost and employee contributions be charged to agency operations.

COST OF FEDERAL RETIREMENT PROGRAMS

The benefits accruing to employees under the various Federal retirement systems represent a very large and growing long-term financial commitment of the Federal Government. The full recognition of these liabilities as they accrue is essential, both in terms of determining and allocating the cost of Government operations and in determining the uncontrollable fixed costs to general revenues. At present, these benefit costs are not fully recognized and, consequently, huge unfunded liabilities have been created and the costs of operating Federal programs are understated.

An examination of the Civil Service Retirement System, which covers 75 percent of Federal employees, illustrates the situation most Federal retirement systems find themselves in.

CIVIL SERVICE RETIREMENT COSTS

Normal cost—The value of benefit rights accrued annually by employees under a retirement system is referred to as the "normal cost" of the system. Normal cost is commonly expressed as a percent of payroll, representing the estimate of the amount of funds which, if accumulated annually and invested over covered employees' careers, will be enough to meet their future benefit payments. The process utilized to determine the normal cost involves mathematically predicting the future experience of the system (salary progression, rate of return on investments, probable rates of employees' death, disability, retirement, and termination of employment) and translating this experience into cost on the basis of the system's benefit provisions.

There are two methods to calculate normal costs: using static or dynamic projections.

"Static" calculations do not consider future general pay increases or annuity cost-of-living adjustments. The normal cost of civil service retirement is calculated by the Board of Actuaries on a static basis. However, annuities are based on an employee's salary, which is adjusted for inflation each year, and annuities are also adjusted according to mandated statutory semi-annual cost-of-living increases. These increases in salary create additional liabilities on the Civil Service Retirement System (Federal white collar salaries have increased 70 percent since 1969). Moreover, annuity adjustments to current retirees increase twice a year based on the Consumer Price Index increase in the previous 6 months. These increases for retirees have totaled over 80 percent since 1969. The Board of Actuaries estimates the system's static cost to be 13.66 percent of covered payroll.

"Dynamic" caculations consider the existing statutes which provide for future pay increases and annuity cost-of living increases. The Board of Actuaries has estimated the dynamic costs to range from 21.56 percent to 28.74 percent of payroll, depending on the economic assumption used. The Office of Management and Budget estimates the dynamic normal cost of civil service retirement to be 27.4 percent of pay at present.

METHOD OF FINANCING

A retirement system is considered actuarially sound if trust fund reserves and income to be received are equal to the system's liability for benefit payments to present retirees and the anticipated liability for active employees who will receive benefits in the future.

Most Federal employees contribute 7 percent of pay and agencies match this contribution with another 7 percent for a total of 14 percent (congressional employees contribute 7.5 percent, and Members of Congress contribute 8 percent of pay). Historically, the 14 percent combined rate has been compared to the static normal cost of 13.66 percent, leading some to the conclusion that the civil service retirement system is actuarially sound.

Because of the relationship between the employee contribution rate and the static normal cost, many people are convinced that Federal employees pay half the cost of their benefits. Historically, the Government has not always matched the employee contribution each year by putting its contribution into the trust fund, and therefore, it is also widely believed that the current unfunded liability is the responsibility of and should be financed by the Federal Government.

In fact, employees pay much less than half the cost of the retirement system, and this can be demonstrated in several ways. The fact that the largest share of the benefit cost is paid by Federal general revenues can be seen by comparing total employee contributions to the benefits received by new annuitants. By this measure each group of new retirees pays over their working years for less than 2 years of their retirement benefit. The 1975 civil service retirement statistical report, for example, shows an average total contribution by employees of $10,218 and an average annual benefit of $7,164. If interest payments are inincluded, the employee contributions would pay benefits for less than 4 years while the life expectancy after retirement of new annuitants is around 20 years. Although many other factors are involved, such as survivor benefits, withdrawal probabilities and cost-of-living increases, the ratio of expected employee share of civil service retirement cost to Government contributions is 1 to 5.

The total contributions to the civil service retirement system in fiscal year 1977 was 29.3 percent of payroll, with the Federal Government paying 75 percent of these costs. At my request, the chief actuary projected the future costs of this system.

By the year 2000 the Chief Actuary estimates that the civil service retirement system will cost a total of 42 percent of payroll or 7 percent of pay for employees and 35 percent of payroll for the Government. It should be emphasized that these cost projections are based on optimistic economic projections of a 4 percent increase in the Consumer Price Index, 4.5 percent salary increase and 5 percent interest annually.

Clearly, the current method of utilizing static calculations to determine financing requirements does not reveal the total costs of the system. The total costs are hidden from the general public and even from Federal employees or retirees who often believe their contribution and an equal agency contribution on their behalf actually finances the system.

There is a need to determine the actual long-range cost of the current civil service retirement system and other Federal retirement systems, taking into account the effect of inflation on salaries and benefits. Such costs should be determined through the use of dynamic assumptions.

There are three major economic assumptions which must be included in a dynamic valuation of a retirement system: annuity increases, salary increases occurring as a result of inflation adjustments, and the rate of investment return.

In civil service retirement, postretirement annuities are tied to the Consumer Price Index (CPI) and initial annuity levels are related to the average of the highest 3 years' salary. Therefore, assumptions must be made as to the future CPI annuity increases and salary increases and salary increases in a dynamic valuation of civil service retirement. The interest rate for investment return used in a dynamic valuation should also be higher than that used for a static valuation since the return should be higher as inflation increases.

The Civil Service Retirement Board of Actuaries, in its most recent actuarial report, expressed concern that the potential long-range obligations resulting from pay increases and annuity cost-of-living adjustments are not reflected in static calculations. The Board, therefore, present dynamic calculations in its report.

Both the General Accounting Office and the Office of Management and Budget (OMB) have recommended that the costs of the Civil Service Retirement System be determined through the use of dynamic calculations.

In October of 1976, OMB instructed all Federal agencies to use a retirement cost factor of 31.7 percent of payroll when making decisions and cost comparisons for the purpose of determining whether

to use Federal employees and facilities or contract out for needed services and products. In June of 1977, OMB temporarily suspended the instructions and has since redetermined the dynamic normal cost to be 27.4 percent based on revised economic assumptions. My office has been advised that OMB plans to reissue the instructions by the beginning of the upcoming fiscal year.

The time has come for the Congress to recognize the retirement programs' total costs in the budget process, in appropriations, and in developing future legislation and policy. If Congress is to make prudent decisions, then the true facts must be revealed.

UNDERSTATED COSTS RESULT IN UNRECOGNIZED SUBSIDIES

When agencies, whose operations are intended to be self-supporting, are only charged a portion of the costs accruing to the Government for Federal retirement programs, these agencies are receiving annually substantially unrecognized subsidies.

There are many Government agencies that have been established to operate on a self-supporting basis, and others that sell products or services which are expected to recover costs incurred. Because most of these agencies are charged only 7 percent of payroll for Federal retirement contributions, their operations are, in effect, subsidized by an amount that is equal to the agency's share of unrecognized and unallocated retirement costs.

The General Accounting Office reported that the Federal Home Loan Bank Board, the Export-Import Bank, the Federal Deposit Insurance Corporation, the Panama Canal Company and Canal Zone Government, and the Farm Credit Administration collectively received $41 million in subsidies in 1976. The General Accounting Office calculated the subsidies by using the Office of Management and Budget's estimate in effect at that time of 24.7 percent as the dynamic normal cost for the retirement system not covered by employee contributions.

Mr. President, I ask unanimous consent that there be printed in the RECORD a letter dated April 24, 1978, written to me by the General Accounting Office signed by H. L. Krieger, Director of the Federal Personnel and Compensation Division.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

U.S. GENERAL ACCOUNTING OFFICE,
Washington, D.C., April 24, 1978.

Hon. GAYLORD NELSON,
U.S. Senate.

DEAR SENATOR NELSON: This is in response to your letter of March 10, 1978, which asked among other things, for a comprehensive list of Federal agencies and the amounts by which their fiscal year 1979 budget authority should be increased to reflect the actual cost of Federal retirement programs. In subsequent discussions with your staff, it was agreed that the information should be limited to the three largest retirement programs—the civil service, uniformed services, and Foreign Service retirement systems—and that the additional amounts should be aggregated for each of the 12 cabinet-level departments.

CIVIL SERVICE RETIREMENT SYSTEM

As discussed in our August 3, 1977, report entitled, "Federal Retirement Systems: Unrecognized Costs, Inadequate Funding, Inconsistent Benefits," the cost of benefits accruing each year under the civil service system are understated because no consideration is given in the "normal cost" calculations to the effect of future general pay increases and annuity cost-of-living adjustments on ultimate benefit payments.

The normal cost of the system is currently estimated to be 13.66 percent of pay which is about equal to the combined rate of contributions being made to the retirement fund by agencies and their employees (generally 7 percent of pay each). However, the Office of Management and Budget (OMB) has determined that the "dynamic" normal cost of the system is 27.4 percent of pay, assuming that future pay increases and interest on fund investments will average 1.5 percent and 2.5 percent, respectively, above the future rate of inflation. Based on this OMB estimate, Federal agencies should be contributing 20.4 percent of their covered employees' pay to the fund (27.4 percent less 7 percent employee contributions) if their budgets are to reflect the full cost to the Government of benefits accruing under the system.

The total payroll for employees covered by the system is estimated to be about $45.8 billion during fiscal year 1979. At 20.4 percent of pay, the cost to the Government of benefits accruing during the year will be $9.3 billion—$6.1 billion more than the $3.2 billion included as agency contributions in the proposed fiscal year 1979 budget. The following table shows the amounts we estimate should be added to the budgets of each of the 12 departments to reflect their share of retirement system costs.

[In millions of dollars]

Department	Costs at 20.4 percent of pay	Costs included in proposed budget	Additional amounts needed
Agriculture	305.6	104.9	200.7
Commerce	111.2	38.1	73.1
Defense	2,227.5	764.3	1,463.2
Energy	82.2	28.2	54.0
Health, Education, and Welfare	523.5	179.6	343.9
Housing and Urban Development	71.9	24.7	47.2
Interior	205.5	70.5	135.0
Justice	209.3	71.8	137.5
Labor	93.2	32.0	61.2
State	57.7	19.8	37.9
Transportation	323.0	110.9	212.1
Treasury	385.8	132.4	253.4
Total	4,596.4	1,577.2	3,019.2

The remaining $3.1 billion in unrecognized costs are applicable to the Postal Service ($1.3 billion) and other Federal agencies ($1.8 billion).

UNIFORMED SERVICES RETIREMENT SYSTEM

This system operates on a pay-as-you-go basis. A fund is not maintained, and benefit payments are financed through annual congressional appropriations. As a result, the Department of Defense budget reflects some of the cost of retirement benefits earned in prior years but does not include any accrual of retirement costs for current military personnel.

At our request, the actuary for the Department of Defense calculated the normal cost of the system using the economic assumptions followed by OMB for the civil service system. The normal cost was determined to be 37.1 percent of basic pay, excluding survivor benefits and benefits for reserve personnel.

The proposed fiscal year 1979 budget includes $17.2 billion for basic pay for active military personnel. At 37.1 percent of basic pay, the cost of retirement benefits accruing during the year would be $6.4 billion.

FOREIGN SERVICE RETIREMENT SYSTEM

Under this system, employees contribute 7 percent of pay, and the Government contributes the difference between the system's normal cost and employee contributions. Currently, the system's actuary estimates normal cost to be 21.89 percent of pay, 14.89 percent of which represents the Government's share. However, using OMB's economic assumptions, the system's actuary estimated normal cost to be 32.37 percent of pay.

The proposed fiscal year 1979 budget includes $40.6 million as the Government's share of the system's currently accruing retirement costs. This amount is based on a normal cost contribution of 21.89 percent and an estimated 1979 payroll for personnel covered by the system of $272.9 million. However, based on the same payroll and a normal cost of 31.37 percent, the Government's share for fiscal year 1979 would be $69.2 million, a difference of $28.6 million from that contained in the proposed budget.

We trust this information satisfies your needs.

Sincerely yours,

H. L. KRIEGER,
Director.

Mr. NELSON. The U.S. Postal Service provides another example of a subsidy being provided to an agency that is intended to be self-supporting.

Of all the agencies participating in the Civil Service Retirement System, the Postal Service is the only one required to amortize any increase in the system's unfunded liability which results from employee pay raises and benefit increases. The General Accounting Office reported that in 1976—

. . . the Postal Service paid about $1 billion to the Civil Service retirement fund, including $614.5 million to match employees' contributions and $385.9 million in amortization payments. However, if accruing costs were calculated on a dynamic basis and the Postal Service was required to pay all costs not covered by employees' contributions, the Service's 1976 contribution would have been approximately $2.2 billion—$1.2 billion more than the amount paid. Subsidies will continue each year as long as the Postal Service is not required to pay for cost-of-living adjustments received by retirees.

Many other agencies and instrumentalities are receiving similar subsidies, including the Federal National Mortgage Association, Farm Credit Banks, the Tennessee Valley Authority and the District of Columbia, to name just a few. There are many others.

Through the budget process, Congress should recognize the full cost of Federal retirement programs; otherwise, the cost of Government operations will be understated. The liabilities assumed by the Government, as required in the various retirement laws, will be ignored and agencies and entities whose operation the Congress intended to be self-supporting will continue to receive subsidies.

The amendment I am offering will put an end to Congress' ability to deceive itself and the American public by failing to recognize the full costs of the Civil Service Retirement System. This amendment will add $6.1 billion in budget authority to function 600 in order to fully recognize the retirement costs associated with all Federal employees covered by

civil service retirement. Several weeks ago, I introduced legislation which would move the legislative committees toward recognition of these costs. I have also advocated the establishment of one Pension Committee herein in the Senate to oversee the proliferation of Federal retirement programs, to review and update their financing plans, and to coordinate their benefits.

Today, I am proposing that the budget process, and ultimately the appropriation process, also recognize Federal retirement systems' costs. The Federal Government has promised civil service retirement benefits to millions of Federal workers. It is time now to recognize the terms and obligations associated with providing those benefits.

Mr. President, in summary, the purpose in offering this amendment is to call attention to Congress and the public, though I am aware that the members of the Budget Committee and others, also, I am sure, recognize that the system of reporting on the retirement costs underestimates very, very dramatically the obligation that is being incurred. It seems to me that it is time this figure be included in the budget so that Congress not only is informed but then is compelled to address itself to the question of the additional $6 billion in liabilities incurred by the Federal Government as a result of benefits accruing under Civil Service Retirement System.

The facts are that although there is some $49 billion in the reserve of the Federal civil service system, in actuality the unfunded obligation is rising very rapidly year by year.

If my memory is correct, the year I came here in 1963 the unfunded liability was about $37 billion. This year it is $117 billion and, as I stated a few moments ago, is projected to go to about $360 billion in the year 2000.

Mr. President, I ask unanimous consent to have printed in the RECORD at this point the following material: A history of civil service retirement financing, a brief explanation of how unfunded liability is determined under the civil service retirement system, and three charts prepared at my request by the Chief Actuary of the civil service retirement system.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

HISTORY OF CIVIL SERVICE RETIREMENT SYSTEM FINANCING PRIOR TO THE 1969 STATUTE (P.L. 91-93)

EMPLOYEE CONTRIBUTIONS

The employee contribution rate has been specified by law since the CRS system began in 1920. While there have been and there are special rates for select small groups of employees, the percent of pay specified for most employees has generally been as follows:

Period:	*Rate percent*
August 1, 1920 to June 30, 1926	2½
July 1, 1926 to June 30, 1942	3½
July 1, 1942 to June 30, 1948	5
July 1, 1948 to October 31, 1956	6
November 1, 1956 to December 31, 1969	6½
January 1, 1970 to present	7

GOVERNMENT CONTRIBUTIONS

Since 1920, several methods for determining contributions to meet the government's share of costs have been utilized.

1920–1928—no appropriations were recommended by the President, or enacted by the Congress.

1929 through World War II (1949)—appropriations enacted by the Congress were those recommended by the President. The amounts recommended by the President were generally sufficient to cover normal cost and to amortize the unfunded liability by the end of the century. These amounts were never equal to the employee contributions, but were instead sometimes higher and sometimes lower.

1950–1957—The President recommended appropriations based on several different methods. The Congress enacted lower appropriations on five occasions; higher amounts twice; and the amount proposed once. During these years appropriations were, at least, $50 million below employee contributions and were most frequently $100 million below employee contributions. The primary cause and effect of the low levels of financing was an effort to help balance the Federal budget, which at the time was directly affected by CSR contributions.

1956 Civil Service Retirement Amendments (P.L. 84–854)—These amendments were effected at the beginning of FY 1958. They provided that each federal agency contribute from its appropriations an agency matching payment equal to deductions from the salaries of covered employees.

However, the agency and employee matching contributions were not sufficient to meet the total retirement cost because no significient provision was made for financing supplemental liabilities. In recognition of this, the 1956 amendments provided that the Civil Service Retirement Commission submit estimates of the appropriations necessary to pay normal cost plus interest on the unfunded liability. Automatic appropriations were no required, however, leaving final determination to the President.

1959–1960—The President did not request supplemental appropriations beyond the agency contribution for fiscal years 1959 to 1960. The Congress appropriated an additional $589 million in 1959 for this purpose, but the President vetoed the bill.

1961–1962—Additional appropriations above agency contributions were made to the fund only for the specific purpose of continuing in effect certain annuity increases and new survivor benefits passed by the 85th Congress.

1963–1968—Additional appropriations were requested and granted to cover benefits approved by the 87th Congress.

1969—The Congress appropriated an additional $72 million in supplement to the agency contributions. This was the amount requested by the President.

In 1969, the Congress decided that the actuarial status of the Civil Service Retirement Fund was so severe that immediate action designed to stabilize the financial situation of the fund was warranted. It was estimated at this time that by 1987, disbursement from the fund would exceed income and that the trust fund reserve would be totally exhausted. The government would then have had to secure the trust fund obligations totally from general revenues or reduce benefit payments.

Rather than be faced with such a situation, the Congress passed H.R. 9825, Public Law 91–93, effective October 20, 1969. The purpose of the legislation, as stated in the House Committee Report, was "to improve the financing and funding practices of the civil service retirement system, so as to maintain confidence in the soundness of the retirement fund and to assure that the necessary money is available when needed to pay the annuities of Government retiree's and survivor annuitants in full and on time."

The Civil Service Retirement Fund found itself in a critical financial condition primarily for two reasons. First, the government had failed over the years to contribute its share of matching contributions to the fund. However, in 1969, the government's failure to contribute its equitable share represented only about 10 percent ($5–6 billion) of the unfunded liability at that time.

Second, the other major contributing factors to the unfunded liability were liberalizations in federal employee pay (which in turn increased the liability of the trust fund), in annuities, and in groups covered. These liberalizations were passed by the Congress without providing for the means by which to finance the liberalizations.

In an effort to correct this situation, the P.L. 91–93 revisions to Civil Service Retirement law were enacted. This law specified that:

1. The government amortize, in thirty annual payments, any liability attributed to new or liberalized benefits, including annuity increases other than those annuity increases already provided for in the prior law.

2. The government make an annual transfer of general revenue funds to the Civil Service Retirement system for interest on the unfunded liability and for the cost of allowing credits for military service. These annual payments are to be made at a rate of 10 percent of the interest payment and the military credit payment in FY 71, 20 percent in FY 72, 30 percent in FY 73, and so forth, until 100 percent is reached in FY 80 and thereafter when the total interest payment and the military credit payment will be paid.

These provisions represented an attempt "to finance future benefit increases and disclose the true costs of any such benefit liberalizations" by funding them with general revenues. The designers of this legislation believed that by using general revenues the actual costs of liberalizations would be exposed, and because the government would have to amortize the new liability over a thirty year period, the Congress and the public would be made aware of the implications associated with liberalizations before they were agreed to.

In reality, the provisions of P.L. 91–93 just slowed the growth of the unfunded liability. P.L. 91–93 did not stop the growth of the unfunded liability. The Act only provided for interest payments on the existing unfunded liability, the amortizing of any liabilities created subsequent to P.L. 91–93, and payments to cover the cost of military credits. P.L. 91–93 failed to require that the annuity cost-of-living increases already provided for in a previous statute be financed through the thirty year amortization process. In addition, propective financing of the unfunded liability created by automatic federal employee pay increases was not provided for in P.L. 91–93. As a result, the financing of the unfunded liability created by these pay increases does not take place until after pay increases go into effect, even though such increases occur annually.

In a Civil Service Commission staff report the thirty year financing provision of P.L. 91–93 was described as "an essential adjunct to P.L. 91–93 funding not to strengthen financing, although it does to some extent, but as a measure of the cost of new benefits." In this sense the new law was successful—there have not been any major liberalizations since enactment of the statute in 1969. But, the fact remains that the true cost of the system has not been totally revealed to Congress and the American people.

The 1969 law also provided for what were described then as "limited, but needed, improvements in the benefit structure." These improvements were *not* covered by the new financing provisions in the statute. Therefore, these new liabilities created in the 1969 law added to the unfunded liability. The new liberalizations, which increased the unfunded liability of the fund, included: (1) a change in the base years used for computa-

tion of benefits from the average of the high *five* earning years to the average of the high *three* years, which increased future benefits an average of 10 percent; (2) an additional one percent added to future cost-of-living adjustments payable to annuitants, so as to compensate for the five-month waiting period which elapsed between the time the Consumer Price Index (CPI) rose 3 percent and the actual time the annuity payment would be increased; (3) a provision to include the value of unused sick leave for computing annuities upon death or retirement; and (4) a provision to enable surviving annuitants to receive their benefits if they remarry. P.L. 91-93 also did not apply the new thirty year amortization provision to a pay raise which occurred in July 1969.

This 1969 pay raise combined with the liberalizations provided in P.L. 91-93 created immediate new liabilities, exempt from the law's thirty year amortization provision, of some $4.5 billion. Because the new liberalizations would continue to escalate each year, the unfunded liability would concomitantly increase each year as well. The following chart illustrates the initial unfunded liability.

P.L. 91-93 new benefits:

Increase in unfunded liability (millions)

High 3-year average	$337
Sick leave credit	329.5
Survivor annuity	150
1% cost-of-living increase	243
	1,059.5
Pay increase effective July 1969	3,400
Total exempted from financing provisions	4,459,500,000

UNFUNDED LIABILITY AND FINANCING CRITERIA UNDER P.L. 91-93

As I have just stated, the liberalizations in P.L. 91-93, which contributed to the growth of the unfunded liability, were not covered by the new financing provisions established in the statute. These liberalizations were not subject to the requirement that the government pay the costs of every future liberalization. This means that the increase in the unfunded liability of the Civil Service Retirement Fund would not be paid for through thirty equal annual appropriations.

As a result, both the unfunded liability and the interest payments on the unfunded liability grew and continue to grow. Since 1969, federal contributions have increased at a rapid rate when expressed either in actual dollar amounts or as a percentage of payroll. Even though the total government contribution in FY 77 was over $9.2 billion—of which $2.9 billion represents the agency contribution paralleling the employees' contribution and over $6.3 billion from general revenues—the Civil Service Retirement Fund unfunded liability grew in FY 77 by $10 billion.

Moreover, the P.L. 91-93 financing provisions do not reveal the actual total costs associated with the Civil Service Retirement Fund, and in fact, fall far short of the financing requirements Congress imposed on private pension programs by the Employee Retirement Income Security Act (ERISA) standards.

UNFUNDED LIABILITY OF THE CIVIL SERVICE RETIREMENT PROGRAM

"Unfunded liability" is defined in statute (5 U.S.C. Sec. 8331(1a)) as the total present value* of all benefits payable from the Civil Service Retirement Fund to participants, both retired and active, and their survivors minus—

(1) the present value of future employer and agency contributions;

(2) the present value of government 30 year payments; and

(3) the Trust Fund balance.

The $116.3 billion unfunded liability at the end of fiscal year 1977 was determined as follows:

	Billion
Present value of all future benefits payable to participants, both active and retired	$251.2
Present value of future employee and agency contributions	−53.1
Present value of the government's 30 year payments	−32.1
Trust Fund balance	−49.7
Unfunded liability (on which the government must make interest payments)	116.3

WHY THE UNFUNDED LIABILITY IS SO LARGE

While the intent of the 1969 legislation was to stabilize the fund and retard the growth of the unfunded liability, this was not achieved. The government's contributions to the Fund, as well as the unfunded liability are growing dramatically. The chief actuary of the Civil Service Retirement System has estimated that the unfunded liability in the year 2000 will be $361 billion.

The size of and the growth of the unfunded liability is attributable to various causes, including (1) not funding liabilities resulting from general pay increases, cost-of-living adjustments to annuities, and benefit liberalizations; (2) creditable service (military) for which neither the government nor the employees made contributions; and (3) lost interest income which would have been earned if the accrued liability had been fully funded.

The unfunded liability will continue to increase primarily because no financing provision has been made to cover liabilities created by cost-of-living adjustments to annuitants.

Mr. NELSON. In view of these facts, I say to the distinguished Senator from Florida I have introduced legislation which if adopted would provide that all Federal employees hired after December 31, 1978, be covered by the social secu-

* Present value is a technique used to determine the amount of money needed today which, if invested at a given interest rate, will be sufficient to provide benefits in the future.

rity system. At the same time I introduced another bill which would require the Board of Actuaries to present to the Congress an actuarial valuation using dynamic calculations to determine the costs of the civil service retirement system, and to distribute the costs equally between employees and employers.

These bills have been widely misunderstood particularly by Federal Civil Service employees. As the Senator from Florida knows, in the Social Security Act extensions that we adopted last fall we provide for some comprehensive studies to be done. One of them would be a study of the advisability of covering all Federal employees under social security and all State and municipal employees under social security. This study is to be available, I believe, within 2 years.

Nevertheless, it seems to me that we should very soon stop adding people to this system, because as they are added the unfunded liabilities continue to escalate far beyond anything that the taxpayers in this country would be willing to support, let alone be able to support.

I wish to make this one point clear, however. No one has proposed at this time, and I do not think anyone would propose, that those who are retired under Federal civil service or those who have accumulated benefits under civil service retirement, would at any time be deprived of what they have earned and are receiving in retirement or what they have earned as employees.

I am offering this amendment solely for purposes of making the public record on the condition of the Federal Civil Service system.

As I said a moment ago, there is about $49 billion in the civil service retirement trust fund. However, the agencies of the Federal Government and the employees are making only 50 percent of the contributions to this retirement system. The other 50 percent of contributions to the fund are being paid for out of general revenues, and this amount is increasing year after year. So in fact we have a situation in which employees under the Federal Civil Service system are making only 25 percent of the contributions to their retirement fund, the agencies are making 25 percent of the contributions, and the general fund is coming up with the remaining 50 percent of contributions made to the fund. This is quite a different situation from the discipline we were required to go through last fall in order to assure the future stability of the social security retirement fund. The Congress provided for increases in the wage base and increases in the social security tax, each party, the employer and the employee, paying 50 percent. So I think it is urgent that we start to address ourselves to this question of the increasing unfunded liability of the civil service retirement fund and the approximate $6 billion in liabilities the fund will incur as a result of benefit accruing during fiscal year 1979. This estimate, I might add, is an estimate made by the General Accounting Office and is based upon rather conservative assumptions.

Mr. CHILES. Mr. President, I commend my good friend and colleague, Senator NELSON, for bringing this issue to the attention of the Senate. It is certainly shocking to find that the long-term retirement costs of civil service employees are being underestimated by at least $6 billion in the President's budget. This is, indeed, a problem in many areas of the budget where we enter into long-term commitments and do not provide money up front to cover them. In some areas, such as military procurement, we have established a full funding principle, and we appropriate budget authority in the first year of the contract. The Senator will also recall that we faced the same kind of issue last year in providing budget authority for housing assistance, where we enter into contracts for as long as 40 years. Fortunately, the Senate upheld our practice of reflecting the full cost of these commitments as budget authority.

Another area where we face the same kind of problem is military retirement where, at present, we only budget for current year costs. While civil service retirement is partially underfunded by not accounting for the future effects of inflation, future military retirement costs are not reflected in the budget at all. The President's budget this year proposed to create a trust fund for military retirement and reflect future costs on a "dynamic accrual" basis, similar to what the Senator from Wisconsin is proposing to us for civil service retirement.

One principle we have adhered to very successfully at the Budget Committee has been to treat all Federal employees equally, whether they are civilian or military. We have done this with pay caps as well as retirement issues. I think this is an important principle that we ought to maintain. We did not accept the President's proposal for changing military retirement accounting at this time, because the authorizing committees have not held hearings and indicated what, if any, action they are likely to take. I think we ought to reform the accounting procedures for military and civilian retirement systems at the same time and in basically the same way.

The Governmental Affairs Committee, which has jurisdiction over civil service retirement, has also not indicated as yet a desire to change the terms of either contributions or benefits for civil service retirement. The one-time payment to meet unfunded liabilities suggested in this amendment would require an appropriation of general revenues and would be handled by the Treasury, Postal, and Civil Service Subcommittee of Appropriations which I chair. We have not yet had such a proposal brought to us. Before we could know exactly what amount to appropriate, we would have to explore the exact terms of the contributions and the economic assumptions being used. I think this is an important area, and I hope we will be able to have hearings between now and the consideration of the second budget resolution.

I am sure the Senator can appreciate how, with all the uncertainties regarding the exact amount of budget authority actually likely to be used, it would be very difficult to include such a large amount of money as $6.1 billion in the function 600 target. If the various Senate committees did not take action on civil service retirement, that money would be avaliable to fund some of the additional programs in housing and welfare which have been recommended, but for which we have not been able to find room in the budget this year. Our experience has been that it is easier to add money to the second resolution for high priority items than it is to take back money that is unspent.

I would also like to point out to my colleague from Wisconsin and to the chairman and ranking member of the committee that I have been very concerned with the difficulty in understanding the concepts of budget authority in the income security function. We already have several different types of budget authority in this function.

For the welfare and nutrition programs, budget authority reflects estimated current year costs just like in the rest of the budget.

For social security, budget authority reflects the anticipated payroll tax receipts for the trust fund and is not related to current benefits at all. In fact, we have the strange situation that if we reduce outlays for benefits in social security, since we leave more money in the trust fund, budget authority goes up.

Housing assistance programs give us still another type of budget authority where we multiply the 40-year costs of annual contracts to estimate our total obligations.

The Civil Service Retirement Budget Authority, as Senator NELSON has pointed out, only partly reflects future year costs in a manner different from any of the other programs.

I would hope that any actions we take to modify accounting procedures will be in the direction of improving consistency, rather than adding still more types of noncomparable budget authority. I would further hope that by the time of next year's budget resolution, we can try to sift out some of these issues. I think the decisions we made this year to report our recommendations on a mission basis, which separates the retirement, the housing, the nutrition, and the welfare programs, goes a long way toward improving understandability of this budget area. By the time we have come close to providing $200 billion of budget authority in one function, it really is time to separate it out a bit so that we can see what our priorities are and those priorities can be made clear.

Therefore, while I commend Senator NELSON for bringing this important issue to the attention of the Senate, I hope he will withdraw his amendment with the understanding that we will try to get the various committees of the Senate to study the issue and come up with recommendations over the next few months.

Mr. BELLMON. Mr. President, will the Senator yield about 2 minutes for a comment?

Mr. President, I would also like to join in commending Senator NELSON for raising this issue, and for the bill he is proposing that new Federal employees are to be covered by social security instead of by the separate civil service retirement system.

He and others have proposed that Federal employees be integrated into the social security system on a gradual basis, and I believe this is an idea we ought to consider carefully, and it is one that I personally find attractive.

It could make a major difference in the whole picture on the actuarial soundness of the civil service system as well as the social security system. Long-range funding issues ought to be resolved as part of the decision on whether to integrate the two systems.

The military retirement system is funded now on an annual appropriation basis, with no trust fund to cover future liabilities. This could prove to be an even bigger problem than funding the civil service retirement system. The Budget Committee considered leaving room in the fiscal year 1979 budget for initiating a military retirement trust fund. We decided the issue needed further study, and we hope the Senator from Wisconsin will consider that it will.

Putting additional money into the Federal civil service trust fund would seem to me to be premature. The system did have a balance at the end of 1977 of about $49 billion, so it would seem that we do not have an immediate urgency.

I would recommend that Congress make a comprehensive review of the entire system of Federal retirement, military retirement, and of the social security system and try to see what the interactions are.

So, Mr. President, I want to simply commend Senator NELSON for raising this issue and to pledge my personal cooperation to him in working out a solution to the whole troublesome retirement and disability picture that faces the country.

Mr. MUSKIE. Mr. President, I have nothing substantive to add to what our two colleagues, Senator CHILES and Senator BELLMON, have said. I join in complimenting Senator NELSON for raising this issue after having carefully probed and developed the facts which he has presented, not only to us here today but earlier.

I assure him of the Budget Committee's concern and of our interest in pursuing the matter and developing a resolution of it. Senator CHILES, of course, in the Appropriations Committee, has authorizing committee responsibility for it, and we will work with him, since he is a member of——

Mr. CHILES. I think the Government Affairs Committee would have the authorizing responsibility.

Mr. MUSKIE. You have the appropriations responsibility, that is right. I think in working together, we can produce some sound policy decisions.

Mr. President, I share the Senator's concern that the budget does not now include the full "current costs" of retirement benefits that are expected to be paid to Federal employees after they retire. The problem here—and it is one that has been recognized for several years—is that the contributions toward employee retirement that are required by law to be made by the employee and by the employing agency are determined on a so-called "static" accrual basis that does not take account of future changes in wages and prices. This is a critical point, because these changes cause increases in employee retirement benefits—wage changes do so because the retiring employee's benefits are based on Federal pay rates in effect at the time of retirement, and price increases do so because retirement benefits are indexed by law to rise with increases in the Consumer Price Index (CPI).

As wage and price increases occur under the existing system of funding, additional appropriations are made to compensate employee retirement and disability funds for the "unfunded liabilities" thus created, that is, the increased benefit payments that cannot be covered by agency and employee contributions.

One aspect of this problem that is of particular concern to the congressional budget process is its effect on functional allocations within the budget. Since the personnel benefit costs now reflected in the various functional categories do not include adequate agency contributions toward retirement, the current system understates the true costs of conducting the programs in these functions.

The concern about civilian employee retirement costs is particularly timely this year since the administration has proposed a substantial change in the funding of the military retirement system. The proposed change would require the Department of Defense to make contributions toward retirement and disability benefits on behalf of its current military employees, at levels determined on a "dynamic accrual" basis that reflects a more realistic treatment of inflation, interest rates, and pay raises than does the "static" basis now used for civilian employee retirement. This proposed change is intended to make defense totals more accurately reflect the true current costs of conducting the Nation's defense program.

The budget resolution now before the Senate does not reflect this proposed change in the method of funding military retirement benefits. The Budget Committee omitted this change without prejudice, deeming it premature to include the change before the authorizing committee had had the opportunity to consider the proposal and report appropriate legislation. Similar considerations apply to this proposed amendment to the budget resolution.

In short there are a number of questions concerning this issue that need to be carefully considered before specific funding decisions are made.

There are legal questions as to what changes, if any, to authorizing legislation are required. There are technical questions as to how an "adequate" level of contributions should be calculated. And there are important equity questions, for example what portion of retirement contributions should be borne by the Government? Whether changes should be made for civilian employees without a simultaneous change in the military retirement system? It is unlikely that these questions could be answered in time to have any impact on the budget for fiscal year 1979.

Beyond these considerations, there is the point that the proposed amendment would not get to the heart of the problem, which is that the current system of funding does not require that Federal agencies make adequate contributions toward retirement benefits that will have to be paid in future years to employees who are conducting this year's programs. This problem requires that the committees with authorizing jurisdiction over employee retirement and disability consider alternatives and report legislation that will place the funding of benefits on an actuarially sound basis, so that future budgets will reflect the true current costs of Federal programs.

Mr. President, I congratulate the Senator for the concerns he has raised here. This is a real issue, and one that deserves our consideration. But, we cannot act in haste, through this budget resolution, to effect the changes the Senator is advocating. We must study the issue carefully before we act.

In view of these considerations, but repeating that I share the concern that is the basis for the amendment. I suggest the Senator may wish to consider withholding his amendment at this time.

Mr. NELSON. Mr. President, as I said at the beginning, I intend to withdraw the amendment.

However, before doing so, I have just another brief comment.

I was well aware that it would be difficult to adopt a particular figure for the additional liability incurred in fiscal year 1979 which is not accounted for in this budget resolution. In fact the Budget Committee has not had the opportunity to run the figures of the General Accounting Office through its own computer. What I did was to ask the General Accounting Office for figures, and they made their own assumptions, which I must say are very conservative assumptions. My impression is that the $6 billion figure is a very conservative figure. The figure would likely be a few hundred million dollars more if GAO had used slightly more liberal assumptions than they used to calculate the $6.1 billion figure. So I recognize the problem of the Budget Committee not having an opportunity to go through it with their own computer system.

Of course, with the military retirement system, there are no contributions involved. The employees of the military do not contribute nor do the various branches of the military contribute. We just, somehow or other, pay the costs of military retirement benefits. There is a very serious, growing unfunded liability resulting from military retirement benefits. I realize that this is something that needs to be addressed in the future.

I recognize the problem that the Budget Committee faces. I only wish to make a record on this, so that people will begin to understand that in fact there is a very serious problem here. And I would hope, though it may not be possible this year, that the bills I have introduced would be acted upon this year.

I recognize, also, that once we cover Federal employees under social security, we also have to develop additional options, as are provided in private em-

ployment, for another pension plan which would be adequately funded, or for an IRA plan or something else. However, in order to stop the growth of the existing civil service retirement system, I would hope very soon we could pass measures providing for the coverage of new employees under social security and the financing of civil service retirement benefits or a dynamic basis with contributions shared equally by employees and the employer.

Mr. President, I withdraw my amendment No. 1801, and I thank the chairman of the Budget Committee and the Senator from Florida.

The PRESIDING OFFICER (Mr. HART). The amendment is withdrawn.

(This concludes proceedings on Mr. NELSON'S amendment which occurred earlier in the day.)

THE FEDERAL GOVERNMENT AND THE ECONOMIC CRISIS OF NEW YORK

Mr. MOYNIHAN. Mr. President, I rise at this moment, which would be characteristic of the situation of which I speak—there are now two Senators on the floor and there will soon be probably none. The distinguished senior Senator from Arizona is on the floor. And I am happy to see my senior colleague, and revered friend, the Senator from New York also.

I take this moment in which, I hope, I am not using too much of the other Senator's time, to speak to the nature of the debate we have been having here the past 2 days. This is a debate in which we have seen a succession of Senators who are associated with fiscal conservatism—and properly so, and honestly and legitimately so—come forward and propose to reduce our budget. They do so in the clear expectation that Senators such as the Senator from New York would come and vote against the reduction of the budget, and so establish ourselves as being in favor of high taxes and the others in favor of low taxes, and in that circumstance to distinguish themselves to the advantage of their principles and the disadvantage of ours. This, Mr. President, is a perfectly legitimate process. And as they would have predicted, and properly so, I have voted against each of the proposals to reduce the budget, with one exception. I voted for a proposal put forward by the senior Senator from Wisconsin, a transparent effort to placate the gods that affect my own city.

But, Mr. President, I have more than once in this past year spoken to the proposition that this pattern of events need not be permanent, need not at all be a fixture of American politics, always to be depended upon because, in fact, if you will think of it in regional terms, it represents a curious imbalance between ideology and interest.

We have just voted on several measures which have been presented by the junior Senator from New Mexico and the Senior Senator from Virginia and ably supported in that case by the junior Senator from Arkansas. And I voted against each proposal by these dear friends and respected colleagues to reduce the Federal budget.

But let me address the question of what was the interest I was supporting at that time: The question of what is the balance of the payments between the Federal Government and the States. I would make it very clear. I have here, Mr. President, a table which I ask unanimous consent to include in the RECORD at this part of my address.

The PRESIDING OFFICER (Mr. PAUL G. HATFIELD). Without objection, it is so ordered.

The table was ordered to be printed in the RECORD follows:

REVISED FEDERAL OUTLAYS, 1976

[In billions]

State	Federal outlays (revised)	Tax collections	Tax refunds	Balance
Alabama	$5.58	$2.74	$0.41	$3.25

Wisconsin	4.75	5.34	.65	.06
Wyoming	.59	.36	.06	.29

Mr. MOYNIHAN. I thank the Chair.

The table shows for the fiscal year 1976 the outlays of the Federal Government by State, the taxes collected from that State, and the balance, a surplus or deficit in the balance of payments. Let me cite the simple facts: The citizens of Virginia received twice as much from the Federal Government as they paid in taxes. The citizens of Arkansas received twice as much per capita from the Federal Government as they paid in taxes. The citizens of New Mexico received four times as much in Federal outlays as they paid in Federal taxes.

Now, the Federal Government is a great boon to persons in States with that huge a favorable balance of payments, that is, favorable ratio in payments.

But what about the State of New York? The State of New York in fiscal year 1976 received $26 billion from the Federal Government but paid in taxes $33 billion. It lost $7 billion in the exchange.

Year in and year out we have not objected to that relationship. We have not said, "My goodness, the average payment in New Mexico"—and I do hope, and I am confident, because there is no one with whom I have a warmer relationship in these matters than my friend, the Senator from New Mexico—I hope he will not mind my using these figures: The figures for New Mexico in 1976 were: Federal outlays were $2.4 billion, tax collections were $600 million, such that there was a balance, a favorable balance, of $1.8 billion for a population of a little over 1 million, 1,168,000.

That meant for each citizen of New Mexico that the Federal Government provided an excess of outlays in New Mexico—I do not wish to characterize it any more than that—a favorable per capita balance of expenditures in New Mexico of $1,556.

If you had a family of five in New Mexico you were living in a State where the Federal Government spent $7,500 more than you paid per family.

In New York State the loss per individual was $409, and a family of five was out $2,045.

I am not suggesting that there is a direct one-for-one exchange or that ever there should be. But consider the magnitude: A citizen of New Mexico could expect the Federal Government to be expending $1,500 more in his State in a given year than he pays in taxes; for his family, assuming three children, $7,500 more.

A citizen of New York in a family of five can expect $2,000 less than it pays in taxes, and yet New York is the State that is constantly expected to vote to continue this disparity, and predictably marches up and votes "no" to the proposals from these other parts of the Nation to cut the budget. And then in a Chamber with only one other Senator, albeit one of the most distinguished and revered Senators in this Chamber, if not the most revered and distinguished, we stand up to lament this circumstance.

Mr. President, my purpose in speaking is to say on the floor what I have sometimes said in writing: That if the pattern continues, New Yorkers, and people from places such as New York, can change their minds about whether the Federal budget is a bargain. Because, Mr. President, it is no bargain for us, and it is no bargain in particular when the city of New York, the largest city in this country, the most important, the capital of the Western World, finds itself in a fiscal situation it cannot resolve with its own resources. Its debts are greater than its resources to pay them back, and it has to have relief. It asks of the U.S. Senate nothing more than an guarantee of a small portion of its bonds, a guarantee that would add to $368 billion of outstanding loan guarantees today. And the presumption is that some shameless proposal has been made that would debauch the very integrity of the Federal

fiscal situation, an outrageous imposition upon the sensitivity and puritannical disposition of the U.S. Senate. Something that has been routine for everybody else becomes extraordinary when we propose it.

I know the concerns that others have when they object to these matters because they wonder, have we changed our ways? The answer is, we have. They ask, would this lead to other precedents? The answer is there are no other cities in any such circumstance.

And there is a third consideration: After 60 years of leading the social revolution in this country that has brought the Federal Treasury to the aid of people and places that need aid, the time finally came when we needed it, and we learned, and we are told, that, no, there is no reciprocity in this matter, yet I am convinced that in the end the Senate will act with the generosity to us in New York City that it acted with generosity to other parts of this country.

I am happy to report that just recently, just within the hour, the subcommittee of the House Committee on Banking, the Subcommittee on Economic Stabilization, dealing with those matters, by a 12-to-2 vote has endorsed and reported the Federal guarantees for $2 billion of New York bonds, as the President has proposed.

But, Mr. President, there is a question of equity and balance here. At risk is the large tradition of national liberalism which comes out of New York as much as, or more than, out of any other State in the Nation; the kind of tradition of national liberalism, Mr. President, that brought Theodore Roosevelt of New York to think about the natural beauties and wilderness and the preservation of these areas of your State, where you presided as a chief judge so ably and so honorably; the national liberalism that brought Franklin D. Roosevelt to say, The South needs help and deserves it, and if New York has to pay for it New York will, because we are one Nation, one people.

And to think that after that long tradition we should now find ourselves with such difficulty being understood is something which is itself hard to understand.

I say to you, as I have said—I say to my distinguished friend from Arizona, who is the only person now on the floor of this U.S. Senate—that you can spoil this tradition. It does not follow that the Senators from New York in the years ahead always will stand up and vote against a cut in the budget. Very quickly we will stand up and propose those cuts, and the citizens of New Mexico and Arkansas and Virginia would notice a difference in their lives, and it would be bad for them, I think, and in the end bad for all of us.

Not to say that the Federal Government is not wasteful; of course it is. That is a question of putting too much administrative responsibility in Washington. Anybody could have predicted it. But Congress does dearly love the power that comes from approving every firehouse roof that is fixed in Fayetteville, N.Y., or Fayetteville, Ark.—both States have little towns by that name, named for Lafayette. Every time a firehouse roof is fixed, some Senator or Representative could take the credit for it, because they saw to it being fixed. We love that kind of power.

But the time will come when the consensus for this arrangement is withdrawn by the great States of the industrial Northeast, and then the country will know it has lost something more than the money involved: lost the position of unity, shared concern, and nationhood that has made us the country we are today, a fact which we ought always to have understood, but which we did not necessarily do.

I ask you to consider the years of bitterness and isolation which the South experienced, and I suggest it is not impossible that the same experience could come to the Northeast, and that it would come with the bankruptcy of the city of New York.

I have told the President of the United States that if New York is allowed to go bankrupt this year, it will be the only thing his Presidency is remembered for. I think we have no idea of the cataclysm that would follow, the crash of confidence in self-government, the confirmation of Macauldy's prediction that America's Government was all sail and no anchor.

The demise of New York City as a center of free enterprise capitalism in the free world. You all know about capitalism; it is an honorable word, and its capital is in New York. If that city should go bankrupt, ask where it would be next. Ask whether there would be such a capital again. Ask not whether a great nation in which the capital of those things the Nation has stood for and so irrevocably destroyed can survive, but ask whether traditional liberalism will survive that experience, which cannot but teach us that if we have thought we shared a common interest in the welfare of others, some of those others do not seem to think that such an interest is reciprocated.

This country will not be the same, and the day will come when the honest and respected fiscal conservatives of the South and West in our country come to learn just how much they have nontheless benefited from the more liberal fiscal precepts of others.

You cannot go on asking us to vote Federal subsidies for your State to be paid out of our taxes, and then ask us, in a moment of extremity, to understand that you will not even help guarantee our bonds. The city of New York is not proposing a penny of aid in its fiscal crisis. The President has not proposed that a nickel be given us to help us with our banks—merely a guarantee of bonds, the use of Federal credit, to be paid for at a premium, just as the city has paid an extra $30 million to the Treasury of the United States for the seasonal loans it has had the last 3 years, which we have repaid at $30 million interest. That $30 million that went to the Treasury of the United States did not end up in New York State; it ended up in other parts of this country. It always does.

We have never protested. We thought that was probably the best arrangement. We assumed it was the best arrangement because people in need get a response from the National Government. But now, if the moment comes when we are the ones in need and we are getting no response, it is a surprising, immensely disappointing, and ominous event.

Mr. President, I would like to state that my feeling of confidence that the Senate will rise to its responsibilities is not diminished. In the end, we have always done the right thing. But I would hope we did not do it begrudglingly, but that we did it with a manly sense of common provision in circumstances of danger and need. That is the kind of people we are as a nation. Heaven knows, if the same circumstances arose, I could name 15 republics in the world where such a condition would immediately bring the response of the National Government, and more than loan guarantees, it would bring the response of actual loans or actual aid.

New York City is a kind of a republic. I remind this all but empty Chamber that under the Constitution of the United States the Federal Government guarantees a republican form of government to the States. New York City is not a State, but the principle is there. Is this Federal Government going to see the self-governance of the city of New York lost in bankruptcy—a city founded formally in 1624 and govering itself continuously, with the brief intervention of General Howe between 1776 and 1779? Apart from the occupation of the British during the Revolution, we have always governed ourselves. Now to lose that self-governance to a Federal judge, now to be declared incompetent in affairs which we have managed for 3½ centuries, and which have brought us to the pinnacle of urban civilization in the world as we can comprehend, and which we created would be intolerable.

Mr. TOWER. Mr. President, will the Senator yield?

Mr. MOYNIHAN. So happily, sir.

Mr. TOWER. Perhaps, considering the Senator's recitation of history, I wonder if it might not be wise to invite the Dutch back to run it again. They apparently ran it far more econmically than it is being run now.

Mr. MOYNIHAN. The Senator makes a real point, but there is a problem. I do not think there are enough Dutchmen left, or at least there are not that many in Holland.

There are many Dutchmen in New York—and they do a very good job—of whom Theodore Roosevelt and Franklin D. Roosevelt were only two of the most distinguished. Not for nothing is it that orange is the color of the New York State flag, comes from the House of Orange. And I will tell you this, sir: If the people of Holland, in their national Parliament, found that Rotterdam or Amsterdam, for whatever reason, was on the verge of bankruptcy, they would recognize an instant responsibility to respond.

The Senator from Texas is a learned man and an accomplished student of economics——

Mr. TOWER. I thank the Senator for that compliment, but I am afraid I am not an accomplished student of economics. However, it does occur, not just

to me but to many people throughout the country, that this is one of New York's problems: That more often than not, New York City seems to be run more for the benefit of its public employees than for the benefit of its citizens.

(Mr. HUDDLESTON assumed the chair.)

Mr. MOYNIHAN. There is nothing unusual in the pattern whereby the employees of an organization make a claim of crying out. It does not surprise me. I do not think it has always been in the best interest of the city or the employees. But, the number of employees in the city of New York has dropped by 25 percent in 3 years.

Our problem—and I wish I could get this more understood—is not the way the city is running today. The city running today is perfectly solvent. It is just that we went through a period of—well, I will not describe it in any pejorative terms, because it was the period of government which had the fullest approbation of all those institutions which judge themselves capable to pass on such matters. The city and State governments from about 1965 to about 1975, exactly those years, were thought to be doing well, were said to be doing well, but, in fact, they were doing disastrously.

They were borrowing money, borrowing money, borrowing money. The unions were demanding it, of course, not for themselves so much, but for programs. And the banks were lending. I will take the liberty of inserting in the RECORD sometime the comment of the London Economist about the New York banks that kept on lending money and lending money that should never have been lent.

The net result was an accumulation of over $10 billion in debt that should never have been accumulated. If it had not been for the fact that Wall Street is in Manhattan, nobody would ever have lent us the money. We would not have the problem. The money was lent and it has to be repaid. We cannot repay it at normal rates at the present time. We just have that problem. The income and outgo of the city is balanced, the city is doing fine, but we are stuck with this debt. We need a little help with it.

I yield to the Senator from Arizona.

Mr. GOLDWATER. I thank the Senator for yielding. I have to leave the Chamber in a moment. I have listened to the Senator's remarks. I want the Senator to know that for the first time since this problem came up I am beginning to see it in a different light, thanks to the Senator's reasoning. I wish more Senators were on the floor. I hope my colleagues will read the message the Senator has given. I do not want to defend those States that receive more than they put out. In fact, I think my State probably is in that category. I think we have to realize how we got that way.

In my own State, when World War II came, this country did not have places to train people, so we opened many airbases. We even had a naval base, believe it or not, in the State of Arizona, for flying. We still retain three large airbases and two large Army installations. In fact, the military pay in Arizona is our biggest source of income.

We can only tax 17 percent of our land so the time is not far off before we are really going to be here with our hands out. We have 30 percent of our land owned by the Indians. We have more national parks and national monuments than any other three States put together. I am not offering that as an excuse.

I wish it were possible for all States to participate on a more equal basis in taxing. I think if we look at the State of California, we might become a little shocked. I am not saying too much about that because I have a son who serves in the House from California and he would be at my front door tonight.

I want to thank the Senator from New York for having made a reasonable approach to this. We have heard so many speeches on this floor about the great disaster that would happen to our country if New York went under. I think the points the Senator has made today not only bring that out but bring out more importantly the fact that we are a Union, that we are a republican country, with a small "r," and that it becomes the duty of those in part of the country to help other parts of the country just as we do when there are floods, when there are disasters caused by storms, in my part of the country, disasters caused by fires.

The American people do not argue, they do not quibble. They like to help.

I have the strong feeling that the Senator has changed some opinions by his speech. Again, I thank him for it. I happened to have lived and worked in New York during the depression. The Senator is not responsible for having so many millions of people living there. We are trying our best to help the Senator by enticing them away, to move out West, so they will pay more taxes out West. I thank the Senator for what he has said.

Mr. MOYNIHAN. The Senator is very generous. May I say to the Senator, that when he sees his very distinguished son, a Member from California, if New York State in 1976 had received the same return from the Federal Government on taxes that California received, we would have received $14 billion more than we did, we could have paid off the entire debt of the city of New York in 1 year, and the Senator would never hear from us again. That is just with 1 year of restraint from California.

Is there anything more clear than that those airbases belong in Arizona? It is one Nation's Air Force, and they have to fly. They should be there.

Mr. GOLDWATER. It is natural that they be there. I just wanted to get that into the RECORD. It explains, not for every State, the situation in which some of our Western States find themselves. My State has less than 3 million people. I can find 3 million people in a couple of blocks in New York.

We want to do our share, and I believe the Senator will find a little change there.

Mr. MOYNIHAN. I thank the Senator. It is extraordinarily generous of him.

Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER (Mr. INOUYE). The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. MUSKIE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

AMENDMENT NO. 1808

Mr. TOWER. Mr. President, I call up my amendment and ask the clerk to state it.

The PRESIDING OFFICER. The amendment will be stated.

The second assistant legislative clerk read as follows:

The Senator from Texas (Mr. TOWER) proposes an amendment numbered 1808.

Mr. TOWER. I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 2, line 20, strike "$129,800,000,000" and insert in lieu thereof "$131,400,000,000".

On page 2, line 21, strike "$116,600,000,000" and insert in lieu thereof "$117,000,000,000".

On page 2, line 23, strike "$12,800,000,000" and insert in lieu thereof "$12,200,000,000."

On page 2, line 24, strike "$7,200,000,000" and insert in lieu thereof "$7,000,000,000".

On page 4, line 2, strike "$52,700,000,000" and insert in lieu thereof "$52,500,000,000".

On page 4, line 3, strike "$49,500,000,000" and insert in lieu thereof "$49,300,000,000".

On page 4, line 5, strike "$192,500,000,000" and insert in lieu thereof "$191,700,000,000".

On page 4, line 6, strike "$159,900,000,000" and insert in lieu thereof "$159,100,000,000".

The PRESIDING OFFICER. The Chair reminds the Senator that by previous order, time on this amendment is limited to 1 hour.

Mr. TOWER. Mr. President, I yield myself such time as I may require.

Mr. President, my amendment to the first concurrent budget resolution would add $1.6 billion in new budget authority and $400 million in outlays to the national defense category targets recommended by the Budget Committee.

At the outset of my remarks, I wish to commend the Budget Committee for making the proposal to add significantly to the defense budget request forwarded by the administration. The recommended target figure of $129.8 billion in new budget authority for fiscal year 1979 will restore to some extent the funds planned for future weapons systems that were removed during the budget review process in the executive branch.

However, in my view, the Budget Committee has not gone far enough in restoring the level of defense spending for next year to that required for the preparedness of our future military forces.

Mr. President, I have learned only recently of some important findings which bear directly on our planned expenditures for NATO in the 1980's and beyond. I take this opportunity to bring to the attention of the Senate the reports of the NATO long-term defense planning task forces, which followed a year's work by representatives from each of the NATO countries who were asked to

study the future military requirements of the common defense.

These findings, which were forwarded last month to the U.S. Department of Defense and the other NATO defense ministries, point to numerous and costly force improvements which the NATO military commanders consider necessary to shore up the military balance in Europe. The estimated cost of these improvements, I understand, would be $60 billion over the 1980–93 time frame. This would require an annual NATO expenditure of about $4.8 billion over currently programed levels.

To my knowledge, the administration has not advised Congress as to the findings of these task force reports. Nonetheless, I think they would have a direct bearing on our deliberations on defense spending, and until we have had the opportunity to review them, we should retain maximum flexibility in our defense expenditure targets at this early stage in the budget process.

Mr. President, I point out, in all fairness, that this information was not available to the Budget Committee during their action on this resolution and, accordingly, they have not had the opportunity to give consideration to the task force reports in recommending the figure for national defense. Whatever level of funding for NATO the President may request in fiscal year 1980, the significant number of procurement programs deferred from the fiscal year 1979 budget into subsequent years will obviously constrain the level of resources that can be applied to new NATO initiatives. My amendment would permit substantial restorations in the procurement of military hardware, particularly ships and aircraft for the Navy, prior to fiscal year 1980.

Another matter that, to my knowledge, the Budget Committee did not consider involves the plans of the Department of Defense to announce today a major list of candidate base closures and realinements. Citing limitations in funds for manpower and base operating support, the Defense Department is proposing to study the closure or reduction of some 85 major and minor defense installations. I think many Members of Congress will have strong objections to these proposals, and until such time as we are able to review specific recommendations and alternatives, I think we should incorporate maximum flexibility into our budget planning for the next fiscal year.

To offset the additional funds which I am recommending be added to the national defense category, my amendment provides for reductions in three separate budget categories in other areas. Under the international affairs category, my proposal would reduce foreign economic assistance by $600 million in budget authority and by $200 million in outlays. This would reduce the totals for the international affairs function from $12.8 to $12.2 billion in budget authority and from $7.2 to $7 billion in outlays. I would like to stress that my amendment focuses on foreign economic assistance, not security assistance. I would observe that the "current policy" funding level for foreign economic assistance is $6.3 billion, yet the Budget Committee recommendation is for $9 billion in budget authority for fiscal year 1979.

In my view, we can still provide adequate economic development aid to other nations and fulfill our commitments to other international organizations even if we limit this target to $8.2 billion instead of the recommended $9 billion. The Budget Committee report, I understand, reflects that the $8.2 billion figure was that recommended by the Foreign Relations Committee. Let me emphasize that I am not suggesting that we reduce our planned contributions to the International Monetary Fund, but that we limit instead the level of real growth in our development aid to other nations.

The second budget category in which I recommend a reduction is that of public assistance, which comes under the income security function. The largest single category in this budget resolution is that of income security, containing $192.5 billion in budget authority and $159.9 billion in outlays. Within this target, the Budget Committee proposes to increase public assistance to $18.9 billion, an $800 million increase over the level identified as "current policy."

I believe that we can hold our public assistance programs to the $18.1 billion level by requiring better management of welfare programs and public service job funds. Welfare reform unquestionably provides a great opportunity for enormous savings to the Federal Government. Welfare fraud constitutes the largest single waste of Federal tax dollars today. I would remind my colleagues in this regard that the Secretary of the Department of Health, Education, and Welfare, Mr. Califano, recently acknowledged that his Department is losing $7 billion annually to welfare fraud and the misuse of public funds.

The third and last item which my amendment would reduce is the category of consumer and occupational health and safety. My motion would lower the target for the overall health category from $52.7 billion in budget authority to $52.5 billion and from $49.5 to $49.3 billion in outlays. The level recommended by the Budget Committee for the health category includes $900 million for the mission of consumer and occupational health and safety. Increased funds for this mission is necessary, according to the Budget Committee report, in order to increase the percentage of the Nation's workplaces that are reviewed each year for compliance with Federal standards. However, the performance of OSHA in my State has not convinced me that increasing the percentage of workplaces subjected to Federal inspection is either necessary or desirable. I must note, however, that my proposed $200 million reduction applies to a budget category that supports additional Federal activities aside from OSHA, and I would expect that this reduction would be apportioned across the range of Federal activities in the consumer and occupational health and safety field.

In summary, my amendment would provide for a needed adjustment to our overall budget priorities by increasing the level of spending for national defense to support needed military programs, and by reducing our expenditures for foreign economic assistance, public assistance, and consumer and occupational health and safety.

I hope my amendment will be supported by those of my colleagues who share my concern for the growth in Federal spending in nondefense areas, and the resultant fiscal constraints which are being placed on the requirements of our Armed Forces.

Mr. President, I urge the adoption of this amendment. I believe that we can have no higher priority than the national defense. I suggest that if our country is not secure, that at some point in time it may not possess the resources to deal with the many problems we have internally in terms of the socially and economically disadvantaged.

Mr. CURTIS. Will the distinguished Senator yield?

Mr. TOWER. I yield to the Senator from Nebraska.

Mr. CURTIS. May I inquire how much of a saving he is proposing in welfare?

Mr. TOWER. The welfare saving would be, in budget authority, $800 million.

Mr. CURTIS. My observation is that that can be easily obtained.

In the operation of aid to families with dependent children, the Department made a regulation as to how they determined need. It was very poorly drawn.

It ended up with families with sizable incomes drawing welfare. It also resulted in a situation where they once got on the welfare rolls, they could not be removed.

We have been trying in the committee to amend this situation. The estimate is that a revision of the earned income disregard would save $525 million.

I would like to see the Budget Committee, as I said yesterday, become the most powerful committee in the Senate. I would like to see them hold the line on spending which means we will have to change the law.

It is estimated that if we tightened up the law in reference to aliens receiving public assistance, we could save $48 million.

There is another item that we could save almost three times as much money on as the Senator proposes, and that has to do with what might be termed self-certification.

Someone comes in and asks to be put on the rolls. They put him on and investigate him afterward.

There are many of us who have been proposing the determination of benefits by the establishment of a monthly retrospective accounting period for the aid to families with dependent children. In other words, not based upon an estimate in the future, but on what the income and expenses really were.

It is estimated that this retrospective accounting would save $1.9 billion.

(Mr. HATHAWAY assumed the chair.)

Mr. CURTIS. There are also some abuses in connection with certain cases in which a child lives with a relative who is not legally responsible for the child's support. We could save $114 million there by the appropriate action.

We have tried to get the requirement of an identification card, which would not be too bad. That would save $10 million.

I can go on and enumerate some other things. Tremendous savings could be made in the food stamp program, currently administered by Agriculture.

Although the item about welfare and public assistance is separate from the occupational health and safety program, I ask how much the Senator proposes to save in the occupational health and safety program.

Mr. TOWER. In the occupational health and safety categories, $200 million. We could save that by stopping the harassment of the small businessman, I think.

Mr. CURTIS. I am sure it could.

Just within the last 3 or 4 days there was called to my attention the case of a small food processing factory which the Public Health Department required to have smooth walls and smooth floors, so that they could take a hose and wash them down and keep them clean. If they did not do it, they would be subject to certain penalties.

The occupational health and safety people came along and said, "Unless you have a rough floor, in order to prevent people from slipping, you are in violation and subject to certain penalties." All that happened in the same department.

Within the last 24 hours, my attention was called to a case in reference to a home for the elderly. This home has been in existence for about 75 years. It was treating older people with kindness and compassion and love years before these bureaucrats were born. They take people in. Some of them can pay and some cannot. Some get an allowance for old age assistance and it is turned over to the home. A few others take what little money they have, a house or something else, and turn it over to the home, and the home cares for them for the rest of their days. They are kindly people. It was established by a saintly clergyman some three-quarters of a century ago. They got along for years. Their building is good. Local people raised the money. It is not a fire trap. They are very careful about everything. Yet they are subject to such harassment that they may have to close.

Here is one instance: At night, while things were quiet, the nurses, carrying out the directions of the doctors for administering medicine, would make up little packets of medicine to be administered the next day, and these would be placed in a cabinet. An inspector came along and said, "You can't do that." Maybe they will have to hire more people. Maybe they will have to neglect some people's needs to make them comfortable, because they cannot do some of this work in advance. I do not know.

We have enacted occupational health legislation in Congress which would appear to be on the assumption that all people are ignorant, incapable of taking care of themselves; that our States and localities were not interested in reasonable regulations for safety. The finest thing we could do would be to send 90 percent of these inspectors out to pasture and get them off people. I am sure it would be a saving, a double saving, because it would save the expenditure, and it would give small businessmen and others a chance to run their businesses so that they can make a profit and pay some taxes.

Mr. TOWER. I thank the Senator from Nebraska for his valuable contribution.

I reserve the remainder of my time.

The PRESIDING OFFICER (Mr. HATHAWAY). Who yields time?

Mr. BELLMON. Mr. President, will the Senator yield me 3 minutes?

Mr. MUSKIE. I yield 3 minutes to the Senator from Oklahoma, and then I will yield 5 minutes to the Senator from Mississippi.

Mr. BELLMON. Mr. President, I would like to set the record straight about what the Budget Committee did in the defense function.

First, I point out that, going back to fiscal 1975, when the Budget Committee's work started, the outlays for national defense have been on a steady upward path. In 1975, outlays were $85.6 billion; in 1977, $97.5 billion; in 1978, $105.4 billion; and this year, $116.6 billion.

Those outlays have grown at the rate of 4 percent between 1975 and 1976, 9 percent between 1976 and 1977, 8 percent between 1977 and 1978, and this year the growth projected in the Senate budget resolution is 11 percent. This is well above the level of growth in the budget as a total.

So it is obvious to me that the Senate Budget Committee is trying to provide to the Defense Department and to provide for the country's defense an amount of money that seems to be adequate to our needs.

In addition, Mr. President, the figure that the Senate Budget Committee has recommended is above the President's numbers, well above the House numbers, and we are even above the numbers recommended to us by the authorizing and appropriations committees.

When we adjust the President's outlay figures, taking into account the CBO reestimate of the outlay shortfall, which is $1.9 billion, the assumption of the 5-percent pay cap, and the assumption of the 2-percent pay absorption, the President's outlay figure would be $114.9 billion, and the Senate Budget Committee's figure is $116.6 billion. So we are $1.7 billion above the President's figures and outlay; similarly, we are $3.3 billion above the President's figures in budget authority.

So it is my conviction that the resolution before the Senate at this time is adequate to meet the reasonable defense needs of the country, and I cannot support the Tower amendment.

In addition, we are providing for growth in the NATO forces of almost 6 percent, which is well above the requirements of the understanding we have with our allies in Europe. So I can see no reason for adding these additional funds.

Mr. TOWER. Mr. President, I yield myself such time as I may require.

I think the Senator from Oklahoma is not aware of the NATO Task Force reports that recently have been completed, which indicate a requirement for a substantial additional expenditure for NATO. I have said in my remarks that, in fairness to the Budget Committee, they were not aware of these reports at that time.

We have some serious problems in NATO that need to be solved in communications, in command and control, and we have to spend money to do it. We will have to encourage our allies to spend it, likewise.

I point out that while our real increase in spending is around 1.8, two of our principal allies in NATO have increased theirs in real spending terms by more than 3 percent.

Merely saying that you raise the defense budget is not enough. We have to consider what is adequate to meet the threat. If we get to the point where our national defense, whatever it costs, is too costly for the protection of our national interests, or such that we value spending on other matters more than we do on national defense, then we will be second best, and ultimately we will find ourselves perhaps economically and politically isolated and not possessed of the resources to take care of the socially and economically disadvantaged.

Mr. MUSKIE. Mr. President, I yield 5 minutes to the Senator from Mississippi.

Mr. STENNIS. Mr. President, first, I want to emphasize that I impute the utmost good faith and intelligence and consistency to the Senator from Texas, who is a very valuable member of our committee, and he is the ranking minority member of that committee.

It is an extraordinary year in many ways with reference to the military budget. Many subcommittees have passed on this matter, as well as several major committees, including the Budget Committee. It is striking that they have come up with remarkably similar figures in each instance.

For instance, we have finished our hearings now in the Armed Services Committee through the subcommittee process where they examine every piece of equipment, the manpower volume and use every research tool. They have all reported now, except on the ships, and none of them had any difficulty whatsoever in staying within the approximation of what was their part of the budget. Those reports have already been filed. One was considered this morning and another one will be considered in a few minutes.

The Budget Committee itself combed this thing from cover to cover, top to bottom, and they came in with an increase proposed or permitted of at least $1.4 billion which was within $300 million of what the Senate Armed Services Committee had recommended and the Senate Appropriations Committee had recommended. Those estimates and recommendations are already in.

Incidentally, the House Appropriations Committee recommended the President's level of this military budget for this year.

This was not just a formality that the Senate Armed Services Committee went through. After discussions and study we had several recorded votes in our committee when almost everyone was there and these figures and other figures were passed on. There was an effort to reduce the amount. Then there was an effort to increase it substantially, and we finally settled on this $1.7 billion that I have already referred to.

So, here is unanimity. After taking the evidence and after weighing the matter and exchanging views, consulting again with the military, with the White House, with the Budget Bureau, the Chiefs of Staff, and a number of other things, we came up with these figures that I have enumerated.

Now, if something new has happened and some kind of group has made some kind of survey somewhere in Western Europe and later comes in with some kind of report, as referred to here, then the machinery of this body, committees, and Budget Committee make ample room for the weighing and consideration fully and thoroughly of whatever that report may be.

There is a provision in the budget law that permits the bringing in of new subject matters. I have conferred with the chairman and ranking minority member of that committee, who gave assurances, that they would be willing and are leaning toward consideration of raising this military ceiling should new facts develop. I conferred with them before I agreed that I would oppose this amendment we are discussing now.

So, Mr. President, here is a case where every group of this body has given this matter judgments, estimates, conclusions, and figures, after hearing all of this testimony. We have come up with the idea here that this budget figure the Budget Committee has is approximately correct with what would be needed, and that is almost unanimous.

So, this matter has been passed on here many times by recorded votes with full explanations on both sides, and with everyone acting in good faith. I do not propose to take too much time of the Senate here now.

Again this with the greatest deference to the concern, caution, commonsense, and judgment of the Senator from Texas. I repeat that we have not finished this matter about the ships. My judgment is that we will have a bill that increases the amount of money for ships. That is exactly why I am confident we have allowed enough margin here to make such adjustments as the committee may vote. The Budget Committee has taken that into consideration along with other matters and allowed part of that margin. I think if we put in extra sums there on that item we are likely to take out an approximate corresponding amount. So that is the best that I can give.

As to the situation, I respectfully submit that this matter has been settled under the rules of the Senate, the estimates, and judgments. For the time being, I hope it remains that way until there is further showing of additional facts.

I thank the Chair very much.

The PRESIDING OFFICER. The Senator from Maine.

Mr. MUSKIE. Mr. President, I yield myself 5 minutes.

The PRESIDING OFFICER. The Senator from Maine is recognized for 5 minutes.

Mr. MUSKIE. Mr. President, with respect to that part of the Tower amendment which deals with the adequacy of the defense function, I am sure I cannot add to what the distinguished Senator from Mississippi, Senator STENNIS, has said—he is our chairman—with respect to national defense requirements—and his assurance that the numbers provided in the budget resolution match his conception of what our defense requirements in fiscal year 1977 should be is all the defense that the Budget Committee's defense recommendation needs. That is the assurance upon which the Budget Committee built its numbers.

The Senator from Texas suggested that we have sacrificed defense spending in order to serve our exaggerated notions of what we should spend for domestic purposes.

The first point I make in response to that is the testimony of the distinguished Senator from Mississippi. I have worked closely with Senator STENNIS throughout the years of this budget process, and I have found him most cooperative and accommodating, not to the sacrifice of his own sense of duty with respect to his responsibilities, but in an effort to accommodate his own best judgment of what our Nation's defense requires and to the need to exercise budgetary strength overall.

I compliment him for serving his duty in that way.

The second point I make in response to the Senator from Texas is this: The recommendations we have received from the Armed Services Committee and Appropriations Committee did not address the *Trident* submarine or pay raise issues which the Budget Committee addressed.

If we are to adjust the Armed Services and Appropriations Committees' recommendations with the Budget Committee views on the pay raise and what our numbers take into account, we provided, in effect, $700 million more than the Armed Services Committee and the Appropriations Committee recommended in their March 15 reports.

The Senator criticizes us for not providing more than the Armed Services Committee and the Appropriations Committee recommended. That is not the case.

May I remind the Senator that the Budget Committee cut the recommendations of authorizing committees by $36 billion and not a penny of that $36 billion came out of the Armed Services Committee's recommendation for defense. That is the reverse of what the Senator accuses us of having done. We have cut domestic programs without cutting the defense program as submitted to us. That is the fact of the matter.

Mr. TOWER. Mr. President, will the Senator yield?

Mr. MUSKIE. I yield.

Mr. TOWER. I did not accuse the committee of anything. I commended the committee for raising the defense amounts. I simply suggested that in my view it should be more.

Mr. MUSKIE. What the Senator was saying and I think these are the Senator's words, and he did say what he just said, but he said this in addition.

The Senator stated that if we have reached the point where we are going to sacrifice defense requirements in order to feed—I do not know if he used the word "feed"—but in order to promote spending in domestic areas, then we are in a sad situation.

The fact is we did the reverse, and I think the record ought to be straight on that point.

With respect to the functions which the Senator would propose to reduce—and this amendment, may I say to the Senator, is the McGovern amendment of the right. Senator McGOVERN proposed a transfer amendment to move funds from the defense function to domestic purposes. The Senator from Texas does the reverse. He would move funds from domestic programs to the defense program. They are both so-called transfer amendments.

Mr. TOWER. Mr. President, will the Senator yield? Six hundred million dollars is out of foreign assistance not out of domestic spending.

Mr. MUSKIE. All right, I accept that as an accurate fact. But the Senator also includes a combined $1 billion reduction in the health and income security functions. The Senator's amendment, if I understand it, adds $1.6 billion in budget authority and $400 million in outlays to the defense function. It takes out $600 million in budget authority and $200 million in outlays from the international affairs function, cuts $200 million in both budget authority and outlays from the health function, and cuts $800 million in both budget authority and outlays from the income security function. So it is the reverse of the McGovern transfer amendment.

Now, I make this comparison for no purpose other than to restate my very great reservation about this method of amending the budget resolution. If there are savings that can be made, legitimate savings that can be made, and judgments can differ on that, in any function, in my judgment the savings ought to be applied to the budget deficit and not to increased spending in another function.

The Budget Committee operates by going through the budget function-by-function. There are 19 of them as a whole. There are Senators in the Budget Committee, as there are on the floor, concerned primarily with defense. Other committee members are concerned with social service programs. The committee members represent a pretty good cross-section of the Senate, maybe more on the conservative side than on the liberal side as a whole, if one looks over the entire committee. But each budget function's needs are evaluated on merits, and the final judgment of the committee is on the needs of each function.

We do not engage in swapping dollars between functions. Once we have gone

through the 19 functions, we look at the totals, determine whether or not the total spending proposed is excessive and whether or not there are some needs that have been overlooked. In the last 2 years the chairman has proposed cuts in the 19 functions on a selective basis in order to reduce total spending and in order to reduce the deficit.

This year I did the same thing, without success. I lost on a motion which would have cut $4.7 billion in budget authority and $4 billion in outlays from the committee's recommendation by a vote of 9 to 7. There were some who thought it was too great a cut. I invited counteroffers. I received none.

So the committee, in effect, endorsed the numbers that are now in this budget resolution, even though I had recommended and was willing to take the heat for some cuts. And my cuts were not just in defense but in foreign affairs and in domestic programs. I recommended cuts in 17 functions, and I was rejected, which, to me, emphasized the soundness of the Budget Committee's first round of decisions on functional totals. That was the committee's consensus of judgment as to the soundness of those functional totals.

So I say to the Senator, if there are supportable cuts in the functions he has chosen for cuts, supportable cuts, that is, that the Senate as a whole can support, then what I would prefer is to see those cuts applied to the deficit in order to reduce it.

I see no justification to move the savings from the cuts to defense when the Budget Committee has already provided more than the President asked for defense, more than the authorizing committee and the Appropriations Committee have asked for defense, and as much as the Budget Committee—relying on the judgment of those within its membership who have a special background in defense matters—has recommended to the Senate. When we have done that much for defense, we need no more spending for defense. I think defense has to exercise the same kind of budgetary restraint as any other function of the Government, and that is the role, of course, exercised by the Budget Committee in establishing budget targets.

So I do not like transfer amendments whether they come from Senator McGovern or from Senator Tower or from any other Member of the Senate, because the way amendments ought to be addressed are to functional totals on their merits. Let us vote them up or down. Make the case for amendments, vote them up or down, but not try to tie a justification for a cut in one function to a desire for an increase in another. That is no case, in my judgment, for a cut in any function.

The cut ought to be justified on its merits and not on somebody's desire to increase spending elsewhere. If we engage in that kind of practice and transfer amendments become popular around here, manging this budget is going to be a real circus. It is bad enough as it is, but I can just see people picking their particular scapegoats among the functions and tying them to their particular favorites among the functions, and just overwhelming the Senate with transfer amendments of one kind or another. The effect of shifting funds from unpopular programs to currently popular programs will be to produce one giant Christmas tree.

In any case I have indicated my opposition to this amendment. I do not see any particular reason to belabor points that have already been addressed.

Incidentally, there is another point I want to be sure that we cover. My good friend from Texas talked about a huge increase in public assistance.

If he was referring to this budget resolution, there would be no increase in the public assistance mission if it were not for an accounting change; and that is the accounting change which would now treat the refundable portion of the earned income credit as a spending item in the budget rather than as a revenue loss. Except for that—and I will put the amount in the Record——

Mr. BELLMON. It is $900 million.

Mr. MUSKIE. $900 million. Except for that $900 million, which is a bookkeeping change, shifting that particular item from the revenue to the spending side, there is no increase in public assistance in this budget resolution.

If this accounting change is taken into account, there is a net decrease, as a matter of fact, in public assistance of $100 million in budget authority and in outlays.

I think, Mr. President, that covers the points which ought to be made. I can understand Senator Tower's concern. He has had a long standing concern with respect to defense matters. I do not criticize that at all nor do I challenge his right, and, as he may see it, his duty to offer his amendment. But I have tried to answer it on its merits, and on its merits I would oppose it.

Mr. BELLMON. Mr. President, will the Senator yield me 2 minutes?

Mr. MUSKIE. Yes.

Mr. BELLMON. Mr. President, I would like to respond very briefly to some comments made earlier by the distinguished Senator from Nebraska (Mr. Curtis) in discussing this amendment. The Senator referred to some changes in AFDC which need to be made. I think most of us would agree that this is a program that does need careful scrutiny and that some changes are, perhaps, in order. In fact, I have joined in a bill that would propose some changes. But most of the changes in AFDC which the Senator from Nebraska has advocated have already been studied or are now being studied by the Senate Finance Committee. Some of them are included in H.R. 7200, a bill which the Senate Finance Committee has reported.

Unfortunately, the CBO estimate of the net effects of H.R. 7200 on costs is that the bill will actually raise costs by $500 million in fiscal year 1979. Four hundred million dollars of this increase is for fiscal relief which the Senate Budget Committee has not put in its recommendation, in this resolution.

I think it is significant, Mr. President, that the Senator from Nebraska and the Finance Committee have already dealt with a good many of the cost-sharing ideas that have now been proposed, and that rather than save costs the net result when they are all considered is an increase in costs.

So I think here again the Senate Budget Committee tried to be responsible to the best information we could get, and that the figures we have in our resolution reflect the real life situation we now face. If the situation changes, certainly we will be happy to take into account those changes when we look at the second resolution in September.

The PRESIDING OFFICER. Who yields time?

Mr. TOWER. Mr. President, I would point out that if we do not increase the budget, when we come in for our shipbuilding, which is undetermined as yet, precisely what we want to authorize in the way of shipbuilding, that shipbuilding money will have to come out of something else in defense, which means there will be cuts in other defense programs if we follow on with what we consider to be an adequate shipbuilding program. I think that should be borne in mind. And I again remind the Senate that the NATO task force reports have not yet been made available to Congress, and they will set a higher target figure, and that, therefore, we should set a higher target figure for 1979, to give flexibility in 1980 and beyond.

Mr. President, I think we can have a reasonable debate here without escalating the rhetoric. I have not accused anyone of anything. I am certain the Budget Committee acted in good faith, and perhaps on the best available information that they had. But I see nothing wrong with coming to the floor subsequent to committee action and suggesting that there might be a constructive change to be made in it.

I understood that that was what we were all about in this place, that from time to time, after a committee has acted, it is perfectly reasonable and legitimate for Members to propose amendments on the floor, that no committee is possessed of all the knowledge in this world, that committees are not always totally infallible, and that perhaps sometimes suggestions can be made from the floor that improve legislation. It has been done time and again.

I think we ought to have a right to debate the question of budget priorities on the floor of the Senate. I do not accept the notion that the Budget Committee alone can determine what our spending priorities are, and then come to the floor and say, "We should not be questioned; we and we alone, in our omniscience"——

Mr. MUSKIE. Will the Senator yield?

Mr. TOWER [continuing]. "Shall determine what the priorities should be, and we should not be challenged."

Mr. MUSKIE. Will the Senator yield?

Mr. TOWER. I think it is perfectly legitimate to challenge them, as long as we do it in good faith and put forth a reasonable argument.

I am not suggesting that the committee acted in anything but good faith, but I also reserve the right, as a Member of the U.S. Senate, to suggest that changes be made on the floor, and call my col-

leagues' attention to such changes and make arguments for them.

I reserve the remainder of my time; the Senator from Maine can speak on his own time.

The PRESIDING OFFICER. The Senator from Maine.

Mr. MUSKIE. Mr. President, I do not think I have suggested at any time that the Budget Committee's judgment is unchallengeable. If I have said so, I have been peculiarly unpersuasive. Over the last year, and prior to this budget resolution, there have been 13 issues, I think, that have been raised in connection with the budget resolution. I have lost 11 of those 13. So I have been persuaded lately, I say to my good friend, that the Budget Committee is not regarded as unchallengeable. I have a sufficient sense of humility to believe that the Senate is probably right, that we are not unchallengeable.

I certainly recognize the right of any Senator to raise any amendment that he wishes. But does that means that that amendment itself is unchallengeable?

I gather that the Senator's rhetoric expressed considerable indignation because I challenged his amendment. Why should his amendment be beyond challenge, any more than the budget resolution itself should be beyond challenge? Obviously we have differences. All I say to the Senator is that we have provided everything and more that the Appropriations Committee and the Armed Services Committee have requested. Senator BELLMON has confirmed that, the chairman of the Armed Services Committee has literally confirmed it, and the Senator from Texas says, in response, that there are some new reports, some NATO task force reports that ought to be taken into account.

Well, they can be taken into account. But those reports, ordered by General Haig as I understand it, have not yet been approved. I understand that the NATO defense ministers will meet in May in Brussels to consider those reports. I take it in due course there may well be policy decisions agreed to by the members of NATO with respect to those reports.

I cannot imagine the process will move so rapidly as to have a budgetary impact in fiscal year 1979. I would expect that it would have an impact in fiscal year 1980. Surely we have all the procedures, the committees, and the agencies in the executive branch and the Congres itself, to take the reports into account in time to make appropriate decisions for fiscal year 1980. I see no reason for the Senate to act on incomplete information, on reports that have not yet been approved or disapproved, for that matter, by the appropriate authorities. The Senate should not act arbitrarily, because of the existence of reports which may at some point result in policy decisions calling for more spending. The Senate cannot be asked to justify an increase in this year's budget resolution due to these reports at this time.

If we were to act on that kind of information, this whole budget would be larger. The Senator will find in the Budget Committee report analyses of future choices that Congress may have to face involving huge sums of spending in the future. They may or may not materialize. Some of them will in some form. But this budget resolution is not the place to provide for them. We are going to have subsequent budget years in which to do so.

If I understand the Senator's case for his amendment, all there is to it rests not on other committee's recommendations but on reports. NATO Task Force reports that may not yet be completed, that have not yet been acted upon, and that have not yet been implemented. Further, the reports have not yet been subscribed to by the President, the State Department, or our foreign policy decisionmaking institutions. I do not think that is a sufficient basis upon which to change the budget resolution for 1979.

I applaud the Senator's initiative in bringing them to our attention, and I do not resent it or object to it, or object to his offering the amendment; and if he has other amendments I will be glad to discuss those also.

Mr. TOWER. Mr. President, as a practical matter, it has been recommended by many that we increase our military spending in real terms, over and above the inflationary factor, in a magnitude of 3 percent a year, if we are to stay abreast—not to maintain superiority, but to stay abreast—of the military spending of the Soviet Union, which is 40 percent greater than ours, and in investment terms 75 percent greater than ours, if we are going to continue to be able to meet the threat.

The President submitted a budget that was $4 billion below that recommended by his own Department of Defense. A lot of it was achieved by sliding aircraft procurement and procurement of other systems into a subsequent fiscal year.

What I fear we are going to do is to come up later on having to make up for that fact, plus having to refund some additional NATO endeavors which I think are likely to be determined necessary.

It is true that the reports of the task forces have not been acted upon, but, in fact, what I am proposing here is enough flexibility to allow us to act upon them should we need to do so. The fact that we increase the budgetary ceiling for defense, of course, does not mean that we have to spend the money. But it is there for a contingency.

I hope we will seriously consider this.

It may be we are going to hit a big bulge in defense next year. I suggest it is better to go ahead and spend the money now in the interest of preventing large increases from time to time. In fact, by stretching out the production lines on aircraft we save money for this budget year. We can reduce the budget by reducing our aircraft procurement. What we do in the process is pay more money in the long run because, by stretching out the production lines, we increase the per unit cost.

That is a kind of budgetary hanky-panky. I do not blame this on the Budget Committee at all. They have nothing to do with this. They do not look at line items. They look at what we request in total terms. So I do not want to convey the impression that I am sticking this on the Budget Committee. But, in fact, because the executive branch wants to get its budget all in apple pie order they recommend stretching out these production lines, increasing the per unit cost on the aircraft we buy just for the sake of showing some budgetary restraint this year.

I do not think we can continue to do this very long and get the biggest bang for our defense buck, get the best value possible for our military outlays, which I insist we must get when we consider the fact that in investment terms, that is to say in R. & D. test and evaluation, production and procurement, the Soviet Union is outspending the United States 75 percent per annum. I think the American people are concerned about it. If they had a chance to vote on what our priorities should be, the defense of the United States would come right at the top.

I believe we do have to make value judgments about what our spending priorities are. I cannot accept that one Government expenditure is equal to another in importance. It is simply not so.

I think it is high time that we gave some thought—and I am not talking about the Budget Committee but I am talking about the entire Congress of the United States—to what our national priorities should be, and that we start cutting spending on those matters which turn up low on the priority list.

The PRESIDING OFFICER. The time of the Senator has expired. The Senator from Maine has 1 minute remaining.

Mr. MUSKIE. Mr. President, I make three points. One, the Senator made his argument before the Armed Services Committee and was unable to persuade that committee to accept his recommendations. He lost his case there.

The Budget Committee has responded to recommendations of both the Armed Services and Appropriations Committees.

Second, our recommendation already provides for a 5.8 percent real growth in the tactical warfare forces mission. This is the mission which contains NATO forces.

The third point I would make concerns the Army's budget, which is the great bulk of the force modernization required for NATO. The Budget Committee's recommendation provides for 18 percent real growth in the Army procurement account and roughly 7 percent real growth in the Army R. & D. account.

When we say the ceiling ought to be the sky, I can never satisfy that kind of requirement. If we were to give every committee the kind of flexibility we have already given to the defense committees in this budget, the budget would be $36 billion higher.

Mr. TOWER. Will the Senator yield for one brief comment?

Actually, the committee on a tie vote rejected $1 billion more in expenditure than I am recommending here on a 6 to 6 tie. So the Budget Committee was evenly divided on the question of whether or not it should be $132.6 billion.

Mr. MUSKIE. Some committees divide.

The PRESIDING OFFICER. All time

has expired. The question is on agreeing to the amendment.

Mr. TOWER. Mr. President, I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

The PRESIDING OFFICER. The yeas and nays have been ordered and the clerk will call the roll.

The assistant legislative clerk called the roll.

Mr. CRANSTON. I announce that the Senator from South Dakota (Mr. ABOUREZK) is necessarily absent.

Mr. STEVENS. I announce that the Senator from Illinois (Mr. PERCY) is necessarily absent.

I also announce that the Senator from Tennessee (Mr. BAKER), the Senator from Utah (Mr. GARN), and the Senator from Kansas (Mr. PEARSON) are absent on official business.

The result was announced—yeas 21, nays 74, as follows:

[Rollcall Vote No. 138 Leg.]

YEAS—21

Allen	Hatch	Schmitt
Bartlett	Hayakawa	Schweiker
Byrd, Harry F., Jr.	Helms	Scott
	Johnston	Thurmond
Curtis	Laxalt	Tower
Dole	Lugar	Wallop
Ford	McClure	
Hansen	Roth	

NAYS—74

Anderson	Griffin	Morgan
Bayh	Hart	Moynihan
Bellmon	Haskell	Muskie
Bentsen	Hatfield, Mark O.	Nelson
Biden		Nunn
Brooke	Hatfield, Paul G.	Packwood
Bumpers		Pell
Burdick	Hathaway	Proxmire
Byrd, Robert C.	Heinz	Randolph
Cannon	Hodges	Ribicoff
Case	Hollings	Riegle
Chafee	Huddleston	Sarbanes
Chiles	Humphrey	Sasser
Church	Inouye	Sparkman
Clark	Jackson	Stafford
Cranston	Javits	Stennis
Culver	Kennedy	Stevens
Danforth	Leahy	Stevenson
DeConcini	Long	Stone
Domenici	Magnuson	Talmadge
Durkin	Mathias	Weicker
Eagleton	Matsunaga	Williams
Eastland	McGovern	Young
Glenn	McIntyre	Zorinsky
Goldwater	Melcher	
Gravel	Metzenbaum	

NOT VOTING—5

Abourezk	Garn	Percy
Baker	Pearson	

So Mr. TOWER's amendment was rejected.

Mr. THURMOND. Mr. President, I ask unanimous consent that Mr. Twilley of my staff be granted privilege of the floor during consideration and votes on the matter now under consideration.

The PRESIDING OFFICER. Without objection, it is so ordered. Who yields time?

Mr. MUSKIE. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. MUSKIE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MUSKIE. Mr. President, I yield myself 5 minutes for the purpose of engaging in a colloquy with the distinguished Senator from Rhode Island.

Mr. PELL. Mr. President, as chairman of the Subcommittee on Education, Arts, and Humanities, I am deeply concerned that the first resolution on the budget does not contain any allowance for the increased costs of student financial aid programs which are contemplated upon enactment of the President's proposed College Opportunity Act. I am aware of the dialog that took place yesterday between the Senator from Iowa and the Senator from Maine, but I still would appreciate some further reassurance.

I can understand the reluctance of the Budget Committee to include this item in the absence of a formal budget request from the President. However, I am pleased to note that such a request, for an additional appropriation of $1.210 billion for fiscal year 1979, has finally been transmitted to the President of the Senate by the President and the director of the Office of Management and Budget. Therefore, I believe that this request should be reflected in the budget resolution.

The chairman of the Budget Committee noted in his opening statement that the budget resolution includes funds for tax credits but not for the President's bill. It is my hope that this position could be changed and the resolution might be amended to include additional student aid funds, although I recognize the constrictions under which the Senator works.

I add a note here: A letter from the President indicates that it is his firm intention to veto any bill that contains tax credits, so we may well be left in such circumstances that no money at all will be available for helping middle-income Americans educate their youngsters.

Mr. President, I ask unanimous consent to have the letters to which I have referred printed in the RECORD.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

THE WHITE HOUSE,
Washington, April 24, 1978.

The SPEAKER OF THE HOUSE OF REPRESENTATIVES.

SIR: I ask the Congress to consider amendments to the request for fiscal year 1979 appropriations in the amount of $1,210,000,000 for the Department of Health, Education, and Welfare.

The details of these proposals are set forth in the enclosed letter from the Director of the Office of Management and Budget. I concur with his comments and observations.

Respectfully,

JIMMY CARTER.

Enclosures.

OFFICE OF MANAGEMENT AND BUDGET,
Washington, D.C., April 24, 1978.

The PRESIDENT,
The White House

SIR: I have the honor to submit for your consideration amendments to the request for appropriations transmitted in the budget for the fiscal year 1979, in the amount of $1,210,000,000 for the Department of Health, Education, and Welfare. The details of these proposals are contained in the enclosure to this letter.

I have carefully reviewed the proposals contained in this document and am satisfied that these requests are necessary at this time. I recommend, therefore, that these proposals be transmitted to the Congress.

Respectfully,

JIM MCINTYRE.

Enclosures.

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE
OFFICE OF EDUCATION

1979 budget appendix page	Headings	1979 request pending	1979 proposed amendment	1979 revised request
427	Student assistance	$3,278,000,000	$1,140,000,000	$4.418,243,000
	(In the appropriation language under the above heading: delete "$3,278,243,000" and insert in lieu thereof $4,418,243,000; delete "$3,253,843,000" and insert in lieu thereof $4,393,843,000.)			

This proposal would modify the Basic Grant and College Work Study programs to allow for more participation by middle income families. It would result in additional outlays of $166 million in fiscal year 1979.

1979 budget appendix page	Headings	1979 request pending	1979 proposed amendment	1979 revised request
434	Student Loan Insurance Fund	$750,814,000	$70,000,000	$820,814,000
	(In the appropriation language under the above heading: delete "$725,814,000" and insert in lieu thereof $795,814,000.); and delete the period after "Higher Education Act" and insert the following: Provided, That $70,000,000 of this appropriation shall be made available only upon enactment into law of authorizing legislation.)			

This proposal would provide funds to support an additional 403,000 new loans. This will increase outlays in fiscal year 1979 by $50 million.

THE WHITE HOUSE,
Washington.

The PRESIDENT OF THE SENATE,

DEAR MR. PRESIDENT: Today I transmitted to the Congress 1979 requests for appropriations totalling $1.2 billion for the proposed Middle Income Student Assistance program.

These funds are requested on the condition that Congress enact my proposed amendments to the Higher Education Act. I continue to believe that this program will be more effective in bringing assistance to middle income students than any of the proposed tuition tax credit bills, and I intend to veto such tax credit legislation if it reaches my desk.

Respectfully.

Mr. MUSKIE. Mr. President, the Senator and I have discussed this concern, and this colloquy is responsive to the discussion.

The budget resolution does accommodate the Roth college tuition tax credits proposal. I voted against this, as I always have voted against this, but a majority of the committee voted in favor of it. So there is room for it in the budget totals.

With respect to the refundable portion of the tax credit, there is room for it in function 500, the education function.

With respect to the President's program, he had not submitted it at the time we marked up the budget, because he did not want to see both programs approved. He was doing his best to discourage the enactment of the college tuition tax credit program in order to make room for his direct spending program. I did not want to see both programs in the budget resolution.

Whatever happens at the end of the legislative line, whether or not education tax credits or the President's proposal are finally approved by Congress, it seems to me that, in the broad sense, there is room in the budget for some form of college tuition assistance for middle income families. If the education tax credits are finally rejected by Congress, or vetoed by the President with the veto upheld by Congress, the room in the budget for the tuition tax credit could be transferred by the second budget resolution to the spending side of the budget, if that were the will of the committee and if that were the will of Congress.

So, given the dilemma of trying to avoid approving both programs while approving in committee the tax credit program, we could not at this point make explicit provision for the President's program.

Mr. PELL. When is the second budget resolution due for consideration by the Senate?

Mr. MUSKIE. We have to adopt that by the 15th of September; so that by late summer I think we will be marking up the second budget resolution, and we will take into account whatever the status of this particular issue will be at that time.

Mr. MAGNUSON. Mr. President, will the Senator yield?

Mr. PELL. I yield.

Mr. MAGNUSON. Does the program that the Senator from Rhode Island is talking about propose an increase in the amount we are going to appropriate for BEOG's?

Mr. PELL. It would, by about $1.2 billion.

Mr. MAGNUSON. It would increase the BEOG program?

Mr. PELL. It would increase that program by increasing the limitation as to those who are eligible for assistance.

Mr. MAGNUSON. In other words, the eligibility of the BEOG program would be changed so that more middle-class people could take advantage of it—or lower-middle class?

Mr. PELL. Exactly. So that instead of the present cutoff of $12,500 family income it would go up to $25,000, which would be approximately the top limit of those eligible.

Mr. MAGNUSON. Under the BEOG program, I say to the Senator from Maine, we are now contributing within the eligibility BEOG program $1,800 a year.

There has been a discussion that the way to get at it is that instead of having the tax credit to take care of the lower middle class or middle class income people, just liberalize the eligibility under the BEOG program, which would amount, as the Senator says, to $1.2 billion. That legislative program has not been enacted.

Mr. PELL. That is correct.

Mr. MAGNUSON. That would have to come up in a supplemental. I do not think we can put $1.2 billion in the regular bill right now. In fact, I am sure the Appropriations Committee would not do so. Then, that would be plenty of time for the Senator from Maine and our Budget Committee to take a look at whatever is going to be decided by that time. I think it would be unwise to have it in this budget resolution now.

Mr. MUSKIE. Exactly.

Mr. PELL. In other words, the fact that we do not put it in now in no way sets the climate of bias of the Senate against the program to increase the basic educational opportunity grant program.

Mr. MUSKIE. I think there should be and I think there is flexibility to permit Congress as a whole to resolve that issue. However, if the Senate recommendation on this issue should survive the conference with the House, the Congress will have decided through the budget process that it wishes to spend only $0.6 billion on middle income tuition assistance. This amount is not enough to fund the Senator's bill. Of course, the Congress can later decide to change its mind and spend more on college tuition assistance, thereby adding more to the budget deficit.

If Congress makes that choice, the second budget resolution could reflect that increase.

Mr. PELL. I thank the Senator from Maine for this colloquy and for his illumination.

Mr. ROTH. Mr. President, will the Senator from Maine yield?

Mr. MUSKIE. I yield.

Mr. ROTH. Mr. President, I listened with considerable interest to this colloquy. I want to make certain that I am clear in my understanding.

I assume that the provision in the budget resolution that provides for college tax credits has exactly the same strength and support of the Budget Committee that the other provisions have.

When the Senator says that it should be the decision of Congress to go another route in the college tax credit and that the second resolution could meet that change, that is true of any provision in the budget resolution. Is that not correct?

Mr. MUSKIE. I am not sure I understand what the Senator is driving at.

Mr. ROTH. Any provision we have in the budget resolution, whether it is for health, safety, or defense, can be modified between now and the second budget resolution. Is that not correct?

Mr. MUSKIE. Yes. There is no question about that.

Let me say this, because I find that my statements are picked up against me, and I want to be sure that what I say is properly qualified.

The targets we are stating in this resolution, I hope, will have some meaning and will impose some restraint on what we do between now and September.

I would not want to find myself in the position of saying that anything that Congress may want to do, whether or not it was covered by this resolution, can be covered in the second concurrent budget resolution. Otherwise, the target setting would be meaningless. So, it is not in that sense that I made the statement I did to the Senator from Rhode Island.

Mr. ROTH. May I assume what the Senator just said applies to the college tax credit as well as to the other provisions of the budget?

Mr. MUSKIE. The college tax credit is provided for in this resolution.

Mr. ROTH. That is correct.

Mr. MUSKIE. So if Congress in fact enacts the college tax credit, it is already covered by this resolution, and I am sure that would be repeated in the second concurrent budget resolution.

The committee did not include the other proposal, that of the President and Senator PELL. I am simply speculating, in an attempt to respond to Senator PELL's inquiry, as to what may happen, and it seems quite clear that both issues will in some way be considered by Congress and decided.

Congress may conceivably approve both, in which case we would have to make provision for both, or it may choose one as an alternative over the other. It is the tuition tax credit that is already provided for in this budget. If tuition tax credits are rejected either by Congress or by the President, with a veto sustained by Congress, then there will be room for at least part of the other proposal and Congress may or may not approve that.

All I was saying to the Senator from Rhode Island is that in my judgment there is flexibility to deal with any of those eventualities as they materialize.

Mr. ROTH. I agree with what the Senator from Maine is saying. I was making the additional observation that in my judgment, of course, that is true of any provision of the resolution at this stage. It could be modified by the action of Congress at a later time.

Mr. MUSKIE. All right. Maybe I did not understand what the Senator was saying clearly. Yes, I would agree with that statement.

Mr. ROTH. For example, it would even be as it was proposed yesterday where Congress was asked to decide on a $25 billion tax cut effective October 1 as the President proposed. That would be within the budget.

Mr. MUSKIE. No; that would not be within this budget. It would violate the revenue and deficit targets of this budget. Of course, the Congress could choose to change the policy which is inherent in this budget and add to the deficit.

Mr. ROTH. The same thing is true here.

I just want to draw the parallel, that both are subject to subsequent action of Congress.

Mr. MUSKIE. If it were done before the second concurrent budget resolution, it would breach the target set in the first concurrent budget resolution, and the Senate would be asked by myself and Senator BELLMON to take into consideration the fact that the first concurrent budget resolution does not provide or make room for that. The Senate could, of course, then decide that notwithstanding that it would decide to make it effective October 1. The Senator is correct.

Mr. ROTH. I thank the Senator from Maine.

Mr. PELL. I thank the Senator.

The PRESIDING OFFICER. Who yields time?

● Mr. HATHAWAY. Mr. President, I have a couple of questions regarding the provisions of the pending budget resolution with respect to function 500 as it relates to education. Specifically, I am concerned with the totals including for budget authority and outlays for the elementary, secondary, and vocational education accounts and those for higher education.

In the report accompanying Senate Concurrent Resolution 80, it is stated that the committee recommends budget authority of $12.2 billion and outlays of $10.9 billion. The report on page 116 states that these totals should be sufficient to accommodate increases in title I of the Elementary and Secondary Education Act and to provide increases in other programs such as Head Start and Emergency School Aid.

Mr. President, I am concerned with this report language as it relates to career education, and particularly to funding of the Career Education Incentive Act. This legislation was signed into law on December 13, 1977, after having been approved unanimously by this body, with the unanimous cosponsorship of the Senate Committee on Human Resources.

The Committee on Human Resources included in its recommendations to the Budget Committee as a specific highlighted item in function 500, funds for implementing this act. It recommended an earmarked $120 million in budget authority to accommodate $40 million in fiscal year 1979 program funding, and $80 million in fiscal year 1980 forward funding. These would require outlays of $18 million.

Likewise, for the higher education account for postsecondary career education, this committee recommended $10 million budget authority, and $8 million in outlays.

These same recommendations were transmitted as a joint letter to all members of the Labor-HEW Subcommittee and signed by a number of my distinguished colleagues.

Mr. President, I ask that this letter be printed in the RECORD at this point.

The letter follows:

COMMITTEE ON HUMAN RESOURCES,
Washington, D.C. February 28, 1978.

Hon. WARREN G. MAGNUSON,
Chairman, Committee on Appropriations, Washington, D.C.

DEAR MAGGIE: During the upcoming deliberations of the Subcommittee on Labor HEW with respect to further FY 1978 supplementals and FY 1979 appropriations, we urge your favorable consideration of sufficient funds to implement the Career Education Incentive Act (P.L. 95-207, enclosed). This legislation was signed into law by the President on December 13, 1977.

The Act proposes a fundamental and necessary refocusing of our educational system on the world of work. It received the strong support of every major education group, organized labor, the Chamber of Commerce, the NAACP, women's groups, and many other groups.

Nonetheless, the President's Budget as submitted to Congress contains no funds to implement this Act. Rather, the Budget proposes level funding for FY 1979 of $10,135,000 for a continuation of career education demonstration under the prior existing statutory authority contained in Section 406 of the Special Projects Act.

It was Congress' determination that sufficient demonstration had occurred over the past seven years, involving over $200 million in Federal funds, and projects in virtually every state. What was needed at the elementary and secondary levels was not further demonstration but implementation. The overwhelming votes in the House and the unanimous support of the Senate underline this determination.

P.L. 95-207 authorized $50 million for FY 1979, $100 million in FY 1980 and FY 1981, $50 million in FY 1982 and $25 million in FY 1983 for elementary and secondary career education implementation, and mandated that these funds be distributed on a formula basis to all states and territories. It also authorized $15 million in FY 1979 and each year thereafter through FY 1983 for postsecondary demonstration projects.

The Career Education Incentive Act provides short term catalytic Federal funding to the states to allow for full implementation of career education at the elementary and secondary levels and confines demonstration solely to the post-secondary level. The bill is specifically worded to require that Federal funding increase gradually, then decline and ultimately phase out at the end of five years, while state and local funds increase concomitantly.

The law was purposefully drafted to require that no funds could be appropriated in any years subsequent to FY 79 unless some appropriation had occurred in the prior year, in order to insure that the integrity of this structure be maintained.

It is therefore critically important that an appropriation be made for the FY 79 initial program year, either through a FY 78 supplemental appropriation, to provide the benefits of forward funding, or through inclusion in the FY 79 Labor-HEW Appropriation bill. The former course would allow the state and local educational agencies to know in advance what their formula allotments would be and to plan accordingly. In fact, the law mandates forward funding of program years FY 80-83, consistent with other education legislation. Thus program funds for FY 80 must be included in the FY 79 Labor-HEW appropriation.

Given the onging problems of youth unemployment, its effect on our national economy, and the tremendous waste of human potential through misdirected pursuit of unpromising or nonexistent career opportunities, the modest level of funding required for this Act would justify itself many times over by any criteria of effectiveness. But a particularly clear benefit flowing from implementation of this legislation would be a greatly decreased need for Federal programs which are essentially Band-aid in nature—unemployment compensation, youth jobs programs, and so on. Rather, by providing each of our students from the earliest grades onward with the skills and experience to seek and retain productive and meaningful employment, we would finally be implementing a strategy intended to eliminate the causes of these societal problems. On this basis, it would seem that any budgetary considerations would further heighten the need for these funds.

We therefore urge you to give strong consideration to including in an FY78 supplemental appropriation not less than $40 million for elementary and secondary career education implementation and not less than $8 million for post-secondary demonstration programs for the FY79 program year of the Career Education Incentive Act. At the same time, we urge that the FY79 Labor-HEW bill include as forward funding for the FY80 program years not less than $80 million for elementary and secondary implementation and not less than $10 million for post-secondary demonstration. Both program years could be included in the FY79 Labor-HEW bill, but as pointed out, this would be less advantageous to the school districts involved.

If members of your staff have further questions or need additional information, they should contact John Doyle at 4-2095.

Sincerely,

Harrison A. Williams, Jr., chairman, Committee on Human Resources, William D. Hathaway, Alan Cranston, Robert T. Stafford, Jennings Randolph, S. I. Hayakawa, Gary Hart, Orrin G. Hatch, Claiborne Pell, Chairman, Subcommittee on Education, Arts and Humanities, Donald W. Riegle, Jr.

Mr. HATHAWAY. Mr. President, these sums were agreed to unanimously by the Committee on Human Resources and transmitted to the Budget Committee on March 15. On that same day I testified before the Subcommittee on Labor-HEW of the Committee on Appropriations, chaired by the distinguished Senator from Washington (Mr. MAGNUSON).

On that occasion, Chairman MAGNUSON indicated his interest in providing funds to implement this important act, and the distinguished Senator from Pennsylvania (Mr. SCHWEIKER), a cosponsor and strong supporter of the bill, indicated his interest as well. While final action of that committee will await its formal markups in May, at this point I am reasonably optimistic that sufficient funds will be made available.

My question then, Mr. President, on which I would appreciate hearing the response of the distinguished chairman of the Budget Committee, is whether the totals included in Senate Concurrent Resolution 80 and the accompanying report language, present any problems in this regard?

Mr. MUSKIE. In arriving at functional

totals in function 500 the committee did not specifically assume any amounts for career education. We did assume a full $1 billion increase over fiscal year 1978 appropriation for elementary, secondary education and additional moneys for higher education as well. The final distribution of all these funds is, as you know, up to the Appropriations Committee. However, if the Appropriations Committee does choose to fund the Career Education Act, it will have to take these funds from other education programs that were assumed by the Budget Committee under this resolution, such as Head Start, emergency school aid or the expansion for the title I program.

Mr. HATHAWAY. Is it then correct to assume that the failure of the Budget Committee's report to mention career education in no way was intended to prejudice the deliberations of the Appropriations Committee in this regard?

Mr. MUSKIE. That's correct.

Mr. HATHAWAY. I thank my friend and colleague for clarifying this matter.●

UP AMENDMENT NO. 1248

Mr. HARRY F. BYRD., JR. Mr. President, I send to the desk an amendment and ask that it be stated.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from Virginia (Mr. HARRY F. BYRD, JR.) proposes an unprinted amendment No. 1248.

On page 1, line 11, strike "$566,100,000,000" and insert in lieu thereof "$565,350,000,000"

On page 2, line 23, strike "$12,800,000,000" and insert in lieu thereof "$12,050,000,000"

The PRESIDING OFFICER. The Senator from Virginia.

Mr. HARRY F. BYRD, JR. Mr. President, the concurrent resolution now pending, in the section dealing with international affairs; namely, function 150, provides for new budget authority of a year ago of $8 billion. "That represents a 60-percent increase. But of that, part is for military sales and credits.

My proposal would reduce the total for the function of international affairs from $12.8 billion to $12.05 billion. In other words, it would be a reduction of $750 million.

This reduction amounts to 5.8 percent of the total of the budget authority for this function.

The objective is to reduce U.S. contribution to international financial institutions. Under Senate Concurrent Resolution 80, the U.S. contribution to these international banks would rise by $1.2 billion or 64 percent over 1978 budget authority.

I just think, Mr. President, that is unreasonable. This country has a lot of problems of its own. Besides that, this Government has a lot of problems of its own.

I am not sure that Washington realizes it. But I think the people throughout our Nation realize that continued and accelerated Government deficits represent the major cause of inflation.

I was interested in the Gallup poll, the results of which were published yesterday. The Gallup poll has been proven quite accurate in the past. The Gallup poll shows that the people of this country by a 9 to 1 ratio would prefer controlling inflation to a tax cut.

That is to me significant. I think most Americans feel that our taxes are too high. I think most Americans would like a tax cut. But most Americans, unlike most in Washington, realize that we cannot effectively reduce taxes unless we simultaneously get Government spending under control.

And just how one can justify increasing the contributions to the international financial institutions, through the use of tax funds, by 64 percent in this year is beyond me.

Of course, those who favor this huge increase will say, "Well, it is to help the developing countries; it will help other countries, and we need to do that."

Well, Mr. President, our Nation for the last 30 years has poured approximately $200 billion of American tax funds into helping other nations. We have a good record in that regard. I think somewhere along the line this Congress has to decide that there is a limit beyond which the use of American tax funds for foreign countries, to give away to foreign countries, must not go.

A $750 million reduction is what this amendment proposes. If this amendment is adopted, it would still leave an increase of about $2.5 billion in international affairs function, and also leave an increase for the international financial institutions.

Mr. President, in regard to these financial institutions, as we know, this money is turned over to foreign governments. Congress has no control.

I cannot prove it, but I am convinced that a great deal of this money turned over to foreign governments is being siphoned off by the leaders of some of those countries and is not being used for the purpose which Congress intended.

Another aspect of this question of appropriating funds to international financial banks is that when Congress reduces the requests that are made on behalf of the international financial banks for appropriations, the next year the administration comes in and adds back the figure that Congress had refused to appropriate the year before.

Unless Congress takes this matter seriously, this matter of vast tax funds that are being funneled into the international financial institutions, there will be no limit as to the vast amounts that will go to these international banking institutions.

I think this amendment is a reasonable one. I will say again that the total function carries a figure in the concurrent resolution of $12.8 billion, and this would reduce it by 5.8 percent or a total of $750 million.

I reserve the remainder of my time.

The PRESIDING OFFICER. The Senator from Maine.

Mr. MUSKIE. Mr. President, first, some general observations, if I may. The amendment of the distinguished Senator from Virginia is intended to reduce our contributions to international financial institutions such as the World Bank, the Inter-American Bank, the Asian Development Bank.

These, of course, are multilateral institutions created by us, in concert with other nations, to carry out the international community's view of its responsibility toward developing countries. Our relations with these countries affect our security interests as well as the shape of the world in which we live. It is not a responsibility to be taken lightly or a national interest to be ignored.

We have struggled over several years now since World War II to find effective ways to advance that interest, to safeguard it, without abusing our taxpayers or without contributing to unwise ventures abroad.

For as long as I have been in the Senate, we have come increasingly to regard multilateral institutions like these international financial institutions as one of the better ways to discharge this international responsibility.

These funds are not turned over to foreign governments by us but are turned over to these international banks. As I understand it, most payments by the banks are made on vouchers representing actual contracts.

For example, our contribution to the World Bank is 23 percent. It just happens that 25 percent of the purchases made by the World Bank is made in America, purchases of American goods. So I think it is correct to say, and it should be clearly stated in the RECORD, that these funds are not turned over for the arbitrary use of foreign governments, but are funneled through multilateral institutions to be handled in a responsible way. These funds are used with precision to advance the objectives for which we make the contributions. I think that ought to be made clear.

Now, Mr. President, I understand that it is not easy to make the case for this commitment of national resources. I know the distinguished Senator from Hawaii (Mr. INOUYE) has struggled with this problem. I think he has made tremendous accomplishments over the years he has had the responsibility for the Foreign Operations Subcommittee of the Appropriations Committee. I am delighted to see him on the floor at the present time.

To return to this amendment and our relationship to the international banks, let me say this: The other day the Senator from Virginia and I had some discussion as to how we became involved in these commitments. Well, these commitments, of course, are the result of agreements with the banks entered into by our Secretary of the Treasury and agreements by the finance ministers of the other member countries of these banks. The commitment is then reduced to writing in the form of a letter.

I have here, for example, a letter dated November 28, 1977 from the Secretary of the Treasury, W. Michael Blumenthal, to the Honorable Robert S. McNamara, President of the International Development Association, which represents our commitment to the fifth replenishment of IDA, the soft loan window of the

World Bank. The letter by its express terms indicates that this commitment is subject to obtaining the necessary appropriations. But, nevertheless, it is a commitment, and it is a commitment which the other member countries have kept to date.

I ask unanimous consent that the letter be included in the RECORD as evidence of the form which our commitments take.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE SECRETARY OF THE TREASURY,
Washington, D.C., November 28, 1977.
Hon. ROBERT S. MCNAMARA,
President,
International Development Association
Washington, D.C.

DEAR MR. MCNAMARA: As United States Governor, I hereby cast the votes of the United States in favor of Resolution No. 102 of the Board of Governors of the International Development Association.

The United States hereby agrees to pay, in accordance with the terms of Resolution No. 102, to the International Development Association the sum of $800 million. The United States also agrees, subject to obtaining the necessary appropriations, to pay to the Association an additional sum of $1.6 billion, in accordance with the terms of the aforesaid Resolution.

Sincerely yours,
W. MICHAEL BLUMENTHAL.

Mr. MUSKIE. I also ask unanimous consent to have printed in the RECORD a letter from Mr. Blumenthal's predecessor as Secretary of the Treasury, William E. Simon, representing our commitment to the Fourth Replenishment of IDA, illustrating the way in which commitments are entered into.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

JANUARY 17, 1975.

Hon. ROBERT S. MCNAMARA
President International Development Association, Washington, D.C.

DEAR MR. MCNAMARA: As United States Governor, I hereby cast the votes of the United States in favor of Resolution No. 92 of the Board of Governors of the International Development Association.

The United States hereby agrees to contribute to the International Development Association the sum of $1,500,000,000 as provided in Resolution No. 92, to be paid in four installments of $375,000,000 each, beginning in fiscal year 1976. Letters of credit for each of the installments will be delivered only after enactment of an appropriation therefor. The requirement of Congressional action on appropriations from customary United States legal procedures.

Sincerely yours,
WILLIAM E. SIMON.

Mr. MUSKIE. Mr. President, in my judgment Congress should consider following through on these commitments, as Congress has the responsibility and obligation to do or not to do. To do otherwise, in my judgment, would break faith with other foreign assistance donors.

The United States has been successful in encouraging other nations to share the burden of development assistance. We have championed "burden-sharing," and we have led other nations in that respect. As a result, over the past decade, the American share of worldwide aid has steadily dropped in coordination with increases by other donors. In other words, it has served our interest to get other countries involved. They have become involved, and the result of that has been to reduce the burden on ourselves by sharing it with others. It is in the spirit of that burden sharing that other countries have made their commitments and kept them. We are the only member country which has not, at this point, fully met its IDA IV commitment. The other member countries have kept their commitments in the 3-year time frame, and one country in 4 years. We have not yet fully met that commitment.

The amendment of the Senator from Virginia would, in effect, unilaterally terminate U.S. contributions already agreed to. It would severely damage current U.S. efforts to increase overall development assistance while slowly reducing the U.S. share. The proper time for such an amendment, Mr. President, in my judgment, is not the unilateral course advocated today, but is when authorizations for new multilateral agreements come before the Senate.

If we have decided not to keep our commitments to other countries, we ought at least to put them on notice. That could be our posture the next time around. Let us not, however, renege on our commitments at this time.

Mr. President, the committee's recommendation already assumes a reduction of $600 million in budget authority from the President's request of $5.5 billion for economic development assistance. This is a significant cut, at a time when the President and the American people recognize the interdependence of the United States and many developing nations, and seek to improve human rights. A further cut in the International Affairs function could reduce the President's options as he deals with developing nations, and undercut the executive-legislative human rights policy.

The next point I would make, Mr. President, is that the middle income developing countries, which would be affected by cuts in foreign assistance, are the fastest growing market for American exports. Further cuts in the International Affairs function would reduce the amount of long-term loans for the multilateral development banks. This reduction could constrain the growth of American export markets in the middle income developing countries.

So on both counts, Mr. President, it is in the national interest to oppose this amendment. I ask unanimous consent to have printed in the RECORD at this point a memorandum which I inserted in the RECORD the other day, but which I think would be useful to the reader of the RECORD if inserted again at this point, describing IDA IV and IDA V and how they relate to this budget resolution.

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

MEMORANDUM

To Senator MUSKIE.
From Charles Flickner.
Date April 24, 1978.
Subject The Difference Between IDA IV and V.

The terms IDA IV and IDA V refer to the fourth and fifth replenishments of the International Development Bank (IDA), the soft-loan window of the World Bank. "Replenishment" is the technical term for a multiyear schedule of donations by the wealthier nations (mostly in North America, Europe, and East Asia) which belong to the World Bank and the regional development banks. The total amount, individual country shares, and length of each replenishment are decided at a special negotiating session by designated finance ministry officials. The results of the session are submitted to governments (and their legislatures) for approval; agreements go into effect only afterwards.

The authorization for the U.S. to enter into IDA IV was enacted in 1974 (P.L. 93-373). It committed the U.S. to provide $375 million a year for four years, for a total of $1.5 billion. The other donor countries extended their donations over three years, beginning in 1975. The U.S. insisted, however, on a four-year donation schedule starting in FY 1976. In part, this U.S. decision was due to a desire to prevent overlapping between IDA IV and the final installment of IDA III, due in FY 1975. For IDA IV, the other donor countries completed their contributions on schedule in FY 1977.

During the first two years of IDA IV, FY 1976-77, Congress met the U.S. commitment, but on a delayed basis, as shown on the following table:

(Dollars in millions)

	Enacted	Request
FY 1976 foreign assistance appriation bill	320	375
FY 1977 foreign assistance appropriation bill	375	430
FY 1977 supplemental appropriation bill	55	55

The final two years' funding for IDA IV ran into trouble in Congress in FY 1978 when the Executive branch negotiated IDA V and asked Congress to begin the Fifth IDA Replenishment (IDA V). the final two installments of IDA IV were due in FY 1978 and FY 1979.

The IDA V replenishment, fully authorized in 1977 (P.L. 95-118), was for the first time formally made subject to subsequent appropriations action. The U.S. share of the $7.3 billion total replenishment was 31 percent, or $2.4 billion. The payments were spread over three years, for an annual request of $800 million. The other donor nations, led by the West Germans, structured the IDA V agreement so that if the U.S. failed to pay its share in any year, the agreement would lapse. For this reason, the Carter Administration has concentrated on security funds for IDA V at the expense of the remaining installments of IDA IV. Every other donor has completed payment on IDA IV.

During the FY 1978 appropriations process, the Administration requested $1,175 million ($375 million, IDA IV and $800 million, IDA V), but received only $800 million for IDA V. The Senate Committee on Appropriations reported a foreign aid bill which included $950 million for IDA (150 million IDA IV and $800 million IDA V). On the Senate floor, a threat by Senators Allen and Harry Byrd to offer and debate at length 39 amendments to the Foreign Assistance Ap-

propriation Bill resulted in an agreement to cut the development banks. The two Senators mentioned above, the Committee, and the leadership agreed to amend and lower the amounts for most of the development banks. For IDA, the decision was made to eliminate the remaining $150 million for IDA IV in the Committee bill. This is the Senate decision Senator Harry Byrd referred to on the floor today.

The floor manager did not strongly resist the elimination of IDA IV from the FY 1978 bill because he hoped to encourage the World Bank into accomplishing management reforms and savings. The Inouye Subcommittee has held hearings this session on the $375 million due to IDA IV in FY 1978 and the final $375 million due this year. Both are part of the President's total FY 1979 request for IDA, which also included the second $800 million for IDA V. If the Subcommittee is satisfied with World Bank management reforms and savings, all of IDA V and at least part of IDA IV is likely to be reported by the Committee in the FY 1979 appropriations bill.

Mr. MUSKIE. In addition, Mr. President, I ask unanimous consent to have printed in the RECORD the Treasury Department's justification for the fiscal year 1979 appropriations, which includes a table outlining in detail the commitments to which we are a party.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

INTERNATIONAL DEVELOPMENT ASSOCIATION JUSTIFICATION FOR FY 1979 APPROPRIATIONS

The International Development Association (IDA) is the concessional lending affiliate of the World Bank Group. It was established largely at the initiative of the United States in 1960 to finance high priority economic development projects in the less developed IBRD member countries, since the normal IBRD lending terms, at near-market interest rates are not appropriate to these countries. It does this by providing long term credits at a nominal service charge. As of September 30, 1977 IDA had 118 member countries and had made cumulative credit commitments of $11,372 million of which $7,771 million had been disbursed.

U.S. membership in the International Development Association and an original subscription of $320 million were authorized in June 1960 (PL 86-565). The United States joined the Association in August 1960. The amount of the original subscription was appropriated and contributed in five annual installments (PL 86-651, PL 87-329, PL 87-872, PL 88-258, and PL 88-634).

Agreements have been reached by developed member countries to replenish the resources of IDA on five subsequent occasions. The United States has participated in all of the replenishments.

The fourth replenishment negotiations for an increase in IDA resources of $4.5 billion were completed in 1973. The United States share of the increase was $1.5 billion, or 33% of the total, payable in four equal annual installments of $375 million. The first $375 million installment was requested in FY 1976, of which $320 million was appropriated (PL 94-330). In FY 77, $430 million was requested, of which $375 million was appropriated in the Foreign Assistance Appropriations Act for FY 1977 (PL 94-441), and $55 million was appropriated in a Supplemental Appropriations Act for FY 1977 (PL 95-26). In FY 78, $375 million was requested as the third U.S. contribution to IDA IV, but none was appropriated by the Congress.

All commitment authority available under IDA IV was to be exhausted by June 30, 1977. International negotiations for a fifth replenishment of IDA resources were completed in the spring of 1977. The replenishment size agreed to was $7.6 billion, of which the U.S. share was $2.4 billion or 31.4 percent of the total—the lowest U.S. share yet for an IDA resource mobilization. The U.S. received authorizing legislation (PL 95-118) in 1977 for its share of the IDA V replenishment. The Congress appropriated $800 million as the first tranche of the U.S. contribution to IDA V in the FY 1978 Foreign Assistance Appropriations Act (PL 95-148).

In FY 1979 the U.S. is requesting $1,550 million for IDA—consisting of $750 million for the third and fourth (and final) contributions to IDA IV and $800 million as the second of three equal annual installments to IDA V. Full appropriation is required of the IDA IV funds to complete the U.S. contribution to that replenishment and of the IDA V funds to trigger the availability of $1.7 billion in funds from other donor countries.

INVESTMENT IN INTERNATIONAL DEVELOPMENT ASSOCIATION: TREASURY DEPARTMENT—FUNDS APPROPRIATED TO THE PRESIDENT, INTERNATIONAL DEVELOPMENT ASSOCIATION

[1] Total 1979 Request for International Development Association is 1,550 thousand.

Mr. MUSKIE. I will close, Mr. President, by referring to a speech made last week, in Vancouver at the annual meeting of the Board of Governors of the Inter-American Development Bank. This is a speech by Horst Moltrecht, temporary alternate governor for the Federal Republic of Germany and Under Secretary of the Ministry of Economic Cooperation, at the Second Plenary Session.

Mr. Moltrecht, on page 2 of his statement, has this to say about the failure of other governments to meet their commitments to these international financial institutions:

> . . . despite the Bank's sound financial structure and its commendable lending policy, there are, in some areas, signs of developments which give rise to some concern. Already at the IDB's last Annual Meeting in Guatemala City, we expressed certain misgivings that agreed replenishment commitments were not implemented, commitments made in parallel to those of the nonregional countries. Interim solutions should not be allowed to obscure the need for an early and complete settlement of the questions on hand. It is, in my opinion, urgent for all members countries, to meet their obligations to the Bank at the appointed time. Otherwise, we might be faced with situations in which the Bank becomes unable to continue its operations. Also from the point of view of Parliaments in member countries, it is indispensable that all members take part on an equal footing and with equal obligations in accordance with certain principles. This applies not only to the IDB, but to all multilateral finance institutions. On the eve of new demands for replenishment, it is extremely difficult for the Government of the Federal Republic of Germany to explain to its Parliament the present situation which is marked by a lack of funds at the soft loan windows of the multilateral finance institutions due to failing contributions of one major donor country.

That one major donor country which has failed to meet its commitment made on a partnership basis with these other countries is the United States of America.

What the West German delegate is saying to us is that if we do not continue to meet the commitments that our leadership role has brought to us and other countries, that failure may well signal the destruction of these international financial institutions and the purpose which they were created to meet. It is a serious matter. It is not a popular matter at the grassroots level in this country, and not an easy case to make. But a responsible country, Mr. President, must recognize this kind of responsibility, and it is for that reason that I urge the rejection of the amendment of the Senator from Virginia.

Mr. BELLMON. Mr. President, I ask unanimous consent that Mr. Larry Howell of Senator STEVENS' staff have the privilege of the floor during the further debate on the budget resolution.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BELLMON. Mr. President, I can understand and readily sympathize with the position taken by the distinguished Senator from Virginia. Foreign aid, so-called, is not particularly popular in my own State. In fact, I think most candidates who have run for office, when given the opportunity, have taken positions against foreign aid.

I would also agree with the Senator from Virginia that we ought to, and I think we should and will, provide for additional oversight of these various multilateral institutions. I think it is wrong for us not to require that they report to Congress in a regular manner, so that we can—

Mr. HARRY F. BYRD, JR. Will the Senator yield at that point?

Mr. BELLMON. I am happy to yield.

Mr. HARRY F. BYRD, JR. I am sure the Senator is aware that the President of the World Bank has refused to appear before any committee of Congress.

Mr. BELLMON. I am aware of that, but I am sure if we require it as a condition of getting the money, they would be willing to appear.

Mr. HARRY F. BYRD, JR. Exactly. The Senator is exactly right. Will the Senator from Oklahoma join me in putting in an amendment to that effect?

Mr. BELLMON. I will be glad to join the Senator in an amendment requiring that they submit regular reports to Congress of what they are doing with the money, so that we will be in a better position to know where we are than we are now. I will be glad to work with the Senator from Virginia on that.

Our Budget Committee figures cut down the funding for the bilateral foreign aid accounts, down from the 20 percent growth requested by the President and the authorizing committees for fiscal year 1979 to 5 percent. We did not give them anything like all they asked for.

We did not give them anything like they asked for.

Mr. HARRY F. BYRD, JR. Will the Senator yield at that point?

Mr. BELLMON. I will be happy to yield.

Mr. HARRY F. BYRD, JR. As I understand, in this concurrent resolution we cannot do that. It is by function, not by line item.

Mr. BELLMON. We took this into account. We do not line item.

Mr. HARRY F. BYRD, JR. So there is no reduction insofar as function is concerned.

Mr. BELLMON. But in reaching the total for the function, we took into account that we are providing not a 20-percent growth as the President recommended, but a 5-percent growth. That is the way we reached the program total.

Also, the programs that Senator BYRD's amendment would impact involve, as the chairman has said, international lending institutions which provide funds for the median-income nations, where we are developing a very considerable market for our exports. We certainly need, in light of the huge costs of imported crude oil, to export wherever we can and to earn as much foreign exchange as possible. These countries already account for about one-fifth of our exports and that figure is going up rapidly. They are our fastest growing market for exports, and if we are not careful we could hurt those markets and in fact inflict great damage on ourselves.

So while I have not been always the greatest supporter of foreign aid, I do feel the figure that the Budget Committee has developed here is realistic. I will support that figure and oppose the amendment of the Senator from Virginia.

Mr. HARRY F. BYRD, JR. The Senator from Maine read a letter, about which I am not exactly clear.

Mr. MUSKIE. There are two letters in the record. One is from Secretary Blumenthal.

Mr. HARRY F. BYRD, JR. This one was from a foreign source.

Mr. MUSKIE. That was not a letter. It was a speech.

Mr. HARRY F. BYRD, JR. Who made the speech?

Mr. MUSKIE. I will give the name again. This document in my hand includes speeches made at the annual meeting of the Board of Governors of the Inter-American Development Bank in Vancouver, in April of this year. This particular speech, which was given on the 2d or 3d of May, was made by Mr. Horst Moltrecht, temporary alternate Governor of the Federal Republic of Germany, Undersecretary of the Ministry of Economic Cooperation. We are represented on the Board of Governors as well.

Mr. HARRY F. BYRD, JR. Would the Senator state for the record how much West Germany has put up?

Mr. MUSKIE. We would have to dig for the number. West Germany has fully subscribed. I will have the number for the Senator as soon as I can get it.

Mr. HARRY F. BYRD, JR. In that connection, and this might save time, the Senator from Maine mentioned those countries which are supplying funds to IDA. If we could have a list of those countries and how much each country is putting up, I think it would help us in our deliberations.

(Mr. HUDDLESTON assumed the chair).

Mr. MUSKIE. The document I have here is the annual report of the Inter-American Development Bank. I will respond to the Senator's question with respect to shares in that bank.

Mr. HARRY F. BYRD, JR. I was really more concerned with IDA.

Mr. MUSKIE. I will give the other, too. Incidentally, we do have a report from the World Bank.

Mr. HARRY F. BYRD, JR. Yes.

Mr. MUSKIE. With respect to the Inter-American Development Bank, this was the first year that European countries contributed. On page 112 of the report is a statement of subscriptions to capital stock. With respect to the United States, the figure is $399 million, and with respect to Germany it is $63 million, for 1977.

Mr. HARRY F. BYRD, JR. What is the total subscription?

Mr. MUSKIE. The previous year, 1976, Germany's portion was $63 million and the United States was $399 million.

The total subscription in 1977 was $1,162 million.

There are, in all, 18 contributing countries to the Inter-American Development Bank. Venezuela, for example, in 1977, contributed $192 million. That is the next largest. Canada, $130 million.

Mr. HARRY F. BYRD, JR. What was the United States?

Mr. MUSKIE. $399 million. Venezuela was $192 million; Canada, $130 million; France, $61 million; Germany, $63 million; Italy, $61 million; Japan, $68 million; Spain, $61 million; United Kingdom, $61 million, and there are others in smaller amounts.

Mr. HARRY F. BYRD, JR. Wait just a minute. I will go back to my original thought. The United States, as I understand it, in that speech was berated at the conference by the representative of West Germany.

Mr. MUSKIE. Was what?

Mr. HARRY F. BYRD, JR. Was berated.

Mr. MUSKIE. I thought his remarks were very modest. What he was saying was, "Look, the rest of us have made our full commitments. What we are saying is if you do not meet your full commitments, it is hard for us to go back to our parliaments to get contributions." That is a statement of fact. I do not think that is berating the United States any more than the Senator from Virginia is berating them for expecting us to meet our commitment.

Mr. HARRY F. BYRD, JR. I will withdraw the word "berated." I will say the representative of West Germany was somewhat critical. Would that be a good word?

Mr. MUSKIE. I thought he was stating a fact. Maybe I added emphasis, because I tend to be a provocative speaker sometimes, which he did not intend. But if the Senator will read his words, and they are in the RECORD, I think it is a moderate recognition of the fact. It is almost like not wanting to recognize a sin when you see it. It is a very moderate recognition of the fact that we have not made our commitment and that his and other countries have.

Mr. HARRY F. BYRD, JR. Let us put it this way: He was less than enthusiastic.

Mr. MUSKIE. Just as I am less than enthusiastic about the Senator's amendment, but I am not berating the Senator. There are times when the Senator may think I am berating him, but I do not think I have been on this one.

Mr. HARRY F. BYRD, JR. I will be glad to withdraw the word "berated."

In any case, the statement was made by a representative of a country which put up approximately 5 percent and the United States is being called upon to put up more than 30 percent.

Mr. MUSKIE. Let me point out to the Senator that is the Inter-American Bank, which is in our hemisphere. That is the first time European countries have contributed to this bank in our hemisphere. It was the first time they were allowed to contribute. Rather than being critical of their contribution, it seems to me we ought to recognize that they made a positive contribution. I think it is a pretty good start in a new partnership.

(Mr. MELCHER assumed the chair.)

Mr. MUSKIE. With respect to the World Bank, it is a much larger list of countries, may I say. I have a list of the amounts paid in as of the end of the Bank's fiscal year, on June 30, 1977.

There are two pages of countries listed, as the Senator can see.

Mr. HARRY F. BYRD, JR. If we could have first the total.

Mr. MUSKIE. The total amounts paid in in 1977: $3,086,925,000.

Mr. HARRY F. BYRD, JR. And how much of that did the United States pay?

Mr. MUSKIE. The United States paid $780,869,000; Federal Republic of Germany, $164,703,000.

Mr. HARRY F. BYRD, JR. That $780 million the United States put up is the total amount the United States was, presumably, obligated to put up?

Mr. MUSKIE. The total amount, including guarantees, of the American subscription is $6,473,000,000.

Mr. HARRY F. BYRD, JR. That is what the United States has already put up?

Mr. MUSKIE. Yes, this is the total subscription of the United States up to June 30, 1977. That is $6,473,000,000.

Mr. HARRY F. BYRD, JR. And what country has put up the next largest item?

Mr. MUSKIE. With respect to subscriptions?

Mr. HARRY F. BYRD, JR. I think the Senator was giving me the total of everything, was he not?

Mr. MUSKIE. We have shifted from what was paid in in 1977 to the total subscription, including callable capital or guarantees. Does the Senator want to go back to the first?

That first total, money actually paid in, was $3 billion by the end of fiscal year 1977.

Mr. HARRY F. BYRD, JR. Of which the United States paid $780 million?

Mr. MUSKIE. Yes. If we want to look at the total subscription, that is $25,581,000,000, of which the United States subscribed $6,473,000.

Mr. HARRY F. BYRD, JR. Which is 25 percent of the total?

Mr. MUSKIE. Twenty-five percent, which is about the figure I used earlier.

With respect to the next largest, right above, the United Kingdom is $2.6 billion. This is on total subscription. The German Republic is $1.365 billion. France is $1.279 billion. Japan is $1.23 billion.

I ask unanimous consent that the full table be printed in the RECORD at this point.

There being no objection, the tables were ordered to be printed in the RECORD, as follows:

STATEMENT OF SUBSCRIPTIONS TO CAPITAL STOCK AND VOTING POWER

Mr. MUSKIE. There are all the numbers. I do not undertake to read them all.

(Mr. BUMPERS assumed the chair.)

Mr. HARRY F. BYRD, JR. Can we get to the question of IDA, which is separate?

Mr. MUSKIE. The International Development Association is the next item of discussion?

Mr. HARRY F. BYRD, JR. Yes.

Mr. MUSKIE. The total subscription as of June 30, 1977, is $10,361 million. I shall not add the other numbers.

The U.S. contribution is $3,999 million; the next largest is United Kingdom, $1,209 million. The third largest is the Federal Republic of Germany, $1,095 million.

Mr. HARRY F. BYRD, JR. The figures show, then, that the United States has put up 40 percent of the International Development Association money.

Mr. MUSKIE. I think the recent trend has been down toward 25 percent for IDA.

Mr. HARRY F. BYRD, JR. It is 31 percent, is it not?

Mr. MUSKIE. In IDA 5, it was 31 percent. We are trying to get it down beyond the 31 percent.

Mr. HARRY F. BYRD, JR. I am trying to help us get down to 25 percent.

Mr. MUSKIE. I understand, but the amendment means undermining our past commitments. It ought to be a multilateral effort and not unilateral.

Mr. HARRY F. BYRD, JR. I want to get on the question of commitments in a moment, but I want to stick with the figures here.

Mr. MUSKIE. I want to be sure the figures I am using are consistent with the understanding of Senator INOUYE, who is chairman of the Appropriations Subcommittee.

Mr. INOUYE. Our first contribution was made in the year 1961. At that time, our contribution was 43 percent of the total. Since then, it has been coming down. Presently, the 5th replenishment is 31 percent. In the resolution we passed recently, the sense of the Senate, we are hoping that we shall come down further to 25 percent, the trend being such that I think we shall be arriving at 25 percent shortly.

Mr. MELCHER. Will the Senator yield me 5 minutes?

Mr. HARRY F. BYRD, JR. I yield to the Senator from Montana such time as he needs.

Mr. MELCHER. I thank the Senator.

First of all, I commend the Budget Committee for the action they have taken in the International Monetary Fund concerning the Witteveen facility of that fund, to expose the $1.8 billion contribution by the United States to that particular function in the International Monetary Fund. I think it is a responsible action on the part of the Budget Committee to make that an item in the budget and to make it subject to the appropriation process. Congress in this way can approve or disapprove the appropriation knowing what the money will be used for.

In the amendment offered by the Senator from Virginia (Mr. HARRY F. BYRD, JR.), dealing with function 150, including the International Monetary Fund. I should like to make a case in point regarding one of the loans that was recently approved. That is for Zambia.

Zambia, whose principal export is copper, operates mines that are government-owned. Despite the fact that the world price for copper is very low, hovering around 60 cents per pound, and despite the fact that, at that price, with a glutted market throughout the world, restraint in production is in order to bring supply back into balance with demand—the loan was made of continued all out copper production. I point out that these are government-owned mines—they have been operating, I have been told, at full blast, full production. In our country, the copper companies—Anaconda, Kennecott, and others—have been forced, because of economic conditions, to reduce production.

Copper mined in Montana in the Berkley Pit at Butte has to be sold at a price somewhere around 72 to 74 cents a pound to cover the cost.

So in our State and other States that mine copper, we have been experiencing layoffs, reduction of jobs, cutbacks, and they are hard to take.

Because copper is imported into the United States and because of our basic law dealing with an industry that is suffering from imports, there is some relief for the laid-off copper workers, but it costs us. It costs money out of the Treasury. But it is the arrangement we have in our country dealing with independent companies, private companies, producing a basic metal, to try to restrain production until that point when supply equals demand, and when copper production can be put on a basis that makes economic sense.

But Zambia, the principal export, I repeat, being copper, has continued the production, I am advised, at the same level, has not cut back, has further aggravated the supply. Therefore, the economic conditions are such that they are digging themselves deeper into the hole.

It was so bad that, in order to protect the country of Zambia at all, the International Monetary Fund agreed just recently to a $340 million loan.

Where do we come in? The United States contributes about one-third of the money loaned through the International Monetary Fund. So we have contributed to a loan to save Zambia from their severe economic distress, but there is no restraint on adding to that distress by their action in continuing to produce copper at near capacity.

It does not make any sense here in the United States or other countries with private copper companies. In fact, we have responded. Our copper companies have restricted production and cut back on jobs. That is what hurts.

The floor managers of the resolution have both stressed the commitments we have made to these international lending organizations, including the International Monetary Fund.

I do not know at what point Congress was advised that there may be a commitment to Zambia through the International Monetary Fund to provide economic stabilization for that country to continue its copper mining. I suppose, in fairness, at some point we did make such a broad commitment that allows the loan. The International Monetary Fund.

But I make this case in point because I believe it is essential that we carry into these lending organizations some horse sense so their actions do not come back to haunt us in one of our industries, in the United States, because by the further production of copper when no one needs it, with an already depressed price of around 60 cents a pound, all it means is a continuation of developing of a commodity that no one can use and we continue to suffer as well as other countries that produce copper.

I particularly stress again that there is a contrast between the Government-owned copper mines in Zambia and the privately owned copper mining companies here in the United States.

Surely, if the private sector can exercise restraint, why can we not insist on such a loan made by the International Monetary Fund that that country receiving that aid will exercise some restraint to arrive at a balance of supply and demand for this basic metal?

With that case in point in mind, I believe the Senator from Virginia has offered a very worthwhile amendment, because if we serve notice by adopting this amendment perhaps we will send notice to the International Monetary Fund, and the other international lending institutions that we participate in, that the loans they make reflect common sense regarding the situation that exists in the world, the world economy as well as the economy here in the United States.

Mr. GRIFFIN. Will the Senator yield?

Mr. HARRY F. BYRD, JR. The able Senator from Montana made exactly the appropriate point, and the point that concerns me so much. Once the Congress makes the appropriation to these multinational banks, the Congress loses all control. We have no further control over the use of that money, just as the Senator from Montana pointed out.

I think that is a very serious problem which the Congress needs to address itself to. Hopefully, as the Senator from Montana indicated, this might be beneficial in that regard.

I thank the Senator from Montana.

Mr. MELCHER. I thank the Senator from Virginia.

Mr. GRIFFIN. Will the Senator from Virginia yield to me to add a comment?

Mr. HARRY F. BYRD, JR. I yield to the Senator from Michigan.

Mr. GRIFFIN. Mr. President, there are copper mines in the Upper Peninsula of Michigan. At the present time, there is widespread unemployment in that part of my State due in large part to the fact that our copper mines are in serious trouble.

The Senator from Montana has made a very important point, and I wish to associate myself with his remarks.

It is one thing for our workers in this country to compete on a fair basis with workers in other countries who produce the same product. However, it is difficult to explain to our workers why their tax dollars should be used to subsidize or in other ways to provide an unfair advantage for competing workers in other countries. Too often, and in too many ways, our Government uses the tax dollars of our own workers in ways that destroy the jobs of those workers here in our country.

It seems to me that our State Department, the AID agency and others involved in implementing international policy have not been nearly attentive to, or concerned enough about, the impact of their policies and programs overseas upon our workers in this country.

So I share the concern of the distinguished Senator from Montana, particularly with respect to the copper miners, and I commend the Senator from Virginia for focusing the Senate's attention on the general problem.

Some people who live in the Upper Peninsula of Michigan, which is divided from the Lower Peninsula by the Straits of Mackinaw have theatened from time to time to secede and leave the Union. Such talk usually brings a laugh, but some of the people in the Upper Peninsula who talk that way are not joking. They are serious—as a foreign country they would be able to ask for foreign assistance.

Mr. HARRY F. BYRD, JR. I thank the Senator from Michigan.

In regard to IDA, it has been established that of the total funds paid into the soft loan window of the World Bank; namely, the International Development Association—40 percent has come from the American taxpayers.

I ask the manager of the bill just where those funds have gone. What countries have received the bulk of those huge funds that have been paid into the International Development Association?

Mr. MUSKIE. The Senator really gives me too much credit. For how many years does the Senator expect me to have that information at my fingertips? I really am not a walking encyclopedia in these matters. We can be here for the next 2 weeks.

Mr. HARRY F. BYRD, JR. I think we will find that between 50 and 60 percent has gone to two countries—mostly to India, then to Pakistan. But I want to refresh the Senator's memory. I think it is important to know what is being done with these funds.

Mr. MUSKIE. I understand, but if our knowledge is limited to that which I have accumulated in my memory bank, we are in sad shape. I am not an expert in this field. I have not served on the committees with jurisdiction. I do not have that kind of information at my fingertips. I will be glad to check for you.

I will yield to my good friend from Hawaii, who has had more exposure to this area than I have.

Mr. HARRY F. BYRD, JR. Fine.

Mr. INOUYE. The major beneficiary of IDA, because of the size of its population, is India. Last year, they received about 40 percent of the IDA funds.

Mr. HARRY F. BYRD, JR. Last year, India received about 40 percent of the IDA funds?

Mr. INOUYE. Yes.

Mr. HARRY F. BYRD, JR. It is correct, as I recollect, that India had adequate funds to develop a nuclear device. That being the case, I am wondering whether we are justified in taking tax dollars out of the pockets of the working people and turning that money over to the Government of India.

Mr. INOUYE. If I may be permitted to speak for about 5 minutes, I think I can give the Senator my reasons why I support foreign aid.

Mr. MUSKIE. I yield 5 minutes to the Senator from Hawaii.

Mr. INOUYE. Mr. President, I believe this debate points out that the most unpopular program we have before us is foreign assistance. I think it is less popular than welfare. There is no constituency in the United States, and there are no votes to be gained when you support foreign assistance.

However, Mr. President, what we are concerned about this afternoon is the national interests of the United States and national security. We oftentimes equate national security with guns, the number of carriers we have, the number of tanks, the number of troops. But there are other ways of determining national interests and the well-being of the people of the United States.

I am trying to suggest that whatever happens in India will affect us. People starving in Bangladesh will come back to haunt us.

Today, according to IDA figures, about 70 percent of the people of the world are in the have-not category and about 30 percent are in the have category. The have-not category are those people living in countries with less than $300 per capita gross national product. Three hundred dollars. We have a per capita gross national product of about $7,000.

If we fail to listen to the pleas of the people of India, of Pakistan, of Bangladesh, of Somalia, of Zaire, and such places, our failure to advance some of the most important aspects of democracy will come back to haunt us.

The success and well-being of our democracy depends upon two factors: One, viable trading partners. It is in our interest to maintain viable trading partners and to develop new trading partners. We have the products of Detroit which we have to sell. We have Chicago; they produce and we have to sell. Hawaii has sugar; it has to be sold. Our economy depends upon selling and trading.

Second, our security is best maintained when there is stability in the world. You cannot stop the frustration, you cannot stop the dissension, and you cannot stop the fears of people with bullets.

In a country such as Mali, with a per capita gross national income of $80, in Western Samoa, $300—these are the have-nots of the world. These are the people who benefit most from IDA.

If by chance the United States should decide by this motion this afternoon to get out of the multilateral program, to get out of the banking business, to leave it up to these little countries to take care of themselves, this ratio I just mentioned of 70 percent have-nots and 30 percent haves will become 80 percent have-nots and 20 percent haves, eroding to 10 percent haves and 90 percent have-nots. We will then have an eruption—an eruption that atomic bombs will not stop.

The Subcommittee on Foreign Operations has jurisdiction over a budget having outlays of less than $5.6 billion. This includes security supporting assistance, with a large amount of that going to Egypt, Israel, Syria, Lebanon, and Jordan. That is a big chunk.

We are spending a relatively small amount to help to develop farms, establish population plannning programs, set-up schools, train teachers, train farmers. It is a small investment to keep the ratio between have and have-not nations to a point where we may have relative stability.

I hope that some day the have-nots of this world, according to this $300 figure, will be no more than 50 percent, not the 70 percent we have today, because the current ratio is dangerous.

I hope the Members of the Senate will consider security in terms other than guns, in terms other than atomic weapons, because the true security of our democracy will depend upon stability in the world and the existence, maintenance, and development of viable trading partners. That is what this type of program endeavors to do.

And, therefore, I hope that the amendment is defeated.

Mr. HARRY F. BYRD, JR. Mr. President, the Senator from Hawaii made an excellent speech, with the exception of that last sentence, and I wish to agree with it. If he means by his speech, and I think he does to an extent, that the appropriation of more and more funds will accomplish the purpose, with this I disagree. The facts show some $200 billion in foreign aid to 100 different countries have been expended in the past 30 years.

But to get back to the question I asked, I wonder if anyone could enlighten us as to where these funds go. We know that 40 percent has gone to India. I am just wondering to what countries the remainder of these funds are going.

Mr. MUSKIE. I think I located the table.

Mr. HARRY F. BYRD, JR. Fine.

Mr. MUSKIE. This table is on pages 148 and 149 of the World Bank annual report for 1977.

Mr. President, I ask unanimous consent that that table be printed in the RECORD so that Senators may know from what source I am responding to the Senator's question.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

SUMMARY STATEMENT OF DEVELOPMENT CREDITS, JUNE 30, 1977 AND JUNE 30, 1976

[Expressed in U.S. dollars in thousands]

Members in whose territories development credits have been made [1]	June 30, 1977 Total [2]	Development credits approved but not yet effective [3]	Percent of total effective and non-effective development credits

Total, June 30, 1977	10,950,027	757,200	100.00
Total, June 30, 1976	9,726,448	697,500	----------

[1] All development credits are made to member governments or to the government of a territory of a member.

[2] Effective development credits held by association.

[3] Development credit agreements totaling $555,200,000 ($591,400,000—1976) have been signed, but the credits do not become effective and disbursements thereunder do not start until the borrowers take certain actions and furnish certain documents to the Association, and agreements providing for credits totaling $202,000,000 ($106,100,000—1976) have been approved by the association but have not been signed

Mr. MUSKIE. Mr. President, India's percent of the total at the end of that fiscal year was 41.2 percent. This is the percent of total effective and noneffective development credits. That is percent of the total cumulative credits.

The next largest appears to be Pakistan with 6.76 percent, next Bangladesh with 6.74 percent, and next appears to be Indonesia with 4.89 percent.

Mr. HARRY F. BYRD, JR. That will be satisfactory.

Mr. MUSKIE. And the rest are 2 percent or under.

Mr. HARRY F. BYRD, JR. I thank the Senator.

One statement the Senator from Hawaii made was that if this amendment is adopted it will get us out of the business of helping finance international financial institutions. Of course, this will not do that. This would reduce the proposed contribution by only $750 million. There would still be vast sums in the resolution which would increase over the past year the contributions by $1.2 billion, or 64 percent. That is what this new program proposes.

All I suggest is that that increase be reduced slightly.

Mr. INOUYE. Mr. President, will the Senator yield?

Mr. HARRY F. BYRD, JR. I yield to my good friend from Hawaii.

Mr. INOUYE. It is true that passage of this amendment will not kill our commitment or kill our involvement, but it will send a chilling message to the remainder of the world, especially the developed countries. That the most powerful and the wealthiest nation in the world would take this step, would, I think, cause others to march in step with us and then, Mr. President, the hopes for international economic development and cooperation would fade.

I also wish to point out that this program we are speaking of, the total foreign assistance program: Food, Public Law 480, teaching farmers how to plant grain, and so forth, amounts to less than 1 percent of the Federal outlay—less than 1 percent—and for that investment we are able to maintain and develop viable trading partners and we are able, Mr. President, somehow to maintain the shaky stability that we find in this world.

I would hate to see an eruption in India, because I am certain that we are all aware that if something happens there we will somehow be sucked in. If something happens in Bangladesh we will be sucked in. If something happens in Africa we will be sucked in. Why not prevent that explosion from coming about?

Mr. President, the investment we are making to world stability and the development of markets, less than 1 percent of our outlays, is very inexpensive.

Mr. MUSKIE. Mr. President, I thank my good friend from Hawaii for his contribution to this debate. I feel somewhat at a loss at not being on top of the details as his experience has made possible for him. But I have here two pages that indicate the trend of burden sharing. One table lists all western and all foreign aid donors. In 1964 the U.S. share was 60.3 percent; in 1968 it had dropped to 51.3 percent; in 1972, 39 percent; and in 1976 to 31.7 percent.

Part of the reason why that trend has been downward is because we have been able to encourage other donors to become involved in these international financial institutions. We have gotten them involved by making a commitment to carry our share of the burden if they carry theirs. That is an important commitment.

Let me share with the Senate the trend with respect to these international financial institutions. The original U.S. share in the World Bank was 31.7 percent. It is now 18.7 percent. The International Development Association, originally 43 percent; now down to 31.4 percent. The International Financial Corporation originally 35 percent; now 23 percent. The Inter-American Development Bank hard loan program originally 41 percent; now 32.3 percent. The Inter-American Bank soft loan program originally 68 percent; now 53.4 percent. The Asian Development Bank originally 20 percent; now 16.3 percent. And the Asian Development Fund originally 29 percent; now 22.2 percent.

Mr. President, I ask unanimous consent that this full explanatory statement issued by the Treasury Department as of February of this year be printed in the RECORD.

There being no objection, the explanatory statement was ordered to be printed in the RECORD, as follows:

HISTORY OF BURDEN-SHARING

The U.S. has made a major effort in the postwar period to promote LDC development as an international effort. This effort required a prominent U.S. presence, and the U.S. did play a dominant role in development assistance into the late sixties. 1969 was the first year in which the U.S. no longer provided at least half of total official development assistance (ODA) flows from DAC countries. It was also the first year in which U.S. performance in terms of proportion of GNP fell below the DAC average.

United States share of DAC official development assistance

	Percent
1964	60.3
1968	51.3
1972	39.0
1976	31.7

The multilateral aid institutions evolved as a logical and effective mechanism for cooperating in this international effort. The initial U.S. share in these institutions tended to be large, both because the U.S. was usually their promoter and due to our strong position in the international economy. Nevertheless, their establishment did represent a step toward greater burden-sharing since the proportion of total bilateral aid provided by the U.S. was generally larger than the proportions of the total multilateral aid provided by the U.S.

Because the U.S. has encouraged other developed countries to increase their IFI contributions, U.S. shares in the latest replenishment of the IFIs are considerably below our original share. With the exception of the IDB—where the U.S. was for years the only major donor—the IDA is the only institution in which the U.S. has not fallen below 25 percent. Even here, however, there has been a substantial drop—from 43 percent to 31 percent.

U.S. Share of IFI Replenishments

	Original share	Current replenishment
World Bank (IBRD)	31.7	18.7*
Int. Development Assoc	43.0	31.4
Int. Financial Corporation	35.0	23.0
InterAmerican	41.0	32.3
FSO—Development Bank	68.0	53.4
Asian Development Bank	20.0	16.3
Asian Development Fund	29.0	22.2

Overall aid burden-sharing is sometimes discussed in terms of aid as a percent of GNP or in terms of GNP as a percentage of total GNP for the industrial countries as a whole. In these terms, only Japan currently lags behind the U.S. among major donors. The U.S. accounted for 41 percent of the GNP of DAC members in 1976, but only 32 percent of total ODA. Thus, multilateral assistance has advantages from the burden-sharing viewpoint in that the U.S. share is much less than might be implied by aid as a percentage of GNP or the U.S. weight in the international economy.

In practice, burden-sharing in the multilateral area is of significance in terms of real resources largely for the soft loan windows. The burden-sharing concept has little relevance to the ordinary capital operations of the IFIs, which are largely financed by private capital through IFI bond placements at market rates. For example, U.S. paid-in contributions to the IBRD have financed only two percent of IBRD lending to date. From the financial viewpoint, accordingly, the IBRD and the hard loan windows of the regional banks might more appropriately be considered financial intermediaries.

Mr. MUSKIE. Mr. President, one other bit of information for the record. This is the fiscal year 1978 foreign assistance appropriation bill (Public Law 95–148), adopted October 31, 1977. It includes a sense of the Senate resolution regarding the U.S. share of contributions to future replenishments of the international financial institutions.

Mr. HARRY F. BYRD, JR. Mr. President, will the Senator yield?

Mr. MUSKIE. I yield.

Mr. HARRY F. BYRD, JR. Is that proposal that the U.S. share be reduced to 25 percent?

Mr. MUSKIE. Exactly.

Mr. HARRY F. BYRD, JR. And this does not accomplish that purpose?

Mr. MUSKIE. It depends upon what the Senator calls "accomplish." I mean our commitments were made on the basis of a different concept of sharing. That is why I quoted the earlier figures. It has been our efforts since—what is that first year?

Mr. INOUYE. 1961.

Mr. MUSKIE (continuing). 1961, to move in that direction, and we have successfully moved in that direction.

Mr. INOUYE. Forty-three percent in 1961.

Mr. MUSKIE. And this sense of the Senate resolution sets out the target.

We are moving toward that target. We are not there yet, no, but we are moving clearly, and I think inevitably, toward that target. The U.S. share of IDA VI will be 25 percent. That will be before the Senate in a year of two.

The Senator wants to achieve it today at the expense of commitments we have made to other countries.

Mr. President, I ask unanimous consent to have printed in the RECORD that portion of Public Law 95–148 to which I have made reference.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

FUTURE UNITED STATES CONTRIBUTIONS TO THE INTERNATIONAL FINANCIAL INSTITUTIONS

It is the sense of the Senate that the United States share of contributions to future replenishments of the International Financial Institutions should not exceed the percentages enumerated below for each of the respective accounts within these institutions:

Asian Development Bank:
Paid-in capital, 16.3 percent;
Callable capital, 16.3 percent;
Asian Development Fund, 22.2 percent;
African Development Bank:
Special Fund, 10.6 pecent;
Inter-American Development Bank:
Paid-in ordinary capital, 34.5 percent;
Callable ordinary capital, 34.5 percent;
Paid-in interregional capital, 34.5 percent;
Callable interregional capital, 34.5 percent;
Fund for Special Operations, 40 percent;
International Bank for Reconstruction and Development:
Paid-in capital, 18.7 percent;
Callable capital, 18.7 percent;
International Development Association, 25 percent;
International Finance Corporation, 23 percent.

Mr. HARRY F. BYRD, JR. Mr. President, I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

Mr. BELLMON. Mr. President, before the Senator yields back his time, could I have a couple of minutes?

Mr. MUSKIE. I yield 2 minutes.

Mr. BELLMON. The Senator from Hawaii is on the floor, and I wonder if I could ask him to respond to a question.

I think the Senator from Hawaii would agree that one of the problems with the foreign aid programs is that sometimes they are not well understood, and there is also a considerable amount of concern as to just where this money goes.

The Senator from Hawaii as well as the Senator from Oklahoma are both on the Appropriations Committee. I wonder if we could join in some kind of language in our appropriation bill to be sure we get more adequate reporting from these financial institutions as to just where this money goes and what happens with these funds.

Mr. INOUYE. I would be happy to join with the Senator.

Mr. BELLMON. It seems to me we might be able to answer some of the very just criticisms the Senator from Virginia has raised if we had better information as to what is being done with this money.

I would hope we could, when we come back a year from now, have more information as to what is being accomplished with these funds.

Mr. INOUYE. Mr. President, if the Senator from Oklahoma will yield, as my distinguished friend is aware the Foreign Operations Subcommittee has been in the lead in trying to bring about management reform in international financial institutions. We have been the biggest critics. As the Senator knows, we reduced the salary of our representative on the board. But I do not want those criticims to leave the impression that we were against the effort and the work of the international financial institutions. I think they are doing a good job. As long as they continue to have management reform, we should support their efforts.

The PRESIDING OFFICER (Mr. PROXMIRE). Is all time yielded back? All time being yielded back, the question is on agreeing to the amendment of the Senator from Virginia. The yeas and nays have been ordered and the clerk will call the roll.

The second assistant legislative clerk called the roll.

Mr. CRANSTON. I announce that the Senator from South Dakota (Mr. ABOUREZK), the Senator from Kentucky (Mr. FORD), the Senator from Montana (Mr. HATFIELD), the Senator from Louisiana (Mr. JOHNSTON), the Senator from South Dakota (Mr. MCGOVERN), and the Senator from New York (Mr. MOYNIHAN) are necessarily absent.

Mr. STEVENS. I announce that the Senator from Illinois (Mr. PERCY) is necessarily absent.

I also announce that the Senator from Tennessee (Mr. BAKER), the Senator from Utah (Mr. GARN), and the Senator from Kansas (Mr. PEARSON) are absent on official business.

The result was announced—yeas 37, nays 53, as follows:

[Rollcall Vote No. 139 Leg.]

NOT VOTING—10

Abourezk	Hatfield, Paul G.	Moynihan
Baker	Johnston	Pearson
Ford	McGovern	Percy
Garn		

So Mr. HARRY F. BYRD, Jr.'s amendment (No. 1248) was rejected.

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which the amendment was rejected.

Mr. BELLMON. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

The PRESIDING OFFICER. Are there further amendments?

Mr. ROTH. Mr. President, I intend to vote against the budget resolution. We have a new fairy tale, "The Myth of the Tight Budget."

The votes over the last 3 days have clearly demonstrated the big spenders are still firmly in control of the U.S. Senate.

The Senate has rejected eight separate amendments to reduce the level of Federal spending. The Senate was not even

willing to vote to reduce a small portion of the documented waste in HEW.

The Senate has refused to reduce inflationary Federal spending, yet it argued a $25 billion tax cut was inflationary.

The Senate has mixed up its priorities. Why do we reduce the deficit by taxing it out of the hides of taxpayers? This is wrong. Do it by reducing Federal spending.

This resolution will force the American people to tighten their belts while allowing bloated Federal spending to loosen its belt several notches. We are asking the wrong people to go on a diet.

Mr. HARRY F. BYRD, JR. Mr. President, may we have order? We cannot hear the Senator.

The PRESIDING OFFICER. The Senate is not in order. Senators will please take their seats.

The Senator from Delaware.

Mr. ROTH. By increasing budget authority by more than $100 billion, this budget assures a continuous ballooning of Federal spending for years in the future. This increased future spending means higher taxes and bigger deficits, and any attempt to reduce taxes in the future will be fought by the big spenders.

I am also distressed by the President's total lack of support for my tax cut amendment. Despite the President's strong statement yesterday that he would not retreat from his tax cut position, his lack of support for my amendment raises a question as to whether he is really serious about tax relief.

He was either asleep at the switch or not committed to fighting for a tax cut.

Mr. President, the implications of the Senate's actions are very clear. The big spenders in Congress want the American people to continue paying for their spending programs—and this budget assures that the American people will be paying higher taxes for years in the future.

We have just robbed Peter and now we are going to tax Paul.

The good guys are the taxpayers and we have proven they finish last.

I yield the floor.

The PRESIDING OFFICER. Are there further amendments?

Under the previous order the Senator from Virginia is recognized for not to exceed 20 minutes.

Mr. HARRY F. BYRD, JR. Mr. President, I will be brief. I will not use the entire 20 minutes.

First, I want to say that I know how conscientious the Senator from Maine and the Senator from Oklahoma are and how hard they have worked on this budget matter.

However, I feel this budget is way out of line. I cannot support Senate Concurrent Resolution 80.

I want to read just three or four aspects of this resolution.

It says on page 1, "The appropriate level of total new budget authority is $566,100,000,000."

That is an increase of $66 billion. Percentagewise, it is an increase of 13.1 percent. To me, that is totally unacceptable.

On page 2, it says, "The appropriate level of total budget outlays is $498,900,000,000." That is an increase of $41 billion. Percentagewise, it is an increase of 9 percent. There, again, I think that is much too high.

Then it says, "The appropriate level of the public debt is $853,800,000,000." It goes on to say, "The amount by which the statutory limit on such debt should accordingly be increased is $101,800,000,000."

Under this concurrent resolution, the public debt will be increased more than $100 million in the next 15 months. That is an astounding figure. I think it is an unjustified figure. As a result, the National debt will have doubled in 7 years.

Mr. President, I ask unanimous consent that page 1 and page 2 through line 9 of the concurrent resolution be printed at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. HARRY F. BYRD, JR. The Federal funds deficit in the current budget will be $74 billion, the highest deficit in the history of our Nation. All of us know that the Federal funds, of course, are separate from the unified budget. The Federal funds are for the general operation of Government and come from general tax revenues.

The deficits for the past 3 years in the unified budget, because of the surplus in the trust funds are less but still huge. The deficit was $51 billion in 1977, $61 billion in fiscal 1978, and now $56 billion, on a unified basis, in the current budget.

I think it is very significant that of the 10 amendments which were presented to the Senate during the past 2 days of debate on this concurrent resolution, 9 of the 10, if my memory is correct, sought a reduction in spending. All amendments to reduce spending were defeated.

I ask unanimous consent to have printed in the RECORD at the conclusion of my remarks a table I have developed showing the vast increase in spending over the fiscal years 1976 through 1979. These figures were developed from the concurrent resolution for the appropriate year.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 2.)

Mr. HARRY F. BYRD, JR. Mr. President, I shall vote against this concurrent resolution as I believe it is totally out of line and will lead to more and more inflation in this country. I yield back the remainder of my time.

EXHIBIT 1

S. CON. RES. 80

Resolved by the Senate (the House of Representatives concurring), That the Congress hereby determines and declares, pursuant to section 301(a) of the Congressional Budget Act of 1974, that for the fiscal year beginning on October 1, 1978—

(1) the recommended level of Federal revenues is $443,300,000,000 and the amount by which the aggregate level of Federal revenues should be decreased is $29,200,000,000;

(2) the appropriate level of total new budget authority is $566,100,000,000;

(3) the appropriate level of total budget outlays is $498,900,000,000;

(4) the amount of the deficit in the budget which is appropriate in the light of economic conditions and all other relevant factors is $55,600,000,000; and

(5) the appropriate level of the public debt is $853,800,000,000, and the amount by which the statutory limit on such debt should accordingly be increased is $101,800,000,000.

The PRESIDING OFFICER. Are there further amendments?

Mr. THURMOND. Mr. President, I would like to associate myself with the remarks of the able and distinguished Senator from Virginia, which he has just delivered. I am in hearty accord with his thoughts.

● Mr. RANDOLPH. Mr. President, I commend the able Senator from Maine, my friend, Mr. MUSKIE, the chairman of the Budget Committee, for his sense of responsibility in developing the budget resolution before the Senate. As a member of the Committee on Environment and Public Works, he also was deeply involved in the preparation of our report to the Budget Committee.

Our committee carefully reviewed spending proposals of all agencies within its jurisdiction. Our report to the Budget Committee was a realistic appraisal of their needs and I appreciate the reception it received.

The Budget Act requires that legislation authorizing expenditures in the next fiscal year be reported to the Senate prior to May 15. We expect to meet that deadline for virtually all of our legislation. For reasons beyond our control, however, I anticipate that the committee will be required to report authorizing legislation after May 15. In one instance, the legislation relates to a matter on which we did not anticipate that funds for fiscal 1979 would be required. The other concerns a major program proposal by the President which has not yet been submitted to the Congress in the form of legislation.

Mr. President, I have discussed these matters in a letter to Senator MUSKIE. So that Members of the Senate will be fully informed should we need to ask for waivers of the Budget Act requirements, I submit the letter for the RECORD:

COMMITTEE ON ENVIRONMENT
AND PUBLIC WORKS,
Washington, D.C., April 26, 1978.

Hon. EDMUND MUSKIE,
Chairman, Committee on the Budget,
U.S. Senate, Washington, D.C.

DEAR ED: The Committee on Environment and Public Works in its analysis of the President's proposed budget for fiscal year 1979 formulated its recommendations with consideration of emerging needs and continuation of vital ongoing programs within a framework of fiscal responsibility.

About two weeks remain before the May 15 deadline when we must have reported to the Senate all legislation authorizing expenditures for 1979. The Environment and Public Works Committee will have approximately 15 bills reported at that time to meet the requirements of the Budget Act. There are, however, at least two areas where legislation cannot be finalized by May 15 but which could need budget authority.

The Department of Transportation has submitted a bill which would authorize the Secretary of the Interior to assign all leases and purchase options presently held with the Washington Terminal Company for Union Station, to the Secretary of Transportation. Interior would rent space for a National Visitor Center from Transportation for not more than $1 million a year and Transportation would spend $52.32 million to finish the 1,200 car garage, complete a suitable railroad terminal, repair and alter existing Union Station structure and rearrange the traffic pattern in front of the Station.

The Environment and Public Works Committee did not include any budget authority request for the National Visitor Center because no public works activity was anticipated on that facility during fiscal year 1979. A hearing has been scheduled on this legislation by the Environment and Public Works Committee for May 25. Because of the severe problems associated with the repair of Union Station, we expect to report legislation this year to correct the deficiencies associated with the Visitor Center and make long-term repairs to the train station. It will be necessary to authorize new budget authority to do some of this work with the remainder coming from budget authority authorized for the North East Corridor Project.

The Committee would hope that the Budget Committee would look with favor upon a waiver for this legislation when reported by the Committee sometime this summer.

The Administration's urban assistance package was expected to be submitted to Congress in late March. This Committee has been sent the Administration's blueprint for a comprehensive national urban policy which includes provisions for labor-intensive public works program totalling $3 billion over the next three fiscal years. This type of program often termed "soft public works projects" would enable cities to make needed weatherization and rehabilitative repairs on buildings, provide structural modifications to buildings permitting each access to the handicapped, and to repair and renovate streets, parks, and other local facilities. These projects would contrast with the Local Public Works program which requires expenditures for large equipment, material expenditures, and prolonged planning rather than for actual job creation.

To date, the Committee members have been briefed on the general Administration program but have not received any definite legislative proposals. If such a proposal is submitted by the President, the Committee on Environment and Public Works would seek a budget waiver since it would be impossible to act on the report this legislation to the Senate before May 15.

The Congressional process of annual authorizations and the First Concurrent Budget Resolution cannot be effective or rational if major policy decisions which will impact on the current and next fiscal year are withheld by the Administration until initial budget decisions have been completed by the Congress. As the Chairman of the Budget Committee knows, I and members on the Environment and Public Works Committee have made every effort to satisfy Budget Act deadlines for reporting legislation. It is probable, however, that Administration initiatives in programs under Public Works jurisdiction may be submitted after the Budget Act otherwise contemplates normal submission and consideration by the Committee.

Truly,

JENNINGS RANDOLPH, *Chairman.*●

● Mr. LUGAR. Mr. President, I will vote in favor of this first concurrent resolution on the budget, despite my strong reservations about both the total spending and the deficit involved. Sincere opponents of deficit spending cannot absolve themselves by casting one vote against the budget resolution. It is my strong belief that the crucial budget decisions have been made one by one to this final vote. By voting to approve the final product of the budget process, I want to indicate my willingness to work within that process, every step of the way.

I urge other Senators who share my concern about excessive deficits to continue to work within the budget process to balance future budgets. Just as important, we should get involved in the authorization process this year to hold down spending below the levels recommended in this budget. I will work diligently in the coming months to find methods of reducing Federal budget authorizations as the budget makes its way through the Congress.

I congratulate Members of the Senate for presenting a budget resolution with a total deficit less than President Carter's recommendation. This is no small achievement, but it is not nearly enough. Nevertheless, I am hopeful that our pleas for fiscal responsibility are finally having some impact, and I am hopeful that we can continue to reduce Government spending and further cut the deficit. Most of the priorities in this resolution are worthwhile, but I believe that the same goals can be accomplished efficiently with less funds.

Mr. President, the Wall Street Journal reported recently that the rate of inflation in the United States has accelerated since 1976, from 5.8 percent in that year to 6.8 percent in the latest figures. Equally disturbing are indicators suggesting that the rate of inflation will continue to rise in the coming months. This is happening in the United States as other major industrial nations are seeing a drop in their rates of inflation. These figures are of critical importance to American families, and particularly those on fixed incomes, whose finances are being ravaged by inflation. And these figures should be of utmost interest to us as we contemplate the prospect of financing another huge Federal deficit.●

The PRESIDING OFFICER. If all time is yielded back, the question is on agreeing to the concurrent resolution.

Mr. MUSKIE. Mr. President, I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

The PRESIDING OFFICER The yeas and nays have been ordered and the clerk will call the roll.

The assistant legislative clerk called the roll.

Mr. CRANSTON. I announce that the Senator from South Dakota (Mr. ABOUREZK), the Senator from Kentucky (Mr. FORD), the Senator from Montana (Mr. HATFIELD), the Senator from Louisiana (Mr. JOHNSTON), the Senator from South Dakota (Mr. MCGOVERN), and the Senator from New York (Mr. MOYNIHAN) are necessarily absent.

Mr. STEVENS. I announce that the Senator from Tennessee (Mr. BAKER), the Senator from Utah (Mr. GARN), and the Senator from Kansas (Mr. PEARSON) are absent on official business.

The result was announced—yeas 65, nays 26, as follows:

[Rollcall Vote No. 140 Leg.]

NOT VOTING—9

Abourezk	Hatfield, Paul G.	Moynihan
Baker	Johnston	Pearson
Ford	McGovern	
Garn		

So the concurrent resolution (S. Con. Res. 80) was agreed to.

Mr. MUSKIE. Mr. President, I move to reconsider the vote by which the resolution was agreed to.

Mr. BELLMON. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. MUSKIE. Mr. President, I ask unanimous consent that the Secretary of the Senate be authorized to make technical and clerical corrections in the engrossment of Senate Concurrent Resolution 80.

The PRESIDING OFFICER (Mr.

LEAHY). Without objection, it is so ordered.

Mr. MUSKIE. Mr. President, as the consideration of this year's first budget resolution draws to a close, I want to commend the staff of the Budget Committee for the extraordinary and arduous work they performed this year. The high standards that staff has always set for itself have been exceeded this year as our committee took two significant leaps forward in the congressional budget process.

This year, the committee implemented budget decisionmaking on a 5-year basis and by mission. These two new decisionmaking tools have enabled us and the Senate to construct the most complete budget we have ever considered and to consider it more thoroughly than ever before.

All of the work which made these achievements possible was performed by the committee staff breaking new ground in the budget process. The staff had to meet its normal workload in preparing for our markup and the enormous new volume of data required for 5-year budgeting. That our committee was able to successfully move from a 1-year decisionmaking basis to a 5-year basis is largely attributable to that staff effort.

I want to commend particularly John McEvoy and Sid Brown, upon whom the committee relies most heavily for advice and guidance on budget matters, and Van Ooms, our chief economist, whose sound judgment on economic questions guides much of our deliberations. I also want to commend the work of Dan Twomey, George Merrill, Ira Tannenbaum Tom Dine, and all of the staff who work with them to formulate the committee markup documents and our presentation of our budget here on the floor. I also want to particularly commend Karen Williams, our "floor general" in these budget debates, whose counsel on legal matters is only exceeded by her ability in helping me to manage these resolutions on the floor.

I also want to thank once more, the splendid staff of the Congressional Budget Office and Alice Rivlin, under whose direction that staff has so admirably performed its work over the years in support of the budget process. Advance budgeting would still be a dream except for the inspiration and assistance the Congressional Budget Office gave us in this effort.

I would like to add my special thanks, but I leave that to my friend, the Senator from Oklahoma, the ranking Republican, to do the job thoroughly, special thanks to Bob Boyd and the minority staff of the Budget Committee.

They have worked with the majority staff as a team. We worked without recognition of any party lines whatsoever. I have been so grateful to them, not only this year, but over the years, and through Senator BELLMON I would like to say "Thank you" to them.

As the work of the Congress has become more complex, our critics have frequently asserted that staff rather than Senators make our laws and decisions. It is a tribute to the Budget Committee staff, I think, that in this most complex area of fiscal policy they have successfully striven to preserve the decisionmaking for the Senators. This budget is all the more a congressional budget for that effort.

Mr. ROBERT C. BYRD. Will the distinguished Senator yield?

Mr. MUSKIE. Yes, I yield.

Mr. ROBERT C. BYRD. Mr. President, establishing wage and price stability—without undermining the Nation's commitment and ongoing efforts to lower the level of joblessness—is one of the most pressing tasks confronting our country. To face up to the task requires action—not just words—on the part of all: action by business to moderate price increases, action by labor groups to moderate wage increases, and action by Government to keep down the deficit. We all know too well that taking such action is no easy task.

The Senate Budget Committee has worked long and diligently to insure that Government action will contribute to wage and price stability—that is, to insure that words on behalf of wage and price stability that have been voiced frequently on the Senate floor will be backed up by legislative action. In the first concurrent resolution on the budget for fiscal year 1979, the committee charts for us a course of fiscal responsibility—educating us to the short-term and the long-term inflationary and budgetary implications of the many spending options before us. Indeed, the first concurrent resolution on the budget—recommended by the Senate Budget Committee and passed today by the Senate—displays a sense of fiscal restraint that mirrors accurately the Nations' economic mood as well as the Nation's economic needs.

Through the leadership of Mr. MUSKIE and his very able counterpart on the other side of the aisle, Mr. BELLMON, and their unstinting labors in helping to chart the budgetary course for the next fiscal year, the chairman of the Budget Committee and the ranking member have served the Senate well. We all owe them a debt of deep gratitude.

Theirs is a thankless job, and it is one that is very demanding and exacting. Those who willingly accept this burden, such as Mr. MUSKIE and Mr. BELLMON, are too often criticized unjustly for their call to hold the line against spending when that line must be held.

Mr. President, it must be recognized that only if we act with fiscal responsibility—with the emphasis that has been urged by the Senate Budget Committee on holding down the deficit while meeting social and defense spending requirements—will be able to nurture our economy and insure that it stays on a strong growth trajectory. Steering our economy on such a course will allow us to achieve our dual goals of balanced growth and fuller employment.

Mr. President, I would be remiss at this time were I to fail to acknowledge the important contributions that have been made by both Mr. MUSKIE and Mr. BELLMON and by the other members of the Budget Committee on both sides of the aisle, working together with Mr. MUSKIE and other committee members, to aid the Senate in formulating the fiscal year 1979 budget.

The Senate, itself, merits the compliments of myself; and I especially want to compliment ED MUSKIE and HENRY BELLMON for the exemplary job they have done. As I said, I think it is all too often considered to be a thankless job. It requires endurance, tenacity, and dedication to purpose. These men repeatedly have demonstrated these fine qualities before the Senate, and they have done so today. The Senate is in their debt and so are the people of this country.

Mr. MUSKIE. Mr. President, I thank the distinguished majority leader for that most fulsome statement and, even more, for the unquestioning and unstinting support he has given me and the Budget Committee through all the years of our association.

Mr. BELLMON. Mr. President, I join in thanking the distinguished majority leader for his very kind and totally complimentary comments. We appreciate what he said and are fully aware that without his support for the budget process, whatever success we have had would be impossible.

In my opinion, the real test will now begin, and that is to see whether or not Congress can stay within the budget limits which the Senate this afternoon has adopted. We hope that within a short time this will be worked out with the House and will become the first concurrent resolution.

Our record last year was not very good. About $6 billion was added to spending in various changes to the resolution between adoption of the first concurrent resolution and the second, and I hope we will be able to do much better this year.

It appears that we are getting off to a good start. This effort to bring reasonable controls to Federal spending must be a bipartisan effort. If it ever loses that quality, it is going to have a far more difficult time. Up to now, I am happy to say, it has been bipartisan, and it was again here on the floor today.

I particularly pay credit to our chairman, Senator MUSKIE, for the outstanding job he does of explaining and explaining and explaining the way the budget process works, both in committee and in defending the positions we take, many of which, I am sure, if we were free to take individual action, might be quite different from the position he takes in defending the committee's positions. It takes real leadership to do that, and he deserves a great deal of credit for the position he takes.

Also, I express my personal appreciation—and I think the appreciation of minority members of the Budget Committee—for the extraordinary efforts over the past several weeks by our minority staff. Hundreds, probably thousands, of hours of hard work have gone into the preparation of the committee's markup materials and preparing for the floor debate over the last 3 days. The preparation of an analysis of the entire budget of the Federal Government would require the dedicated work of a staff 10 times as large as the one we have. It requires almost superhuman efforts by

the competent minority staff that is available to us, and it is a particularly arduous task for these people.

The fact that the budget resolution has been accepted by the Senate without revision and that the 10 amendments that were offered were defeated gives testimony, I believe, to the high quality and very professional approach to the budget that has been taken by both the minority and the majority staffs. They give us realistic numbers to work with. They give us good arguments to use in defending those numbers. It must be a source of considerable pride and satisfaction to these people to know that these arguments have stood the test of the votes that have been taken.

It is appropriate to provide specific recognition to members of the staff individually: Charles McQuillen, Robert Fulton, William Stringer, Michael Pillsbury, Barry Kinsey, Carol Cox, Becky Davies, Gary Kuzina, Paul Carttar, Barbara Camp, Joyce Purcell, Arlene Peebles, and Valerie McMullan.

I should like to give special credit to our minority staff director, Mr. Robert S. Boyd, for his excellent work, and for the valuable working relationship he has been able to establish and maintain with the minority staff.

Mr. President, this resolution truly represents the work of a bipartisan staff, which contains, I believe, some of the most competent and highly professional people on Capitol Hill. Certainly, they have the best working relationship between minority and majority staff members that I have seen since I have been a Member of this body.

I believe most of the credit has to go to our chairman, who has made this possible, and I pay him the very highest compliment.

Mr. STEVENS. Mr. President, will the Senator yield?

Mr. BELLMON. I yield.

Mr. STEVENS. Mr. President, on behalf of the minority leader and our side of the aisle, I join the Senator from Oklahoma in expressing our gratitude to the majority leadership, and particularly to the chairman of the Budget Committee.

I have been one of the supporters of the committee in its deliberations and with regard to all but one of the amendments that were presented during the consideration of the measure. I think it is highly important for us to remember that the time is coming when individual Senators will have to elect whether the Budget Committee, in effect, will become one of the major committees. I feel that the support the Senate has shown to the deliberations and work of the Budget Committee this year will encourage new Members of the Senate particularly to seek membership on the committee, because it is increasing its prestige in the Senate.

This committee is demonstrating what can be accomplished with a working consensus on a bipartisan basis in attacking the very difficult problems of setting budget goals for the Senate as a whole.

I commend the Senator from Maine and the Senator from Oklahoma. I am sure that if the minority leader were here, he would join in the comments that have been made by the distinguished majority leader.

ADHERING TO THE BUDGET ACT

Mr. PERCY. Mr. President, the Senate has deliberated the first concurrent budget resolution for fiscal year 1979 for 3 days, and I commend the chairman, Senator MUSKIE; the ranking Republican member of the committee, Senator BELLMON, and the members of the Budget Committee for their hard work and continuing dedication to the spirit of the Budget Act.

As a sponsor of the original budget reform resolution, working with Senator MUSKIE over a period of years on the Governmental Affairs Committee, I am pleased and gratified that the Budget Committee has lived up to the expectations of those of us who fought so hard to develop and establish this procedure. That the committee could substantially reduce the deficit recommended by both the administration and our own authorizing committee is indeed a benchmark in our efforts to get a grip on the Federal budget.

Yet, concerns have been voiced that the budget process does not have the full support of this body, and several critical threats to the budget process have emerged since its enactment.

It was never our intent to establish the budget process as a convenient one-time "litmus test" of fiscal responsibility. A Senator's vote for the budget resolution one day and for excessive spending in authorizing bills on subsequent days serves only to make the budget process a farce. The limits we set out in these resolutions should essentially be adhered to in the subsequent votes in this Chamber.

Another concern mentioned by the committee chairman relates to the actual flaunting of the procedures laid out in the Budget Act. We have only the integrity of the Senate to use as a tool to keep ourselves on the track of the budget resolutions. No armed guard will appear to tell us that we have strayed from the discipline we had voted. When committees disregard the guideposts of the budget resolution and when the full Senate later also ignores those requirements, we are only fooling ourselves and it is the American taxpayer that is the loser.

A third concern lies in the underlying assumptions of the 5-year budget projections. The assumptions that many Federal programs will continue at a certain level of increase into the 1980's may hamper us at a later date from making changes we feel are necessary for the Nation's economic health. At this time it would be unwise for the Federal Government to attempt to finance costly new programs, and yet the budget resolution assumes that some of these initiatives will be enacted in the near future. This budget adequately responds to the needs of the country for the next year but I must add my voice to that of Senator BELLMON that this resolution may have indeed overresponded.

During consideration of this resolution, the Senate narrowly rejected an amendment which would have cut $5 billion from the budget in an across-the-board fashion. I supported this amendment which was rejected by a vote of 43 to 46. Even though it did not win acceptance by the Senate. I feel this close vote signals the Senate's strong determination to hold the line on spending and its concern with the deficit's effect on inflation.

In addition, I regret that the Senate rejected Senator ROTH's amendment which would have given us the flexibility to enact a tax cut in October rather than waiting until January 1979. As the resolution is drafted now, a tax reduction will not be possible until next year without a change in the second resolution even if the economy changes in the next few months and such a cut at that time is considered desirable.

Although a major tax cut may seem to some only to increase the deficit and therefore fuel inflation, let me state that just the contrary should be true. A significant tax cut of the right kind for both individual and business taxpayers will actually increase the revenues the Federal Government will take in. This is what happened with the tax cut enacted in the early 1960's in the Kennedy administration. A tax plan along the lines of the one I cosponsored with Senators DANFORTH and JAVITS will increase confidence, stimulate investment, create jobs, and consequently increase Federal revenues.

Such a tax cut is also essential at this time if we are to address a major grievance in the tax system: the combined effects of inflation and the progressive tax system on a worker's paycheck. Those who have had cost-of-living increases in recent years and feel they may be keeping up with inflation are in fact being pushed into ever higher tax brackets. The effect of this coupling is to tax our productive workers at higher and higher rates, even though their spending power does not change.

For these two reasons, a tax cut will be one of the Senate's most important actions this year. We will need flexibility in determining the size and timing of this cut, and I am disappointed that the Senate rejected this course.

In concluding, Mr. President, I would like to mention an excellent column which appears in today's Wall Street Journal by the former Chairman of the Council of Economic Advisors, Mr. Paul W. McCracken. In his essay, Mr. McCracken suggests that—

> A significant part of the price-level problem has been government administered inflation—government actions that quite directly raise costs and prices. And it would be useful to have the Council on Wage and Price Stability issue a report at the end of the year estimating the effect on the cost-price level of corrective actions taken in 1978 by government.

Mr. President, surely one of the items high on such a list would be this budget resolution, which has cut $36 billion out of the authorizing committee's requests and reduced the deficit recommended in the President's own budget. Inflation is our No. 1 enemy now and this resolution is a responsible recognition of that economic fact of life.

ROUTINE MORNING BUSINESS

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that there now be a period for the transaction of routine morning business.

The PRESIDING OFFICER. Without objection, it is so ordered.

MESSAGES FROM THE PRESIDENT

Messages from the President of the United States were communicated to the Senate by Mr. Chirdon, one of his secretaries.

REPORT OF THE MINING ENFORCEMENT AND SAFETY ADMINISTRATION—MESSAGE FROM THE PRESIDENT—PM 169

The PRESIDING OFFICER laid before the Senate the following message from the President of the United States, together with an accompanying report, which was referred to the Committee on Human Resources:

To the Congress of the United States:

In accordance with Section 511(a) of the Federal Coal Mine Health and Safety Act of 1976, I hereby transmit to you the Annual Report of the Secretary of the Interior.

Part I of the report details the activities of the Mining Enforcement and Safety Administration. Part II describes the mining research activities of the Bureau of Mines.

The report covers a period of time before I took office.

JIMMY CARTER.

THE WHITE HOUSE, *April 26, 1978.*

MESSAGES FROM THE HOUSE

At 2:25 p.m., a message from the House of Representatives delived by Mr. Berry, one of its reading clerks, announced that the House has passed, without amendment, the following bill:

S. 2597. An act to amend title 28, United States Code, to move the place for holding court for the district court of the Eastern District of New York to Brooklyn and Hempstead, and for other purposes.

At 3:20 p.m., a message from the House of Representatives delivered by Mr. Hackney, one of its reading clerks, announced that the House has passed the following bills, in which it requests the concurrence of the Senate:

H.R. 11401. An act to authorize appropriations to the National Aeronautics and Space Administration for research and development, construction of facilities, and research and program management, and for other purposes; and

H.R. 11877. An act to authorize appropriations for fiscal year 1979 for the Peace Corps and to make certain changes in the Peace Corps Act.

The message also announced that the House has agreed to the following concurrent resolution, in which it requests the concurrence of the Senate:

H. Con. Res. 573. A concurrent resolution denouncing the Government of Cambodia for its disregard of basic human rights.

HOUSE BILLS AND CONCURRENT RESOLUTION REFERRED

The following bills were each read twice by their titles and referred as indicated:

H.R. 11401. An act to authorize appropriations to the National Aeronautics and Space Administration for research and development, construction of facilities, and research and program management, and for other purposes; to the Committee on Commerce, Science, and Transportation; and

H.R. 11877. An act to authorize appropriations for fiscal year 1979 for the Peace Corps and to make certain changes in the Peace Corps Act; to the Committee on Foreign Relations.

The following concurrent resolution was read by title and referred as indicated:

H. Con. Res. 573. A concurrent resolution denouncing the Government of Cambodia for its disregard of basic human rights; to the Committee on Foreign Relations.

ENROLLED BILL PRESENTED

The Secretary of the Senate reported that on today, April 26, 1978, he presented to the President of the United States the following enrolled bill:

S. 1617. An Act to establish a program of ocean pollution research, development, and monitoring, and for other purposes.

COMMUNICATIONS

The PRESIDING OFFICER laid before the Senate the following communications, together with accompanying reports, documents, and papers, which were referred as indicated:

EC-3451. A communication from the General Counsel of the Department of Defense, transmitting a draft of proposed legislation to amend the Aviation Career Incentive Act of 1974, Public Law 93-294, May 31, 1974, to make certain technical amendments for purposes of clarification, and for other purposes; to the Committee on Armed Services.

EC-3452. A communication from the Acting Director, Defense Security Assistance Agency, reporting, pursuant to law, concerning the Department of the Air Force's proposed Letter of Offer to Sudan for Defense Articles estimated to cost in excess of $25 million; to the Committee on Armed Services.

EC-3453. A communication from the Secretary of the Interior, transmitting, pursuant to law, the second annual report on the Tule elk herd in California; to the Committee on Energy and Natural Resources.

EC-3454. A communication from the Secretary of the Interior, transmitting, pursuant to law, the combined First Decade Report and the 1977 Annual Report of the National Park Foundation; to the Committee on Energy and Natural Resources.

EC-3455. A communication from the Federal Cochairman, Upper Treat Lakes Regional Commission, transmitting, pursuant to law, the annual report of the Upper Great Lakes Regional Commission; to the Committee on Environment and Public Works.

EC-3456. A communication from the Secretary of Health, Education, and Welfare, transmitting, pursuant to law, a report on State compliance with section 1903(g) of the Social Security Act; to the Committee on Finance.

EC-3457. A communication from the Secretary of Health, Education, and Welfare, transmitting, pursuant to law, a report on State Medicaid program compliance with section 1903(g) of the Social Security Act; to the Committee on Finance.

EC-3458. A communication from the Assistant Secretary (Legislative Affairs), Department of the Treasury, transmitting, pursuant to law, project performance audit reports prepared by the International Bank for Reconstruction and Development (IBRD), post-evaluation reports prepared by the Asian Development Bank (ADB) and evaluation reports issued by the Group of Controllers of the Inter-American Development Bank (IDB); to the Committee on Foreign Relations.

EC-3459. A communication from the Secretary of State, transmitting a draft of proposed amendments to the International Security Assistance Act of 1978; to the Committee on Foreign Relations.

EC-3460. A communication from the Comptroller General of the United States, transmitting, pursuant to law, a report entitled "Status of the NAVSTAR Global Positioning System," April 25, 1978; to the Committee on Governmental Affairs.

EC-3461. A communication from the General Counsel, Securities and Exchange Commission, transmitting, pursuant to law, a report on a new system of records; to the Committee on Governmental Affairs.

EC-3462. A communication from the Secretary of Health, Education, and Welfare, transmitting, pursuant to law, the Fifth Annual Report of the Department of Health, Education and Welfare on Head Start Services to Handicapped Children; to the Committee on Human Resources.

EC-3463. A communication from the General Counsel, Civil Aeronautics Board, transmitting, pursuant to law, a report in relation to the Freedom of Information Act; to the Committee on the Judiciary.

PETITIONS

The PRESIDING OFFICER laid before the Senate the following petitions, which were referred as indicated:

POM-616. A resolution adopted by the Council of the City of Hoyt Lakes, Minnesota, relating to the pending B.W.C.A. bill; to the Committee on Energy and Natural Resources

POM-617. A resolution adopted by the Legislature of the State of Hawaii; to the Committee on Commerce, Science, and Transportation:

"S.R. No. 251

"Whereas, there is presently before the United States Congress S. 1381 and H.R. 6601 which would enact a national motor vehicle no-fault law; and

"Whereas, the State of Hawaii enacted its own Hawaii No-Fault Law effective September 1, 1974, after three years of intensive study and legislative consideration; and

"Whereas, Hawaii's law has been further refined by legislative amendments since that time and continues to be subject to constant scrutiny and study; and

"Whereas, 24 states with over 53 percent of the national population have enacted some form of no-fault legislation and at least eleven additional states have no-fault legislation currently under consideration; and

"Whereas, it is only by a process of trial and error that the true costs and benefits of the different no-fault programs of the various states can be tested and improved through practice; and

"Whereas, a single untested nation-wide plan would not be able to meet the varied needs of the different states as well as legislation enacted by their own legislatures; now, therefore,

"Be it resolved by the Senate of the Ninth Legislative of the State of Hawaii, Regular Session of 1978, that the United States Senate and House of Representatives be advised that the State of Hawaii opposes federal no-fault legislation, and requests such legislation be withheld so that Hawaii and the other states may continue to develop their no-fault laws to best serve the interests of their own citizens; and

"Be it further resolved that certified copies of this Resolution be transmitted to the President of the United States Senate, the Speaker of the United States House of Representatives; the Honorable Daniel K. Inouye and the Honorable Spark M. Matsunaga, Senators from the State of Hawaii; the Honorable Daniel K. Akaka and the Honorable Cecil Heftel, Representatives from the State of Hawaii."

POM-618. A resolution adopted by the Legislature of the State of Massachusetts; to the Committee on Finance:

"RESOLUTION

"Whereas, A large number of taxpayers, while paying their full share of federal and state income and other taxes which support our public school systems throughout the land, send their children to private and parochial schools; and

"Whereas, There is an enormous savings in expenditures by the federal and state governments in the field of education by reason of the great number of children attending said private and parochial schools, which number, if added to the public school system of the nation, would result in a precipitous rise in the costs of said systems; and

"Whereas, Those taxpayers paying on the one hand the taxes necessary for public education of children in general, are also paying the high cost of private or parochial education for their own children, all resulting in an unjust burden upon such taxpayer; now therefore, be it

"*Resolved*, That the Massachusetts Senate hereby urges the Congress of the United States to enact legislation granting an annual five hundred dollar income tax credit to the parents or guardians who are paying tuition for the education of children in their charge for attendance at private, secular or parochial schools; and be it further

"*Resolved*, That copies of these resolutions be transmitted forthwith by the Clerk of the Senate to the President of the United States, to the presiding officer of each branch of Congress and to each member thereof from the commonwealth."

POM-619. A resolution adopted by the Legislature of the State of Hawaii; to the Committee on Banking, Housing, and Urban Affairs:

"S.R. No. 15, S.D. 1

"Whereas, the conventional home mortgage, under which a lender advances a major portion of the purchase price or construction cost of a home with the balance amortized over a long period at equal installments, is a relatively recent development in home financing; and

"Whereas, widespread use of the conventional home mortgage has been spurred by federal programs established under the National Housing Act of 1934, as amended, which provide for federal insurance of mortgages by the Federal Housing Administration, and guarantee of veterans' home loans through the Veterans' Administration; and

"Whereas, F.H.A. insurance is available only for the purchase of homes which meet the criteria of the National Housing Act and regulations adopted pursuant to it; and

"Whereas, F.H.A. insurance programs place specific restrictions on the minimum lease term remaining, where the home to be covered is situated on leasehold property; and

"Whereas, subsection II of the National Housing Act, 12 U.S.C. 1707, specifies that a residential mortgage on leased land can be insured by the F.H.A. only if the lease term is at least 50 years at the time of insurance; and

"Whereas, more than 30,000 single-family homes in Hawaii are situated on leased land, as well as an increasing number of dwelling units within leasehold condominiums and planned unit developments; and

"Whereas, residential leaseholds in Hawaii are customarily for a term of at least 50 years, and often for 55 years; and

"Whereas, mortgages are often obtained on leasehold property upon resale by the original or succeeding owner, in which case the remaining lease term may well be less than 50 years and the remaining period of fixed rent may be limited; and

"Whereas, many private lenders in the State will extend long-term mortgage financing in such situations, so long as the remaining lease term is at least 2 years longer than the proposed mortgage term; and

"Whereas, in view of the fact that residential mortgages are being written for periods not exceeding 30 years, a 50-year remaining lease term requirement appears to make little sense in safeguarding a security interest in the mortgaged property; and

"Whereas, the 50-year requriement, when applied to resold residential leasehold property, means that the lessor must consent to an extension of the lease to a 50-year term, before F.H.A. insurance can be secured; and

"Whereas, since June, 1976, several major leasehold landowners in Hawaii, notably Bishop Estate and Campbell Estate, have unilaterally refused to extend the terms of residential leases; and

"Whereas, this action, coupled with the 50-year federal requirement, has made obtaining federal mortgage insurance impossible for many persons wishing to finance homes on leasehold land; and

"Whereas, the federal requirement seems to accord little additional protection for insurance purposes, plays into the hands of lessors who have taken the law into their own hands, and has resulted in significant disadvantages to purchasers of leasehold residential homes in Hawaii; now, therefore,

"Be it resolved by the Senate of the Ninth Legislature of the State of Hawaii, Regular Session of 1978, that the Congress of the United States is requested to amend the National Housing Act to shorten the remaining lease term necessary for insuring mortgages on residences, preferably to a term not more than 2 years longer than the term of the mortgage applied for; and

"Be it further resolved that certified copies of this Resolution be transmitted to the President of the United States Senate, the Speaker of the United States House of Representatives, and to each member of the Hawaii's congressional delegation."

POM-620. A resolution adopted by the legislature of the State of Colorado; to the Committee on Human Resources:

"HOUSE JOINT RESOLUTION No. 1025

"Whereas, The Federal Food and Drug Administration proposes to ban most common uses of antibiotics in cattle, swine, lamb, and poultry feeds and to restrict the therapeutic uses of these drugs to a veterinarian's prescription; and

"Whereas, Colorado's beef, lamb, hog, and poultry feeding industries depend to a significant degree upon the continued use of antibiotics, as feed additives at low levels; and

"Whereas, the low-level feeding of antibiotics aids signficantly in the prevention of disease and infection in livestock and poultry that are fed in confinement; and

"Whereas, The low-level feeding of antibiotics results in more efficient conversion by livestock and poultry of forage and feed grain resources into animal food products; and

"Whereas, The proposed actions by the Food and Drug Administration will have a major economic impact upon the livestock and poultry feeding industries of Colorado and consequently the Colorado economy as a whole; and

"Whereas, The Food and Drug Administration's proposed actions are based upon only a theoretical risk to public health; and

"Whereas, the Food and Drug Administration states '. . . There have been no epidemiological studies showing that a particular antibiotic-resistant human disease occurred or was more difficult to treat as a consequence of the use of an antibiotic in animals feeds . . .'; and

"Whereas, A large segment of the scientific community contends that the available scientific evidence does not warrant the Food and Drug Administration's proposed actions; now, therefore,

"*Be It Resolved by the House of Representatives of the Fifty-first General Assembly of the State of Colorado, the Senate concurring herein:*

"(1) That we, the members of the Fifty-first General Assembly of the State of Colorado request the federal Food and Drug Administration to dispense with further promulgation of its proposed bans and restrictions on the use of antibiotics in animal feeds until a thorough determination is made concerning the basic safety and benefit of these products and that such a determination should be reached only after:

"(a) The Food and Drug Administration's or another impartial source's conclusion from well-designed epidemiological studies made to determine if the uses of antibiotics in animal feeds at low levels do result in antibiotic-resistant bacteria or other infectious organisms occurring within the human population; and

"(b) Conducting scientific research necessary to determine the extent of hazard involved in order that a rational benefit-risk decision can be made.

"*Be It Further Resolved*, That only when the additional scientific studies have been completed and credible cost-benefit assessments have been made should the Food and Drug Administration proceed with any proposed rule-making concerning bans and restrictions on the low-level use of antibiotics in animal feeds.

"*Be It Further Resolved*, That copies of this resolution be transmitted to Dr. Donald Kennedy, Commissioner, Food and Drug Administration, the President of the Senate and the Speaker of the House of Representatives of the Congress of the United States, and to each member of Congress from Colorado."

MEMORIAL PRESENTED

Mr. PELL presented the following memorial, which was referred as indicated:

POM-621. A resolution adopted by the legislature of the State of Rhode Island; to the Committee on Foreign Relations:

"HOUSE RESOLUTION

"Whereas, Thousands of cub or baby harp seals are brutally bludgeoned to death annually along the Labrador front; and

"Whereas, Commercial exploitation has taken precedence over the humane treatment of these baby seals; and

"Whereas, Although the savage slaughter of these baby seals is restricted, each year brings the baby harp seals closer to extinction; now, therefore, be it

"*Resolved*, That this house of representatives of the state of Rhode Island and Providence Plantations hereby memorializes the congress of the United States to take appropriate action with the governments of Canada and Norway in order to halt the unneces-

sary slaughter of baby harp seals on the Labrador front; and be it further

"*Resolved*, That the secretary of state be and he hereby is authorized and directed to transmit duly certified copies of this resolution to the senators and representatives from Rhode Island in the congress of the United States."

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. PELL, from the Committee on Rules and Administration, without amendment:

S. Res. 434. A resolution authorizing the printing of additional copies of part one of the report entitled "Developments in Aging: 1977" (Rept. No. 95–764).

S. Res. 435. A resolution authorizing the printing of the report entitled, "Progress in the Prevention and Control of Air Pollution in 1977" as a Senate document (Rept. No. 95–765).

S. Res. 436. A resolution authorizing the printing of the report entitled, "Special Bridge Replacement Program, Seventh Annual Report," be printed, with illustrations, as a Senate document (Rept. No. 95–766).

By Mr. CANNON, from the Committee on Commerce, Science, and Transportation, without amendment:

S. 2616. A bill to amend the Independent Safety Board Act of 1974, as amended, to authorize additional appropriations (Rept. No. 95–767).

INTRODUCTION OF BILLS AND JOINT RESOLUTIONS

The following bills and joint resolutions were introduced, read the first time and, by unanimous consent, the second time, and referred as indicated:

By Mr. MORGAN (for himself, Mr. McGOVERN, Mrs. HUMPHREY, and Mr. THURMOND):

S. 2991. A bill to amend the National School Lunch Act to provide for pilot projects for free school lunches; to the Committee on Agriculture, Nutrition, and Forestry.

By Mr. BENTSEN:

S. 2992. A bill to amend the Internal Revenue Code of 1954 to provide uniform accounting of pension liabilities of tax-exempt pension funds; to the Committee on Finance.

S. 2993. A bill to amend the Internal Revenue Code of 1954 to provide a credit against tax for certain expenditures in connection with the rehabilitation of certain buildings; to the Committee on Finance.

By Mr. ALLEN (for himself and Mr. SPARKMAN):

S. 2994. A bill to authorize the Secretary of the Army to convey to the Alabama Space Science Exhibit Commission certain additional real property for use by such commission as a part of the permanent site of the Alabama Space Science Exhibit; to the Committee on Armed Services.

By Mr. RANDOLPH (for himself and Mr. MOYNIHAN) (by request):

S. 2995. A bill to facilitate the implementation of section 703 of the Railroad Revitalization and Regulatory Reform Act of 1976, to provide for the conversion of a part of the National Visitor Center to railroad passenger service, and for other purposes; to the Committee on Environment and Public Works.

By Mr. MARK O. HATFIELD:

S. 2996. A bill to correct the map entitled "Hells Canyon National Recreation Area" which accompanied the act of December 31, 1975; to the Committee on Energy and Natural Resources.

By Mr. BENTSEN:

S. 2997. A bill to provide financial assistance for school construction to local educational agencies educating large numbers of immigrant children born in Mexico; to the Committee on Environment and Public Works.

By Mr. DOMENICI:

S. 2998. A bill for the relief of the Alexander Concrete Co., of Clovis, N. Mex.; to the Committee on the Judiciary.

STATEMENTS ON INTRODUCED BILLS AND JOINT RESOLUTIONS

By Mr. MORGAN (for himself, Mr. McGOVERN, Mrs. HUMPHREY, and Mr. THURMOND):

S. 2991. A bill to amend the National School Lunch Act to provide for pilot projects for free school lunches; to the Committee on Agriculture, Nutrition, and Forestry.

(The remarks of Mr. MORGAN when he introduced the bill appear elsewhere in today's proceedings.)

By Mr. BENTSEN:

S. 2992. A bill to amend the Internal Revenue Code of 1954 to provide uniform accounting of pension liabilities of tax-exempt pension funds; to the Committee on Finance.

UNIFORM ACCOUNTING OF PENSION LIABILITIES

● Mr. BENTSEN. Mr. President, I am today introducing legislation to help protect tens of millions of pension plans participants and beneficiaries by requiring uniform standards for calculating and reporting pension liabilities.

There has been a great deal of concern recently about the adequacy of funding pension plans and the reliability of information presented to pension plan participants. As chairman of the Private Pension Subcommittee of the Senate Finance Committee, I believe this serious problem requires prompt congressional attention.

Last November Fortune magazine asserted that the unfunded liabilities of private pension plans now exceed $50 billion according to corporations' own reported figures. However, the magazine added that unfunded liabilities might actually come to several hundred billion dollars because "reported figures are ridiculously understated."

It is extremely difficult for both pension plan participants and corporate investors to determine the unfunded pension liabilities of a retirement plan. Fortune stated:

> The accounting and actuarial treatment of pension liabilities is a masterpiece of obfuscation. There is so much latitude in the way pension calculations are performed that companies can come up with virtually any level of contributions and liabilities they choose.

Many pension experts agree with that assessment.

A lot of adjustments in actuarial assumptions are made around the time new labor contracts are negotiated. Caterpillar Tractor, for example, negotiated a pension increase in 1976 with the United Auto Workers, but its pension expenses dropped (from $106.9 to $100.3 million), and its unfunded vested liabilities declined (from $440 to $270 million). The principal reason was that Caterpillar raised both the interest and wage assumptions, and the higher interest assumption predominated. The company would not disclose the figures for either assumption to Fortune magazine.

Rather than add another layer of Government regulation to a field already overburdened by excessive paperwork and redtape, it would be very practical to insure that pension plan trustees publish liability estimates based on uniform criteria.

It is absolutely essential for pension plan beneficiaries to have confidence in the numbers that are reported in the accounting and actuarial reports of pension plans. My legislation will help strengthen our pension system by insuring greater confidence on the part of pension plan beneficiaries and participants.

Mr. President, I ask unanimous consent to insert in the RECORD three newspaper and magazine articles which clearly document, with detailed statistics and examples, the need for prompt congressional approval of my legislation.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

THOSE PENSION PLANS ARE EVEN WEAKER THAN YOU THINK

(By A. F. Ehrbar)

Fans of *Pumping Iron* will surely recognize that fellow flexing his muscles on the opposite page. Rather than pumping iron himself, though, our Mr. Pension Fund has been pumped up with a lot of hot air. His condition, leaks and all, does not grotesquely exaggerate the condition of the private pension system in the U.S. today. The figures disclosed in the footnotes to annual reports make most pension plans look considerably more robust than they actually are.

The most obvious measure of a pension plan's strength is the degree to which assets have been set aside to cover retirement benefits. "Unfunded liabilities," as uncovered benefits are called, have been growing apace, and now exceed $50 billion, according to corporations' own reported figures. To be sure, corporate America could pile up that much money by funneling off pretax profits for four or five months. But the bulk of the unfunded liabilities are concentrated among a relative handful of companies that would be hard pressed to pay them off in a few years, let alone months.

There is reason to believe, moreover, that the reported figures are ridiculously understated. Unfunded liabilities might actually come to several hundred billion dollars. If that is true, even the "fully funded" strong men of the pension world may turn out to be ninety-seven-pound weaklings.

In a few extreme cases, employees' pension claims against a company have grown nearly as large as the total assets employed in the business. Lockheed's obligations, for instance, are so great that the company might be thought of as a pension plan that happens to make some missiles and aircraft on the side. At the end of last year, Lockheed reported total liabilities for vested pension benefits of $1.3 billion, an amount equal to 82 percent of the assets used in the business. The unfunded portion of those liabilities alone came to $276 million—66 percent more than the company's net worth and 46 percent more than the market value of its stock.

Dozens of other corporations aren't in much better shape when it comes to unfunded liabilities. Ten of the top 100 companies in the FORTUNE 500 have unfunded vested liabilities equal to a third or more of their net worth. In seven of those cases, these uncovered pension claims exceed the value of the companies' stock (for the companies, see page 107). The winner in the unfunded-liabilities derby, however, has to be

Wheeling-Pittsburgh Steel, No. 243 on the FORTUNE 500. Wheeling's unfunded vested liabilities of $274 million come to more than seven times its recent stock-market value.

WHO BETTER WATCH OUT

The immediate question that comes to mind about these tremendous unfunded liabilities is whether retiring employees will get their pensions. Actually, the employees have little to fear. The pension laws, as tightened up by the Employee Retirement Income Security Act of 1974 (ERISA), have effectively lifted the risk from the employees' backs. ERISA requires all companies with defined-benefit pension plans to pick up the tab if one of their number defaults. (Defined-benefit plans—which make up the vast majority of all plans—specify the dollar-amounts employees will receive; the other variety, defined-contribution plans, promises only that the company will put a certain amount into a pension fund each year.)

Now it is the shareholders who had better watch out. From their point of view, the disquieting question is whether the companies whose pension funds are deeply in arrears will be able to pay off their obligations and still have much of anything left over for profits. All those past, uncovered pension claims, after all, must be met out of funds that would otherwise flow down to the bottom line. The unfunded liabilities of some companies are so large—and rising so rapidly—that they will inevitably put a drag on profits like lead in a racehorse's saddlebags. Wheeling-Pittsburgh, for instance, has amassed unfunded liabilities totaling eight times its average pretax profits over the last three years. Uniroyal's unfunded liabilities come to the equivalent of twelve years of profits, and Chrysler's to a staggering twenty-seven years.

Even in this era of all-pervasive regulation and strict disclosure requirements, there is ordinarily no way for an investor to get a decent line on the pension-fund risks and unfunded liabilities he's buying into. The accounting and actuarial treatment of pension liabilities is a masterpiece of obfuscation. There is so much latitude in the way pension calculations are performed that companies can come up with virtually any level of contributions and liabilities they choose. Various actuarial methods, all of them legitimate, produce wildly divergent results, as the chart on the left illustrates. And no matter which actuarial method is used, seemingly minor variations in a company's assumptions about the growth of wages and the return on pension-fund investments can yield substantially different costs and unfunded liabilities.

When it comes to comparing one company with another, the only pension figure universally available on a vaguely comparable basis is "unfunded vested benefits." (In fact, for many companies, this is the only figure available.) Vested benefits are those a company would have to pay employees if its pension plan were terminated immediately. They are always smaller than total liabilities, because they include no allowance for the higher future salaries on which benefits ultimately will be paid, or for benefits that will be paid to current employees who will become vested.

That they are "vaguely comparable" is the best that can be said for unfunded vested benefits. All companies use essentially the same actuarial method to compute them, but minor differences in assumptions can throw the figures off by astonishing amounts. Unfortunately, few companies routinely disclose the assumptions they use.

THE "THREE-MARTINI" EFFECT

Nor do many companies disclose *anything* about the full dimensions of their pension plans—the total assets and liabilities—even though these data are critical in assessing the massive, but largely unrecognized, component of leverage that pensions have added to corporate financial structures. All the gains and losses on pension-fund portfolios ultimately affect profits by raising or lowering future pension contributions. For some companies, the pension fund's performance is actually more important to shareholders than operating results. Swings in Lockheed's $1.04-billion pension fund, for example, usually exceed operating profits or losses. And in years of great stock-market fluctuations, the returns on A.T.&T.'s $17-billion pension fund could conceivably double or wipe out even that company's reported profits.

What figures *are* reported show that pension expenses have been exploding. During the Seventies, annual corporate contributions to pension funds have bounded upward at a rate of 15 percent a year, while funds available for contributions (i.e., profits before taxes and pension expenses) have risen less than 7 percent a year. Even this torrid rate of spending hasn't kept pace with the need. It seems remarkable in our statistics-crazed age that no one has compiled precise aggregate data on either total or unfunded liabilities. But the few samplings of reported pension figures all show a widening gap between pension liabilities and assets.

The liabilities have been bloated by what might be called the "linebacker effect" and the "three-martini effect." Most employees earn benefits based on their incomes in the years immediately before retirement. So inflation in wages creeps up on a pension plan like that infamous third martini. And companies also increase retirement benefits, most often retroactively. The new liabilities created by such an increase can suddenly hit the pension fund with the jolt of Dick Butkus chopping down a running back.

In the investment climate of the Seventies, pension portfolios have been unable to keep up with the huge growth of liabilities. Unfunded liabilities naturally increased during 1973–74, when momentous stock-market losses pared the value of pension-fund assets. But, incredible as it may seem, unfunded liabilities had climbed even higher by the end of last year. Wage inflation was so great, and benefit increases so munificent, that they more than offset the boost pension funds got from the best two-year stock-market rally since the mid-Fifties. With stocks down again, pension funds are certain to be deeper in the red at the end of this year.

THEY LOOK CONSERVATIVE BUT • • •

Getting a focus on just how large a drag pensions costs will put on future profits requires a look beyond the reported numbers and into the arcane realm of the actuary. At first blush, it would appear that actuaries have been conservatively overstating costs and liabilities, and that the future burden will not be as bad as it looks. Using one of six "funding methods," actuaries spread pension costs over a period of years. Most of the methods distribute the costs fairly evenly, often as a constant amount each year or as a constant percentage of payroll. This approach tends to be conservative, for pension costs do not really follow a smooth pattern. They start low and increase during an employee's career, both in dollar terms and as a percentage of compensation. The methods that smooth out the costs increase pension contributions in the early years and lighten the burden later on.

Unfortunately, this actuarial conservatism is vitiated by a couple of crucial assumptions that corporate managers and their actuaries make about what will happen in the future. The two most critical assumptions concern the rate of return at which pension-fund assets will be invested (the "interest assumption") and the rate at which wages will grow (the "wage assumption").

Obviously, if the interest assumption is overly optimistic, a company won't put up enough money to cover benefits. And since corporations also use the assumption to discount those benefits back to a present value, a high rate will tend to understate pension liabilities. The wage assumption is important because most companies operate plans that scale retirement benefits to the worker's income in later years. If a company underestimates the growth of wages, its contributions will also fall short of what will be needed.

As it turns out, the assumptions made about interest and wages are so far out of line with reality that most companies contribute too little to cover future benefits. Even small errors in the interest and wage assumptions have a powerful effect on the actuaries' calculations. One pension specialist, Professor Howard E. Winklevoss of the Wharton School, says an increase of one percentage point in the interest assumption will, on average, reduce pension expenses and liabilities by 25 percent. And a reduction of one percentage point in the wage assumption, he says, will cut expenses and liabilities by 13 percent or so.

Superficially, most companies' interest assumptions would appear to be quite conservative. The average interest rate used is only 6 to 6.5 percent (they range as high as 10 percent and as low as 3.5). At a time when thirty-year government bonds pay more than 7.5 percent, a 6 percent assumption would seem to be pretty modest. However, the interest assumptions are being pitted against wage assumptions of only 3.5 to 4 percent. That is, companies are increasing future wages at, say, 3.5 percent to estimate the costs of benefits, and then discounting the costs back at 6 percent to arrive at a present value of liabilities.

The question of the proper wage and interest assumptions is a matter of some contention, and it is complicated by the uncertain impact inflation will have on both wages and investment returns. But a strong case can be made that the wage assumption should be *higher* than the interest assumption, not lower, as is now the case.

The best way to understand this is to strip inflation out of the figures and look at the relationship between "real" wage increases and "real" rates of interest. The wage assumption, first of all, should include an allowance for the long-run real increase in wages for the work force as a whole. Average weekly wages in manufacturing have increased at a real rate of 1.5 percent over the last thirty years. In addition, some allowance should be made for the "merit" raises that individual workers get as they move through their careers. Winklevoss estimates that, in real terms, merit increases average 1 percent to 2 percent a year. Adding the two, we come up with a real wage increase of 2.5 to 3.5 percent a year.

THE IMPORTANCE OF THE "RISKLESS" RATE

The interest assumption, on the other hand, should be the "riskless" rate of interest—i.e., the rate that would be earned on an investment that carries no possibility of default. The riskless rate—rather than the expected return on risky pension-fund assets—is appropriate for computing the present value of liabilities because the obligations *must* be paid if the company remains in business.

Until very recently, it has generally been assumed that the real riskless rate is about 3 percent, which would suggest that the inassumed that the real riskless rate is about equal. However, several recent studies have produced startling evidence that the riskless rate actually is *at most* 1 percent. The real rate of return on government securities over the last fifty years has been only 1 percent, and the rate has actually been negative since the end of World War II.

If this thinking is correct—and it seems clearly to be the best available—wage

assumptions should exceed interest assumptions by at least 1.5 to 2.5 percentage points. But, as we have seen, companies now use wage assumptions that fall short of interest assumptions by an average of 2.5 percentage points (an interest assumption of 6 percent versus a wage assumption of 3.5 percent). The swing of four or five percentage points between the way companies now run their calculations and the way they should run them has a fantastic impact on estimated pension liabilities. Using Winklevoss's rule of thumb, the adoption of proper interest and wage assumptions would nearly double reported corporate pension liabilities and expenses.

It is difficult to sort out the countervailing effects of the understatement caused by improper assumptions and the overstatement caused by the use of conservative actuarial methods. It appears, though, that actual pension expenses and liabilities should be, on balance, about 50 percent higher than the figures now being reported. Unfunded liabilities are understated by an even greater amount. For example, a company that now estimates it has $100 million in liabilities and $80 million of pension-fund assets would report unfunded liabilities of $20 million. If actual liabilities were $150 million (an increase of 50 percent), unfunded liabilities would come to $70 million (an increase of 250 percent).

The practice of using interest assumptions that are higher than wage assumptions is commonly defended on the grounds that long-run returns on pension funds are likely to exceed long-run wage inflation, since the average fund has 65 percent of its assets in common stocks. That logic has been roundly criticized by several financial economists, including Professor William Sharpe of Stanford and Jack Treynor, editor of the Financial Analysts Journal. They point out, quite simply, that the value of pension liabilities is independent of the type of pension-fund assets a company holds.

In other words, corporate managers are gambling when they invest pension assets in common stocks. By assuming that pension-fund assets will grow at the expected rate of return on risky investments, they are taking it for granted that they will win the gamble. There is always a chance, however, that they will lose. That possibility of losing constitutes a real claim against future profits—it just doesn't show up on the books. The only way a corporation can be certain of having sufficient funds to cover future benefits is to invest in risk-less assets. And that would of course raise the level of pension-fund contributions above what it is today.

In a complex matter such as this, it is hard to determine the degree to which corporations are endangering their futures. An important question is whether they will in fact win the gamble. If the real rate of return on pension-fund portfolios turns out to be 5 percent or more, the use of the present optimistic interest and wage assumptions would be justified to determine funding levels.

One of the more intriguing studies of what future rates of return will be was done by Roger Ibbotson of the University of Chicago and Rex Sinquefield of the American National Bank. They simulated future returns on several kinds of securities through the year 2000 by using the distribution of past rates of return over the last fifty years. Based on the simulations, Ibbotson has concluded that there is a 60 percent chance that the real rate of return on pension-fund portfolios will be 5 percent or more. This means there is a 40 percent chance that the rate will fall short of 5 percent. In that unhappy event, companies will have to dip into future profits to pay benefits that they now report as having been funded.

THE ODDS ARE LONGER FOR AMC

Although the odds appear to favor the pension funds, three to two is cutting it pretty close. Plenty of odds-on favorites have lost the Kentucky Derby. What's more, those odds apply only to companies whose interest assumptions exceed wage assumptions by the average 2.5-percentage-point spread. The spreads can be a lot higher and the odds a lot worse. Goodyear and American Motors, for instance, have 6 percent interest assumptions and zero wage assumptions.

These two companies have a partial defense for such unbridled optimism. Their union contracts call for pensions of specified amounts for each year of service, rather than basing payments on final salaries. Since pension contributions are tax deductible and in this case aren't formally tied to wage inflation, the Internal Revenue Service doesn't allow companies using the years-of-service formula to assume any future increases. Of course, this doesn't alter the economic realities: unions will demand that pensions keep pace with wages. And nothing prevents the companies from better reflecting true conditions by lowering interest assumptions to partly offset the unrealistic wage assumptions.

Unfortunately, the adjustments most companies make are of a different kind. From what can be ascertained about them, it appears that they have had a conspicuously self-serving quality. Even though wages have been shooting up faster than the actuaries have assumed, and pension portfolios have barely stayed above water, the actuaries have seen fit in recent years to raise interest assumptions more than wage assumptions. This holds down pension costs and lowers unfunded liabilities. The trend toward higher spreads between the two assumptions means, of course, that actual pension costs have been rising even faster than the 15 percent rate companies have reported.

A WAY TO "PAY" THE UNIONS

Actuaries, who are required by ERISA to certify the assumptions, insist that their adjustments are "reasonable." Curiously, though, a lot of the adjustments are made around the time new labor contracts are negotiated. With an adjustment or two in its assumptions, a company can "pay" for a benefit increase by pushing the costs into the future; in the meantime, reported profits are maintained and unfunded liabilities are held in check.

Caterpillar Tractor, for example, negotiated a pension increase with the United Auto Workers last year, but its pension expenses dropped (from $106.9 million to $100.3 million), and its unfunded vested liabilities declined (from $440 million to $270 million). The principal reason was that Caterpillar raised both the interest and wage assumptions, and the higher interest assumption predominated. The company will not disclose the figures for either assumption.

Goodyear improved the looks of its financial statements by making similar adjustments last year. It agreed to a thumping increase in pension benefits for its United Rubber Workers employees, and then raised its interest assumption from 5.5 percent to 6 percent. Unlike Caterpillar, it reported the changes quite plainly. With a few extra calculations, an investor could figure out from the footnotes to Goodyear's annual report that the new benefits will cost 30 percent more, and that the actuarial change reduced pension expenses by 14 percent from what they would have been had the assumption remained unchanged.

Goodyear's executives are also a lot more candid about how actuarial changes come about. As Bennett Shaver, an assistant treasurer, puts it, "It's always good to look at [assumptions] at the same time you have a benefit increase." He adds, though, that the looking comes after labor negotiations. "Otherwise, the union could say, 'Go ahead, raise the interest rate to 10 percent. It [a pension-benefit increase] is not going to cost you anything.'"

Investors clearly would be better able to assess a company's profit prospects if they had a more objective measure of pension costs and liabilities. Jack Treynor, viewing the issue from the perspective of the security analyst, asserts that "what is needed from the pension actuary is something much more straightforward than he now provides—namely, the present value of benefits discounted at the riskless rate."

Accountants also recognize the deficiencies of pension reporting, and many of them have been arguing for greater consistency and disclosure. Shareholders aren't likely to get a closer look at the actuarial sinews of the pension strong men anytime soon, though. The actuaries have staked out pensions as their turf, and they aren't granting easements. Some actuaries are so riled about all the attention unfunded liabilities have been getting that they want to stop using the term altogether. Instead, they prefer calling them "supplemental present values," a euphemism worthy of an undertaker.

A STRANGE KIND OF INSURANCE

Before the advent of ERISA, most pension agreements limited a company's liability to pension-fund assets; in the event a company went bankrupt or terminated its pension plan for some other reason, employees couldn't collect anything beyond what was in the pension fund. Hence, employees were always "at risk" for any unfunded vested liabilities.

ERISA relieved employees of those risks by guaranteeing pension benefits up to a specified limit, currently $937.50 a month. It accomplished this by transferring the risks to shareholders. The law holds a corporation liable for its own unfunded guaranteed benefits up to 30 percent of the company's net worth. Any guaranteed benefits left over must be picked up by all other companies under a scheme called "plan-termination insurance." The "insurance" is administered by the Pension Benefit Guaranty Corporation (PBGC), a government agency that raises the money by levying a per-employee tax on all companies that have defined-benefit pension plans. Thus shareholders are now "at risk" not only for the guaranteed benefits of the companies in which they own stock but also for those of all other corporations.

The PBGC spreads the tax equally across all companies. Weak companies that are likely to default pay the same "premium" per employee as strong companies whose risk of default is minimal. Strong companies are therefore subsidizing the weak ones.

Plan-termination insurance tends to warp the way businessmen make decisions. It raises the value of pension promises by assuring that the benefits will be paid. This encourages weak companies to offer, and their employees to accept, overly generous pension promises in lieu of additional wages. Promised benefits have the advantage of not immediately increasing costs, as higher wages would. And a weak company has little to lose by making pension promises: if it goes broke, the extra liabilities will cost the shareholders little if anything. And if the company thrives, profits will be available to pay the benefits when the employees actually retire.

The insurance scheme has operated successfully for the last three years, but some pension experts believe it is fatally flawed. The architects of ERISA overlooked a special aspect of pension-fund risk when they decided to insure benefits. They really aren't insurable. The concept of insurance is based on the law of large numbers, which describes what happens when events are essentially independent of one another (e.g., everyone will die sometime, but everyone will not die

at the same time). Pension assets are invested largely in common stocks, and the law of large numbers doesn't apply in the stock market—all stocks can go down, and they can all go down at the same time.

The chances of a catastrophic stock-market decline are slight, to be sure, but prices, in real terms, have been cut in half twice during the last fifty years. Should that happen again, it is apt to coincide with a major economic decline, when the PBGC's resources are likely to be strained by a surge of pension-plan defaults. The defaulting companies' unfunded liabilities would be swollen by stock-market losses, forcing the PBGC to jack up the taxes on other companies to make up the huge deficits. These companies, meanwhile, would be struggling to make up losses in their own portfolios. The added levies from the PBGC could persuade them to abandon their plans. And the PBGC, swamped by claims, would have to cut off benefits or turn to Congress for help.

It is possible that, even without an economic disaster, claims against the PBGC could force its "premiums" to go so high that many companies with solid defined-benefit pension plans would abandon them in favor of defined-contribution plans (e.g., profit sharing). Unfunded vested liabilities now total at least $25 billion, and the great bulk of them are concentrated in several dozen large companies, many of which are less than robust. Should the PBGC sail into a line squall of major bankruptcies, the tax per employee could easily jump from its current level of $1 to $10, $20, or even $50 a year. The PBGC is already looking for a "premium" increase to $2.25, and it has yet to come up against its first truly large claim. If Bethlehem Steel were to go bankrupt, for instance, other companies would get stuck for an additional per-employee "premium" of about $4 a year for fifteen years. That in turn would cost General Motors alone $3 million annually.

SADDLED WITH THE HATTERS

Industries in which all employers are covered by one labor contract and pay into a common pension plan appear to be particularly dicey propositions. Many of those multi-employer plans, which cover about 7.7 million workers, are in deep trouble. A lot of them cover present and formers employees in anthracite coal, hats, and other declining industries. As an industry shrinks, surviving companies end up paying the obligations of their defunct competitors.

Although the PBGC doesn't have to cover multi-employer plans until January, it has voluntarily taken over four of them already. It has also identified eight others—with $350 million in unfunded liabilities—that it believes will terminate soon. In contrast, losses on single-employer plans, which cover some 26 million employees, have totaled about $100 million over the last three years.

Some special aspects of the insurance program increase the likelihood that well-funded companies will opt out of the system. One of them is that provision in ERISA making corporations liable for any unfunded benefits up to 30 percent of the company's net worth. The provision was included in the law in order to discourage weak companies from terminating their plans and dumping all the liabilities on the PBGC—in effect, on other companies.

As the law reads now, though, a company with huge unfunded liabilities could still terminate its plan and get off the hook by paying the PBGC 30 percent of its net worth. The PBGC says it calculates net worth by judging what a company's assets could be sold for and deducting all liabilities. In Wheeling-Pittsburgh's case, the company could clear its books of $274 million in unfunded vested liabilities, while paying the PBGC a maximum of $110 million (30 percent of its balance-sheet net worth) and perhaps as little as $11 million (30 percent of its stock value). Harrison Givens, a vice president of the Equitable Life Assurance Society who has been an adviser to the PBGC, contends that the 30 percent limit constitutes "bribery to terminate."

HOW TO GET OFF THE HOOK FOR LESS

There is no evidence that companies are in fact planning to terminate in order to dump liabilities, but they may simply be waiting for a big uncertainty about government regulations to be resolved. The PBGC's claims against a company have the status of a tax lien. Bankers have naturally become uneasy about the PBGC getting a lien against a company's assets, because that claim could be senior to theirs. Aroused by nightmares of subordinated status, the American Bankers Association induced Congress to require the PBGC to offer corporations "contingent employer liability insurance" covering the agency's claims against a company. If a company could buy this insurance, it could discontinue its pension plan and wipe out all of its unfunded liabilities—without having to work over that 30 percent of net worth.

The PBGC began shopping around for an underwriter to supply the insurance back in 1974 but, unsurprisingly, private insurers weren't lining up for the opportunity. Even Lloyds, which has insured everything from robots to Marlene Dietrich's legs, turned down the proposition, observing that underwriting unfunded pension liabilities amounts to "insuring the profitability of the American economy."

The PBGC is now required to offer the insurance itself. It hasn't been eager to get into this business either and is now preparing an alternative proposal for Congress. The agency wants to limit the coverage to $5 million or so, and require that a company be in bankruptcy before it can escape without any liability for unfunded benefits.

These recommendations are a step in the right direction, but they aren't nearly radical enough to wipe out the perverse incentives built into the pension system. To make sure companies shoulder the risks they create for themselves, Congress would be wise to dump the idea of contingent employee liability insurance altogether and eliminate the 30 percent ceiling. Corporations should also be required to report pension liabilities on a uniform basis so that investors and regulators can assay the true condition of the enterprise. And the PBGC should base its "premiums" on the amount of risk a company contributes to the system—i.e., its unfunded guaranteed liabilities. So long as companies can reap the benefits that accompany higher risks while avoiding the costs, they are certain to impose all the risks on the system that they can get away with.

It would also be a good idea to re-examine the entire issue of whether the government should *guarantee* a fixed level of future income to any particular group in society—in this case retired employees. Shifting the risk of pension-fund defaults from employees to shareholders in general is merely a form of transferring wealth, not an insurance program. What's more, no amount of funding will eliminate the possibility that the pension system may collapse: in the final analysis, all corporations, as investors in each other's stock, are dependent on one another's profits to meet their pension obligations. In terms of the system as a whole, virtually all pension liabilities are essentially "unfunded." So long as they are guaranteed, the liabilities constitute an overhanging burden not only on future profits, but on the future living standards of all but the 35 million or so workers who are covered by defined-benefit pension plans.

IT MAKES SOCIAL SECURITY LOOK SOLVENT

The pension bills facing shareholders pale before those that taxpayers will eventually have to pay to provide retirement benefits for public employees. Congressmen, governors, and mayors have run up gargantuan tabs for pensions that are frequently more lavish than anything found in business, and they have left the liabilities largely unfunded. As a result, the unfunded liabilities of public pension plans dwarf the total liabilities of corporate plans—even though public pensions cover fewer workers.

When it comes to actuarial and disclosure practices, public pension plans are even worse than their corporate counterparts. The meager figures available chillingly illustrate the politician's unwillingness to look beyond the next election and reveal an astonishing propensity for fiscal irresponsibility.

A BIG BILL IN BOSTON

New York City's pension dilemma has achieved the status of a contemporary legend. Less widely noted is the fact that many other cities and states aren't far behind. Based on the latest reported data, Boston, Detroit, Los Angeles, and even Jacksonville, Florida, have unfunded pension liabilities that exceed their net municipal debt. Boston had unfunded liabilities of $1.1 billion a year ago, and Massachusetts had unfunded liabilities of $12.8 billion.

In Los Angeles, retirees who are struggling to get by on fixed incomes have complained that soaring property taxes are forcing them out of their homes. Half of those taxes go for the pensions of city employees. And, despite the high tax levies, Los Angeles had unfunded liabilities of $1.6 billion at the beginning of 1975 (the latest reported figures).

As in everything else, the federal government leads the pack when it comes to piling up pension deficits. Congress, which labored for seven years to force corporations to treat their pension obligations more responsibly, presides over a system of its own that is so far in arrears that it makes Social Security look positively solvent. By some estimates, the unfunded liabilities for federal-employee pensions will soon reach the trillion-dollar mark.

In a scathing report last summer, the General Accounting Office concluded that federal pension costs and liabilities are perilously understated. Many of the federal plans give no consideration to the effects of future pay increases and the impact of inflation on pension annuities, many of which are tied to the consumer price index. The reported unfunded liabilities of the civil-service system (which includes about half of all federal employees) came to $107 billion at the end of fiscal 1976. Based on calculations made by the system's board of actuaries, the true unfunded liabilities—after adjustment for inflation—are more than twice that amount.

WHEN THE BILL ARRIVES

The underestimation of pension liabilities and costs means, of course, that the federal budget deficit is even bigger than reported. The GAO estimates that pension costs for federal civil-service employees alone were understated by $7.1 billion in fiscal 1976. Moreover, the unfunded liabilities have been growing geometrically, despite an increase in contributions in 1969 that was designed to stem the rise. Between fiscal 1970 and fiscal 1976, the reported unfunded liabilities of the civil-service system more than doubled, and payments to retired employees more than tripled, to $8.3 billion. Assuming government wages rise 6 percent a year, payments will hit $29 billion by 1985.

If Congress were to restate unfunded liabilities along the lines advocated by the GAO, and then pay them off over thirty years, as it requires corporations to do, taxpayers would have to cough up $15 billion or more a year just to amortize the unfunded obligations of the civil-service system. Regardless of how Congress treats the liabilities, though, the benefits ultimately must be cut or paid.

If it doesn't cut the benefits, the government will have to raise taxes, reduce services, or print more money.

PENSIONS: A $100-BILLION MISUNDERSTANDING

The only line that concerns most of us about pensions from a private business is the bottom line. It takes a whiff of scandal—insider shenanigans, or dealings with gangsters—to transform the arcane world of other people's pensions into headline news. But the pension issue with the greatest potential impact on Americans has little to do with improper conduct by pension managers. In the view of many experts, private pension funds—representing retirement security for tens of millions—could have great difficulty delivering on their promises. Corporation stockholders, and perhaps taxpayers, may get stuck with the bill.

According to Fortune magazine, the collective obligations of corporate pension plans may exceed their current assets by as much as $100 billion. The "unfunded" pension liabilities of at least two major corporations are actually greater than the companies' net worth. Government-sponsored insurance makes it unlikely that workers belonging to even the weakest pension programs will ever go hungry. But the questionable financial underpinning of the nation's private pension system suggests that serious reforms are in order.

A pension, offered as an employment fringe benefit, typically promises a specific monthly payment to a retiring employee, based on salary and the number of years of service. Money is then set aside by the company and invested to cover this liability for 10, 20, or 30 years into the future. The amount that should be set aside, however, is extremely difficult to compute. Trustees cannot be sure how much the invested funds will learn; they thus cannot be sure how much will be available for pension checks decades ahead. Moreover, since benefits are often calculated on wages paid during the last few years of service, future obligations of the fund cannot be determined until those wages are actually set.

What is known, however, is that the dismal performance of pension-fund investments in recent years has left hundreds of funds with much less cash than their managers expected. For the most part, these shortfalls can be covered by drawing on current corporate revenues that would otherwise have gone toward profits. Nothing, however, prevents corporations from repeating their honest mistakes, overestimating investment earnings or underestimating future obligations. And that is precisely what a growing group of actuaries and economists believe is happening today. Corporate stockholders may have some unpleasant surprises in store.

Tomorrow's pensioners have two lines of defense. First, pension benefits are obligations of contract. If the funds prove inadequate, pensioners must be paid off before stockholders receive a nickel. Second, benefits up to $11,250 a year are insured by a Government agency, the Pension Benefit Guaranty Corporation (PBGC). If a company goes broke, the PBGC collects money from all other corporate pension funds to keep the benefit checks moving. So far, the PBGC has had to pick up the pieces of bankrupt funds on only a few occasions. But if pension fund investments turn sour in the 1980's or 1990's, as they did in the early 1970's, PBGC could face an annual multibillion-dollar deficit that would represent a massive drain on corporate earnings.

At that point the only alternative to saddling business with the pension debt would be to bail out the funds with Federal tax revenues. Neither alternative is very attractive. Hence the need for some cautionary reforms to put the pension system back on track.

Uniform Accounting Standards. Pension trustees are legally required to exercise prudence, but prudence is hard to define. Rather than adding another layer of Government regulation to a field already overwhelmed by regulations, it probably makes sense only to insist that trustees publish liability estimates based on uniform, conservative criteria. This would give warning of trouble ahead to regulators, employees and stockholders—and deter corporate managers from sweeping tomorrow's pension problems under the rug.

Conservative Financial Incentives. Unlike most insurance premiums, those charged by PBGC bear no relation to the risks run by the insured. All companies chip in a fixed amount per employee, regardless of how likely the chances of default. If companies with large unfunded liabilities were charged higher premiums, the insurance costs would be spread more equitably and those that take the biggest chances would have an incentive to take less.

Defined Contribution Pensions. The root of the pension fund problem is the guarantee of fixed benefits in an indefinite future. Funds in which the size of the company's contribution, rather than the promised benefits, is fixed cannot go broke. Such "defined-contribution" plans already cover millions, and in cases where employees are willing, could be substituted or added to "defined-benefit" plans. This approach admittedly shifts risk from the company to its workers. But some companies might be willing to pay a premium pension benefit to achieve that shift.

Private pensioners aren't begging on the streets, nor are they remotely likely to face that prospect. It surely makes sense, however, to encourage more conservative pension practices by letting future pensioners and those who will ultimately be forced to pay those pensions know exactly where their interest lie.

[From the New York Times, Jan. 8, 1978]

WORRYING ABOUT THE PENSION GAP

(By Deborah Rankin)

Many financial analysts and bankers are in a cold sweat over whether the nation's largest corporations have set aside enough assets to cover the pensions they have guaranteed their employees. In the past the workers carried much of the risk. But the Employee Retirement Income Security Act of 1974 transformed pensions from gratuities—payable to employees at a company's discretion—to liabilities with a potential claim on up to 30 percent of a company's net worth.

Such pension claims have the status of tax liens, which makes them senior to the claims of other creditors, such as banks.

Now that the workers' pensions are protected, the risks of shaky retirement plans have been transferred to investors, who must consider whether a company whose stock they are purchasing has a hidden time bomb. The trap is an underfunded pension plan that could wipe out future profits if the assets it has invested in the stock market do poorly or, even worse, devour corporate assets if the plan is terminated.

By one estimate, there is a $23 billion gap between the pensions that workers have been guaranteed and the assets that have been set aside to pay for these obligations. When the costs of contingent pension benefits that will come due are added, the gap widens to a staggering shortfall of almost $50 billion.

The problem for investors examining the footnotes of corporate annual reports, where pension plan information is given, is to find a common denominator that will allow them to compare on a uniform basis the pension figures of one company to the pension figures reported by another. Critics contend that the law allows actuaries so much latitude in making pension-cost determinations that the same numbers can have widely different meanings from company to company.

"The trouble is that nobody knows what pension costs are," said Jack L. Treynor, editor of the Financial Analysts Journal and co-author with Patrick J. Regan and William W. Priest Jr. of a book, "The Financial Reality of Pension Funding Under ERISA."

Andrew J. Cappelli and S. Thomas Moser of the accounting firm of Peat, Marwick, Mitchell & Company recently complained in a trade periodical that complex accounting rules for pensions have made meaningful comparisons from company to company "all but impossible."

Pension cost figures are actuarially derived numbers whose size can vary dramatically, depending upon what assumptions the actuary feeds into the calculations. Basically, they represent the amount of money a company must set aside today to meet its pension obligations years from now. Minute changes in two key assumptions can make pension cost figures grow or shrink by millions of dollars.

The first important assumption, known as the "interest assumption," concerns the rate of return a company expects to earn on its contributions to the pension fund. An increase of one percentage point in the interest assumption will, on average, pare pension costs by 20 or 25 percent.

The second key assumption, known as the "wage assumption," concerns the rate at which wages will grow and takes into account such factors as inflation and special industry trends. This rate is crucial because most pension benefits are tied to the wages employees earn in their final years of work. A cut of one percentage point in the wage assumption will reduce pension liabilities by 13 percent or so.

Currently there are no limitations on the numbers that companies can crank into these critical assumptions. Although a typical interest rate assumption is in the neighborhood of 6 to 6.5 percent, the numbers can rise as high as 9 percent and sink as low as 4 percent. Similarly, although wage assumptions tend to cluster around the 3 or 4 percent level, the range goes from zero to 8.5 percent. All are considered legitimate, at least by the companies and actuaries that use them.

Under the pension law, however, actuaries must certify that the assumptions are "reasonable" in the aggregate. "For example, the wage rate assumption might be understated by two percentage points, which by itself would produce an understatement of costs," said Lawrence N. Bader, vice president and actuary with William M. Mercer Inc., an employee-benefits consulting firm. "And the interest assumption might be understated by one percentage point, which by itself would produce an overstatement of costs." The result, he said, might be to state costs correctly. "This is permissible under ERISA," Mr. Bader said, "but it is debatable whether it is sound actuarial practice."

It is not unusual for companies to periodically alter their interest and wage assumptions. Indeed, many companies increased their interest assumptions after the bull stock market of the 1960's from a level of 3 to 4 percent to the current level of 6 to 6.5 percent. The market's precipitous decline since then has made some of the more optimistic assumptions suspect.

Most analysts' attention is focused on the size of the "unfunded vested benefits" of American business. This is a net figure that represents the difference between the benefits a company is legally obligated to pay to workers, even if they quit tomorrow, and the amount of assets, such as stocks and bonds, it has on hand to pay for these future obligations.

Even this number can be tricky, however. Just as companies can fiddle with the assumptions (such as interest-rate growth) that are used to compute the liability side of the equation, they also can—and do—

use different methods to arrive at the asset side.

A recent study of 40 large industrial corporations by BEA Associates, a New York-based investment counseling firm, found that even though the aggregate pension assets of the sample rose by 27 percent in 1976, to $39.3 billion, the total unfunded vested benefits rose by 8 percent, to $12.3 billion. Furthermore, unfunded vested benefits as a percentage of the average company's net worth increased from zero in 1973 (which meant the average company was fully covered) to 7.5 percent of net worth in 1976.

"These numbers are incredible," said Mr. Regan, the co-author of the book on pensions and a vice president of BEA. "Even though pension assets were growing, the plans wound up worse funded than they had been. What would have happened if the economy and the stock market collapsed?"

There is growing pressure to standardize the way companies account for their pension costs and disclose the actuarial assumptions underlying them. While most of the pressure has come from the pension law, which requires pension plans to submit financial statements annually to the Department of Labor and the Internal Revenue Service, other supporters of uniformity are accountants and bankers. As creditors, the bankers are especially concerned because of their precarious position should a company pension plan fail and the Government go after some of the corporation's assets.

The Financial Accounting Standards Board, the private sector's top authority on accounting procedures, had tentatively recommended that major pension plans standardize their financial reports to plan participants. This could have laid the groundwork for standardizing the reporting of pension costs.

But intense opposition from actuaries, who resented the accountants' intrusion and contended that the rule would increase actuarial costs without helping beneficiaries, made the board delay. So it will probably be years before the board gets around to debating the proper accounting method for pension costs.

PENSION FUND LIABILITY

Company	1976 pension expense in millions	Pension expense as percent of payroll
Western Union	$33.4	16.2
Bethlehem Steel	261.2	11.3
Union Carbide	130.3	11.1
Uniroyal	79.4	10.4

By Mr. BENTSEN:

S. 2993. A bill to amend the Internal Revenue Code of 1954 to provide a credit against tax for certain expenditures in connection with the rehabilitation of certain buildings; to the Committee on Finance.

TAX CREDIT FOR THE REHABILITATION OF PROPERTY

● Mr. BENTSEN. Mr. President, I am today introducing legislation to provide a 10-percent tax credit for the costs of rehabilitating certain residential, commercial, and industrial structures.

Existing tax law includes many incentives to build new structures in preference to maintaining or rebuilding existing structures. In some instances it may be cheaper to tear down an older structure and build a new one in another location simply because of the tax deductions allowed. This bias in our tax law actually contributes to the decline of older neighborhoods in both small towns and urban centers throughout the Nation. The legislation that I am introducing today will correct this counterproductive feature of the Internal Revenue Code.

Mr. President, this tax credit will help promote the rehabilitation and modernization of existing neighborhoods through private initiative. This will help both rural communities as well as metropolitan centers. The credit will supplement existing tax incentives for the construction of new property. There is substantial precedent in existing law for this kind of tax incentive. For example, section 167(k) of the Internal Revenue Code provides incentives for the rehabilitation of low-income housing and section 191 of the tax code encourages rehabilitation of historic structures.

There is growing recognition that the rehabilitation of existing housing must play a key role in national policy to help distressed neighborhoods and communities. Just a few deteriorated or abandoned houses or apartment buildings can have a dramatically adverse impact upon an entire block or neighborhood—and a coordinated effort to rehabilitate several houses in an area can be a key catalyst in revitalizing a distressed neighborhood or community.

The rehabilitation of existing housing is also needed to meet the increased housing demand expected over the next decade as new household formations rise. We must make maximum possible use of our existing housing in order to adequately deal with this demand.

Mr. President, under my proposal both individual and corporate taxpayers would be entitled to a tax credit equal to 10 percent of the first $20,000 of qualified rehabilitation expenditures for a maximum credit of $2,000 per year. The credit would apply to residential, commercial, and industrial property. This credit would not be refundable but a 3-year carryback and 7-year carryover would be permitted. Qualified rehabilitation expenditures would be defined in a manner similar to section 167(k) of the tax code to include "amounts chargeable to capital account and incurred for property or additions or improvements to property (or related facilities) with a useful life of 5 years or more, in connection with the rehabilitation of an existing building." A threshold is included so that the credit is allowed only if the aggregate amount of qualified expenditures over a period of 2 consecutive years exceeds $3,000. In addition, the credit only applies to improvements to structures that are at least 20 years old. A recapture rule is also included to prevent tax windfalls to real estate speculators.

Mr. President, this tax credit for the rehabilitation of property will encourage private investment to reverse the decline of older neighborhoods and communities throughout rural America as well as our central cities. The proposal will remedy the existing bias in our tax law toward the construction of new homes and businesses as compared to the rehabilitation of existing structures.●

By Mr. ALLEN (for himself and Mr. SPARKMAN):

S. 2994. A bill to authorize the Secretary of the Army to convey to the Alabama Space Science Exhibit Commission certain additional real property for use by such commission as a part of the permanent site of the Alabama Space Science Exhibit; to the Committee on Armed Services.

EDUCATIONAL AND RECREATIONAL COMPLEX EXPANSION OF THE ALABAMA SPACE AND ROCKET CENTER

Mr. ALLEN. Mr. President, I send a bill to the desk on behalf of my distinguished colleague (Mr. SPARKMAN) and myself. I ask that it be appropriately referred.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

Mr. ALLEN. Mr. President, the citizens of Alabama in 1965 approved a bond issue to fund construction of a missile and space exhibit in Huntsville, Ala. More than $2.5 million was invested by the city of Huntsville, Madison County, and the State of Alabama in the design and construction of the space and rocket center. In 1968, the Congress of the United States deeded to the Alabama Space Science Exhibit Commission property on Redstone Arsenal on which to build the space and rocket center.

On March 17, 1970, the space and rocket center officially opened its doors. Since that time the center has served over 1,700,000 visitors, 70 percent of whom were from out-of-State or from foreign countries. More than 316,000 of the visitors were students who came to the center on educational field trips. I have a deep personal interest in this center because I had the distinct honor of serving as chairman of the Alabama Space Science Exhibit Commission from its inception through the opening of the facility. I resigned as chairman

shortly after becoming a member of the U.S. Senate.

The Alabama Space and Rocket Center has become the largest missile and space museum in the world. It has in its collection more than 1,500 pieces of missile and space hardware valued at over $26 million. Over 60 active exhibits are now a part of the exhibition center. The space and rocket center also serves as a major repository for the Smithsonian Institution's National Air and Space Museum, having over 300 historical artifacts on loan from that institution.

The State of Alabama has retired the bonds which were used to finance the design and construction of the facility, and the center has been self-sustaining since its opening, operating on nominal admission fees. Any remaining funds, after operating expenses are paid at the end of each fiscal year, have been used to add new exhibits, purchase equipment, and develop educational programs and services for students and teachers.

The operation of the space and rocket center has made it possible for the U.S. Army and NASA to save $1,500,000 since 1970 by closing their museums and directing visitors to the space and rocket center. Over the next 10-year period, it is estimated that the facility will save the Government an additional $3.7 million.

The space and rocket center now has undertaken a 10-year expansion plan which would involve the addition of several new public facilities. To house these anticipated facilities and provide for land to be taken by the new Interstate (I–565) highway, it is necessary that this organization request additional land to accommodate future growth. Since the Alabama Space and Rocket Center is bounded by highways and Redstone Arsenal, expansion is possible only onto Army property on Redstone Arsenal.

Therefore, Senator SPARKMAN and I are introducing this bill to amend Public Law 90–276, and authorizing that adjacent lands on Redstone Arsenal, Ala., be deeded to the Alabama Space Science Exhibit Commission for the purpose of expansion and further development of new educational and recreational programs.

As agreed upon in the original act, the U.S. Army will have approving authority for any developments to be executed on this property. Further, the Alabama Space Science Exhibit Commission will relocate existing structures on the property if desired by the Army.

Mr. President, Alabamians sincerely appreciate the confidence the U.S. Army and the Congress of the United States have shown in the Alabama Space and Rocket Center, and it is their desire to continue the excellent relationship they have had with the U.S. Army in the further development of a facility of which all Americans can be proud.

Mr. President, I ask unanimous consent that a narrative explanation of this project be printed in the RECORD:

There being no objection, the explanation was ordered to be printed in the RECORD, as follows:

PROPOSED EDUCATIONAL AND RECREATIONAL COMPLEX EXPANSION OF THE ALABAMA SPACE AND ROCKET CENTER, HUNTSVILLE, ALA.

BACKGROUND

The citizens of Alabama and the State Legislature voted to construct a missile and space exhibit in Huntsville, Alabama in 1965. Over $2.5 million was invested by the City of Huntsville, Madison County and the State of Alabama in the design and construction of the Space and Rocket Center. In 1968 the Congress of the United States provided property for its location by deeding to the Space Science Exhibit Commission, the governing body of the Space and Rocket Center, property on Redstone Arsenal.

On March 17, 1970 the Space and Rocket Center officially opened its doors. Since that time the Center has served over 1,700,000 visitors, 70% of which were from out-of-state or visiting from foreign countries. More than 316,000 of the visitors were students who came to the Center on educational field trips.

In 1972 the Space and Rocket Center instituted bus tours of Redstone Arsenal and NASA's Marshall Space Flight Center. Over 465,000 visitors have had the opportunity to tour the complex, a program designed to permit the taxpayer the opportunity to see inside a large government operated research and development facility.

The Space and Rocket Center has become the largest missile and space museum in the world. It has in its collection over 1,500 pieces of missile and space hardware valued at over $26 million. Over 60 active exhibits are now a part of the exhibition center. The Space and Rocket Center also serves as a major repository for the Smithsonian Institution's National Air and Space Museum, having over 300 historical artifacts on loan from that institution.

The State of Alabama has retired the bonds which were used to finance the design and construction of the facility. The Center has been self-sustaining since its opening, operating on nominal admission fees (current 1978) of $3.00 for adults and $1.00 for children. Any remaining funds left over, after operating expenses are paid at the end of each fiscal year, have been used to add new exhibits, purchase equipment and develop educational programs and services for students and teachers.

The operation of the Space and Rocket Center has made it possible for the U.S. Army and NASA to save $1,500,000 since 1970 by closing their museums and directing visitors to the Space and Rocket Center. Over the next ten-year period, it is estimated that the facility will save the government an additional $3.7 million.

The combined facility serves as a Visitor Information Center for all governmental agencies based on Redstone Arsenal and located in Huntsville. They are:

(1) NASA's Marshall Space Flight Center
(2) U.S. Army Materiel Readiness Command
(3) U.S. Army Missile Research and Development Command
(4) U.S. Army Missile and Munitions Center and School
(5) Corps of Engineers
(6) Ballistic Missile Defense Systems Command
(7) Readiness Command Group

Special care in the design and development of the visitor center was taken to provide the visitor with an exciting educational experience based on the missile and space developments in Huntsville.

The Space and Rocket Center has undertaken a ten-year expansion plan which would involve the addition of several new public facilities. To house these anticipated facilities and provide for land to be taken by the new interstate (I–565) highway, it is necessary that this organization request additional land to accommodate future growth. Alabama Space and Rocket Center property is bounded by highways and Redstone Arsenal and expansion is possible only onto existing U.S. Army property.

Further, the Center's mission has been expanded by legislative action by the State of Alabama establishing the Center as Alabama's Energy Information Center responsible for disseminating data on energy conservation and new sources of energy. Working models of solar energy devices and conservation techniques are available for the public to view and inspect.

EDUCATIONAL COMPLEX

The project being planned by the Space and Rocket Center includes an integrated educational and recreational complex designed primarily to serve the visitors coming to the Space and Rocket Center. It is an effort by all levels of government, federal, state, county and city, to develop a modern recreational and educational complex for use by all segments of the public. The complex will be developed over a ten-year period but construction and use will begin immediately.

The major project undertaking will be the construction of an educational complex adjacent to the main exhibit building at the Space and Rocket Center. The acquiring of additional property from the U.S. Army would enable the complex to be developed within the next ten years, including the construction of a planetarium, a scientifically oriented educational facility providing houses, and facilities for orientations in the missile and space sciences and supporting recreational facilities primarily for the youth of America but not limited to them.

Missile and Rocket Park.—The Alabama Space and Rocket Center presently has over 60 full-scale missile and space vehicles on exhibit. Additional property is needed to exhibit new missile and space vehicle systems expected to be available for exhibition during the 1980's. Some of the systems contemplated are Hellfire, Patriot, Chaparral, Stinger, General Support Rocket Systems (GSRS), Advanced Heavy Anti-Tank Missile (AHAMS), target missile programs, Space Shuttle, Space Telescope, Spacelab and Space Tug. A large pavilion is planned in this area to house those systems requiring protection from the weather. This area will serve to broaden the visitors' knowledge of the objects on exhibit by providing special exhibit techniques depicting the missions and use of the featured equipment.

Youth Science Center.—Of the 300,000 visitors coming to the Alabama Space and Rocket Center annually, approximately 80,000 are students, many of whom visit the Center on planned field trips. Their thirst for knowledge is immense. Due to a time limitation and lack of facilities, many students often fail to gain the understanding and knowledge of science they desire. It is the intent of the Space and Rocket Center to expand the existing facilities to further accommodate individuals and groups who have an interest in the sciences. Such facilities would allow a large number of students the opportunity to live and learn together during overnight or week-long stays at the Center.

The center would operate similar to a church camp; however, the subject would be science. Young people who have an interest in science could participate and broaden their knowledge. The younger generation will be faced with solving many scientific problems and some of which will involve space science. It is the intent of the Space and Rocket Center to use the science center as a teaching tool in exposing young people to the advanced technology available at Redstone Arsenal, NASA's Marshall Space Flight

Center and supporting private industry. It will also mentally prepare those young people for leadership in future society, segments of which may someday face the task of living and working in a space environment.

The center will be linked with education systems offering supplemental education on elementary and advanced levels. It is envisioned that this facility could offer exceptional training and preparation to the boy or girl who plans a career in rocketry or space research or desires to go into the astronaut corps.

The Space and Rocket Center, its present exhibits, equipment and demonstrations, would be made available to the student as would be facilities planned for future expansion, such as the Energy Information Center, Planetarium, Earth Resource Center and recreational facilities. Fields of study that could be offered are space geology, earth observations from space, planetary science, laser science, agriculture in space, solar energy, earth resources conservation, long-term confinement in space, communications, weather forecasting and space transportation.

Students would be offered the opportunity to experience weightless training, drive space vehicle simulators and experience confinement involving living and working in a space station for long periods wearing the clothing and eating the type food required by astronauts. This opportunity would familiarize the student with the uniqueness of space and prepare him to develop experiments to be flown in space and to study the effects of the space environment. (The Space and Rocket Center presently has in progress a national program which allows high school students to build experiments to be flown aboard the Space Shuttle at no cost to the participant. Called Project Explorer, the program is conducted in cooperation with four universities who provide scholarship assistance to students, and is expected to be continued for several years.)

Youth Science Center attendees would have the opportunity to meet and participate in discussions with the leading scientists in the field of rocketry and space technology working at Redstone Arsenal and NASA's Marshall Space Flight Center.

This facility will include dormitory facilities, a meeting hall and camping facilities to be located adjacent to the proposed lake.

Energy Information Center.—The Space and Rocket Center was established as the Alabama Energy Information Center for the state by legislative action in 1976. An Energy Information Center is planned to house exhibits and information services. Energy conservation, new energy saving products and energy producing equipment would be brought to the attention of the public. An Energy Park would be developed containing exterior demonstrations depicting home and industry insulation techniques, solar applications, conservation and new architectural techniques, wind energy, agricultural use of new energy sources and fuels generated from organic matter would be available in the Energy Park.

The Energy Information Center would strive to present a total energy story for all segments of the public and industry to observe and study.

Space Theatre Planetarium.—An integral part of the complex will be the construction of a planetarium. The planetarium will provide programs oriented to the planets and the solar system in general but not limited to astronomy. The planetarium will be available for the use by all groups including but not limited to the city and county school systems, the University of Alabama in Huntsville, Oakwood College, Alabama A&M University and other educational institutions in the southeast who choose to use it. It will be available to astronomy groups and others who are interested in the study of the solar system.

The facility and programs will be made available to governmental agencies such as NASA's Marshall Space Flight Center, U.S. Army Materiel Readiness Command, U.S. Army Missile Research and Development Command, U.S. Army Missile and Munitions Center and School, Corps of Engineers, Ballistic Missile Defense Systems Command, Readiness Command Group headquartered on Redstone Arsenal and in Huntsville. Further, the general public visiting the Space and Rocket Center, which totals over 300,000 annually, would have the opportunity to experience programs within the Center.

Programs will not be limited to astronomy. They will encompass oceanography, meteorology, laser science and other subjects which lend themselves to a planetarium type environment. During September through May, the facility will be used primarily as a teaching tool for use by educational groups (presently 80,000 students annually and steadily increasing). In the summer (June–August), the center will devote its programs to the public, primarily tourists visiting the Space and Rocket Center.

The planetarium will consist of a 50' dome seating 250 people. It will be equipped with a star field projector with related accessories for presenting the story of the solar system. Additional standard projectors will be available for presenting landscapes of earth and other planets. Special effect projects will be provided to present moving objects across the dome, i.e., a spacecraft flying through space. A special wide angle lens projector will be included to project motion and still pictures on the overhead dome totally encompassing the audience with the subject matter. Special laser equipment will be included to present laserium programs designed to inform the public of the many uses of laser technology. The type planetarium envisioned would include all the spectacular and unique equipment and programs that can be concentrated within a single facility.

Cafeteria.—To serve the growing number of individuals and groups visiting the Space and Rocket Center, a cafeteria type food facility is planned. This facility would serve the entire education and recreation complex producing fast food type service for the projected 2,000 average daily visitor flow. It would be centrally located between the existing and planned facility.

Earth Resources Facility.—The Earth Resources Facility will present what we have learned about managing earth resources from space. A tracking station will be available to receive transmissions from earth orbiting satellites. It will also consist of displays of infra-red photography showing the various portions of earth that have been studied through this technique. This portion of the complex will serve as a learning center for visitors studying earth science, and it will demonstrate how we can better manage our resources here on earth through earth orbiting satellites.

The story of space colonization, building communities, factories and conducting medical research in space will be included in the facility. This activity will permit the visitor to experience living and working in space 50 to 100 years from now.

RECREATIONAL AREA

A recreational park is planned for a portion of the land. This park will include camping and recreational facilities to complement the educational complex. These facilities will be available to the traveling public, youth groups, military personnel and their dependents from Redstone Arsenal, and those members of the public residing in the area.

Recreational facilities will be laid out in two increments, passive and active.

Passive.—This area will border the existing military housing on Redstone Arsenal. It will be designed as a passive park encompassing only those facilities that appeal to families, small groups and individuals seeking a quiet, relaxing environment. Activities planned in this area include nature trails for hiking and cycling, a jogging course, picnic shelters and grills. Existing trees and natural growth would be retained.

Active.—The active recreational facility would be located in an area near the outer boundaries of the property, along Bob Wallace and Jordan Lane Avenues. Facilities planned for this area would be available to military personnel and their dependents, groups visiting the Space and Rocket Center and community oriented teams such as YMCA, church and city leagues. This area is within walking distance of a major portion of local youth population, an area which presently has a shortage of recreational and park facilities.

Activities planned include softball, football and soccer fields, playgrounds, tennis courts and bike and hiking paths located throughout. General support facilities such as rest rooms, concession stands, shelters, water fountains and parking area will be dispersed throughout the area.

A 20 acre lake with sand beaches will be located in this area. It will serve those persons interested in canoeing, sailing and swimming. No motorized boating will be permitted. The lake will also be used in teaching water safety and demonstration of how NASA uses underwater facilities to train astronauts for space flight. Other recreational facilities will be located adjacent to the lake.

It is anticipated that this area will be utilized by the many visitors coming to the Space and Rocket Center, especially the youth groups who choose to stay more than one day.

Camping facilities, including primitive and recreational vehicles, are planned near the lake to accommodate scouts, church and school groups, and individuals who choose to remain in the area for more than one day. At the present time, there are no camping facilities in the city designed for recreational vehicles or tent camping.

NATIONAL ATTRACTION

The Space and Rocket Center has become a national attraction. It has been covered on national television by all three TV networks, and magazines and newspapers throughout the nation have carried articles about the Center and its programs. The full size Saturn V moon rocket, the first to ever be publicly exhibited, has been selected by the National Register as a national historical landmark.

FUNDING

The Space Science Exhibit Commission has the authority to sell bonds to obtain capital for expansion of its facilities. It is also anticipated that matching funds can be obtained from those governmental agencies at the federal, state, county and city levels who are interested in public educational and recreational facilities.

ATTENDANCE

Attendance to the Space and Rocket Center, since opening in 1970, has exceeded 1,700,000 visitors. Over 70% of these visitors come from out-of-state. States having 3,000 or more visitors annually are:

Alabama	88,830
Tennessee	40,170
Georgia	14,520
Illinois	12,000
Ohio	11,520
Kentucky	11,280
Florida	10,800
Indiana	9,690
Mississippi	9,000
Michigan	8,760

Texas	7,830
Louisiana	6,900
California	5,100
Pennsylvania	4,980
Missouri	3,000
New York	3,000
Other	52,620

School groups are the most prominent, with scouts and church groups also representing a large percent of group visitors. Families visit in large numbers, particularly in the summer months. Foreign visitors total more than 2,000 annually. The average stay time of visitors is approximately six hours. An average of 40% of the visitors coming to the Space and Rocket Center choose to tour Redstone Arsenal and NASA by bus from the Space and Rocket Center. Over 465,000 have experienced the Redstone Arsenal/NASA tour since its inception in July 1972.

Projected attendance to the Space and Rocket Center complex is estimated to be 720,000 by 1988, more than double the attendance today.

By Mr. RANDOLPH (for himself and Mr. MOYNIHAN) (by request):

S. 2995. A bill to facilitate the implementation of section 703 of the Railroad Revitalization and Regulatory Reform Act of 1976, to provide for the conversion of a part of the National Visitor Center to railroad passenger service, and for other purposes; to the Committee on Environment and Public Works.

UNION STATION IMPROVEMENT ACT OF 1978

● Mr. RANDOLPH. Mr. President, the Union Station Improvement Act of 1978, proposed by the Department of Transportation, is intended to complete the controversial Visitor Center project and return Union Station to increased use as a railroad station. This act authorizes the Secretary of Interior to assign the Secretary of Transportation all leases and purchase options which Interior presently holds with the Washington Terminal Co. as a result of the National Visitor Center Facilities Act of 1968. The Department of Interior would rent from the Department of Transportation, for not more than $1,000,000 a year, space in Union Station for the National Visitor Center.

The act authorizes the expenditure of $52.32 million by the Department of Transportation to complete projects authorized by the 1968 Act and to make other necessary repairs and alterations. This is in addition to over $47.82 million already spent on the parking garage, Visitor Center and the new railroad station.

Completion of the projects authorized by the 1967 Visitor Center Act will mark the end of a long, frustrating struggle to provide a place for visitors in Washington to get information on what to see and do while in the Nation's Capital.

Increased rail travel, due to the Northeast corridor improvement project, is another factor which prompted the Union Station Improvement Act proposal. Washington needs a railroad terminal which can handle large amounts of tourists, commuters, and business travelers who need efficient, modern rail transportation. The Union Station improvement project will convert a substantial part of the neoclassical building back to its original function, a railroad station. This will replace the small new station behind the Visitor Center and will provide the kind of efficient rail transportation Washington needs.

Mr. President, the Committee on Environment and Public Works plans to conduct hearings in the near future on this legislation. The proposal of the Administration is a serious effort to resolve this long-standing problem.●

By Mr. BENTSEN:

S. 2997. A bill to provide financial assistance for school construction to local education agencies educating large numbers of immigrant children born in Mexico; to the Committee on Environment and Public Works.

SOUTHWEST BORDER EDUCATION ASSISTANCE

● Mr. BENTSEN. Mr. President, I am introducing today legislation to provide one-time authorization of $45 million in emergency assistance to Southwest Border State school districts severely impacted by the enrollment of legal alien children.

A great deal of attention, Mr. President, has recently been devoted to the issue of illegal aliens in the United States and President Carter's proposals to address this issue.

In focusing our concern on the issue of illegal immigrants, we have tended to overlook the fact that the United States admitted 165,000 legal immigrants from the Western Hemisphere last year. Over one-third—58,000—of these legal immigrants came from Mexico. Many of them settle in U.S. border communities which are traditionally among the poorest regions of this country.

In one of the great ironies of demography and geography, numerous border counties and communities are being called upon to expend their limited resources to educate a high percentage of the legal alien children we accept into this country.

In Texas, for example, there are 13 border counties. The average personal income in these counties is generally only about 60 percent of the national average, while unemployment is generally twice the national figure.

There are 280,400 schoolchildren enrolled in Texas border counties, and 27,120 of them—9.5 percent—are legal aliens with a legitimate claim to public education.

I submit, Mr. President, that this represents an unfair sharing of the burden of accommodating legal immigrants to this country. We are asking some of the poorest and neediest areas of the Nation to educate a disproportionate share of legally admitted alien children. We have long had a program of Federal assistance for school systems impacted by the children of Government and military employees. It is only equitable that we should provide some assistance for districts which host large numbers of legal immigrants.

Our immigration policy, after all, is established by the Federal Government and is designed to provide thousands of people with an opportunity to realize a better life. One of the steps to this freedom of opportunity is education, and we all acknowledge our obligation to educate legal immigrant children. I think, at the same time, the Government should recognize and accept an obligation to assist border school districts that are being called upon to do most of the education with very limited resources.

Under the terms of the legislation I am proposing today, a one-time authorization of $45 million would be made available for emergency assistance to southwest border school districts that have (a) a minimum enrollment of 7-percent Mexican alien children, and (b) at least 20 such alien children enrolled. The program would be administered by the Southwest Border Regional Commission. Eligible schools would receive $1,000 per alien child, with the funds to be used for purchasing, renovating, or constructing additional classroom facilities.

Mr. President, there is a clear and urgent requirement for this legislation. It is consistent both with past practice and with the ideals for which we stand as a Nation. I strongly urge that it be enacted into law at the earliest possible date.●

By Mr. DOMENICI:

S. 2998. A bill for the relief of the Alexander Concrete Co., of Clovis, N. Mex.; to the Committee on the Judiciary.

ALEXANDER CONCRETE CO.

● Mr. DOMENICI. Mr. President, today I am introducing a private bill directing the payment of $7,751.87 from the U.S. Treasury to a small company in New Mexico because, in my opinion, the U.S. Government is liable for losses incurred by this company, even though such liability may not be judicially upheld. It is one of those situations in which the Government has conveniently insulated itself from ordinary citizens simply attempting to protect their own rights. I would like to describe this situation very briefly so that my colleagues can understand why I feel this bill is justified.

The company in question, Alexander Concrete Co. of Clovis, N. Mex., performed certain services and supplied certain materials as a subcontractor on a construction project at Cannon Air Force Base near Clovis. Pursuant to Air Force regulations relating to such projects, the prime contractor was bonded by a surety company approved by the Air Force. In this case the surety firm was located in New York.

The purposes for requiring a bond for the prime contractor was to protect subcontractors in the event the prime contracts failed to discharge its contractual obligations toward subcontractors resulting in losses to subcontractors.

In this case, the prime contractor did fail to discharge such obligations and so notified the Air Force and subcontractor, including Alexander Concrete Co. Unknown to Alexander, however, the surety company had also become unable to meet its obligations and could not provide the protection against financial loss intended by the regulations.

I communicated with the Air Force and the General Accounting Office and my staff has analyzed their responses sufficiently for me to conclude that, under the circumstances described, my con-

stituent company has no means by which to obtain payment for its goods and services from the Government even though the Government has received the benefit of those goods and services. That is patently unfair and is no way for our Government to deal with people and businesses that fulfill their end of contractual agreements.

I urge consideration of this bill as quickly as possible and its enactment to show that we can bend the rules somewhat to be fair and honest.

I ask unanimous consent that the attached correspondence and bill be printed at this point in the RECORD.

There being no objection, the bill and material were ordered to be printed in the RECORD, as follows:

S. 2998

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury is authorized and directed to pay, out of money in the Treasury not otherwise appropriated, the sum of $7,751.87 to the Alexander Concrete Company, of Clovis, New Mexico, in full satisfaction of all claims of the said Alexander Concrete Company against the United States for concrete and other materials furnished to the Department of the Air Force through the McIntosh Company, as a subcontractor to such company, prior to the default of the said McIntosh Company in completing its contract with such Department.

SEC. 2. No part of the amount appropriated by this Act in excess of 10 per centum thereof shall be paid or delivered to or received by any agent or attorney on account of services rendered in connection with this claim, and the same shall be unlawful, any contract to the contrary notwithstanding. Any violation of the provisions of this section is a misdemeanor punishable by a fine not to exceed $1,000.

COMMITTEE ON THE BUDGET,
Washington, D.C., December 15, 1976.

Col. DENNY SHARON,
U. S. Air Force Liaison Officer, U. S. Senate, Washington, D.C.

DEAR DENNY: I need your assistance in obtaining information in Air Force files pertaining to a constituent who owns a business in Clovis, New Mexico. I will briefly state the facts as presented to me and ask you to use these facts to obtain for me a summary of Air Force actions and decisions in regard to this matter.

This business, Alexander Concrete Company, entered into contract with a general contractor, McIntosh Company, to supply concrete and other material under a contract McIntosh had with the Air Force for construction work at Cannon Air Force Base, Clovis, New Mexico. Under normal USAF contracting procedures, McIntosh, as a general contractor, provided a bond for the protection of subcontractors such as Alexander Concrete Company. The bond in this case was furnished by a bonding company known as Summit Insurance Company of New York.

Alexander Concrete Company delivered concrete and other materials in the amount of $7,751.87 under the terms of its subcontract with McIntosh. However, before payment for those materials, McIntosh became unable to complete the contract with the Air Force. McIntosh notified both Alexander and the Air Force of this fact on or about August 11, 1975. Unfortunately, Summit Insurance Company had been placed in receivership, without the knowledge of Alexander or other subcontractors.

My constituent has communicated with Colonel Cecil D. Crabb, Commander of Cannon Air Force Base, as has my staff in an effort to obtain payment for the materials delivered by Alexander Concrete Company. Colonel Crabb was very cooperative and genuinely concerned and tried to help. However, by letter dated May 17, 1976, to Mr. Alexander, Colonel Crabb indicated that the Air Force's top procurement law attorneys had reviewed the matter and that they "can find no avenue of relief open to [Alexander] against the United States Government." It was their expert opinion, according to Colonel Crabb, that Alexander's only remedies "are with the surety liquidation action and the contractor's bankruptcy proceeding."

I hope you will be able to obtain for me a summary of this case from the Air Force's point of view, particularly the legal foundation of the contention that Alexander has no legal claim against the Air Force.

It appears to me that, if the material was used by the Air Force and providing payment had not been made to McIntosh (a point about which I am unclear), the Air Force could and should pay Alexander directly. Even if payment has been made to McIntosh, doesn't the Air Force have some responsibility to subcontractors to ensure that bonding arrangements made for their protection do, in fact, protect them. Certainly, that is not the responsibility of the subcontractor. Please ask your legal staff to address these issues in their response.

Again, Denny, I appreciate the assistance provided by you and your staff. It is very helpful in responding to legitimate concerns of my constituents, concerns such as are involved in this particular matter.

With warmest personal regards.

Very truly yours,

PETE V. DOMENICI,
U. S. Senator.

TRIANGLE HOME CENTER,
Clovis, N. Mex., December 21, 1976.

Hon. PETE DOMINICI,
U.S. Senator, Senate Office Building, Washington, D.C.

Ref: Air Force Contract No. F29605-75-90040, 11-24-74 with The McIntosh Co.

DEAR SENATOR DOMINICI: L. D. Alexander, a local businessman having the identical problem with Cannon Air Force Base as Triangle, has just shared your letter to the Air Force Liaisons officer. Triangle has always supported our military strength and Cannon Air Force Base. With an employee count in excess of 100, and annual sales in excess of $5.5 million, Triangle also supports with many tax dollars. It does appear rather unfair that we should be unable to collect from the Air Force because of an error in procurement, not closing a job pending an acceptable bonding company. This bonding requirement by our government is Triangle's main source and reason to continue any charges to contractors of government contracts.

As stated in our letter of March 19, 1976, Triangle and our people remain extremely pleased that we have a representative to our government who not only sees both sides to a problem, but takes an active and interested part in its equitable solution.

We shall continue to support any representation who works at his job.

Very truly yours,

RICHARD W. PETTY,
President.

COMMITTEE ON THE BUDGET,
Washington, D.C., May 18, 1977.

Mr. L. D. ALEXANDER,
Alexander Concrete Co.,
Clovis, N. Mex.

DEAR MR. ALEXANDER: Enclosed are copies of two letters in further efforts to try to be of assistance and service to you. One enclosure is a copy of the letter I received from the Comptroller General of the United States in reply to my letter of March 21. As you will see, this is not the kind of response we had hoped for since it confirms the position taken by the Air Force.

The other enclosure is a copy of a letter I have sent today to the Comptroller General to make further, more specific inquiries on what I consider to be the fundamental question: Under the circumstances that existed, is it not conceivable that the Air Force failed to discharge an obligation to you in relation to the surety's solvency, an obligation which should be treated as an enforceable right? The purpose of this letter to the Comptroller General was to obtain his views on that question.

I do not know whether the GAO will be able to provide a definitive response since this is a question which may not be as easily answered as ones it has addressed. Therefore, I feel that I should advise you again that I cannot and I am not acting as your legal counsel. You have obtained the services of an attorney and he could well decide that there is legal grounds on which to initiate litigation against the Air Force. That is a matter which is strictly up to you and your legal counsel. By this letter I am simply advising you that the GAO opinion thus far gives me no ammunition to use as a United States Senator, to get the Air Force to reimburse your losses.

This letter is not encouraging. I wish it could be, but I feel that I should always level with my constituents and not promise more than I can deliver. Right now, Mr. Alexander, I am not very optimistic, but I will keep trying. In the meantime, you should seriously consider legal action against the prime contractor and the surety's receiver.

With best wishes.

Very truly yours,

PETE V. DOMENICI,
U.S. Senator.

COMMITTEE ON THE BUDGET,
Washington, D.C., May 18, 1977.

Hon. ELMER B. STAATS,
Comptroller General of the United States, General Accounting Office Building, Washington, D.C.

DEAR MR. STAATS: This will acknowledge receipt of your letter dated May 5, 1977, Reference No. B-188663, in response to my request for assistance on behalf of my constituent, Alexander Concrete Company. Thank you for providing me with the detailed and factual information contained in your letter. Your reply indicates to me that your office has indeed devoted the time and effort my constituent deserves as he struggles to deal with a situation in which he has been adversely affected through no fault of his own.

I understand and accept the proposition that Alexander has no enforceable right against the government as a laborer or materialman. That proposition seems to be well supported by cases cited both in your letter and by the Air Force.

As to the issue of retainage, we have no alternative but to accept the word of the Air Force that no retainage exists in this case. I have no reason to doubt the Air Force, since all information available to me indicates a cooperative and sympathetic attitude by the Air Force toward my constituent.

There is, however, the question of the obligation, under the circumstances which existed, of the Air Force to advise or notify my constituent of the insolvency of the surety. How else was Alexander to know and take steps to protect his interests? In those respects, I have these two further questions:

1. What is the legal basis for your conclusion that "the Government does not guarantee the solvency of a Miller Act surety"? No legal authority is cited in your letter.

2. Under these circumstances, even if the government does not guarantee the solvency of the surety, hasn't the government (the Air Force) some obligation toward my constituent to advise him of the insolvency of the surety which the Air Force accepted even

though located thousands of miles from the construction site? How else are subcontractors who are supposed to be protected by the surety requirement (and who rightfully assume they are) to take action in their own interests when the Air Force-approved surety fails?

It continues to be my opinion that under these circumstances there is a government obligation toward my constituent which ought to amount to an enforcement right. Your letter, as detailed as it was, did not specifically address that issue. Please have your staff research and reply to my observations and the specific questions outlined above.

Again, my sincere appreciation for your assistance in this matter. The cooperation and expert advice of your office is vital in this case, as it is in so many, to ensure that I provide the best representation possible for my constituents.

With warmest personal regards.

Very truly yours,

PETE V. DOMENICI,
U.S. Senator.

COMMITTEE ON THE BUDGET,
Washington, D.C., November 16, 1977.

Mr. L. D. ALEXANDER,
President, Alexander Concrete Co.,
Clovis, N. Mex.

DEAR Mr. ALEXANDER: Since my last letter to you, Cecil has advised me to proceed with the introduction of a private bill on your behalf. During the last several weeks my staff has been investigating which of the two private legislative procedures would be better to use in your situation.

The most common procedure is to simply introduce a private bill for referral to the appropriate Senate committee for consideration and action by that committee. The lesser used procedure is to require the U.S. Court of Claims to hear the claim of the private party and recommend to the Senate whether relief should be granted.

After careful consideration, the normal course appears to be the more appropriate since the Court of Claims would more likely to be bound by strict contract law which, as has been explained several times, seems to be pretty definite that the government is not liable for your claims against the prime contractor. A negative recommendation by the Court of Claims would be extremely detrimental to our chances of passing a private bill on your behalf.

So, please indicate by return mail the total of your financial losses to this point, broken down in two major categories: materials and services for which you were not paid and expenses incurred in pursuing payment for those goods and services. When I have received this current information, I will proceed to prepare and introduce a private bill and urge its consideration by the committee of jurisdiction early near year.

Seems like things take quite a while, but I prefer to evaluate the various options before pursuing the one most likely to be successful.

I must say again, Mr. Alexander, that I cannot be very optimistic about our chances of getting the bill passed, but I will do my very best.

Please let me hear from you at your earliest convenience. With best regards.

Very truly yours,

PETE V. DOMENICI,
U.S. Senator.●

ADDITIONAL COSPONSORS

S. 1066

At the request of Mr. DOMENICI, the Senator from New Mexico (Mr. SCHMITT) was added as a cosponsor of S. 1066, a bill to create an Office of Hispanic Affairs.

S. 1674

At the request of Mr. LAXALT, the Senator from Kansas (Mr. DOLE) was added as a cosponsor to S. 1674, a bill to amend the Internal Revenue Code of 1954 with respect to employer's duties in connection with the recording and the reporting of tips.

S. 2543

At the request of Mr. GLENN, the Senator from Alaska (Mr. STEVENS) was added as a cosponsor of S. 2543, a bill to provide better enforcement procedures for preventing fraudulent solicitations through the mails.

S. 2583

At the request of Mr. DOLE, the Senator from Rhode Island (Mr. PELL) was added as a cosponsor of S. 2583, a bill to provide for the temporary transfer of the U.S.S. *Sanctuary*, to Life International, a nonprofit corporation.

S. 2691

At the request of Mr. WILLIAMS, the Senator from South Dakota (Mr. McGOVERN) was added as a cosponsor of S. 2691, a bill to provide for the furnishing of congregate housing services under the U.S. Housing Act of 1937.

S. 2734

At the request of Mr. McINTYRE, the Senator from Massachusetts (Mr. KENNEDY) was added as a cosponsor of S. 2734, the Solar Energy Bank Act.

S. 2862

At the request of Mr. HASKELL, the Senator from New Hampshire (Mr. DURKIN) was added as a cosponsor of S. 2862, the Regulatory Control Act.

S. 2895

At the request of Mr. BENTSEN, the Senator from Iowa (Mr. CLARK) was added as a cosponsor of S. 2895, a bill to amend the Meat Import Act of 1964.

S. 2990

At the request of Mr. CHURCH, the Senator from Washington (Mr. MAGNUSON) was added as a cosponsor of S. 2990, the Sugar Stabilization Act of 1978.

SENATE JOINT RESOLUTION 65

At the request of Mr. KENNEDY, the Senator from South Dakota (Mr. McGOVERN) was added as a cosponsor of Senate Joint Resolution 65, to amend the Constitution to provide for representation of the District of Columbia in Congress.

AMENDMENTS SUBMITTED FOR PRINTING

DISTRICT OF COLUMBIA REPRESENTATION—HOUSE JOINT RESOLUTION 554

AMENDMENT NOS. 1812 THROUGH 1814

(Ordered to be printed and to lie on the table.)

Mr. HELMS submitted three amendments intended to be proposed by him to House Joint Resolution 554, proposing an amendment to the Constitution to provide for representation of the District of Columbia in Congress.

NAVIGATION DEVELOPMENT ACT—H.R. 8309

AMENDMENTS NOS. 1815 THROUGH 1817

(Ordered to be printed and to lie on the table.)

Mr. STEVENSON submitted three amendments intended to be proposed by him to the bill (H.R. 8309) authorizing certain public works on rivers for navigation, and for other purposes.

AMENDMENT NO. 1818

(Ordered to be printed and to lie on the table.)

Mr. STEVENSON submitted an amendment intended to be proposed by him to the bill (H.R. 8309), supra.

● Mr. STEVENSON. Mr. President, I submit an amendment to H.R. 8309, the Navigation Development Act which would amend the authorization for the phase I advanced engineering and design work of the Chicagoland Underflow plan contained in section 108 of the Water Resources Development Act of 1976.

The amendment would: First, remove the condition that phase I work cannot proceed until such time as the Secretary of the Army approved the project and notified the Congress and; second, broaden the authorization to direct the Corps of Engineers to study other perhaps less costly and more effective alternatives to the Chicagoland Underflow plan.

A review of the severe pollution and flooding problem in Chicago is essential to explaining the intent of this amendment and the results I expect it to produce.

The Chicago metropolitan area has 4,200 miles of combined sewers serving 5.5 million people. The combined sewer/drainage system works well during dry periods. But as little as one-quarter inch rainfall in this highly developed area causes flooding and millions of dollars of damages. The lack of natural surface drainage areas in cities is compounded where the sewer systems and the drainage system are one. One-quarter inch rain in Chicago can overtax the system's capacity and cause backup flooding. Fifty-three communities are served by the combined system. Many of the homes in these 53 towns and villages wind up with flooded basements filled with raw untreated sewage. The pattern is repeated each time there is a heavy rain.

The damage from urban flooding is not limited to homes and businesses. Urban rainfall is an environmental hazard. Untreated wastes and rainwater overflow into Chicago's rivers at 640 different outflow points. During severe rains it is sometimes necessary to open the locks at the Chicago River and allow polluted waters to pour into Lake Michigan to prevent flooding of downtown Chicago.

The Chicago Metropolitan Sanitary District recognized the problem of combined systems long before it came to national attention. The MSD proposed the tunnel and reservoir project: TARP. It

consists of 120 miles of underground tunnels and a series of storage reservoirs which will capture the overflow from the combined system and safely store it until such time as it can be treated.

I have supported the TARP plan since I came to the Senate. In 1973 I introduced a resolution subsequently adopted by the Public Works Committee which directed the Corps of Engineers to conduct a general investigation survey of the Federal interest in participating in the flood control aspects of TARP. The Corps' investigation found that TARP would improve water quality and reduce flood damage. Accordingly, on July 30, 1976, the Board of Engineers for Rivers and Harbors recommended Corps participation in the project.

Subsequently, in 1976 the Congress adopted legislation sponsored by myself and my distinguished colleague, Senator PERCY, which authorized the Corps to begin the phase I advanced engineering and design work on TARP.

The authorization—section 108 of Public Law 94–587—was limited and conditional. It stated that the authorization to begin the phase I work would take effect upon submittal of the Secretary of the Army by the Chief of Engineers and notification to Congress of the approval of the Chief of Engineers. This condition was inserted in the legislation by the Public Works Committee as a means of expediting the project. When TARP was authorized for phase I the Congress was only passing an omnibus water resources bill once every 2 years. Inevitably there were a number of good projects that missed being included in the bill by only a few months. Rather than make these projects wait a full 2 years until the next omnibus bill the Public Works Committee adopted the policy of conditional authorization which would allow the Corps to move forward as soon as it finished its report and transmitted it to Congress.

It is sad to say that the chief's report was never transmitted to the Congress. The Office of Management and Budget has refused to allow that report to be transmitted. I can understand OMB's concern. TARP is an expensive undertaking. It is potentially the largest public works project in history. It could also be the most effective. The lowest cost estimate is $2.5 billion, and the General Accounting Office estimates it may cost an additional $5 billion. Obviously the TARP project—if built—will mean a heavy investment of public funds. Any decision to make that investment cannot be made lightly.

But neither the Congress nor OMB need make a final decision on TARP today. The 1976 authorization directed the Corps of Engineers to study TARP for potential Federal flood control funding. Part two of the amendment I submit mandates that the corps study the feasibility of alternatives. The phase I authorization assumes the study of these alternatives, but given a project of this magnitude, and OMB's reservations, I believe the instructions should be explicit.

My amendment in no way commits the Federal Government to assume the financing of TARP—or any alternative for that matter. All this amendment does is give all options a fair hearing. I would expect the corps to study all proposals thoroughly and then report back to the Congress on its findings along with a recommendation as to whether the Federal Government should participate in flood relief in the Chicago area—and if so, to what extent.

At some point the Congress will have to determine Federal policy with respect to the flooding and pollution problems caused by combined sewer systems. We do not have sufficient information to make an informed judgment now. My amendment would allow those who are the most experienced in flood control—the Army Corps of Engineers—to take a look at all the alternatives and then provide the Congress with an evaluation. Then and only then will we have the information we need to make a final judgment.

Today many of the aspects of TARP are in dispute—its cost, its effectiveness, and its potential for environmental damage. The city of Chicago is divided on the future of the project. Both the supporters and opponents of TARP include some of the best engineering talent in the country and the most respected civic associations in Chicago.

I want to emphasize that I have been a supporter of TARP. My amendment directing the corps to study alternatives does not mean that I have become an opponent. It means that all options are open to discussion—the least costly as well as the most expensive. I am looking for the most effective.

Under no circumstances can we afford to do nothing. The Congress must ultimately face the fact that combined systems cause flooding and pollution. We cannot pass stringent water quality standards and then turn our back on urban areas when they try to meet them and stop flooding.

The dumping of raw untreated wastes into Lake Michigan during periods of heavy rainfall is the source of almost 50 percent of the area's water pollution. It threatens the great recreation resource of Lake Michigan—and it forces the Chicago area to contaminate a source of its drinking water supply.

The problem is not an easy one—or cheap. But it is the Federal Government that has set the standards and the Federal Government must bear some of the responsibilities for helping local governments meet those standards—either through TARP or some other method.

There are some who say we should abandon TARP now before we are committed to funding it to the point of no return. Others argue that it is an unconscionable waste to throw away the $800 million that has already been invested. While the debate may be polarized the supporters and opponents of TARP have one thing in common. Both have requested that the Congress appropriate $1 million to study viable alternatives as well as TARP. With this much common ground I believe it is essential to remove the contingency in the original authorization and thereby make TARP and all alternatives eligible for an appropriation to get the studies underway. Until the contingency is removed the funds to study TARP or any other alternative cannot be appropriated. With $800 million already invested, I believe the additional $1 million is the minimum needed to find out which direction to take. This amendment would make those studies possible and I urge its adoption.●

GUIDELINES FOR REHABILITATING HOUSING—S. 2637

AMENDMENT NO. 1819

(Ordered to be printed and referred to the Committee on Banking, Housing, and Urban Affairs.)

Mr. PROXMIRE submitted an amendment intended to be proposed by him to the bill (S. 2637) to amend and extend certain Federal laws relating to housing, community and neighborhood development and preservation, and related programs, and for other purposes.

(The remarks of Mr. PROXMIRE when he submitted the amendment appear elsewhere in today's proceeding.)

NOTICES OF HEARINGS

SUBCOMMITTEE ON CIVIL SERVICE AND GENERAL SERVICES

● Mr. SASSER. Mr. President, I wish to announce that the Subcommittee on Civil Service and General Services of the Governmental Affairs Committee will hold a hearing on May 2, 1978, at 9 a.m. in room 357 of the Russell Office Building regarding H.R. 11003, relating to the authority for employment of White House and other executive personnel and H.R. 3161 and S. 1163 relating to the workweek of firefighting personnel of executive agencies.●

SENATE SELECT COMMITTEE ON SMALL BUSINESS—CANCELLATION OF HEARING

● Mr. NELSON. Mr. President, I wish to announce that the hearing scheduled for Friday, April 28, 1979, at 9:30 a.m. in room 424 of the Russell Senate Office Building on S. 836 (to amend title IV of the Small Business Investment Act of 1958) has been canceled.●

SUBCOMMITTEE ON FEDERAL SPENDING PRACTICES AND OPEN GOVERNMENT

● Mr. CHILES. Mr. President, the Subcommittee on Federal Spending Practices and Open Government will continue oversight hearings on the Government in the Sunshine Act (Public Law 94–409) on Thursday, May 11, at 9:30 a.m., in room 1318, Dirksen Senate Office Building. For further information regarding the hearing, please contact Mr. Ronald A. Chiodo, subcommittee chief counsel and staff director (224–0211).●

SUBCOMMITTEE ON PARKS AND RECREATION

● Mr. ABOUREZK. Mr. President, I would like to announce for the information of the Senate and the public, the scheduling of a public hearing before the Subcommittee on Parks and Recreation, Committee on Energy and Natural Resources.

The hearing is scheduled for Friday, May 5, 1978, beginning at 10 a.m., in

room 3110 of the Dirksen Senate Office Building. Testimony is invited regarding S. 2270, S. 2611, S. 2653, S. 2656, S. 2658, H.R. 10984, and S. 1906.

S. 2270, S. 2611, and S. 2653 are three bills to include a portion of the Delaware River in the Wild and Scenic River System. S. 2656 would designate a segment of the Pere Marquette River in the State of Michigan as a component of the Wild and Scenic River System. S. 2658 would similarly designate a segment of the Skagit River in the State of Washington as a component of that system. H.R. 10984 is a House-passed measure which would provide for the establishment of the Friendship Hill National Historic Site in the State of Pennsylvania.

Finally, Mr. President, S. 1906 would provide for the establishment of the Santa Monica Mountains National Park and Seashore. I would like to point out that S. 1906 was originally scheduled to be heard by the subcommittee on April 28. The hearing was delayed 1 week in an effort to accommodate the administration in the preparation of an official position on this measure.

For further information regarding the hearing, you may wish to contact Mr. Tom Williams at 224–7145.

Those wishing to submit a written statement for the record should write to the Subcommittee on Parks and Recreation, room 2106, Dirksen Senate Office Building, Washington, D.C. 20510.●

SENATE SELECT COMMITTEE ON SMALL BUSINESS

● Mr. NELSON. Mr. President, I wish to announce that on Wednesday, May 10, 1978, the Select Committee on Small Business will hold a markup session on H.R. 11445—SBA authorization legislation. The markup will begin at 9 a.m. in room 424 of the Russell Senate Office Building.

For further information, contact the committee office at 224–5175.●

ADDITIONAL STATEMENTS

A LONG ROW TO HOE

● Mr. McGOVERN. Mr. President, farm demonstrations this year of unprecedented intensity together with somewhat futile attempts by the Congress to write farm legislation acceptable to the administration have resulted in an unusual amount of printed material on the farm strike in the Nation's newspapers, magazines, television, and radio reports, as well as other organs of public communication throughout the land.

In my judgment, perhaps the most objective, evenhanded article on the subject appeared in the May 1978 issue of Harpers magazine by Anne Nelson, entitled "A Long Row To Hoe." Ms. Nelson deftly brings historical and contemporary agricultural economics into sharp focus unencumbered by rhetoric or bias. The fact that final analysis comes down with a clear tilt on the farmer's side is understandable to many of us because there can be little dispute on where the real equities lie.

I feel that this article is of sufficient importance to be of interest to Senators who have actively participated in the recent farm debates as well as those Senators whose constituencies tend to be more dominated by urban interests. For this reason, I ask that the article to which I have referred be printed in the RECORD.

The article follows:

A LONG ROW TO HOE

(By Anne Nelson)

The basement cafeteria of the House Office Building was full of striking farmers stopping off for lunch before the next committee hearing upstairs. Leroy Murray, of Potlatch, Idaho, was one of them, a shy but friendly man in plaid Western shirt and cowboy boots. Leroy had been in Washington for two weeks, traveling on borrowed funds, sharing a cramped hotel room, and eating in cheap restaurants. He had worked for sixteen years as an electrical engineer to save up enough money to go into farming, but he made the mistake of buying land on credit in 1973. He's been in trouble ever since.

"I farmed 2,500 acres last year and lost $196,000," he said. "It cost me $3.50 to produce a bushel of wheat, and I ended up selling it for $2.50. There's no way I can go on operating like this. Unless there's some miracle I'll be out of business by the end of the year. Hell, in six months."

Leroy Murray is one of a number of farmers who have joined the American Agriculture Movement. No one appears to know how large that number is. When I asked Secretary of Agriculture Bob Bergland, after he had made a cheerful speech to farmers in Wichita, in January, he shrugged and said, "We have no idea." One of his assistants at the Department of Agriculture ventured a guess of 5 to 20 percent, depending on the area. (The High Plains of Colorado, Kansas, and Texas have generated the most support, while the dairy farmers of Illinois and Indiana have little to complain about.) The Secretary may dismiss the strike as negligible, and his department play it down as regional, but last January more than 40,000 farmers descended on the capital for the opening session of Congress, and six weeks later 3,000 remained.

Historically, the American farmer has proved an exceptionally independent, patriotic, and well-behaved citizen; hence the strike movement has come as a surprise to everyone, including the strikers. Moreover, the farmer is an economic hybrid; capitalist, manager, and laborer, self-employed but ruled by the vicissitudes of the market and the whims of Congress. If the farmer is not striking against himself, then he is striking against the government and the economic system. The fact that such a strike could exist indicates the severity of the problem. According to the estimates of several Congressmen, 15 percent of the nation's nearly 3 million farmers will go bankrupt in the next year alone. Most of these will be young farmers, the next generation of food producers. If these projections are accurate, we will witness the worst attrition in farm population since the Depression.

Farmers are traditionally the poor cousins of the American economy. In this century farm income has usually averaged 10 to 30 percent below nonfarm income. This is largely because the American farmer has never learned the first rule of capitalism: to ensure a profit, supply must not exceed demand. He is a compulsive overproducer, and for the past fifty years government farm policy has tried to compensate for this by providing incentives to limit production. The resulting legislation has been a fragile pyramid of price supports and subsidy payments, kept in balance by the massive bureaucracy of the Department of Agriculture. The program has worked, to an extent.

Americans spend relatively less of their disposable income on food than any other people—17 percent. This figure would be smaller still but for the American taste for refined food; processing, packaging, and distribution account for more than 60 percent of consumer prices. At the same time, the government's programs have been only a stopgap solution to the problems of low farm income and overproduction, and the workable, if unwieldy, balance was thrown off entirely by the events of the early 1970s. Because of worldwide crop failures and food shortages in 1972, export demand drew heavily on U.S. grain reserves. In 1973 the Russians, negotiating independently and in secret with the major American grain dealers, managed to buy far more wheat than the United States could afford to sell, at prices subsidized by the government. American wheat reserves fell from 26 million metric tons in 1972 to 9 million metric tons in 1974, and the domestic price of wheat shot up from $1.57 to $4.48 a bushel. Farmers were jubilant as their incomes soared. Earl Butz, Secretary of Agriculture in the Nixon and Ford Administrations, told them, "Low prices are a thing of the past." The world market was going to buy everything they could produce at prices that would make them rich. From then on, the word going around was "plant fencerow to fencerow."

In the boom years from 1973 to 1975 the farmers increased the amount of land under grain cultivation by 10 percent. They borrowed from the Federal Land Bank to buy more land; they invested heavily in machinery and irrigation with credit extended by local banks to increase the yield on land already in use. Between 1970 and 1976 total U.S. grain production rose 40 percent and farm debts on land and machinery more than doubled.

Then the bottom dropped out. The food industry used high farm prices as an excuse to hit the consumer: when the price of the wheat in a loaf of bread rose three cents, the price of the loaf rose ten cents. Feedlots could no longer afford to fatten cattle; they were sent to market without being replaced. Beef prices dropped, and then rose drastically in response to the shortage. Housewives called a beef boycott, and there was a public furor over the coming of the "dollar loaf of bread." In the midst of all this, the middleman was overlooked and the farmer was blamed. A panicky Ford Administration, reacting to union and consumer pressure and the temporarily depleted reserves, imposed the 1974 grain embargo, a move that angered farmers and importing nations alike. The farmers were in the act of producing the biggest grain crop in history, and suddenly there were no cattle to feed, no importers, no demand. The predictable outcome—to everyone, it seemed, but Ford and Butz—was a glut on the domestic market. Wheat prices fell from a high of $6 to $1.80 a bushel, and in the next two years the grain reserves almost doubled.

In the meantime, the farmers' cost of production had risen almost 50 percent. The farmer who had been spending an average of $2.50 to produce a bushel of wheat that sold for $5 was now spending $3.50 and selling for $2.50. For the older farmer who has owned his land and his equipment outright for a number of years, this lean period is one that he will weather, as he's weathered others in the past. Besides, he's enjoying lush capital gains on everything he owned before 1972, and the low income return on his investment is more than made up in the increased value of his property. It is the young farmer, especially the one who borrowed heavily during the good years, who suffers. He now must meet payments on his land and machinery loans, attempt to borrow next year's production costs with little or no equity left on his holdings, and face the strong possibility that

the more he produces in the coming seasons, the further he will be driven into debt.

The American agriculture movement was born in a Colorado gas station last September 6, as four farmers sat discussing the 1977 farm bill over coffee. By December there were more than 300 strike offices throughout the country, for the most part rented from or donated by a local bank or merchant. Farmers sat at round tables overhung with banners, talking about a self-imposed embargo, and plowing up 5 percent of their crop every week until 50 percent was gone. They also talked about waiting until harvest and then burning their wheat in bonfires. But their immediate aim was attention, and they proved to have a brilliant flair for hokey but effective publicity. Turned-over tractors were parked on highway overpasses, tractorcades drove through the streets of county seats and state capitals, and bright orange strike stickers glowed over the cigar counter of every smalltown café.

The American Agriculture Movement had a strong appeal for the young and indebted farmers. But the more established farmers were caught in a bind. They sympathized with the strikers' plight, but tended to disagree with their tactics. Many belonged to traditional farm organizations, with Washington lobbyists and law firms on salary, and they felt this was a more sophisticated way to reach their goals. The conservative Farm Bureau was the most openly opposed to the strike, while other groups, such as the Farmers' Union and the National Farmers' Organization, endorsed the strike without enlisting in it.

One point at which American Agriculture and the older organizations part ways is the 1977 farm bill, signed into law last September.

The older organizations worked hard for the bill and stress that it's a step in the right direction, while American Agriculture finds it both inadequate and misdirected. Under its conditions, a farmer who voluntarily limits his production by setting aside, or not planting, a given amount of land is eligible for government loans and deficiency payments. The set-aside requirement for wheat is 20 percent of the acreage planted for harvest. The farmer can then borrow $2.25 per bushel from the Commodity Credit Corporation against the costs of production. If the market price rises above the $2.25 loan rate, the farmer can sell his produce for a profit and repay the loan with interest. If the market price falls below the loan rate, the CCC will accept the produce itself as full payment for the loan. The loan rate is therefore the lowest price the participating farmer need accept, and if enough farmers sign up for the program it will have the effect of setting the world price floor.

The farmer is further eligible for deficiency payments. The target price is the "fair" price determined by Congress—$3 a bushel for wheat in 1978—and the amount of the payment is the difference between the target price and the loan rate or the market price, whichever is higher. If wheat remains at its current price of about $2.80, the participating farmer will receive twenty cents a bushel in deficiency payments. If the price falls to $1.80, he will receive seventy-five cents, which is the difference between the target price and the loan rate. This is the maximum payment.

In times of low market prices, it is the target price that determines how many farmers will stay in business; the theory behind the target price implies that it should equal the cost of production, allowing the farmer to break even at worst. There are two ways to compute cost of production, and the difference depends on land. The calculation based on the average price paid for land applies to the established farmer who has bought land over the past 30 years, and comes to a little more than $3. The calculation based on current land prices applies to the farmer who bought land in the past few years, and comes to more than $3.50. So the younger farmer suffers again, losing fifty cents a bushel.

The farmer faced with impending bankruptcy considered the 1977 farm bill more insult than aid. It asked him to expend his labor and lose his capital for the privilege of producing food, and then be subject to the public outcry that Congress was "paying the farmer not to plant." In the meantime, a Minnesota-based group called the National Organization for Raw Materials (NORM) began to revive and publicize the age-old solution of parity in the marketplace.

The term parity came into legislative use in the Agricultural Adjustment Act of 1933. Congress was casting about for a relative means to measure farm income, and decided to compare the average prices of farm products with those of farm costs during the prosperous period of 1910–1914. Despite revisions in the parity formula over the years, it is an outdated and unworkable concept: changes in technology, yield, and produce since 1910 have been so revolutionary that the basis for the formula is meaningless. For NORM, however, "parity in the marketplace" simply meant that the government should legislate high domestic and export prices for agricultural products, and require them to keep pace with general inflation. To many farmers, it sounded like the ultimate panacea, simplistic as it was, and "parity in the marketplace" became the rallying cry of to the strike movement.

American Agriculture gave Congress a deadline of December 14, 1977, to pass parity legislation, after which, they said, "We, the farmers of this nation, will halt all agricultural production and distribution immediately." The problem with this threat was that there was no agricultural production in December; spring planting wasn't for another three to six months. Congress missed its deadline, to no one's surprise, so the strikers began to organize their pilgrimmage to Washington.

Washington was less than impressed. Nothing is more gauche in Washington than earnest, unsuspecting patriotism. For many of the farmers this was their first foray into practical, as opposed to ideal, democracy. They packed the House Agriculture Committee hearings, many listening and some testifying, and they traveled from office to office to see sometimes sympathetic, sometimes hostile Congressmen. The guards at the Capitol called them the most orderly protest group they'd ever seen, but their sheer numbers and the intensity of their feelings alienated some of the people they needed most. "I'm not impressed by people roaming through the halls and coming to hearings in gobs," complained a Congressman from New York. "What would happen if we got fifty thousands welfare mothers down to Washington every time we wanted to pass a bill on welfare reform?"

"The farmers are not a sexy protest group," added his press aide. "They just can't drum up the kind of sympathy here that, say, the blacks and the feminists can."

The cynicism of the strikers in Washington set in slowly and painfully. When the Commissioner of Agriculture from South Carolina testified in a hearing, his uppitiness made the American Agriculture people in the audience a little uncomfortable. But when he reached the point of open defiance and blurted, "If I ran my farm like you all run this committee, the cows would never get milked," there were cheers and loud guffaws. Then Thomas S. Foley, the committee chairman, answered sharply, "Well, sir, you can just go milk your cows." There was a strained silence. Was this what the big shots in Washington wanted them all to do—shut up and go home to tend their farms?

"How do we feel?" asked Jerry Scheid, a wheat farmer from Idaho. "There's one term for it—manic-depressive. One day we come out of these hearings and slap each other on the back and say, 'Boy, we really told 'em like it is.' And the next day we just look at each other and think, hell, we aren't accomplishing a damn thing down here. We might as well be back on the farm quietly going bankrupt."

According to the House report on the 1977 farm bill, "Congress hereby specifically reaffirms the historical policy of the United States to foster and encourage the family farm system of agriculture in this country." In his State of the Union address, President Carter declared, "What's best for farm families in the long run is also best for the consumers," and a Harris poll taken in February showed that the consumers agree. More than 60 percent indicated that they support the preservation of the family farm, and would be willing to pay 5 percent more for their food to demonstrate that support. Some of the enthusiasm doubtless stems from a sentimentalized image of farming, but it also reflects a horror at the prospect of agricultural industrialization.

But if corporations are going to pose an economic threat to the family farm, it won't be in the near future. There has been much talk about the corporate takeover of American agriculture, but the statistics are misleading. (Over the past few decades many farm families have found it to their advantage to form family corporations. Otherwise, they stand to lose up to half their land and equipment in inheritance tax when the head of the family dies.) Less than 7 percent of all American farmland is owned by corporations, and of this, 80 percent belongs to family corporations. Six states have laws against nonfamily corporate farmland ownership, and four others restrict it through general corporation laws. The main reason corporate interest in farming is so light is the low return on capital investment. Corporate farming will become an economic threat only if enough farmers go out of business to open the field to large investors.

The real threats to the farm industry are the low prices that already are affecting the entire rural economy. Among the striking farmers' heartiest supporters are the smalltown banks and merchants who have lost their business. Farm-equipment manufacturers and dealers are in bad shape, too, because farmers can't afford to replace machinery as it wears out. The rural legislators and most USDA bureaucrats are aware of these problems, but they disagree on what measures to take. Of the proposed solutions, parity is the one everyone claims to like and no one knows how to set in motion. To achieve parity prices through an extension of the past fifty years' agricultural policy would cost the budget an additional $15 to $20 billion, a prospect shunned by the Administration and Congress. But American Agriculture isn't asking for increased subsidies and price supports; if anything the farmers resent the programs more than taxpayers do because they feel they smack of welfare. In demanding "parity in the marketplace," they want the government to set the prices and let the consumer make up the $15 to $20 billion gap.

The effect of such a policy would be a 20 percent increase in consumer prices before the addition of the middleman's cut, a 25 percent drop in agricultural exports, and a boost in the inflation rate. The strikers feel this is not an unreasonable price to pay, but it is unlikely that they can convince anyone else.

Hit-or-miss proposals are flung about the Capitol with abandon: "mandatory cuts in

production"; "aggressive export policy"; and even "gasahol," a plan to convert grain into a fuel that takes more energy to produce than it delivers. Rep. Richard Nolan (Dem.-Minn.) is grandstanding with a parity bill with no economic underpinnings to make it work. Rep. Glenn English (Dem.-Okla.) offers a short-term solution with his loan-consolidation bill, which would combine debts on land, machinery, and production costs, and postpone payments for at least three years. Sen. Robert Dole (Rep.-Kans.) has introduced no fewer than four agricultural bills, the most interesting of which is a new twist on set-aside: it operates on a sliding scale, so the more land the farmer chooses to set aside, the greater the target price on his remaining crops.

Secretary of Agriculture Bergland is telling the farmers to sit back and give the 1977 farm bill a chance to work, but an internal document from the USDA's Agricultural Stabilization and Conservation Service projects that between now and 1982 wheat prices will hover around $2.60 a bushel. So when he tells even the most conservative farm audience that it's "the best farm bill of any Congress of any time," he meets with very light applause. Bergland feels that the answer lies in increased exports at higher prices, but his means for effecting this happy solution are limited. The United States already provides more than half of the world's grain exports, and as developing nations absorb American agricultural technology, they will become competitors instead of purchasers. Even Bergland realizes that government efforts are less influential than the weather.

The American Agriculture Movement believes it can gain the most leverage by cutting back planting and production enough to create a national uproar. If half the nation's farmers cut back 50 percent, this goal could be attained, but nowhere near this rate of participation has been demonstrated thus far.

There will be ample occasion for bitterness between neighbors: the more farmers cut back, the smaller the supply and the higher the price, hence the greater the profit realized by farmers who don't cut back. This will mean a more than neighborly interest in what the next man is planting. Retaliatory tractor-tire-slashing and barnburning have begun in the South, where spring planting is under way, and will probably soon spread northward. These reports dismay the majority of strikers, who believe in the cutbacks as a matter of principle rather than violent persuasion. Without cutbacks, they say, most farmers will lose money next year, along with a stake in their way of life. With the cutbacks, they will still lose money, but they will make a potent political statement.

It is possible, though not likely, that the strikers could win over their fellow farmers and persuade them to cut back their planting. It is likely that their persistence will win them some relief from Congress, though there's no assurance that it will be soon enough to help this time around. But if they are struggling against the historically inevitable, those concessions will be meaningless. Every crisis in agricultural economics in the past has precipitated a large-scale migration from farm to city, and every shift in farm population means a corresponding modulation in the structure of the industry. It may be that this strike, too, is the futile gesture of men at war with history, trying to maintain a modest, independent way of growing food for a society that rewards the large and the organized.●

SUMMARY OF THE OLDER AMERICANS ACT

● Mr. EAGLETON. Mr. President, yesterday the Subcommittee on Aging, which I chair, reported S. 2850, as amended, to the full Human Resources Committee. In an attempt to keep my colleagues informed on the actions of the subcommittee, I have prepared a summary of the major modifications which I have made to my bill since the time of introduction. All of these changes were agreed to by the subcommittee, reserving the right of all members to make further modifications at the full committee level.

AMENDMENTS TO THE OLDER AMERICANS ACT

First. S. 2850, as introduced, consolidated existing title III, community services; title V, multipurpose senior centers, and title VII, nutrition projects, into a single authorization. The subcommittee amendment maintains the total administrative consolidation, but provides a separate authorization for nutrition services. This would require that all social services funds, including nutrition, be channeled through the States and area agencies on aging, but would guarantee the separate visibility for nutrition services and a separate amount of funding.

Second. S. 2850, as introduced, repealed authority for the Federal Council on Aging and in its place gave statutory authority to the President's Special Counsellor on Aging.

The subcommittee amendment would reinstate the Federal Council and delete the statutory requirement of the Special Counsellor. In addition, the amendment would require a series of studies by the Federal Council—an analysis of the numbers of low income and minority participants, an evaluation of the effectiveness of programs under this act, an analysis on the advisability of allowing AAA's to provide direct services, an analysis of the special needs of rural elderly, an analysis of the effect of broadening eligibility to the nonelderly handicapped, etc.

Third. S. 2850 attempted to increase State participation in the Federal-State partnership of programs under this act by requiring an increased non-Federal match for State administration. The subcommittee amendment attempts to achieve increased State participation by requiring an increase in the non-Federal match for the provisions of social services.

Fourth. Existing law, in determining the intrastate distribution of funds, requires the State to determine "the incidence of the need for social services (including the numbers of older persons with low incomes residing in such area)." The subcommittee amendment would expand this consideration of low-income elderly by requiring that each State develop a formula, consistent with regulations developed by the Commissioner, which would reflect the geographic distribution of the elderly within the State the number of low-income elderly, and the number of elderly who are members of minority groups.

Fifth. S. 2850, as introduced, required each area agency to target at least 50 percent of its funds: (1) on the delivery of a particular class of social service; (2) on nutrition services; (3) on a particular segment of the population of older persons The subcommittee amendment requires that each area agency target at least 50 percent of its funds on services to establish access—transportation, outreach—and in-home services. Under the subcommittee amendment, nutrition services would automatically be targeted because of their separate funding authority under title III.

Sixth. S. 2850 modified the existing bypass for funding of Indian tribal organizations. The subcommittee amendment deletes this bypass authority and provides a separate title which allows a tribal organization to contract directly with the Commissioner on Aging rather than receive funds through the State and area aging network.

Seventh. S. 2850 basically retained the title IX program as it is contained in existing law. It would, however, modify the non-Federal matching requirement from the current 90–10 to 80–20. The subcommittee amendments splits the difference and requires an 85–15 Federal/non-Federal match.●

LABOR DEPARTMENT PROPOSES PRUDENT MAN REGULATIONS WHICH COULD HELP SMALL BUSINESS

● Mr. NELSON. Mr. President, today's Federal Register contains a proposal by the Department of Labor which is intended to provide some flexibility to the administrators of the Nation's pension plans so that investments of appropriate amounts in smaller business and venture capital pools will not be precluded as a legal and practical matter, as they now are.

The Small Business Committee has been working for more than 2 years to bring about changes in this area, and we commend the Department of Labor for recognizing the small business problems and in being responsive in seeking a solution to those problems.

It might be helpful to briefly review the history of the problem to which these regulations are addressed. The enactment in September 1974 of the Employees Retirement Income Security Act (ERISA) made pension fund managers subject to new legal and financial liabilities for fund investments, which we reviewed in 6 days of testimony before the Small Business Committee and the Senate Finance Committee in 1977. The witnesses pointed out that:

Section 409 of ERISA makes the fiduciary personally liable to the extent of any losses due to the breach of his duty;

Section 502 permits the fiduciary to be sued by any plan participant in a civil action which might cost between $10,000 to $40,000 per year to defend;

Section 502(g) allows the court to award costs and reasonable attorney's fees to a plaintiff; and one court has done so after the plaintiffs had lost the action;

Insurance companies have declined to provide insurance to fiduciaries, and very few pension fund managers possess adequate indemnity agreements to cover either the investment loss, or legal costs.

Attorneys also testified to the inherent conservatism in the advice they would give to pension fund managers under these circumstances, and in light of a new Federal rule on prudence which has yet to be fully interpreted by the courts.

These concerns were brought to a head by the so-called *Spitzer* case (Matter of Bank of New York, 35 NY 2d 512 (1975)) in which the high court of New York State entertained a law suit to question the prudence of a single investment, which the bank made in good faith.

Knowledgeable witnesses stated that, as a consequence, institutional investment had dried up for smaller businesses and for venture capital pools which invest professionally in a portfolio of promising enterprises. In fact, executives of the large institutions informed the committees that institutions customarily avoid making investments in any business with net worth of less than $50 million.

It was further explained that the withdrawal of institutions from the capital market for small enterprise broke what was termed the "ladder of investment." This meant that organizations which previously financed smaller concerns, such as hedge funds and smaller mutual funds, also drew back from such investments because they had lost the take out which pension investment could provide when the company grew larger.

The absence of pension funds, which account for about 70 percent of all the stock exchange trades, is believed to be a considerable factor in the inability of new and small firms to reach public securities markets in the years since ERISA's enactment. From 1974 through 1977, only 61 firms with net worth of $5 million or less were able to sell their stock to the public, compared to 698 in the single year of 1969.

These conditions have resulted in the concentration of pension fund investment in a limited number of the largest companies, with consequences outlined in testimony by Professor Schotland of Georgetown University, who is mentioned in a Washington Post article of April 25 on the subject.

Detailed information on these matters can be found in the committee's hearings on "Pension Simplification and Investment Rules"[1] and the committee's most recent annual report.[2]

In connection with these hearings, many committee members pointed out that the careful investment of some small portion of pension funds may be in the highest interest of pension fund participants and beneficiaries for two reasons: First, the rate of return may be far higher than on more established companies and the fund may thus be able to support a higher level of benefits; and second, the real value of pension benefits will depend ultimately on the ability of our economy to progress and remain competitive. The decline in the value of the U.S. dollar and the inflationary forces thus transmitted to the everyday lives of our citizens should bring this lesson home convincingly.

We came to the conclusion that the law or investment practice, based upon a restrictive interpretation of the law, should not be an absolute barrier to investment in smaller enterprises or venture capital pools that invest in a diversified portfolio of such firms.

We therefore introduced a bill (S. 1745)[3] which proposed changes in the law for this purpose, and have continued to work to refine these proposals.

For these reasons, the committee appreciates the initiative of the Department of Labor in proposing these "Prudent Man Regulations." The explanation points out that those who drafted the prudent man provisions of ESIRA thought that they were liberalizing the common law rule. It is unfortunate that the effects have been just the opposite of their intention.

In an effort to gain wide circulation of this proposal to small business, financial, legal, and other interested parties, I shall submit excerpts from the proposal and the Washington Post article for the RECORD following my remarks.

It is hoped that the provisions can evolve to the satisfaction of all concerned, and that they can be adopted. Since they would serve to clarify the original intent of the rule, we would advocate that the rules be retroactive.

The question remains as to whether the the regulations will be strong enough to counteract the inherent caution of the financial and legal fraternities. This is a matter which must be interpreted by the courts and the congressional committees concerned. However, the work of the Labor Department in this matter is valuable, and their guidelines are a step in the right direction for dealing with what has become a serious problem of capital formation for small business, and for the economy upon which pension benefits must ultimately be based.

We hope small business, and financial, legal, and pension spokesmen, will comment thoughtfully on these proposed regulations. We will be watching these developments closely to determine a proper course of action here in the Senate.

The material referred to follows:

EASED PENSION FIDUCIARY RULES URGED

(By Nancy L. Ross)

Fiduciaries of pension plan assets will be given wider latitude to make investments without risking personal liability under a proposed regulation issued today by the Department of Labor.

The so-called "prudent man" rule will not hold investment managers responsible for a single poor investment, provided the overall portfolio had been invested wisely. DOL sets forth five basic factors for evaluating a prudent investment.

The regulation also states that the relative risk of a specific investment or investment course of action does not make it prudent or imprudent. Written comments should be addressed to DOL's Pension and Welfare Benefits Programs section before June 26.

The prudence issue arouse with the passage of the 1974 Employe Retirement Income Security Act (ERISA), which stipulated that a fiduciary should discharge his duties "with the care, skill, prudence, and diligence under the circumstances then prevailing that a prudent man acting in a like capacity and familiar with such matters would use in the conduct of an enterprise of like character and with like aims."

As plan administrators rushed to increase their liability insurance against the possibility of participants' suits, they also clamored for a clarification of the act's language. The attitude toward investments was one of extreme caution. The recession was also a dampening factor.

In 1976, the International Foundation of Employe Benefit Plans found that 64 percent of the trustees it surveyed were unwilling to invest in anything but blue-chip securities.

Concentration resulted. Georgetown Law School professor Roy Schotland found that seven banks, six of them in New York, managed nearly one-fifth of all the pension funds assets in the country.

The basic factors for evaluating prudent investments were announced last August by Ian Lanoff, administrator of Pension and Welfare Benefit Programs. Incorporated into the regulation published today in the Federal Register, they oblige the manager to consider:

The composition of the plan investment portfolio with regard to the diversification of risk.

The volatility of the portfolio with regard to general movement in investment prices.

The liquidity relative to the projected payment schedule for benefits.

The projected return relative to funding objectives.

The prevailing and projected economic conditions of the investments.

TITLE 29—LABOR

CHAPTER XXV—PENSION AND WELFARE BENEFIT PROGRAMS

Subchapter F—Employee Retirement Income Security Act of 1974

Part 2550—Rules and Regulations for Fiduciary Responsibility

(Proposed regulation relating to the investment of plan assets under the "Prudence" rule)

Agency: Department of Labor.

Action: Notice of Proposed Rulemaking.

Summary: This document contains a proposed regulation relating to the investment duties of a fiduciary of an employee benefit plan under the Employee Retirement Income Security Act of 1974 (the Act). Among other things, the proposed regulation states that investment decisions by a fiduciary of an employee benefit plan shall be made in the context of all relevant facts and circumstances and the plans' total investment portfolio. The proposed regulation, if adopted, would be relevant to the investment of plan assets of all employee benefit plans and, thus, would affect participants, beneficiaries and fiduciaries of employee benefit plans.

Dates: Written comments must be received by the Department of Labor (the Department) on or before June 26, 1978. This proposed regulation would be effective 30 days after its adoption.

Addresses: Written comments (preferably at least six copies) should be addressed to: Office of Regulatory Standards and Exceptions, Pension and Welfare Benefit Programs, Room C-4526, U.S. Department of Labor, 200 Constitution Avenue, N.W., Washington,

Supplementary information: Notice is hereby given that the Department has under consideration a proposal to adopt a regulation, 29 CFR 2550.404a–1, under section 404(a)(1)(B) of the Act, relating to the investment duties of a fiduciary of an employee benefit plan. Section 404(a)(1)(B) provides that, subject to certain exceptions not relevant to this proposed regulation, a fiduciary shall discharge his duties with respect to an employee benefit plan solely in the interest of the participants and beneficiaries and with the care, skill, prudence, and diligence under the circumstances then prevailing that a prudent man acting in a like capacity and familiar with such matters would use in the conduct of an enterprise of a like character and with like aims (the "prudence" rule.

The Department has received a substantial number of inquiries from the public which indicate that there is some uncertainty as to how the "prudence" rule applies to the investment duties of a fiduciary of an employee benefit plan.[1] Generally the inquiries can be categorized as those which request information concerning: (1) whether the "prudence" rule requires that an investment should be made by a fiduciary on the basis of the risk and anticipated return attendant to that investment, without regard to the role that it plays within the overall plan investment portfolio, (2) what criteria should be considered by fiduciaries in fulfilling their investment duties pursuant to the "prudence" rule, and (3) whether specific investments are prudent.[2]

This proposed regulation makes it clear that the "prudence" rule requires that each investment decision should be made with regard to the role that the investment in question would play within the overall plan investment portfolio and sets forth some, but not necessarily all, of the factors which generally should be considered by fiduciaries in fulfilling their investment duties to a plan.

DISCUSSION OF THE REGULATION

Proposed section 2550.404a–(b)(1) provides that with respect to a fiduciary's investment duties, the requirements of the "prudence" rule have been satisfied if the fiduciary has given appropriate consideration to all relevant facts and circumstances and the role that the investment or investment course of action plays in the plan's investment portfolio. Proposed section 2550.404a–1(b)(2) sets forth those factors which may be included in an evaluation of the role an investment or investment course of action plays in the plan's investment portfolio. The term "investment duties" is defined in proposed section 2550.404a–1(c)(1) as any duties imposed, assumed or undertaken by a person in connection with the investment of plan assets which make or will make such person a fiduciary of the plan or which are undertaken by such person as a plan fiduciary. The term "investment course of action" is defined in proposed section 2550.404a–1(c)(2) as any series or program of investments or actions related to a fiduciary's performance of his investment duties.

The Department believes that the practice followed by some jurisdictions at common law of judging the prudence of an investment alone without regard to the role that the investment plays within the overall investment portfolio[3] is improper for evaluating the prudence of an investment or an investment course of action under the Act. The common law method of evaluating the prudence of an investment arose, in large part, from the need to resolve a basic conflict between the interests of the income beneficiary and the remainderman of a common law trust. In many instances the common law resolution, giving great weight to the interest of the remainderman, deemed the safety of corpus more important than the generation of income. The same type of conflict between the investment goals of the income beneficiary and the remainderman is presented far differently, if at all, in employee benefit plans and, thus, a primary rationale for judging the prudence of an investment alone, without regard to its role in the total investment portfolio, does not exist under the Act.

The Department believes that the evaluation of an investment or investment course of action by a fiduciary of an employee benefit plan in the context of the overall investment posture of the plan in light of the factors set forth in proposed section 2550.404a–1(b)(2) is supported by the legislative history of the Act and sound policy considerations.[4] The legislative history of the Act indicates that the common law rules of trusts, including the common law focus on the performance of the individual investment, should not be mechanically applied to employee benefit plans.[5]

Further, in the Conference Report which accompanied the Act, Congress directed that the "prudence" rule (and the other fiduciary standards of section 404) be interpreted "bearing in mind the special nature and purpose of employee benefit plans."[6]

Proposed section 2550.404a–1(b)(2) sets forth the following basic factors which a fiduciary generally should consider in evaluating the role that an investment or investment course of action plays in the plan's investment portfolio: (1) the composition of the plan investment portfolio with regard to the diversification of risk, (2) the volatility of the plan investment portfolio with regard to general movements in investment prices, (3) the liquidity of the plan investment portfolio relative to the projected payment schedule for benefits, (4) the projected return of the plan investment portfolio relative to the funding objectives of the plan, and (5) the prevailing and projected economic conditions of the investments in which the plan has invested and proposes to invest.

The proposed regulation makes it clear that under the Act, the relative riskiness of a specific investment or investment course of action does not render such investment or investment course of action either per se prudent or per se imprudent. Thus, although securities issued by a small or new company may be a riskier investment than securities issued by a "blue-chip" company, the investment in such a company may be entirely proper under the Act's "prudence" rule.

PROPOSED REGULATION

Accordingly, it is proposed to amend Part 2550 of Chapter XXV of Title 29 of the Code of Federal Regulations by inserting § 2550.404a–1 as set forth below:

Paragraph 1. § 2550.404a–1 is inserted in the appropriate place to read as set forth below:

§ 2550.404a–1—Investment Duties.

(a) In general. Section 404(a)(1)(B) of the Employee Retirement Income Security Act of 1974 (the Act) provides that subject to sections 403(c) and (d), 4042 and 4044, a fiduciary shall discharge his duties with respect to a plan solely in the interest of the participants and beneficiaries and with the care, skill, prudence, and diligence under the circumstances then prevailing that a prudent man acting in a like capacity and familiar with such matters would use in the conduct of an enterprise of a like character and with like aims.

(b) Investment Duties. (1) With regard to the investment duties of a fiduciary of an employee benefit plan, the requirements of paragraph (a) of this section and section 404(a)(1)(B) of the Act have been satisfied if, in making an investment decision, the fiduciary has given appropriate consideration to all facts and circumstances relevant to the particular employee benefit plan and particular investment or investment course of action involved and the role the investment or investment course of action plays in the plan's investment portfolio.

---

[1] This proposed regulation pertains only to the investment duties of a fiduciary of an employee benefit plan. Section 404(a)(1)(B) of the Act, however, requires that a fiduciary shall discharge *all* his duties in accordance with the "prudence" rule.

[2] The Department issues Advisory Opinions which interpret and apply the Act to specific factual situations under ERISA Proc. 76–1 (41 FR 36281, August 27, 1976), but pursuant to section 5.02(o) thereof generally will not issue Advisory Opinions relating to the prudence of a specific proposed investment or type of investment. This is because a determination as to the prudence of any particular investment can be made only on the basis of an evaluation of all the relevant facts and circumstances.

[3] *See* III Scott, Law of Trusts § 227 (3rd ed.).

[4] Whether a fiduciary has complied with the investment duties of the "prudence" rule depends on all relevant factors, and obviously the nature of these factors will vary from case to case. The Secretary of Labor, however, is authorized in section 505 of the Act to prescribe such regulations as he finds necessary or appropriate to carry out the provisions of Title I of the Act, which includes section 404. Accordingly, this regulation, if adopted, will assure that a fiduciary's consideration of an investment or investment course of action will reflect the special nature and purpose of employee benefit plans as required by the "prudence" rule under the Act.

[5] The debate on the "prudence" rule took place in 1970, when essentially the present form of section 404(a)(1)(B) of the Act was first introduced in H.R. 16462. At that time, there was considerable discussion as to whether the "prudence" rule in that bill was preferable to the common law "prudence" rule. Testifying in support of the "prudence" rule in H.R .16462, then Secretary of Labor Shultz characterized this rule as providing a standard "with a built in flexibility . . . which recognizes the vast diversity and other characteristics of private pension and welfare plans." *See* Committee on Education and Labor, General Subcommittee on Labor, Hearings on H.R. 1045, H.R. 1046 and H.R. 16462 (1st and 2nd Session., 1969, 1970) at 477 (hereinafter referred to as Hearings). Those who supported the language in H.R. 16462 maintained that the common law "prudence" rule, developed for personal trusts, was in certain respects inappropriate for employee benefit plans because their objectives were quite different from those of typical common law trusts. *See* Hearings: Richard A. Van Deuren at 159, 163–64; H. C. Lumb at 292–93, 299–300; Robert C. Tyson at 833; American Retail Foundation at 902; N.Y.S. Bar Association Tax Section at 936; American Cyanamid Co. at 302.

[6] H.R. Rep. No. 93–1280, 93rd Cong., 2nd Sess. at 302 (1974).

(2) The role an investment or investment course of action plays in an employee benefit plan's investment portfolio involves factors which may include, but are not necessarily limited to, the following:

(A) the composition of the plan investment portfolio with regard to the diversification of risk,

(B) the volatility of the plan investment portfolio with regard to general movements in investment prices,

(C) the liquidity of the plan investment portfolio relative to the projected payment schedule for benefits,

(D) the projected return of the plan investment portfolio relative to the funding objectives of the plan, and

(E) the prevailing and projected economic conditions of the entities in which the plan has invested and proposes to invest.

(c) Definitions. (1) The term "investment duties" means any duties imposed, assumed or undertaken by a person in connection with the investment of plan assets which make or will make such person a fiduciary of an employee benefit plan or which are performed by such person as a fiduciary of an employee benefit plan as defined in section 3(21)(A(i) or (ii) of the Act.

(2) The term "investment course of action" means any series of program of investments or actions related to a fiduciary's performance of his investment duties.●

TERROR INTERNATIONAL

● Mr. EAGLETON. Mr. President, On April 9, the CBS program "Sixty Minutes" devoted its entire broadcast hour to a film prepared by the British Broadcasting Co. on international terrorism. The film, entitled "Terror International," reminded me that terrorism has become an intenational industry. There is no longer such a thing as an isolated incidence of terrorism, rather there is an elaborate international network of terrorists trained in the most violent methods of destruction, committed to the cause of revolution in the name of liberation.

"Sixty Minutes" provided an excellent service in showing this film because it emphasizes the need for strong international cooperation in combating terrorism. The plain truth is that no one is immune from the threat of terrorism. In his introduction to the film, Mike Wallace points out that:

Terror International involves Palestinians, Japanese, Germans, Latin Americans—men and women come together in a complicated if loose alliance in pursuit of their vision of revolution; left-wing radicals bent on the destruction of Western and Arab capitalism. In a sense, the terrorists whom you will see are at war with half the world.

Mr. President, I ask that the entire transcript of this "Sixty Minutes" broadcast be printed in the RECORD.

The transcript folows:

TERROR INTERNATIONAL

Captain MARTYR MAHMOUD. This is Captain Martyr Mahmoud. We give you enough time to prove that you want to change your imperialist mentality, and to let our revolutionaries out of your imperialist fascist prisons.

MIKE WALLACE. The hijackers systematically wired up the explosives and poured alcohol over the seats, looking toward the incineration of everyone aboard.

GABRIELLE DILLMAN. Then I said to the big girl, "Well, why don't you at least throw that sweet little boy outside? Just throw him out, then he has a chance to run away or so." And then she said, "Well, you know, we—" "He's so cute," I said. And she said, "You know, we like him also very much. He's—he's a fantastic little boy, so sweet. And I promise you one thing, we're going to shoot him first before anything else—before the thing is blown up." So that was some kind of mercy.

DAN RATHER. I'm Dan Rather.

MORLEY SAFER. I'm Morley Safer.

MIKE WALLACE. I'm Mike Wallace. Some weeks ago Morley, Dan and I saw a film made by the BBC on international terror. What you saw a moment ago was a scene from that film. We thought it was such a first-class job of reporting, and such an important subject, that we wanted to share it with you. So that story and no more tonight on 60 Minutes.

TERROR INTERNATIONAL

MIKE WALLACE. Tonight, for the first time in the ten years we've been on the air, 60 Minutes is devoting an entire edition to a report produced outside our own shop, in this case by the BBC—the British Broadcasting Corporation—with Tom Mangold as reporter. His story focuses on this man, Wadih Haddad, who died 12 days ago in a still unidentified Arab capital. He died of leukemia. Who was Wadih Haddad? He was the leader of a group which over the past decade was responsible for an assortment of terrorist episodes that stunned the world: Entebbe, Mogadishu, the Lod massacre. We'll tell you more about all of them, details you have not heard before.

Terrorism is a poor man's substitute for war. As in all wars, the terminology depends upon who's using it. One man's freedom fighter is another man's terrorist. One man's armed struggle is another man's hijack of a plane with innocent victims. Wadih Haddad's Terror International involves Palestinians, Japanese, Germans, Latin Americans—men and women come together in a complicated if loose alliance in pursuit of their vision of revolution; left-wing radicals bent on the destruction of Western and Arab capitalism. In a sense, the terrorists whom you will see are at war with half the world. Until his death 12 days ago, they were led by a man who was virtually a shadow, anonymous.

This was the man behind Terror International, a Palestinian called Dr. Wadih Haddad. He was responsible for planning most of the major terrorist attacks of the last ten years—a mysterious figure who headquartered mainly in the socialist state of Iraq.

[Gunfire]

This camp in Iraq on the banks of the River Euphrates is one of those used by Haddad's Palestinian guerrillas. Well beyond Israeli fighter range, there is no threat here of Israeli air strikes.

[Gunfire]

It is also one of the camps where Wadih Haddad trained his recruits from other countries. Reporter Tom Mangold and his BBC team were permitted to visit this base, one of seven such camps in the Middle East that Wadih Haddad used.

TOM MANGOLD. This, I think, is quite an important camp. They have a good training ground for medium-size weapons. They have several acres down by the river bank where they are able to have very good target practice. The countries that were represented they weren't prepared to talk about. They were only prepared to say that there were "international comrades" at the camp.

Where do they come from. Where do your international comrades come from?

GUERRILLA. All—all over the world.

MANGOLD. No? He can't answer that? Okay. I'm sorry. All right. And these are groups that are also dedicated to—to world revolution?

GUERRILLA. Yeah.

WALLACE. Wadih Haddad was a founding member in the sixties of the Popular Front for the Liberation of Palestine, a Marxist-Leninist group dedicated not only to the destruction of Israel, but to world revolution. The PFLP adopted terror as its main weapon.

[Explosion]

In 1970, they first exploded their cause onto the world scene when they hijacked and blew up three Western airliners at Dawson's Field in Jordan. That was their first major exploit. But deadlier attacks were to follow.

In 1972, the PFLP claimed responsibility for a slaughter which in its senseless brutality stunned the world—the massacre of 26 people, mostly Christian Puerto Rican pilgrims, at Israel's Lod Airport. It also revealed Terror International's first major alliance. For significantly, the attack was carried out not by Palestinians, but by three members of the so-called Japanese Red Army, who had undergone a commando training course in Lebanon. Two of the terrorists committed suicide at the end of the raid. The surviving terrorist, Kozo Okamoto, was sentenced to life in prison by the Israelis. He said that in death he believed he would have become a "star in the heavens". In life, he has become the object of repeated hijack attempts by Terror International, hijacks like Entebbe, aimed at securing his release.

By 1974, the Japanese Red Army was operating in Paris. One of their aims: to secure the release of a comrade arrested by the French police—Yoshiski Yamada. This confirmed another Terror International connection—with Latin America. For a secret meeting took place in Zurich, Switzerland, in September. Present were Junzo Okudairo of the Red Army and two fellow Japanese. To help them were Michel Moukharbel, an Arab and key go-between for the PFLP and its agents in Europe, and a young Venezuelan who had become the most wanted terrorist of them all—Ilich Ramirez Sanchez—known to his admirers and hunters alike as Carlos.

Carlos had first made contact with Wadih Haddad in Jordan in 1970. They had sent him to London, where his ostentatious playboy lifestyle was perfect cover for a committed Marxist revolutionary working for Terror International. And it was in London that he met Nydia Tobon, a Colombian Marxist. They became political allies. Her London apartment wound up as a safe house for Carlos and his conspirators. It was not till 1975 that police broke the Carlos network in London. It was then they seized a complete arsenal of guns and explosives, stored for future attacks, from the apartment of another of Carlos's girlfriends. By this time, though, Carlos had escaped to Paris.

For her part in the affair, Nydia Tobon was deported from Britain. She now lives in Bogota, where she explained why Carlos, the South American, became a terrorist working for Wadih Haddad.

NYDIA TOBON. He told me, "I—now I—I form part of a group that—they are fighting for liberation movement, and I am feeling so happy." I ask him what the mo—what about the movement? What kind of movement it is? And he told me the Palestinian. And I say why Palestinian? I can't understand why. Why—why not Latin America movement or Venezuelan or Colombian or Latin—in Latin American more—one thing more close to us? He told me, "Don't be silly, is because Palestinian is part of the Third World problem. Palestinians created and is supported by the imperialism, the American imperialism. So if we are convinced that we need to fight against the imperialism, we can fight with the Palestinian or whatever liberation movement is—is—is going on."

[Explosion]

WALLACE. In 1973, an Israeli hit team struck back with the car bomb murder of the leader of the Terror International in

Paris, a murder that left a vacancy there which was filled by Carlos. He moved to the French capital to run a network which included Arabs and the Japanese Red Army. Their Zurich meeting back in 1974 had resulted in an attack on the French embassy at the Hague to blackmail the French into releasing their Japanese comrade in jail in Paris. Three Japanese terrorists seized the Hague embassy and held the staff captive. The French capitulated and released the terrorist. The Japanese then negotiated their way out of the Hague embassy and rejoined their freed comrade, now at Amsterdam airport. Then all four flew to safety in the Middle East.

To force the hand of the French government during that seige, Carlos had bombed a cafe in Paris called Le Drugstore, killing two people and wounding a score of others. The grenade that he hurled was to reveal yet another international alliance, for it was part of a batch of M–26 grenades stolen by the German Baader-Meinhof gang, when they raided an American Army base at Miesau in West Germany in 1971. Some were used by the Japanese in the Hague at the embassy seige; one was used by Carlos in Paris to bomb The Drugstore; others would be found in Carlos' London and Paris hideouts.

The Baader-Meinhof gang was named for Andreas Baader, seen here in court, who, like Carlos, had undergone guerrilla training by the PFLP in Jordan in 1970. Journalist Ulrike Meinhof had defended the terrorist movement, which had its roots in the student demonstrations of the sixties, and preached that violence was a valid weapon against a fascist society. American military bases in Germany were targets for the bomb attacks by Baader-Meinhof. At the U.S. European Supreme Headquarters in Heidelberg, three people were killed in one bomb attack.

Andreas Baader and Ulrike Meinhof and other principal members of their group were arrested and sentenced to long terms in prison. Baader and Meinhof committed suicide there. But other German terrorists took part in Terror International's continuing operations.

In December, '75, Terror International turned its attention to the conservative Arab states of the Middle East, which it regards with equal hatred. The oil ministers of OPEC were meeting in Vienna. But of the eleven there, the terrorists had two major targets: Dr. Amouzegar, Oil Minister of Iran, and Sheikh Yamani of Saudi Arabia. The terrorist gang burst its way into OPEC headquarters. Their plan was to kidnap the oil ministers first, then fly them to the Middle East, and then murder Amouzegar and Yamani. Three men were killed as the terrorists broke in. The OPEC gang was truly international. It was led by Ilich Ramirez Sanchez—Carlos himself; and there were two Germans—Gabrielle Kroecher Tiedemann and Hans-Joachim Klein, both members of Baader-Meinhof; three Palestinians, who have never been identified, formed the rest of the gang. But from beginning to end it was to be Carlos' show.

Sheikh Ahmed Zaki al-Yamani.

SHEIKH AHMED ZAKI AL-YAMANI. I thought that probably some Europeans were invading the conference room, trying to kill the oil ministers who are raising the oil prices; that was my first reaction. But then when we were on the floor and they announced that they are Palestinians, they're working for the Palestinian cause, I immediately knew that he's not Palestinian because his Arabic was not the—our Arabic, and not even the Palestinian Arabic. I felt that he's a Jew.

MANGOLD. What was your reaction when you first learned that Carlos was involved in this attack?

YAMANI. I felt I'm about to die.

WALLACE. The murder of Yamani alone would have been an enormous coup, but Carlos—seen here in beret and sunglasses—first forced the Austrians to provide a bus to the airport, and then a waiting jet to take terrorists and hostages to the Middle East. Only then did he start chatting with the man he intended to kill.

YAMANI. Oh, we had all kinds of conversations, every aspect of life social, political, even sex. [Laughs]

MANGOLD. Well, tell me, what did he talk about? What did he reveal of himself in that conversation?

YAMANI. He's a very ambitious man. I think he wants so—so many things, but definitely he wants to be a hero.

MANGOLD. Were you impressed with him at all?

YAMANI. Yes, I should say, yes.

MANGOLD. Did you get the impression from any of the conversations you had with him that he was working for somebody else, that there was an organization involved of which he was not himself the head?

YAMANI. Oh, yes. He was telling us several times that "we'll see according to the instructions I receive"—at least this is his own words. But definitely he himself won't be a—a planner, he—he won't plan something. He can execute something very efficiently, but I don't think he's the brain behind anything.

MANGOLD. So who do you think was the brain behind this?

YAMANI. Later on we heard about Wadih Haddad, for instance, or an organization in Baghdad; but he's cooperating with everybody. He himself told us that they do cooperate with Baader-Meinhof, with the Japanese Red Army, with some of the Palestinian organizations.

WALLACE. On this second visit to Algiers, the plans of Carlos—in the leather jacket—his plans to kill the two oil minister were changed. During stormy negotiations with the Algerians, Carlos may have been bought off or warned off or both. One report claims the Saudis and Iranians gave him a million pounds to free the victims. In any event, the great OPEC raid simply fizzled out here. Sheikh Yamani was released to the Algerians. So just what had the OPEC raid achieved?

YAMANI. Publicity, to start with. And if they wanted to kill both of us, I think to weaken the two governments by killing two of their officials. I don't think anything more.

MANGOLD. That was the intention. And what do you think in the end is achieved, apart from publicity?

YAMANI. Nothing, as far as I'm concerned, not even the publicity.

MANGOLD. And your attitudes have not been changed by your long conversations with Carlos?

YAMANI. In what sense?

MANGOLD. You are no more or less revolutionary now than you were before the attack?

YAMANI. Me?

MANGOLD. Yes.

YAMANI. I thought I am an imperialist. [Laughs]

WALLACE. We'll continue this report on Terror International with the story behind the alliance responsible for the Entebbe hijack.

Six months after the OPEC raid and kidnapping, Terror International mounted its most spectacular operation yet. It hijacked a French plane with a load of passengers, including 83 Israelis, and flew it to Entebbe, Uganda. Once again the team of hijackers was to reveal an international alliance of terrorists whose links ultimately led back to Wadih Haddad.

[Sound of jet engine]

The leaders of the hijacking were former accomplices of Carlos: the German, Wilfrid Boese, and a German girl known by the Arab code name of Halimeh, believed to be Brigitte Kuhlman, Boese's wife.

In Entebbe, the hostages were ordered to fill in arrival forms issued by the Popular Front for the Liberation of Palestine. At Entebbe, and with the full support of President Idi Amin, a second team of terrorists took over. In charge was Antonio Bouvier, an Ecuadorian who had earlier been Carlos' instructor in Cuba and comrade in London.

Fayez Jaber, a Palestinian, a leading member of the PFLP both as head of internal security and later head of external operations.

Jayel el-Arja, another Palestinian, who had special responsibility for the PFLP's relations with South America. And Abu Ali—a code name, but almost certainly concealing the man who was the architect of the alliance between the PFLP and the Japanese Red Army. The hijackers demanded the release of terrorists from Israeli prisons. Ominously they separated the Jewish hostages from the non-Jews. The non-Jews were set free; the others were held.

Uzi Davidson was an Israeli hostage.

UZI DAVIDSON. When a question—an unpleasant question was—was put before him: that of what business do you, a German, have fighting Jews, or Israelis, Jews, after what happened in the Second World War, and whether or not there was any difference between you, a 25- or 27-year-old young German and your ancestors? Did not this occasion prove that there was no difference? So he started explaining about his belonging to a group, to in fact a—a socialist group, or rather an underground socialist revolutionary group. He said that the OPEC raid demonstrated that they were not only against—that they were joining the Arab cause not because they were against Israel or against the Jews in particular; they're against any capitalistic country or any capitalistic society.

WALLACE. In any event, the Entebbe blackmail failed when Israeli commandos killed the hijackers, freed the hostages, and returned them to Israel.

But Terror International won all its demands the following year when five members of the Japanese Red Army hijacked a jet to Dacca, Bangladesh. Those demands were the release of imprisoned comrades from Japan plus a ransom of six million dollars. And the Japanese government gave in, releasing all the Red Army prisoners, and handing over the money too. The hostages, many of them American citizens, were flown to Algiers and released. So in one fell swoop the Japanese Red Army recovered all its operators and a brand new budget as well.

Meanwhile, in Germany there was a spate of killings, top businessmen the victims. In the most dramatic attack, industrialist Hanns-Martin Schleyer was kidnapped after his bodyguards had been shot to death. Schleyer began five weeks of captivity. "Martyr Halimeh", after whom his kidnappers named the operations, was the German girl on the Entebbe hijack killed by Israeli soldiers. Videotapes were issued by the kidnappers in which Schleyer appealed for his life; but his fate rested on the outcome of an operation that was to follow. And when it failed, as we shall see, the terrorists murdered Schleyer and dumped his body in France.

That operation by Terror International involved a Lufthansa airliner with 86 passengers hijacked and flown to Dubai. The four hijackers, all of them Palestinians, demanded that West Germany release the imprisoned Baader-Meinhof gang. Leading the hijack, self-styled Captain Martyr Mahmound, the voice you hear first is that of the German pilot, Captain Jurgen Schumann.

CAPTAIN JURGEN SCHUMANN [over radio]. One moment, please. One moment, please.

Mr. Captain Martyr Mahmoud is just in the aft part of the aircraft. [Pause] Okay, he is now in the cockpit.

CAPTAIN MARTYR MAHMOUD [over radio] This is Captain Martyr Mahmoud. We give you enough time to prove that you want to change your imperialist mentality and to let our revolutionaries out of your imperialist fascist prisons. But unfortunately, you didn't cooperate.

WALLACE. Mahmoud's real name was Zohair Akache, seen posing here for a joke "wanted poster" while living in London. But the joke became fact when Scotland Yard issued this real poster of him after the assassination of the north Yemeni prime minister in London. Mahmoud fled London, and wound up hijacking that German plane. The hijack lasted five days, during which Mahmoud's behavior grew increasingly deranged. Conditions aboard the aircraft were intolerable, with the temperature reaching over a hundred. One old man went insane. Some women hostages began to menstruate without any sanitary aides. When negotiations got nowhere, Mahmoud ordered the plane to take off.

From Dubai, the hijackers intended landing at Oman, but were refused permission. The same at Aden. But desperately short of fuel, Captain Schumann brought the plane down there on a sandy strip. He briefly went outside to inspect the undercarriage, and spoke to some officials before returning to the plane. Gabrielle Dillman, an air stewardess on board, knew that was to cost the captain his life.

GABRIELLE DILLMAN: Well, Mahmoud before announced that he was going to shoot him. He announced it to us. And he said that everybody who will scream or cry or anything will be shot too, will be executed immediately. And so, everybody prepared for that event, you know. They—they pulled things over their heads and closed their ears and shut their eyes, and tried to ignore what was going around—on around them. So the colleague of mine was told to go back and open the door to let him in. I was glad I didn't have to do it because I knew him quite well. So, she let him in. And he was walking up, going to the front, and I—and I looked in his face and I—he knew he was going to die. Somehow he knew it. And he came to the front; he had to kneel down. And Mahoud said, "This is going to be a revolutionary trial!" He shouted it. And he shouted it with some kind of triumph. And he said, "You—you traded in your lousy little life for the life of 86 passengers. I was going to blow up the whole airplane because you ran away," and "You coward." And he said things like that. And the captain said, "Please, Captain Mahoud, Martyr Mahoud, sir, can I explain?" And he was all the time hit in the face. And so it come only parts of sentences out all the time. Then he said, "The only problem was to come back to the airplane." And you know that—he didn't say it in one—"The only problem was—" [voices slapping sound] "—to come back to the airplane—" [voices slapping sound] "—please let me explain again." Things like that. And so he— the— while the— he was saying this, Mahoud all the time cried, "Do you plead guilty—" shouted, "Do you plead guilty or not guilty?" Mahoud hit him in the face; his head was flying way around; and before he could turn it back, he was shot. And the bullet went in here. And he then—one passenger told me he—he once came up like that, he— I don't know the English expression here.

MANGOLD. He raised himself.

DILLMAN. He raised himself one last time, and then he fell. And I'll never forget that dry—that dry shot. It was so dry. I always thought, like in American movies, it make ping ping. It was completely dry, like a—like breaking a piece of wood. And then that plop of the body. And then I started to cry. I was the only one. I don't know why; I lost my nerves.

WALLACE. The co-pilot, with Mahmoud's help, flew the plane on to Mogadishu, Somalia. As soon as it landed, the dead body of Captain Schumann was thrown down an escape chute. By now it was clear in the control tower that Mahmoud had reached total desperation.

MAHMOUD [over radio]. This Captain Martyr Mahmoud. We didn't want any bloodshed, but the imperialist fascist West German regime refused our demands. So there's no alternative. We have to blow up the airplane with all the people on board.

WALLACE. Mahmoud meant every word. The hijackers systematically wired up the explosives and poured alcohol over the seats, looking toward the incineration of everyone aboard.

DILLMAN. Then I said to the big girl, "Well, why don't you at least throw that sweet little boy outside? Just throw him out, then he has a chance to run away or so." And then she said, "Well, you know, we—" "He's so cute." I said. And she said, "You know, we like him also very much. He's—he's a fantastic little boy, so sweet. And I promise you one thing, we're going to shoot him first before anything else—before the thing is blown up." So that was some kind of mercy.

MANGOLD. Who poured the alcohol over the plane?

DILLMAN. Oh, they all did. All of them. They took the duty-free bottles and everything they found at the passengers, and then—even the perfume they poured out. And that big girl, she was also like the boy, just doing it, because she had to. And the slim pretty one, she even—was even humming while she did it, a little bit. And then she gave from time to time, a reassuring smile to one of her comrades.

MANGOLD. What, as she was preparing the plane for incineration?

DILLMAN. Yes.

MANGOLD. Humming?

DILLMAN. [Hums] Pouring.

WALLACE. But it was Mahmoud and two of the hijackers who died instead, when only minutes before his deadline German commandos stormed the plane and freed the hostages. The fourth hijacker, that big Palestinian girl, was carried away wounded, still shouting defiant slogans.

[Hijacker shouting]

Within days posters conferring true martyrdom on the three hijackers who died appeared in the Middle East. Although the PFLP denied responsibility, this poster displays the group's sign, together with the hijackers' pictures, and clearly says in Arabic: "PFLP Special Operations". And the chief of those operations for the PFLP was Dr. Wadih Haddad.

Chapter three of our report on Terror International in a moment.

ANNOUNCER: This portion of 60 MINUTES was sponsored by . . . [Brief annoucement]. 60 Minutes, a CBS News weekly magazine, will continue.

WALLACE. In 1972, the mystery surrounding Wadih Haddad deepened. George Habash, the official head of the PFLP, an extremist left-wing splinter of Yasir Arafat's PLO, denied that Haddad was any longer a member of the PFLP. He said the break had come when he, Habash had decided not to take part in any more airplane hijackings. Haddad, he said, refused to go along with that. But the evidence shows that the position taken by George Habash was just a political ruse, a ruse commonly used by organizations or by states when they find it advantageous to denounce in public activities which in reality they support. As we shall see, the evidence uncovered at the trial of a young Dutch girl in Israel linked with Wadih Haddad beyond doubt to the present day PFLP, and marked him as the man behind Terror International.

Wadih Haddad remained under such deep cover that only his operatives and agents saw him. This photograph taken some years ago was transmitted to intelligence agencies all over the world. The director of Israeli military intelligence, Major General Schlomo Gazit, was well briefed about Haddad.

Major General SCHLOMO GAZIT: He is one of the most cruel operators, with no consideration to human life, innocent people, women, children, old men or whatever it is. And very, very careful, as I say it, in the planning and preparation of the different operations, in which he is always personally involved. He doesn't delegate authority on that.

WALLACE. George Hajjar is a Palestinian who trained in Cuba and supports the PFLP. He is now a professor of political science at Baghdad University in Iraq.

GEORGE HAJJAR. I would say he is a highly devoted anti-imperialist fighter; one of the few Arab leaders who doesn't like TV and news people. But a dedicated man to the cause of the revolution—Arab and worldwide.

WALLACE. Dr. George Habash, head of the PFLP.

MANGOLD. He has no function within the PFLP?

Dr. GEORGE HABASH. No. No. No.

MANGOLD. He has no role to play in it?

HABASH. No.

MANGOLD. He is not a member in any way at all?

HABASH. At the present moment, no.

MANGOLD. Has he split from the PFLP?

HABASH. He is the PFLP.

WALLACE. Wadih Haddad was born in Palestine in the town of Safed by the Galilee in 1928. He was the son of a school teacher. He grew up and was educated in Jerusalem. Then after the Six Day War, he fled to Beirut. At the American University in Beirut he met George Habash. They studied medicine together. They were to become close friends and political allies. In the sixties, they opened a clinic together in one of Jordan's Palestinian refugee camps, working with families who lived on charity and despair. Haddad's passionate anti-Zionism was born here, as was the PFLP itself.

[Gunfire]

A special foreign operations division was created, and Wadih Haddad became its head, training men and women to commit acts of international terrorism. But it was the arrest 18 months ago at Tel Aviv's Ben Gurion Airport of a young Dutch girl which first exposed Wadih Haddad's Terror International—the man and his methods. The girl's arrest marked the first time a Haddad operation was uncovered before it began.

Lidwina Jannsen was part of a European terrorist cell recruited to stage a hijacking. And the plan was well advanced when it was broken by Israeli intelligence. Jannsen was an important link in the proposed operation. So was Marius Nieuwberg, her boyfriend, arrested by Indian police when his plane reached Bombay. Lidwina Jannsen was charged by the Israelis with consorting with an enemy agent. Unusually for a case of this kind in Israel, she was tried in public, so details of the proposed operation were revealed in court. Jannsen, who belonged to a revolutionary Dutch group, is today in Israel's Ramleh Prison. Her interrogator was Lieutenant Colonel Eliahu Lavie.

Lt. Col. ELIAHU LAVIE. I mean, to send her to— to— to Ben Gurion Airport is Daniel into the lion's den; and that was the important part of the mission because, I mean, she'd have to case the— the installations and see exactly what— and they'd have to rely a lot on her report. So, therefore, I should imagine that she was the base for what was supposed to be afterwards quite a large and important operation.

WALLACE. This is the original statement she made in English, though the voice is not her own.

WOMAN [reading Jannsen statement]. In June, 1976, Marius and I and some others journeyed to Aden. We had no visa for Aden because we didn't want a stamp in our passport, so nobody would know we were there.

Lt. Col. LAVIE. They arrived at Aden airport; nobody knew who they were, and they knew nobody there. Quite easily they—they sauntered into the airport sort of thing, and one of the members asked the passport authorities to call the—the member of the Popular Front who was supposed to meet them. And eventually the fellow came up and said I'm so-and-so and took their passports. They went straight through without inspection; the passports weren't stamped; and from there were taken immediately by land rover to a training base somewhere in Aden.

WALLACE. Aden, now called the People's Democratic Republic of Yemen, has a Marxist-Leninist government, and is a safe country for Terror International, which has a base there.

WOMAN [reading Jannsen statement]. We arrived at a private house with a garden. We were ushered into a room. There we found three other Arabs dressed in civilian clothing. On the walls were pictures, one of Kanafani, who was once the Popular Front spokesman who was killed. There was a map of Palestine on the wall, and a picture of the sign of PFLP.

WALLACE. One of Terror International's major training camps is located away from the town in the desert. It has full military facilities.

Lt. Col. LAVIE. She was there with her Dutch group, and there were all sorts of odds and ends there. There was a German group; there was a South Moluccan fellow; there was one of the Irish IRA there. That was more or less the odd—the odd terrorists from all over the world who they could collect to make a group of.

WOMAN [reading Jannsen statement]. Hussein from Libya trained with us, and Mahdi from Kuwait. While I was there, Hussein and I were lovers. When I got back to Holland, I saw their pictures in the newspaper. They were arrested in Istanbul for shooting at the El Al plane. For a week and a half we spent more than an hour a day studying the Kalashnikov submachine gun and the Walther pistol. While we were there a man called Abu Hani visited us a few times.

WALLACE. Abu Hani was the code name for Wadih Haddad.

Lt. Col. LAVIE. Oh, she met him twice, as a matter of fact. She met him when he came to the base on a visit; and one evening she was taken to the PL—PFLP office in Aden, and she spent a night there. And they had discussions and——

MANGOLD. And he was there?

Lt. Col. LAVIE. And he was there, yes.

MANGOLD. The man she called Abu Hani?

Lt. Col. LAVIE. Yes.

MANGOLD. Now, subsequently you asked her to identify various pictures?

Lt. Col. LAVIE. Yes. I—there was a row of six pictures, and she identified the man.

MANGOLE. She identified a man known as Abu Hani?

Lt. Col. LAVIE. Exactly.

MANGOLD. And you say he is Wadih——

Lt. Col. LAVIE. Wadih Haddah, yes.

WOMAN [reading Jannsen statement]: Day before I left, Abu Hani gave me a written note for Ciska, who had left the week before. The note had a coded message saying: "The marriage will be at the end of September." The day after I arrived in Holland, I took Abu Hani's message to Ciska and gave it to her.

WALLACE. It was Ciska Eeken who sent Lidwina Jannsen on her ill-fated mission to Tel Aviv. Eeken, a Dutch socialist revolutionary, was Haddad's chief contact in Holland. She had met him several times, and she knew him well.

CISKA EEKEN. The Palestinian people, the comrades in the PFLP, love him very, very much. They sing about him, they talk about him; and what I know about him is that he makes very much concrete his political way of thinking, his internationalism. He makes it concrete. International operations are organized by him. He gives—he doesn't see the difference between the people who are fighting in Europe and the people who are fighting in the Middle East. For him they are one organization. Dr. Wadih Haddad is a man who works very practically; he is very convinced of the armed struggle, international. He supports international, foreign—for him foreign—liberation movements, but he sees those liberation movements as part of a worldwide liberation movement. For him there is no difference.

MANGOLD. Is he a hard man?

EEKEN. I think that is a normal interpretation for the ones who are not in the revolutionary movement. They see the people who are involved in the armed struggle as terrorists, as murderers, as hard people who are just running around in the world to kill who they meet. But this is not true. The suffering of the people made them convinced that they had to do something to stop the suffering, stop the murdering, and they made a strategy. And in this strategy they took the weapons, of course. They had to.

MANGOLD. But the strategy involves murder itself.

EEKEN. What's murder?

MANGOLD. Murder is a dead German pilot in Mogadishu.

[Eeken pauses . . . makes a blowing sound with her lips]

WALLACE. With Lidwina Jannsen's arrest at Tel Aviv airport, Wadih Haddad's plans came to an abrupt halt. The cost had been slight—little more than a couple of airline tickets.

But what about money? How is Terror International financed?

General Gazit.

GENERAL GAZIT. Most of their expenses are being covered by the different host countries, who are, let's say, covering the expenditures in the different camps, whether it is a camp in Iraq or in southern Yemen or in Mogadishu in Somalia, Libya, Algiers, et cetera. On the other hand, we know that the main sources are two, for the money. One is ransom money which they have already collected, and I would say that it would be pretty safe saying that they have got something like between five to ten million dollars already collected. And let's say certain allocations by different Arab countries, mostly host countries. But I don't really know if they don't get even from other countries that politically don't support their operations but gladly give some money so that they won't be too much bothered by them.

MANGOLD. How do you feel about working with revolutionary groups from Germany or Japan or South America?

HAJJAR. As a committed world revolutionary, I am prepared to work with anyone who wishes to overthrow imperialism.

MANGOLD. And are you prepared to see anything done?

HAJJAR. What do you mean, see anything done?

MANGOLD. Anything. Any kind of operation, no matter whether innocent people die or——

HAJJAR. The—in dealing with a German technocratic fascistic mind that we have, for instance, have had to deal with in the past few years, and how they have operated, to deal with that type of person you have to operate in a like manner. The assassination of our comrades in prison in—in Germany is certainly not an act of humanity. The destruction of our people everywhere is not an act of humanity. And if you—if you expect me to be a super Jesus, ask that of Jimmy Carter first, and ask that of the Nixons and the Fords and this—the Schmidts and the Callaghans and all the criminals of Europe who are passing as rulers and just rulers.

MANGOLD. But why do the Palestinians, who have a particular struggle on their hands, why do they relate to groups like Baader-Meinhof, Red Army faction, the United Red Army? What have you got in common with these people?

HAJJAR. Because they're liberation movements; they're being oppressed by imperialism, and also are we.

WALLACE. At the last count, 36 German Baader-Meinhof terrorists were being sought by the police. Most are believed to have left Germany. Interpol wants seven Japanese Red Army terrorists released during the Dacca hijack. That six million dollar ransom has gone to Terror International. And Interpol wants Carlos, too. Police worldwide are on the alert to arrest and detain him. He is said to have a home in Libya, given him in gratitude by Colonel Muammar Qaddafi. And Dr. Wadih Haddad? Who will replace him as the leader of Terror International? That is a question being debated now, no doubt, in Baghdad, in Aden, in Beirut, and in the high councils of the PFLP.

BBC reporter Tom Mangold investigated the story behind Terror International for close to six months. After Wadih Haddad's death 12 days ago, we asked Mangold who will be the new leader of Terror International.

MANGOLD. There's certainly a feeling that there'll be a power struggle. Control of this group is quite important. Haddad had it, he kept it, he ran it; it was his show. Now, there may be an attempt by certain rejection front countries to gain more control of it. George Habash of the PFLP may want to involve himself in its actions a little more, or he may want to prevent some of the actions. There will be a power struggle. I doubt that we will ever hear what has happened. This is not an organization that exactly publicizes its activities.

WALLACE. What about Carlos? Carlos has been at the heart of the Haddad operation, and yet we've not heard a good deal of Carlos since the OPEC kidnapping, the Yamani kidnapping?

MANGOLD. I was told in Beirut that he was still very much around, that he still travels to Europe. So, he's around, he's in the area. And he may very well finish up with some closer association with Terror International than he's had before. I think it is not inconceivable that Carlos might be an adjutant, a number two, the guy who would be in charge of special operations, rather as Haddad was himself when he was working with Habash in the old days of the PFLP.

WALLACE. And who would be that Palestinian candidate? Do you know him? Is his name known in the West?

MANGOLD. Not at all. The only names that are known are—are the noms de guerre, the war names, and nobody has the slightest idea who might be the crown prince there.

WALLACE. Is there no Russian hand, no Russian money, in any of this?

MANGOLD. The only connection there is with the Russians is through the Cuban intelligence service. Now there was a connection between the Cuban intelligence service and Carlos the Jackal, and three Cubans were expelled from Paris after the Carlos network was broken up. So there is that link. But I think the Russians like to make mischief; probably no more.

WALLACE. The United States has not, until

now, been hit by the kind of terrorism we've seen in your film.

MANGOLD. It's a long way from Europe to the United States. Those are long lines of communications for a small army of terrorists; difficult to maintain, and difficult to keep secure. On the subject of security, United States security at ports of entry and so on is very good. It's better than most other countries in the world.

WALLACE. Would you expect any quick move now by Terror International, after Haddad's death, to prove that they are still in operation?

MANGOLD. I think that's very possible. I would have thought they will want to show that, despite his death, his martyrdom, as it's been called today, the group can continue its operations. But you must remember one thing: most of these operations are very well planned and they're very carefully planned. What they won't do is mount a hasty failure if they can avoid it.●

OLDER AMERICANS ACT AMENDMENTS OF 1978

● Mr. CLARK. Mr. President, I am very pleased to have the opportunity to join Senator CHURCH, chairman of the Senate Special Committee on Aging, in introducing S. 2969, the Older Americans Act Amendments of 1978.

The Older Americans Act, which expires this year, is the major Federal initiative for promoting services to senior citizens. It authorizes funding for various types of social services that are coordinated by a network of area agencies on aging.

I know of few programs that are as successful as those authorized by the Older Americans Act—such programs as the elderly nutrition program, which provides hot meals to the elderly at congregate sites; the senior center program, which assists communities in establishing focal points for the activities of senior citizens and for services to them; and the senior employment program, which supports thousands of older workers across the Nation who are participating in community service projects.

These programs are crucial for rural States like my home State of Iowa, which has the third largest percentage of elderly people—over 12 percent—of all States.

Older people, particularly those who reside in smaller communities that lack the wide array of services provided in metropolitan areas, have tremendous social, financial, and health needs that are addressed by Older Americans Act programs.

I am especially gratified to note that S. 2969 incorporates ideas that will make the Older Americans Act more responsive to rural needs.

Earlier this year, I testified before the Senate Human Resources Aging Subcommittee on this topic. At that time, I highlighted one particular act provision that was discriminatory against rural older Americans.

Title V of the act, which authorizes the senior centers program, limits funding to acquisition, alteration, or renovation. This provision hampers the use of title V funds by rural communities, because they often do not have available structures that are suitable for conversion into multipurpose centers at a reasonable cost.

The Church bill, as I recommended, allows for limited construction of senior centers in areas that lack facilities to be renovated or acquired. State aging agencies would have the authority to determine if a community should receive construction funds for this purpose.

This bill will also establish a new program of much benefit for the rural elderly—a national home-delivered meals program within the existing title VII elderly nutrition program. Residents of smaller towns would especially gain from an expression of "Meals-on-Wheels" projects, since the only viable alternative is often nursing home care in larger communities, far from their homes.

These amendments would also mandate a specific study of the differences between urban and rural service delivery. The information that is derived from this study will be useful in developing future legislation and policies that affect the rural elderly.

Other provisions of S. 2969, the Older Americans Act Amendments of 1978, would:

First, consolidate State and community programs (title III), multipurpose senior centers (title V) and the nutrition program for the elderly (title VII), while retaining the separate identities of the programs through separate authorizations.

Second, expand efforts to develop legal services and ombudsman programs for the elderly.

Third, expand eligibility for the title IX senior community service employment program by allowing persons 55 years and older, with incomes up to 125 percent of the poverty level, to participate.

Fourth, authorize funds to begin or expand training, coordinating, and capacity building activities directed toward alternatives to institutional living.

And, fifth, provide authority for a White House Conference on Aging in 1981.●

RSVP DESERVES CONTINUED FEDERAL SUPPORT

● Mr. SPARKMAN. Mr. President, since its inception in 1971, the retired senior volunteer program, RSVP, has successfully demonstrated that it is one of the most effective direct volunteer service programs to receive Federal funding.

RSVP was created to provide Americans aged 60 and older with the opportunity to become actively and purposefully involved in useful as well as personally satisfying activities within their own communities.

For the past 7 years, thousands of RSVP volunteers across the Nation have been placed in numerous types of organizations or facilities lacking adequate services related to basic human needs. Facilities such as hospitals, schools, nursing homes, libraries, day care centers, nutrition sites for the elderly, and numerous others have benefited immeasurably from the services of RSVP volunteers.

Volunteers—regardless of age, education, or vocational background—utilize whatever skills, experiences or interests they have toward helping others in a variety of ways. At the conclusion of this statement, I shall insert a newspaper article outlining a few of the services provided by one RSVP program in a small city in east Alabama.

Figures from the fiscal year 1979 budget estimate submitted by ACTION, RSVP's sponsor agency, provide impressive evidence of the program's attraction for elderly retirees as well as sizable economic advantages: In fiscal year 1978 approximately 250,000 volunteers will provide more than 52 million hours of service in 692 projects throughout the country. As volunteers are paid no stipend other than out-of-pocket expenses, the total value of volunteer service—based on the consideration that the minimum wage for paid labor is currently $2.65 per hour—represents a $118 million savings.

In spite of RSVP's overwhelming advantages in both monetary and human terms, ACTION has proposed cutting $4,555,000 from RSVP's fiscal year 1979 budget which would result in a loss of 30,000 volunteers. Plans are also underway to reevaluate effectiveness of RSVP's local projects and to assess the need for expanding the entire program.

ACTION's rationale for implementing these drastic measures is twofold: First, too few RSVP volunteers are serving minority populations whose income is below the poverty level, whereas disadvantaged minorities should be the primary target group receiving community services; and, second, not enough evidence regarding the value of the service to the community has been thus far demonstrated by this program—apart from the services rendered to the volunteers. While I can only speak for the State of Alabama, I must say that our Alabama RSVP programs are providing many needed services for our minority communities and are actively seeking minority individuals to participate in RSVP activities as well as encouraging them to make use of RSVP services. Our Alabama programs are based on service to the community.

Unless ACTION decides in favor of increasing funding for RSVP project grants, the valuable supply of elderly volunteers will dwindle; many retirees whose lives have become more meaningful because of their participation in RSVP will find no satisfactory outlet for their untapped talents or energies; services offered at no cost to the needy, the handicapped, or the lonely will be tragically terminated for both the volunteer and recipient.

Mr. President, I ask that a copy of the Dateline column of the Talla Coosa Advertiser of Alexander City, Ala., dated January 25, 1978, be printed in the RECORD. Incidentally, a number of the proposed additional services mentioned in the column have now been implemented.

The column follows:

DATELINE

(By Barbara Earnhardt)

The Retired Senior Volunteer Program in Alexander City now has 157 participants. Recruiting volunteers is an on-going process.

Alabama has more RSVPs than any other state in the nation with some 26 programs throughout the state.

The primary purpose of RSVP is to offer persons age 60 or over the opportunity for meaningful volunteer service.

For anyone who wants to use his or her experience and talents in useful service, RSVP provides a wonderful opportunity.

There is so much to be learned from the older members of our community. Whether it be in working with children, in nursing homes and hospitals, in beautification programs, in homes of house-bound neighbors, in whatever services they perform, the contributions our senior citizens can make are unlimited.

Many of the crafts of yesteryear would become lost arts if not for our older friends.

There is no special training required to become an RSVP volunteer. It depends on what you like to do.

If you want to get really excited about RSVP, talk to Virginia Bradshaw, director of the local program. She has a wealth of information and ideas for future work in Alexander City.

New plans are being made for additional RSVP services locally. A Neighborhood Watch Program and Telephone Reassurance Program are two that are now in the planning stages.

Additional services will be offered at Russell Hospital. Persons with some sewing expertise will be enlisted to aid in sewing for Veterans Hospitals and public health facilities.

When the new Chamber of Commerce building is completed RSVP hopes to have a part in depicting, through needlepoint and quilting, a history of the area.

In the coming weeks, Dateline will keep you informed as each new plan is put into action.

If you are interested in learning more about RSVP call Virginia Bradshaw at 329–8123. Better still, go by for a visit. The RSVP office is located in the library building at Alexander City State Junior College.●

SOLAR POSSIBILITIES

● Mr. McGOVERN. Mr. President, in this era of high cost energy and projected fuel shortages, nearly all agree that energy from the sun is a safe, clean alternative. Several forms of solar space and hot water heating have been extensively developed and are commercially available throughout the Nation. However, solar energy and other renewable energy resources are making minimal contributions to our country's energy needs, and the majority of projections indicate that its contribution will not substantially increase by the end of this century.

Several major factors currently inhibit rapid development and commercialization of solar technologies. Today, utilization of solar energy is cost efficient in most cases when the energy and revenue savings are measured over a period of several years. However, the initial cost of installing solar equipment is presently high enough that, in the short run, the majority of people find it less expensive to continue use of conventional fuels. Some may argue that if we wait, solar technologies will eventually find their own way to the mass market. I find this thinking a serious abrogation of Federal responsibilities especially in light of the billions of dollars the Government has invested in the development of oil and nuclear energy technologies.

Legislation, such as the Solar Development Bank and the Solar Energy Transition Act, now pending in Congress would provide long term low interest loans to homeowners and small businesses for the installation of solar equipment and mandate considerable use of solar technologies in Federal buildings which would have the twofold effect of providing substantial demonstration of the technology and the development of an increased solar market. These proposals, in addition to several others currently pending are essential to overcome the present obstacles to widespread commercialization of alternative energy technologies.

Mr. President, I ask that an editorial from the April 26, 1978, edition of the Washington Post be printed in the RECORD.

The editorial follows:

SOLAR POSSIBILITIES

Sunshine is everybody's favorite answer to the dilemmas of energy policy. Solar energy doesn't pollute the atmosphere. You can't make bombs out of it. The supply isn't declining. But since it's so attractive, why isn't it being exploited more rapidly?

The technology for heating water, and for keeping houses warm, is fully developed and commercially available. Although solar generation of electricity is not quite so far along, it's progressing nicely. But there is one drawback, and it is important. Solar energy is comparatively expensive.

The collectors—whether the little panel on your roof for the bath water, or the futuristic arrays of mirrors out in the desert—are costly. The people currently installing solar equipment are doing it as a matter of environmental principle. But the practice is not going to become widespread so long as it costs less to do the same job with oil or gas.

The present outpourings of exhortation to go solar generally touch very lightly on that point, when they touch it at all. There's an illuminating little example of interest-group politics here. Most of the organizations that campaign for solar solutions are also vehement defenders of price controls on oil and natural gas. The controls hold fuel prices low, which encourages waste and undercuts the new solar technology. The greatest determinant of the use of solar energy in this country will be the relative cost of the competing fuels. Of all the things that Congress can do right now to promote solar energy, the most effective would be to deregulate gas prices.

Beyond cost, the restraints on solar power fall mostly in the category of habit and caution. Mortgage lenders are disinclined to provide loans for equipment that they regard as unconventional. It takes time to recruit and train the armies of contractors and mechanics capable of installing and fixing those systems. In some areas, housing codes get in the way.

But like the price controls on oil and gas, these impediments are man-made, self-imposed and—if the country wants to do it—remediable.

According to the standard forecasts, solar energy will make only a marginal contribution to this country's needs by the end of the century. But the President's Council on Environmental Quality has just published a much more optimistic view. The CEQ argues that, by the end of this century, the sun could provide fully one-fourth of the country's energy requirements. That would be a very happy prospect, if it were possible. Unfortunately, so large a gain is not possible. The reasons can be discerned in the long quarrel, now entering its second year, over President Carter's energy bill, the central strategy of which is to end the present artificially low pricing of oil and gas. But neither is it necessary to stand still.

When all of the impediments and limitations are stated, one signal truth remains: Solar energy is the safest and most satisfactory of all sources. Under present policy, there are only three ways to meet this country's growing demand for energy. The three are, of course, imported oil, coal and nuclear fission—and the current drift of events favors the first two, which are also the most dangerous of all the possible solutions. The Carter administration has not given much leadership in behalf of the solar alternative, no doubt because the Department of Energy has been endlessly entangled in the energy bill.

What's needed now is an array of solar demonstration projects, far beyond the present modest scale, to disseminate knowledge of the equipment and to acquire broad experience with its performance and reliability. Every collector panel installed will mean a little less foreign oil coming into the country, and a little less coal smoke going into the air. That's not a bad reason to start spending money, both public and private, on solar plumbing.●

S. 2990—THE SUGAR STABILIZATION ACT

● Mr. LONG. Mr. President, I am pleased to join in cosponsoring the Sugar Stabilization Act of 1978. This bill will implement the international sugar agreement between the United States and numerous foreign countries, both exporters and importers of sugar.

It will maintain a viable domestic sugar producing industry which will be capable of continuing to supply the largest part of the sugar consumed in the United States. It also is intended to protect the welfare of consumers by providing supplies of sugar at a fair price in the United States and the world market.

The bill basically provides a badly needed and long-awaited domestic sugar program which takes account of domestic producing and consuming interests as well as international interests.

The bill has wide bipartisan support, including: Senators CHURCH, STONE, DOLE, CURTIS, MATSUNAGA, YOUNG, HANSEN, HAYAKAWA, WALLOP, ANDERSON, MELCHER. INOUYE, JOHNSTON, CHILES, HUMPHREY, BAYH, MARK O. HATFIELD, MCCLURE, TOWER, ZORINSKY, RIEGLE, BURDICK, BENTSEN, DECONCINI, DOMENICI, GRIFFIN, and SCHMITT.

It also represents a consensus among the major sugar producing interests in this country, including beet and cane growers, processors, and even the corn sweetener industry.

Before briefly describing the provisions of the act, it would be useful to recall the history of the last 4 or 5 years with respect to sugar.

On December 31, 1974, the Sugar Act expired. During the 40 years of its life, the Sugar Act was relatively successful. It assured U.S. consumers adequate supplies of sugar and assured the domestic industry an adequate return on its investment. Beginning in the early 1970's, world sugar prices increased dramatically as consumption exceeded demand.

This price rise made renewal of the Sugar Act politically impossible.

After the sugar price boom and the demise of the Sugar Act, prices decreased dramatically. High production costs, declining sales, and declining profits caught up with the domestic sugar industry. U.S. producers were put in an untenable position. Imports increased and low prices made it virtually impossible for even the major producers to cover their costs, never mind the little man.

In response to the problems of the sugar growers and the refusal of President Ford to take any action to restrict imports, the Senate Finance Committee in September 1976, directed the International Trade Commission to investigate whether the increased imports of sugar were injuring the domestic sugar industry.

The Commission thoroughly studied the sugar situation and concluded by an overwhelming majority that the domestic industry was being seriously injured by foreign imports. The Commission recommended immediate action to reduce imports.

After receiving bad advice from people who should know better, President Carter denied import relief and opted for a direct payment scheme. Under this bankrupt policy, which the GAO and the Justice Department both found to be illegal, sugar producers were to get a direct subsidy. These direct payments were to be transmitted to growers through processors of sugar. Under this administration scheme the payments were supposed to make up the difference between a target price of 13.5 cents and the U.S. national average sales price for raw sugar if it was lower. However, a 2-cent-per-pound cap was placed by the administration on payment, making it virtually impossible to achieve the price objective.

In the meantime, during the summer of 1977, work was proceeding in the Congress on the 1977 farm bill. An amendment containing a price support program designed to aid the sugar industry was added to this bill. The price support program was limited to the 1977 and 1978 sugar crops. Known as the de la Garza amendment, it became law in September 1977, and requires the Secretary of Agriculture to maintain a price support of between 52.5 and 65 percent of parity through loans or purchases of sugar.

About the time the sugar support program became law, the U.S. Department of Agriculture announced another payment program to replace the ineffective and plainly illegal program the President first announced. The new program was to be effective until the provisions of the price support program in the 1977 Farm Act became operative. This price support program was to be financed from U.S. Treasury funds and was designed not to interfere directly with the market price for refined sugar.

Then began a saga of administrative bungling and ineptitude rarely equalled in Washington. Although the Farm Act of 1977 did not give the administration discretion to delay implementation of the legislated sugar program or to implement the program in a manner not authorized by Congress, the Department of Agriculture and other interested agencies nevertheless consumed several months in determining how the program was to be administered.

During this time sugar continued to enter the country at extremely low prices, the sugar producers continued to suffer and large speculative interests reaped huge benefits from this improper delay in implementation of the law.

Finally, on November 8, 1977, the USDA acted to implement the sugar provisions of the Farm Act by providing for a loan and purchase program.

At the same time, to decrease competition from imports, the President implemented by proclamation increased tariffs and fees on imported sugar. In taking this action he replaced the September 1977 subsidy program. The only problem was that the proclamation of the President was so shot full of loopholes and problems that it was totally ineffective in keeping down imports, and in fact encouraged them. In announcing an increased tariff and duty on November 10, 1977, and delaying the effective date until January 1, 1978, foreign exporters shipped an unprecedented amount (more than at any other time in history) of sugar to the United States during November and December of 1977.

Further, the repeal of the September 1977 subsidy program hurt many growers of sugarcane and sugar beets who could not qualify for the loan or purchase program because of actions they had taken in reliance on the subsidy program.

After several more months of haggling and interagency dispute, the administration finally appeared to have gotten the program together correctly. The President proclaimed increased tariffs and fees which appear to cover adequately all of the products concerned.

However, the damage had been done. The big importers, refiners, and users continue to reap windfall profits because during this time of administrative bungling they built up large stockpiles of foreign sugar at cheap prices in anticipation of the delayed government action to increase the market price. In the meantime, of course, U.S. sugar producers have continued to suffer, and will suffer a great deal more due to stockpiles overhanging the market.

Thousands of small and medium-sized cane and beet growers have been and continue to be severly hurt by imports. The current price objective of about 52.5 percent of parity is simply not enough to cover even operating costs. Our farmers have been expecting the administration and the Congress to provide them with meaningful relief from the dilemma in which they find themselves.

Unless such relief is given, these growers will continue to suffer heavy damage, and not a small number will simply be ruined. Without immediate help, our domestic sugar industry could well be forced into bankruptcy. This whole issue boils down to the simple questions, "Do we need a domestic industry?" I believe we do.

Mr. President, while all this was going on domestically, the administration was negotiating an International Sugar Agreement, which is now before the Senate for its advice and consent. Under the Farm Act, the domestic program is to remain in effect for the 1977 and 1978 sugar crop years or until the Secretary of Agriculture determines that an International Sugar Agreement is in effect which assures the price objectives of the Farm Act program.

That brings us to this act, the proposed Sugar Stabilization Act of 1978, which is designed to implement the International Sugar Agreement and provide a domestic program to assure the continuation of a domestic sugar industry with ample supplies of sugar for consumers at reasonable prices.

Title I of the act simply authorizes the President to take such actions as are necessary and appropriate to implement the obligations of the United States under the International Sugar Agreement. These actions include prohibiting the importation into the United States of any sugar from any country not a member of the International Sugar Organization. It would also enable the President to prohibit entry of any quantity of sugar not accompanied by a certificate of contribution to the stock financing fund that is required by the International Sugar Agreement.

Title II of the act provides for the establishment of a domestic sugar program. Under this program, the Secretary of Agriculture is to determine for each calendar year the amount of sugar needed to meet the requirements of consumers in the United States, to maintain and protect the domestic sugar producing industry, and to obtain the price objective set forth in the act.

The price objective is a price for raw sugar equal to the median of the price range for freely traded sugar under the International Sugar Agreement. Under the International Sugar Agreement, the free-trade range is from 15 to 19 cents per pound.

In this range, stocks under the agreement are neither being added to nor reduced. In effect, this is the international price objective reached by extensive multilateral negotiations and this act merely seeks to place the United States at the mid-point of that price objective, which is 17 cents.

Under the proposed act, the domestic price objective is to be adjusted to reflect changes in the parity index and the wholesale price index.

In order to maintain the price objective in the United States for producers and consumers and assure a viable domestic industry, the Secretary of Agriculture is required under the act to establish a global quota for imported sugar. The quota is to be the amount by which the needs of the consumer exceeds the amount of domestically produced sugar which will be available during the particular calendar year. Authority is also provided to the Secretary to permit him to establish fees and quarterly quotas when these become necessary to achieve the price objective.

In order to protect consumer interest, the Secretary is required to suspend all

quotas and fees when the daily price for sugar exceeds by more than 20 percent (about 20.4 cents) the price objective under the act for a period of 1 marketing month.

Mr. President, what I have described are the essentials of the bill which I am cosponsoring. This is a bill which offers a great deal to both domestic producers and consumers of sugar. This proposal has bipartisan support in this body, and I believe it has equal support in the House.

The major sugar-producing interests in this country are behind this bill in a solid display of unity.

I hope there will be hearings on the bill very soon, and thorough, rapid consideration by the committees involved. This is a program which we should not delay in enacting. Thank you, Mr. President.●

SIXTH ANNUAL REPORT ON FEDERAL ADVISORY COMMITTEES

● Mr. GLENN. Mr. President, the 6th annual report of Federal advisory committees, covering calendar year 1977, was prepared by the General Services Administration and transmitted to Congress by the President shortly before the March 31 reporting date specified by the Federal Advisory Committee Act (P.L. 92–463).

Here are the highlights:

First. As of December 31, 1977, there were 875 advisory committees, a decrease of 284 from the 1976 year-end total. During the year 184 new committees were formed and 414 expired, were abolished or merged.

Second. Total Federal costs to operate and support advisory committees in 1977 were $64,932,210—about $125,000 less than the Office of Management and Budget anticipated would be needed. It is 9 percent above the $59,726,365 reported spent in 1976. The administration estimated that $76,288,442 will be necessary for the expenses of advisory committees in calendar year 1978, an amount incorporated in the President's budget recommendations to the Congress. This substantial increase is largely attributable to two statutory committees chartered late in 1977, the National Commission on Unemployment Compensation and the National Commission on Employment and Unemployment Statistics.

Third. Advisory committees held 3,802 meetings during the year. Of these meetings, 2,201 (58 percent) were open; 847 (22 percent) were wholly closed to the public, and 754 (20 percent) were partially closed. This compares with 4,694 meetings in 1976 of which 2,779 (59 percent) were open, 845 (18 percent) were closed and 1,070 (23 percent) were partially closed.

Fourth. The number of advisory committee members decreased by approximately 2,000 from about 27,000 in 1976 to about 25,000 last year.

The 182-page publication includes a brief narrative, nine pages of summary data, an alphabetical list of advisory committees in existence at the end of 1977, a list of these same committees grouped according to the agency or department responsible for them, annotated to show new or terminated committees, a roster of agency committee management officers and a four-part appendix, which includes the text of the Federal Advisory Committee Act and relevant Presidential and agency documents.

The Senate Subcommittee on Energy, Nuclear Proliferation and Federal Services (224–1474) and the House Government Information and Individual Rights Subcommittee (225–3741) have copies of the sixth annual report for distribution to congressional offices. Agencies may obtain copies of the report from GSA. The report may be purchased from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402 for $3.50. The stock number is 052–003–00521–2.

Later this spring, the thousands of pages of agency supporting documents from which the sixth annual reports were compiled will be microfilmed and placed on sale. These documents include the names, addresses, and occupations of all advisory committee members, provide information on each committee's origin and purpose and list meeting dates and reports issued.

The Federal Advisory Committee Act (FACA) and subsequent OMB guidelines and court decisions make it clear that advisory committees are to be open to the public, subject to a few exemptions. Almost half of the advisory committee meetings held since the act became effective in January of 1973 have been wholly or partially closed to the public. In 1977, only 58 percent of the meetings were open to the public, down from 59 percent in 1976. It is important that continued oversight and increased enforcement are necessary to carry out the intent of FACA. The best record for openness last year was set by the U.S. Commission on Civil Rights, which held all of its 235 meetings in the open.

Federal advisory committees are divided into four categories. They are (1) required by law, (2) authorized by law, (3) established under general agency or departmental authority, or (4) established by Presidential directive. During 1976, 50 percent of the advisory committees in existence were established by agencies, and 29 percent were authorized by statute. By December 31, 1977, the committees established by agencies had been reduced to 30 percent, while those authorized by statute had risen to 42 percent.

It is apparent that Congress must get its own house in order by applying ever more rigorous standards when considering legislation authorizing the establishment of advisory committees. The responsibilities of congressional committees regarding legislation dealing with advisory committees are set forth in section 5 of FACA Public Law 92–463).

Mr. President, the Subcommittee on Energy, Nuclear Proliferation, and Federal Services is responsible for the oversight of the Federal Advisory Committee Act, and we intend to carefully scrutinize the committees to insure that they are indeed necessary and adhere to the spirit and letter of the law.●

SMALL BUSINESS TAXES AND INVESTMENT: TIME FOR CHANGE

● Mr. CHURCH. Mr. President, I am pleased to join Senator GAYLORD NELSON, chairman of the Senate Small Business Committee, in support of legislation to provide a graduated income tax rate for small business, and a new and simplified system for depreciation to encourage small business investments.

For many years I have felt that the corporate tax structure does not treat small businesses fairly. Tax changes enacted in 1975 for small business represent the only progressive tax rate action taken in the last 25 years. In my view, they did not go nearly far enough. This year, the Congress has received recommendations from President Carter which offer the opportunity to do the job that must be done. That job, Mr. President, is the graduated system Senator NELSON has proposed. I ask that a table comparing present tax rates, the Carter administration's proposals and the Nelson bill, S. 2669, be printed at this point in the RECORD.

The table follows:

Comparison of current corporate tax rates, administration and Nelson proposals

[In percent]

Corporation taxable income	Current law	Administration proposal	Nelson bill
0 to $25,000	20	18	15
$25,000 to $50,000	22	20	20
$50,000 to $100,000	48	44	30
$100,000 to $150,000	48	44	40
Above $150,000	48	44	45

Mr. President, as the table indicates, the administration package would reduce all business tax rates, but it would leave unchanged the basic disparity among them. S. 2669, on the other hand, would create a graduated rate structure geared precisely to business size in terms of taxable income. In addition, Mr. President, by eliminating only 1 percent from the reduction the President has proposed for large corporations, S. 2669 would balance the benefits for small businesses against a fairer share of revenues from these bigger companies.

Mr. President, I enlisted in the tax reform fight many, many years ago, and I have long advocated a graduated tax rate system as a vital part of any reform effort. I believe that the time for enactment of such a system has come, and I commend Senator NELSON and the Small Business Committee on their work in its support.

Another important area that the committee has attacked is paperwork and redtape, and the profusion and confusion of Government requirements which assault small businessmen in almost every facet of their daily operations. Government forms are a nightmare, Mr. President, and there are few businessmen who feel that they profit from them. The burdens of the tax code, however, are even more confounding, with its incomprehensible provisions.

Perhaps the most incomprehensible of

these provisions is depreciation. Large corporations easily maintain banks of tax experts to take advantage of the multiplicity of depreciation schedules that have proliferated over the years. This advantage is also offered to small businessmen, but without the guidance of tax experts, they are left confounded.

The depreciation alternative that Senator NELSON has proposed would exorcise this demon from the tax code. S. 2742 is simplicity itself: it would allow all smaller businesses to write off up to $100,000 of equipment over 3 years, using the simplest straightline depreciation method.

Statistics show that smaller businesses do not take advantage of the various depreciation schedules as had been anticipated when they were adopted. This situation exists even with the investment tax credit, which has always been posed as a small business benefit. The Congressional Joint Tax Committee reports in this regard that 76.1 percent of the investment credit is taken by firms with over $100 million in assets, while those firms with less than $100,000 account for only 0.8 percent.

Furthermore, Mr. President, the reason these benefits have failed small enterprises is amply demonstrated by the fact that a table listing the useful lives of property for depreciation cover 20 pages. S. 2742 would eliminate these pages by making all types of machinery and equipment subject to a uniform 3-year life for most smaller businesses, up to $100,000 annually.

The basic goal of depreciation schedules and investment credits is capital formation. These economists who argue most strenuously on the need for capital formation almost always miss the major point by simply recommending slashing present tax rates or addressing double taxation of corporate dividends. That point is the failure of current tax provisions to achieve their stated purpose of that very same capital formation. We should not leave the inequities of the present system alone. A graduated tax rate and simplified depreciation are the correct and equitable approach for fair treatment of small businesses and the economic goal of capital formation, and I urge their adoption by the Senate.●

REMARKS BY SENATOR MATHIAS AT THE THAMES/POTOMAC SEMINARS

● Mr. EAGLETON. Mr. President, the Potomac River not only is rich in history of the founding of our Nation, but it is rich in potential for the future of this burgeoning section of our country. This invaluable and beautiful waterway must be protected and enhanced through thoughtful planning and management. I share a commitment in this regard with my distinguished colleague from Maryland, CHARLES MCC. MATHIAS, and I should like to share with all Americans his remarks at the recent Thames/Potomac Seminars in Washington, D.C. I submit a copy for the RECORD.

The remarks follow:

REMARKS BY SENATOR CHARLES MCC. MATHIAS, JR.

I am delighted to welcome our British colleagues to this Washington Session of the Thames/Potomac Seminars and I am honored to have been asked to open Plenary II—The Thames and The Potomac: Comparative Systems.

The coupling of those two great names—Thames and Potomac—evokes the happiest memories and emotions. A large portion of my life has been spent within the rich precincts of the Potomac. All of the Potomac River from bank to bank lies within the State of Maryland by virtue of the Charter Charles I gave to Lord Baltimore. Perhaps I still cannot read her face as surely as Mark Twain read the Mississippi's, but I know and love her well.

As for the Thames, that magnificent river of rivers—so rich in historic connotation, so various in mood—has held me in thrall since our first meeting. I first say the Thames while I was in the Navy and then last summer I had the extraordinary opportunity of seeing it again, as if for the first time, through the eyes of my 17-year-old son, Charlie. We drove out to Windsor and then over to Hampton Court where we took the river boat to Westminster. The following day we went by boat from Westminster to Greenwich. It was a wonderful trip.

I give place to no one in my devotion to these rivers, and in my concern for their well-being. This conference is an important contribution to their future and I am happy to be part of it.

Before we move on to considering the practical ways to safeguard that future, I would like to linger for a moment on the poetic side. The Thames, of course, has moved many of England's greatest poets to pay her tribute. But today, because America is host at this meeting, I would like to salute these two great rivers in the words of an American poet, Henry Wadsworth Longfellow:

Two ways the rivers
Leap down to different seas, and as they roll
Grow deep and still, and their majestic presence
Becomes a benefaction to the towns
They visit, wandering silently among them,
Like patriarchs old among their shining tents.

(Christus. The Golden Legend. Pt. V)

Now, let us turn to a practical examination of this "benefaction" to our towns.

Rivers epitomize the concept of flow. Industry is usually classified in two categories—batch processes and flow processes—and much of nature could also be categorized this way. Sunlight is intermittent; crops are harvested once a year; sylvan resources are managed by decades; rain and snow come to us in batches—and, if we are lucky, we get what we need and not too much.

But, within the variables of flow rate, our rivers are continuous in their service to us. This characteristic gives our rivers a central role in the planning of our geography of resource management. They deliver water. They provide a medium of transportation. They generate electric power. They irrigate our crops. They support a population of fish and other marine food. And they give us many kinds of recreational opportunity.

Unfortunately, a beneficent, continuously flowing resource is not an unmixed blessing. It has its disadvantageous side. Rivers are a clear line on a map. And so, they all too often are the boundary line between political jurisdictions and a bone of contention in jurisdictional disputes.

Another difficulty with rivers is that all the people who live along their banks don't have the same interests. The conflicts between "Upstairs-Downstairs" are pale beside the conflicts between upstream-downstream. If the people upstream use the river as they wish, the people downstream suffer. And it is doubly difficult when costs are assessed for projects that benefit downstream.

Not long ago, the Stanford Research Institute did a "technology assessment" of the costs and advantages of causing an increase in snowfall on the western slopes of the Colorado plateau. Interestingly, they found that the costs—for road repairs, spring freshets, erosion, fallen timber, and lost working time and school attendance—were largely visited on the mountain settlements. But the principal gain in the form of increased water for irrigation would be in the agricultural regions below the Mexican border, whose people do not even pay taxes in the United States.

A similar problem exists with the Potomac River. The upstream states of West Virginia and Pennsylvania have very different interests from the downstream states of Maryland and Virginia, not to mention the District of Columbia. Those upstream want to hunt and fish, while people in metropolitan Washington are concerned about the supply of drinking water.

The logic of these two disadvantages of rivers is clear. We must find ways to balance costs and benefits upstream against down, and from one side to another. The rewards must be explicit and attractive and quick in coming. The costs must be manageable and fairly distributed.

The situation reminds me of this fairy story about the two woodsmen who found a dwarf trapped by his beard in a split log. They freed him and in gratitude the mischievous dwarf promised to grant one of the woodsmen anything he wanted and to give the other twice as much as the first.

"Ask for a heap of gold," urged the second woodsman. "Ask for a great fortune." "Ask for a bushel of precious stones," he nagged. As the second woodsman grew more and more importunate, the first grew more irritated and angrier. Finally, he burst out in a fury, "I wish I lost the sight of one eye."

Too often, as we urge improvements on others which would benefit us, we invite this irrational but all too human response. Clearly, the gains to be achieved from our planning must be perceived by all as being fair to all.

The coordinated program designed by our friends in the U.K. for the Thames Basin has demonstrated, on a regional basis, a lesson the whole world needs to learn. Our planet earth is often compared to one of our manmade spaceships. But, unlike our manmade satellites and space vehicles, spaceship earth was delivered to us without a manual of operations.

I hope this plenary discussion today will help correct that omission by revealing to us some of the basic chapters in our manual for the operation of river basins. For rivers are, afterall, a significant fraction of the surface of planet earth.

And they give rise to life and poetry.●

ARMS SALE PROPOSAL NOT ACCEPTABLE AS PACKAGE

● Mr. DOLE. Mr. President, there appears to be little possibility that the President's arms sales proposal will be approved by the Senate if the President insists that it be accepted as a "package."

In effect, Congress is being tossed a complex bundle of separate recommendations, and being told "here it is—take it or leave it." It seems particularly ironic that a President who rejects the concept

of "linkage" in so many foreign policy areas, now insists upon linking the arms sales to three separate countries of widely differing persuasions.

"PACKAGE" DEAL OBSCURES IMPORTANT FACTORS

The effort to tie these arms proposals together serves to obscure the critical military and political factors that should be examined in detail for each of these separate proposals. While none of the proposed sales can be examined without considering the likely impact on the other two nations, neither can we overlook the unique factors that relate to each situation, and which must form the basis for our judgment.

It may be that the proposed sales for all three countries are beneficial to stability in the Middle East, but this is something Congress must decide for itself after full committee hearings. There is a legal, political, and strategic basis form insisting that each nation's arms requests be examined on its own merits.

POSTPONE UNTIL MIDEAST GOAL REACHED

If the President, after reviewing the actual defense needs of all three nations, is still convinced that the sales are necessary, then I suggest that the entire matter be postponed to a more suitable time. The current sensitive stage of Middle East conditions is not receptive to a large influx of major weapons purchases. Even though the aircraft would not be deliverable until the early 1980's, the agreements themselves could be a destabilizing factor. Our attention and energies should remain focused on achievement of a responsible Middle East settlement as the first priority, and arms sales might best be postponed until that goal has been reached.●

THE TYRANNY OF MILITANT MINORITIES

● Mr. EAGLETON. Mr. President, we have become all too familiar lately with the despicable, attention-getting tactics of terrorist groups around the world. Whether they strike at groups or at individuals, the message is clear that they intend to continue their attempts to tip the rational balance of society by acts of violence and bloodshed.

There is neither pattern nor logic to terrorist acts. They occur at random and leave their cruel mark on the people or property they seek to destroy. In his excellent article "The Meaning of Tragedy" which appeared in the April 19, 1978, New York Times, James Reston points out that "we are probably not at the end but at the beginning of this tyranny of militant minorities." As society becomes more complex and more populated, the chances that terrorism will increase, rather than decrease, is good.

No individual, no country is immune from the threat of terrorism, and, therefore, it is essential that the United States seek some sort of international dialog on means of controlling and combating terrorism. I am hopeful that the Soviet Union will see the merits in cooperating on this very threatening issue.

Mr. President, I ask that Mr. Reston's excellent article be printed in the RECORD.

The article follows:

THE MEANING OF TRAGEDY

(By James Reston)

WASHINGTON, April 18—The tragedy of former Prime Minister Aldo Moro of Italy is a startling reminder of the fragility of all civilized nations. They are worrying these days about classic wars of invasion across national borders, and they debate endlessly over cruise missiles, Backfire bombers, and neutron artillery shells that can kill fleets of tanks; but in the last quarter of the century, the tyranny of desperate minorities may also be a major threat to world order.

There are new forms of warfare loose in the world: kidnappings of prominent political and business officials; skyjacking of planes; proxy wars in Africa by Soviet mercenary soldiers out of Cuba; and blackmail, terrorism and the taking of hostages.

The Moro case is only a symbol of the problem. Secretary of State Vance, wandering through Africa, is equally vulnerable to this terror. When President Carter goes abroad, he takes along a bullet-proof car.

When you go to any American embassy overseas these days, you are met not by a Foreign Service officer or a smiling hostess, but by a Marine guard, who has more manners than guns. Every U.S. ambassador, in capitals that have political problems with the United States, has to be concerned about his safety and the security of his wife and children.

Even in Washington, the Iranian ambassador has a convoy of security guards to protect him from aggrieved Iranian students; and if you go to lunch here with Israeli officials, they pick their table very carefully and have one or two security guards placed discreetly in the room. So what we are seeing is a very troubling thing: The entire diplomatic community is living under the dominion of fear.

Perhaps more important, we are probably not at the end but at the beginning of this tyranny of militant minorities. The more people crowd into the cities of the world, the more vulnerable cities become to the sabotage of desperate political organizations like the Red Brigades.

For example, any terrorist group, no matter how small, that knows what manholes to go down to get at the electrical guts or switches of any major city, can terrorize the life of that city. And as we move into the age of nuclear electric power, as we are bound to do as petroleum supplies run out, the problem of sabotage is likely to become more serious.

Terrorists can create confusion if they can capture a Moro in Rome or American businessmen in Argentina, or invade the German embassy in Stockholm; but if they control a nuclear energy factory, or even a railroad train carrying nuclear wastes, they can hold whole cities and countries for ransom.

In that event, they can threaten to dump nuclear wastes into the harbor of Stockholm or the rivers of Germany and pollute them for generations. This is not a crazy speculation: It is a practical possibility every country dealing with modern terrorists is now having to face.

One of the hopeful things about all this is that there are an increasing number of problems that no country can resolve by itself. Nations cannot deal with terror on the international airways unless they agree to refuse asylum to the skyjackers. They cannot protect the health of their peoples unless they agree to stop testing nuclear weapons in the atmosphere. They cannot avoid a new arms race in outer space or under the seas unless they negotiate some rules in the interest of all nations.

This is, one hopes, what Secretary Vance will be talking about to Leonid Brezhnev and Andrei Gromyko in Moscow this week; not only about the control of nuclear weapons, but about the control of terrorism, about the use of Cuban troops in Ethiopia, Angola and elsewhere in Africa.

We will be trying to find out whether the Soviet Union is really serious about trying to work with Washingtton for a new peaceful order in the world, or whether Moscow wants to go on financing the Red Brigades in Italy and using the Cubans to dominate the strategic naval lanes around the Horn of Africa.

The official view in Washington, if I understand it, is that both the United States and the Soviet Union have more to gain by agreeing to control terrorism and cooperating in Africa than by financing the terrorists and getting into a serious confrontation in Africa, Europe and the Middle East.

It is not at all sure that Messrs. Vance and Brezhnev will be able to agree. The Communists are making progress in Italy. The terrorists in that country are creating so much chaos that Moscow thinks they may prevail in the end, but Mr. Vance is likely to be very severe on this matter.

The Carter Administration is at a very critical point in both its domestic and foreign policy. It is watching the Vance mission very carefully. It is trying to say to Moscow that what happened to Aldo Moro could happen to anybody, that chaos threatens all nations, and that the time has come to look at the problem of arms, money, trade and terrorism in a totally different way.●

CONDITIONS AT THE PENNSYLVANIA SOLDIERS AND SAILORS HOME, ERIE, PA.

● Mr. HEINZ. Mr. President, over the last several months I received a number of complaints about the conditions at the Pennsylvania Soldiers and Sailors Home in Erie, Pa. Because of the very serious nature of the charges, I asked my staff of the Subcommittee on Federal Spending Practices to conduct an investigation.

Based on the complaints I have received from Pennsylvania veterans and the results of the staff investigation, I visited the home Monday morning. I found that the physical facilities are in deplorable condition and that minimal health and safety standards are not met. In addition the size and composition of the staff is clearly inadequate to provide first rate care. What I saw Monday raises concerns about how well the Veterans' Administration exercises its responsibility for the nearly $500,000 in Federal tax dollars which will go to the home this year.

The conditions I found also raise vital issues about the management and financial support of the home by the Pennsylvania Department of Military Affairs.

In addition to complaints from Pennsylvania veterans, I have received copies of the October 1977, VA annual inspection report and the November 1977, VA audit report. The October report comments on the depressing impression of the home and the need for a more concerted effort to upgrade the facility. The audit report stated that:

It is highly improbable that the Home could currently qualify as an approved nursing home or domiciliary.

That report further indicates that the Veterans' Administration has been aware of staffing shortages and poor facilities for years without taking action to see that the State corrected the situation. The report recommended that the

VA use what influence it had to expedite remodeling and thus insure the safety and well being of the veterans.

These reports and the complaints from Pennsylvania veterans have caused me grave concern. These men who have given so much for their State and Nation deserve the very best care we can provide. There can be no excuses for failing to provide adequate physical facilities or for not seeing that all necessary qualified staff are hired.

Based on what I saw Monday, as well as the information developed by my subcommittee staff, I have written Governor Shapp and VA Administrator Cleland requesting an immediate investigation.

Mr. President, I submit for the RECORD my letters to Governor Shapp and Mr. Cleland and a more detailed statement of conditions at the Home:

U.S. SENATE,
COMMITTEE ON GOVERNMENTAL AFFAIRS,
Washington, D.C., April 26, 1978.

Mr. MAX CLELAND,
Administrator of Veterans Affairs,
Washington, D.C.

DEAR MR. ADMINISTRATOR: Over the last several months I have received a number of complaints about the conditions at the Pennsylvania Soldiers and Sailors Home in Erie, Pennsylvania. Because of the very serious nature of the charges, I asked my staff of the Subcommittee on Federal Spending Practices to conduct an investigation.

Based on the complaints I have received from Pennsylvania veterans and the results of the staff investigation I visited the Home Monday morning. I found that the physical facilities are in deplorable condition and that minimal health and safety standards are not being met. In addition, the staff is clearly inadequate in both numbers and skills to provide first rate care.

The details of what I saw are described in the attached statement.

These conditions raise concern about how well the Veterans Administration exercises its responsibility for the nearly $500,000 in Federal Tax dollars which will go to the Home this year.

In addition to what I saw, I have received copies of the October 1977 VA Annual Inspection Report and the November 1977 VA Audit Report. I am particularly concerned by the comments in the audit report that the VA has known about these conditions for a number of years without taking any action. Because of the implications for the health and safety of the Veterans residing in the Home I am extremely troubled by the statement in the respect that "it is highly probable that the Home could currently qualify as an approved nursing home or domiciliary."

I urge you to personally see that the following steps are taken as soon as possible:

1) conduct your own investigation of conditions at the Pennsylvania Soldiers and Sailors Home.

2) determine why the Veterans Administration took no action in spite of knowing about the situation for several years.

3) inform me of how the Veterans Administration intends to further aid the State in remodeling the current building.

Finally, I am very concerned that similar situations may exist in the other 40 or more State Veterans Homes. It is clear to me that the Home in Erie does not adequately meet the nine general areas effecting quality of life described in the 1978 report prepared for the Committee on Veterans Affairs. It would seem reasonable that State Homes which receive substantial support from the Veterans' Administration should meet the same requirements as the Veteran Administration's own facilities. I understand that VA nursing homes are required to meet JCAH standards and that VA domiciliaries are reviewed as part of your systematic internal review. I would appreciate your comments on the desirability of requiring that State Homes meet these or similar standards as a condition of VA participation.

I would be pleased to meet with you to discuss this very important problem.

Sincerely,

H. JOHN HEINZ III,
U.S. Senator.

U.S. SENATE,
COMMITTEE ON GOVERNMENTAL AFFAIRS,
Washington, D.C., April 26, 1978.

Hon. MILTON J. SHAPP,
Harrisburg, Pa.

DEAR GOVERNOR SHAPP: Over the last several months I have received a number of complaints about the conditions at the Pennsylvania Soldiers and Sailors Home in Erie. As a Pennsylvanian and a United States Senator I am vitally concerned with the treatment given to our citizens who sacrificed so much for their country. Additionally, as the ranking minority member of the Federal Spending Practices Subcommittee I am concerned that the Veterans' Administration may be spending $500,000 per year to purchase care in facilities which are grossly substandard. Because of the very serious nature of the charges, I asked the staff of the Subcommittee on Federal Spending Practices to conduct an investigation.

Based on the complaints I have received from Pennsylvania veterans and the results of the staff investigation, I visited the Home Monday morning. The physical facilities are in deplorable condition and the most minimal health and safety standards are not being met. In addition, the staff is clearly inadequate in number and skills to provide first rate care.

The details of what I saw are described in the attached statement.

While I realize that improvements have been made in the past several years, greater efforts must be made. Although the Home's proposed budget increase will help, it will still, in my view not provide sufficient resources to provide the necessary quality of care. While the new addition will provide much needed additional facilities, it will still not remedy the gross deficiencies in the current Home.

Based on my own visit and the report of the staff investigation I urge that you conduct your own review of the conditions at the Pennsylvania Soldiers and Sailors Home. My visit Monday would suggest that serious consideration be given to the following actions:

a) appropriation of at least the $300,000 for repairs that have been requested for a number of years. The time for piecemeal approaches has long since passed.

b) increase staffing standards to at least those required by State and Federal standards.

c) inspect the Home using either the Medicare/Medicaid Standards or those of the Joint Commission on Accredidation of Hospitals for Long Term Care Facilities and make all necessary corrections.

d) put all positions in the Home under the State merit system. The care of our elderly and ill veterans is too important to be controlled by political patronage.

e) consider moving the administration of the Home to one of the State Departments (e.g. Health or Public Welfare) which has more experience with care of the sick and elderly.

I would be glad to provide you with any possible assistance in ensuring that our State's Veterans receive proper care.

Sincerely,

H. JOHN HEINZ III,
U.S. Senator.

INVESTIGATION BY MINORITY STAFF, SUBCOMMITTEE ON FEDERAL SPENDING PRACTICES AND OPEN GOVERNMENT INTO CONDITIONS AT THE PENNSYLVANIA SOLDIERS AND SAILORS HOME; ERIE, PA., APRIL 10, 1978

A. OVERVIEW/HISTORY

The home was established in Erie in 1886. It was originally constructed as a Marine hospital after the end of the Civil War. The building, located on an 80 acre tract in the northeast section of Erie, is three stories in height and is of solid, brick construction. The third floor has been closed off and is used only for storage.

The home can accommodate some 180 veterans, 100 in domiciliary care and 80 in skilled nursing beds. The average age of the residents is 74, with the youngest being 47 and the oldest 90. A large number of the patients are incontinent and non-ambulatory; a significant number have some psychological impairment.

Overall, the home has a dreary and depressing environment. The commandant and the staff are motivated and dedicated, but, given the physical facilities and the resources provided, they are fighting a losing battle.

B. PREVIOUS INSPECTIONS AND CRITICISMS OF THE HOME

1. A July 1977 report by an American Legion Representative described the facilities as well kept, but physically rundown.

2. A May 1976 inspection of the facilities by the Veterans of Foreign Wars, Dept. of Pennsylvania, used terms like, depressing, archaic, disgraceful, drab.

3. The annual inspection report of the VA dated Oct. 17, 1977, indicates that "improvements have been made, but that the overall general impression is still quite depressing . . . It would appear that a more conserted effort be directed to upgrading the Soldiers & Sailors Facility."

4. The November 1977 VA audit report comments on the poor facilities and adds that "it is highly improbable that the home could currently qualify as an approved nursing home or domiciliary under (VA Regulations)".

5. An August 1977 letter to the Adjutant General of Pennsylvania from an American Legion Staff Member indicating the "some of the conditions in the home are deplorable. The residents are undeserving of such treatment."

C. PHYSICAL FACILITIES

The building is one hundred years old, and looks its age. While some piecemeal repairs have been made (one new bathroom, new sprinklers and an alarm system with VA support) it is still a worn out building and one that clearly would not meet federal nursing home standards.

Resident rooms

(1) overcrowded, small and lacking privacy.
(2) inadequately furnished.
(3) lacking a call system.
(4) dreary, cold and drafty.
(5) ceilings are high and the windows drafty, together with a poor heating system residents are cold and uncomfortable.
(6) peeling paint and plaster in some rooms.

Toilet and bathing facilities

(1) the bathing facilities (one tub for approximately 80 nursing patients) are outmoded, archaic, lacking privacy, and inadequate.
(2) toilet facilities are old, worn out and lacking in privacy.
(3) sinks are leaky and badly worn.
(4) facilities for wheelchairs are not adequate.
(5) a call system is not available.
(6) ceilings are high and the heat poor and the windows drafty.

Halls, dining and other public areas

(1) high ceilings, old lighting fixtures, peeling paint, missing plaster and inadequate and outdated furnishings.

(2) old kitchen and other working facilities for staff.

(3) the electrical and heating systems are antiquated and inadequate.

(4) facilities for socializing and recreational activities are highly limited and generally depressing (one area is being renovated and recreational equipment has been donated by various groups).

(5) tile is old, worn and cracked.

(6) paint is old, peeling and dingy.

(7) safety rails are absent.

Grounds

There have been numerous problems with security on the grounds. There are reports that residents have been attacked by outsiders.

D. PATIENT CARE

The nursing and medical care seemed to be good within the limits of staff and facilities. There is an obvious need for social, occupational, physical and mental therapy for the residents of the home. In addition, the nursing staff ratios do not meet accepted standards and therefore, additional nursing staff is needed for adequate patient care. In general, the staff appear hard working and dedicated to providing good care. However, because of shortages in staff both in kind and quantity, the general impression is that of patient storage, not of an active and supportive environment. Patients in many cases remain passively in their rooms staring at the drab walls. Staffing shortages prevent many programs from being implemented.

E. PERSONNEL AND EMPLOYMENT PRACTICES

(1) There are shortages of personnel to meet required standards in a number of areas:

a. nursing (RN & LPN);

b. occupational physical therapy;

c. pharmacy;

d. attendants, custodial and other support workers;

e. social work; and

f. nursing assistants.

(2) The employment practices are worsened by the patronage system and the extreme delays in having vacancies filled. A September 1977 memo listed vacancies and days unfilled as follows:

Position	*Days*
Institutional business manger III	99
Clothing room attendant	100
Nursing attendant (2 positions)	111
	95
Cook	63
Food service worker	49
Custodial worker	34
Painter	84
Maintenance repairman	183

(3) The patronage system has resulted in numerous delays in filling positions and in the appointment of unqualified individuals.

F. BUDGET AND PURCHASING

1. According to the records and discussions with staff, the home's request for $300,000 in repair funds have been denied every year.

2. The Department of Veterans Affairs has purchasing urine stained, second hand mattresses which the home had to pay to burn, and ugly, ungainly used dresses which, even if finished, would be much too large for the rooms.

3. The state purchasing procedures are cumbersome and paper bound and frequently result in either delays or the failure of the home to receive needed materials and supplies. Some minor examples include—an $18.00 bill for a classified ad rejected because all the proper forms weren't completed; staff having to buy coffee from their own funds because of infrequent state contractor visits.

G. STATE AND VETERANS ADMINISTRATION INSPECTION

In discussions with the staff of the home, I was informed that to the best of their knowledge, there had not been any state inspections of the facility for health and safety standards in the last few years. The state auditors come every two years to review the books, but for whatever reasons there is no assessment of the care provided. The VA on the other hand, has expressed concern over both the facility and the adequacy of the staffing. The latest VA audit report, previously cited, stated, "They (VA) should exercise whatever influence it has to expedite the remodeling of the home and thus ensure the safety and well-being of the veterans, or consider the feasibility of withdrawing Federal aid entirely." The report further recommended that the VA "assess the status of the Pennsylvania state Soldiers and Sailors Home and determine appropriate steps to improve the living accommodations for beneficiaries not affected by current proposals for additional construction."

H. STATE DEPARTMENT OF MILITARY AFFAIRS MANAGEMENT

The senior staff of the Department of Military Affairs have made only a few visits in over a year to inspect conditions in the home.●

SOLAR ENERGY FACTSHEET

● Mr. HART. Mr. President, last December the Environmental Study Conference prepared a factsheet for its members entitled "Solar Energy: A Guide to Federal and State Programs and Information Sources." This has been one of the most successful and useful reports the study conference has ever provided. As far as I know, this was the first time all of this information was brought together in such a concise format, designed specifically for easy reference. It answers many of the questions I and many of my constituents have about how to get in touch with experts on solar energy and how to find solar programs scattered throughout the Federal Government.

The study conference has updated the factsheet as a cochairman of ESC in the Senate and on behalf of House Cochairman JIM JEFFORDS, I submit this update be printed in the RECORD.

I urge my colleagues and the public at large to use this information in any way they see fit. Already, a number of House and Senate ESC members have incorporated it into their newsletters on solar energy and some are using it for their activities on Sun Day. It was developed to expand the level of knowledge on solar energy and I hope that people will use it for that purpose.

The material follows:

SOLAR ENERGY: A GUIDE TO FEDERAL AND STATE PROGRAMS AND INFORMATION RESOURCES

(By Mike McCabe)

Solar energy continues to attract growing interest as the nation explores alternatives for meeting its energy needs. Inexhaustible, environmentally sound and available everywhere, solar energy is being pursued with the hope that if only a tiny fraction of the sunlight falling to earth could be tapped, our energy problems would evaporate.

That hope, of course, is far from being realized. At present, less than 1 percent of the U.S. energy demand is met by solar, and the potential for future contributions is the subject of great debate.

Nevertheless, a number of factors combine to make solar a key option for meeting the nation's long-term energy requirements: the promise of a nonpolluting and renewable resource, the uncertain future of conventional energy supplies, escalating fuel prices, and the severe environmental problems with both coal and conventional nuclear power—the twin pillars of the President's energy plan.

Here in Congress, support for solar has been growing steadily in recent years. Solar R&D funding has jumped dramatically, and scores of solar initiatives have passed in one form or another. In addition, solar would get a big boost from various tax credits, loan programs and federal grants incorporated into the national energy plan, if it passes.

State and local government agencies also are very active. In fact, many states and localities are far out in front of the federal effort.

All these governmental programs, however, may be lagging behind the public's interest in solar. On May 3, a national day of celebration for solar energy—Sun Day—is scheduled, and it promises to rival 1970's Earth Day for public attention.

With greater public awareness has come increased demand for good information about solar and the programs that encourage and demonstrate its use. This solar fact sheet was prepared to help Environmental Study Conference members, their staffs and constituents locate this kind of information.

The economic and technical feasibility, as well as the projected contribution of solar, are issues beyond the scope of this fact sheet, but they can be explored with the help of the many individuals and organizations listed.

The information provided can be used by homeowners, businesses, the construction industry, workers in solar-related trades, research firms, local government officials and individuals interested in the development and use of solar energy.

The fact sheet includes:

A brief review of solar technologies;

A listing of programs scattered through various federal agencies that assist in the purchase, installation or general development of solar equipment;

A summary of solar-related provisions in the national energy plan;

An overview of state solar programs; and

A directory of information sources which can provide material suitable for individuals with no background in solar energy, as well as technical data for those well versed in the field.

SOLAR TECHNOLOGIES

The term solar energy actually encompasses a broad range of energy sources that convert the sun's rays either directly or indirectly into usable energy. For example, solar electric cells, usually thin silicon slices, convert sunlight into electricity. This category of solar energy is called photovoltaics. The conversion of organic matter, such as solid waste, into liquid fuels, such as methane, for energy use alone is considered an application of solar energy—biomass conversion.

In all, there are eight basic solar technology categories. They are: passive solar heating and cooling, agricultural and industrial process heat, wind, photovoltaics, solar thermal, ocean thermal energy conversion, and biomass.

In addition, there are a number of different technology designs and applications within each of the categories. For example, under solar heating and cooling, there are many collector designs that use different heat exchange mediums. Some use water; some forced air. Some use flat plate collectors; others use evacuated tubes.

A number of different systems can be combined to supply a greater and more reliable energy product than when used separately, for example, both electricity and process heat

can be provided by using a combination of solar devices. These are usually referred to as generating systems, while others lend themselves to small-scale, decentralized applications.

Decentralized, small-scale applications include residential heating and cooling and hot water, as well as various agricultural and industrial heat processes. Systems such as photovoltaic cells and wind energy can be used to generate electricity for small-scale use. Several hybrid systems lend themselves to use in homes, businesses and farms.

On the other hand, some solar technologies can only be used in large-scale applications—primarily centralized electrical power generating plants. So-called "power towers," which use mirrors to concentrate the sun's rays on steam boilers that drive an electric generator, and ocean thermal systems, using temperature differences in the ocean, require large generating plants and electric power grid systems.

Some systems, such as photovoltaics, wind and biomass conversion, can be used in both small-scale and large-scale applications.

The solar energy picture is changing almost daily. From about $1 million in fiscal year 1971, the federal solar research budget has leaped to more than $300 million for FY 1978. Rapid changes are occurring not only in the technology itself, but also in feasibility, economics and availability.

Below are short explanations of the various categories of solar technologies. Their relative merits, economic feasibility or technical feasibility are not discussed. Information on these aspects of solar energy can usually be obtained by contacting the individuals listed. Contacts listed after each technology are DOE officials familiar with, in most cases, responsible, for, programs in those areas.

Passive solar

Passive solar takes advantage of the design and siting of a building to maximize the effects of nautral processes, such as evaporation and heat flow, as opposed to active systems, which require mechanical devices, such as motors, pumps and valves, to heat or cool a building. It is believed that the early cliff dwellers in the Southwest positioned their structures under cliffs in such a way to receive direct solar radiance which heated thick outer walls during the winter months, yet were shaded by the cliff overhang in hot summer months.

Modern architects are rediscovering these same principles. The orientation of a house, positioning of walls, windows and baffles to let in the sun during the winter and keep it out in summer can be an effective way of capitalizing the sun's natural heat. The use of deciduous trees to provide extra shade in the summer, storage ponds, building green houses, and site orientation according to prevailing wind patterns can also passively contribute to the energy needs of a building.

DOE contact: Mike Maybaum, 376–9642.

Heating, cooling and hot water

At present levels of technology, solar energy systems with the greatest potential for widespread application are those for space heating and domestic hot water—systems which do not require high temperatures. Solar cooling is generally considered to be further away from widespread use.

Standard heating systems include a solar collector panel, a storage unit, an energy exchange and a distribution network, a tie-in with a back-up energy supply and a thermostat control unit. Collectors are most often located on a building's rooftop and are simple in design. Relatively efficient operation can be achieved with commercially available panels, now manufactured by dozens of companies. And in many parts of the country, considerable energy and costs savings can be expected over the lifetime of the unit.

For cooling, an additional component must be added, either a standard "absorption" air conditioner or a mechanical motor-driven system.

To be used effectively, all solar systems should be accompanied by stringent conservation measures such as insulation and proper building design.

DOE contacts: Ron Scott, 376–9610; Roger Bezdek, 376–9619.

Agricultural and industrial process heat

The use of both direct sunlight and the conversion of solar energy collected by panels to low and medium temperature heat can be applied to many agricultural and industrial processes. Among the potential users are grain and crop drying, heating greenhouses and livestock shelters, food processing, low pressure steam operations and a wide range of processes in the textile, paper and chemical industries. Most applications would replace conventional processes using scarce and expensive propane gas.

DOE contact: Bill Auer, 376–8633.

Photovoltaics

Solar electric cells—photovoltaics—convert sunlight directly into electricity and have successfully powered electrical equipment on space satellites for years. In recent years, solar cells have been adapted to many other uses, particularly in remote areas where conventional means of supplying electricity have been unavailable or too expensive. These new uses have created a growing market for for this unique energy source.

Solar cells work by conducting both positive and negative charges, producing electricity proportional to the incoming light. With present technology, about 10 to 13 percent of the light hitting a cell is converted to electricity. Although usually composed of silicon, other materials using chemical processes are also being investigated.

DOE contacts: Paul Maycock, 376–1957; Sam Taylor, 566–9552.

Solar thermal

Electricity also can be produced by indirect conversion of the sun's energy using thermal devices. Plans for large-scale solar thermal facilities involve wide expanses of mirrors reflecting the sun's rays to a boiler situated atop a large tower. Steam from the boiler would turn conventional turbogenerators, producing electricity. Heliostats, mirrors able to track the sun as it moves, provide the best system for focusing the heat of the sun on the tower.

DOE contact: Gerald Braun, 376–1934.

Ocean and thermal energy conversion

The Ocean is both a solar collector and a solar storage system. By using the temperature differential between surface and deep ocean waters, ocean thermal energy conversion (OTEC) systems can exploit the vast amounts of solar radiation stored in the ocean. Warm surface waters pass through a heat exchanger that evaporates a closed fluid to drive a turbine generator. The fluid would then be cooled by deeper waters and a second heat exchanger, and the cycle would begin again. Since an OTEC plant could operate continuously, even in the sun's absence, it has been considered a solar system able to provide baseload or full-time power.

DOE contact: Sig Gronich, 376–4772.

Wind energy

Small-scale wind energy systems have been supplying energy of one sort or another for centuries. The familiar blades that dot the countryside are most probably pumping water or turning an electric generator. Drawing on the expertise of the helicopter industry to develop more efficient blades, DOE has concentrated on large-scale centralized projects which would be worked into an electric power grid. It also has recently funded several smaller models which could be effectively used in the wind-belt areas of the Midwest and coastal regions.

DOE contact: Louis Divone, 376–4878.

Biomass conversion

The conversion of sunlight into plant life, by photosynthesis, is probably the most well known form of the sun's power. Various proposals have been investigated for converting the solar energy captured in plants to fuels and petrochemical substitutes. Fuel sources could be from agricultural and forest residues and animal, human and other organic wastes.

The processes include anaerobic digestion, which converts biomass to methane gas; fermentation, which yields liquid fuels; biophotolysis of water, which releases combustible hydrogen; hydrolysis, the application of heat in a process similar to petroleum refining which can produce liquid and gas fuels; and several thermochemical gasification and liquification processes.

Currently the paper and lumber industry have demonstrated considerable energy savings and some degree of energy self-sufficiency through direct burning of forest residues. And some experiments are underway to burn municipal wastes for electrical generation.

DOE contact: Roscoe Ward, 376–1614.

FEDERAL ASSISTANCE PROGRAMS

Many federal agencies offer programs and services which can be of assistance to persons interested in solar energy. For the purposes of this fact sheet, the programs have been placed in two groups: those offering financial aid to homeowners and businesses wishing to install solar systems and those which can be of use in entering the solar development, manufacturing and installation market. While a few of these programs are specifically intended to promote solar energy, most are general programs with eligibility requirements that solar projects can meet.

The contact listed in each section is a person in the agency administering the particular program. They are offered as an aid to Congressional staff and are usually not the persons whom individuals outside Congress should contact. However, they can provide the names of those to contact.

Residential demonstration grants

The Department of Housing and Urban Development (HUD), in conjunction with DOE, is offering a series of grants for the demonstration of solar heating and/or cooling projects in residential units. Proposals are solicited from builders and developers wishing to install units in new or existing buildings. Grants are not available to individual homeowners.

To be eligible, solar systems must comply with the HUD Intermediate Minimum Property Standards (available from the National Solar Heating & Cooling Information Center (NSHCIC); see information section below). A grant pays the difference in cost between a residential unit with a solar system and an equivalent residential unit with only a conventional energy system.

The demonstration program has been divided into five cycles, with applications being solicited every 9 to 12 months. Third cycle grants, which were announced in August, totaled over $6 million for 3,468 units. Of the approximately 700 applications received, 169 were approved for grants.

The fourth cycle of the program has been extended and grant applications are being accepted until August 1. Grants will be made only for residential units representative of the major portion of the residential market and will be limited to $250,000 for any one project which may have multiple units. About $8 million has been earmarked for the fourth cycle.

Fifth cycle solicitations will not be issued until the summer. Requests for grant applications should be directed to: RFGA/Inte-

grated Projects, Solar Demonstration Program, Room 8158, Department of Housing and Urban Development, Washington, D.C. 20410.

HUD contact: Joe Sherman, 755–6443.

Additional information on the HUD demonstration program may be obtained by calling NSHCIC (see Information Section).

Passive solar grants

Soon to be announced is a special HUD grant program and design competition for passive solar systems. Awards will be made for designs of private homes that are applicable to mass construction. Some construction will also be financed. One of the most important goals for this program will be to bridge the gap between builders and architects, a major impediment for widespread use of passive systems.

HUD contact: Bill Freeborn, 755–6970.

Community block grant programs

HUD administers a community block grant program which is available for a wide range of projects aimed at conservation and building rehabilitation in urban centers. If desired, a community could use some of this grant money for funding solar systems.

HUD contact: Dan Patch, 755–6304.

Non-residential demonstration grants

DOE has closed applications for its third round of cost-sharing grants for solar heating and cooling systems in new or existing commercial buildings. The ceiling was $600,000 for any one project. However, the fourth round will be announced in October, with more emphasis expected to be placed on cooling systems.

Requests for applications should be addressed to: Department of Energy, Procurement Operations Office, 400 First St., N.W., Washington, D.C. 20545.

DOE contact: Ron Scott, 376–9610.

Small-scale technology grants

A special $500,000 program for small-scale energy projects is being funded through the DOE Conservation and Solar Applications Office. The emphasis of the program is on projects not suitable for conventional demonstration programs. One pilot project was funded last year in California and another is scheduled for New England in June.

DOE contact: Maxine Savits, 376–4646.

Hot water initiative

HUD and DOE have also run a "hot water initiative" aimed at stimulating the use of solar hot water units in residential and commercial buildings. Block grants were allocated to ten states where homeowners paid high electric heating bills in 1976, allowing rebates of up to $400 toward the cost of a residential unit.

Originally scheduled to have ended August 31, 1977, the program has been extended in Pennsylvania and Connecticut, where allocated funds have yet to be depleted.

The program is administered through state agencies. For the name and phone number of the agency in your state, call NSHCIC, 800–523–2929.

Home improvement loans

Homeowners may qualify for government-guaranteed loans to install solar heating, cooling and hot water units under the Federal Housing Administration's Insured Home Improvement Loan Program. A maximum of $15,000 is available for up to 15 years, at a 12 percent interest rate. A similar provision is proposed in the national energy act (see NEA section).

To qualify, an individual must own or have a long-term lease on the property, have a satisfactory credit rating and be able to pay back the loan over its term. Before approving a loan, FHA must be satisfied that the solar system to be installed has proven to be reliable. Field offices have been issued guidelines for evaluating the acceptability of a proposed system.

FHA's willingness to guarantee loans for solar equipment may vary regionally. Applicants should contact the local HUD/FHA offices or any FHA-approved lender.

FHA contact: Stanley Pohutsky, 755–6223.

Loans to veterans

The Veterans Administration will consider solar energy systems under VA home acquisition and home-improvement loan guarantee programs at interest rates of 8½ percent for up to 30 years. Solar equipment must meet HUD–FHA standards. Eligible veterans and active-duty personnel should apply for VA loans through regular lending institutions. VA must appraise the property and assess the credit worthiness of the veteran.

VA contact: George Wilkes, 389–2249.

Rural and farm assistance

The Farmer's Home Administration (FmHA) operates several loan and grant programs to aid farmers and residents of rural areas unable to obtain financial assistance through other means. Though none of the FmHA programs are directed specifically at solar development, proposals will be considered under any of the agency's programs which offer credit for home improvement and acquisition of farm equipment. Systems must meet HUD minimum property standards and be cost effective.

FmHA is also developing a grant program in conjunction with local community action projects to fund solar greenhouses.

Applicants should contact the architect in their state FmHA office or the county supervisor for their area.

FmHA contact: George Schladt, 447-3394.

Severe unemployment area assistance

In its report, "Application of Solar Technology to Today's Energy Needs," the Office of Technology Assessment states that the Economic Development Administration is authorized to make grants to communities with severe unemployment problems which might be used for solar projects.

The objective of the grant program, authorized by both the Public Works and Economic Development Act of 1965 and the Public Works and Capital Development and Investment Act, is to stimulate employment. Solar energy is seen to be a labor-intensive industry requiring skills in job areas currently suffering from unemployment.

EDA contact: Charles Coss, 377-5265.

Low-income community grants

Community Action Projects across the country funded through the Community Services Administration are engaged in building, designing, and installing solar energy systems for low-income homes. Greenhouses, supplementary heat for the elderly, and low-cost hot water systems are some of the projects under way.

Grants of $25,000 per project are available.

CSA contact: Dick Sohl, 632–6503.

Small business loans

Individuals interested in starting or expanding small solar operations may be eligible for loans guaranteed by the Small Business Administration. While SBA has no programs aimed specifically at developing solar businesses, applicants will be considered under regular loan programs. SBA will guarantee up to 90 percent of a loan, at a maximum interest rate of 9½ percent.

Interested persons should first contact a bank or lending institution. If they are unfamiliar with the SBA programs, the nearest SBA field office should be contacted.

A measure (HR 11713) pending on the House floor at press time would set up a separate SBA program to provide loan guarantees and direct loans to small solar and energy conservation businesses. A similar bill (S 2733) is moving through the Senate Small Business Committee.

SBA contact: Mark Johnson, 653–6545.

Technology transfer

A variety of services is offered by the Technology Transfer Program of DOE's Solar Division. The program attempts to boost the commercialization of "early impact technologies" by promoting information exchange between groups involved in the development of solar.

Technical training programs form a major part of the office's activities and include classroom and in-home courses. Emphasis is placed on "add-on" training, offering education in solar technologies to workers already skilled in relevant trades. Also available are materials for use in primary and secondary schools and exhibits and displays designed to stimulate public interest in solar energy.

Persons interested in any of these programs should contact the Washington office, which may then refer them to one of five regional offices. The address is: Solar Technology Transfer Branch, Division of Solar Energy, Department of Energy, 600 E St., N.W., Washington, D.C. 20545.

DOE contact: Lawnie Taylor, 376–9146.

Technical guide

The Economic Development Administration of the Commerce Department, together with the Colorado State University, has prepared a two-volume manual which can serve as the basis for a technical training course or as a reference guide for solar technicians. Designed for use by architects, builders, contractors and design engineers, the volumes are the result of an EDA-assisted training program developed and field tested at Colorado State.

Entitled "Solar Heating and Cooling of Residential Buildings," volume one is "Design of Systems" and volume two is "Sizing, Installation and Operation of Systems." They can be obtained from the General Printing Office (see information section).

EDA contact: Glenn Fatzinger, 377–4637.

Project proposals and inventions

DOE has funding available for solicited and unsolicited proposals. Any unsolicited project will be reviewed, provided they do not fall within the scope of planned competitive solicitations.

When DOE wishes to fund a specific project, a Request for Proposal is issued. All RFP's are listed in *Commerce Business Daily*, which is available by subscription from the General Printing Office ($75 annually, see address in information section) and is kept on hand by many public libraries. Anyone wishing to find out if an RFP in a particular area has been released may contact DOE at the address below.

Persons wishing to submit unsolicited proposals are encouraged to contact the division beforehand for any advice they may be able to offer. These projects are sent by DOE to the National Bureau of Standards' Office of Energy-Related Inventions for Evaluation. Reportedly, the review process can often be very lengthy.

All inquiries should be addressed to: Dr. Henry Marvin, Division of Solar Energy, Department of Energy, 600 E Street, N.W., Washington, D.C. 20545, and to Ron Scott, Office of Solar Applications, DOE, 20 Massachusetts Ave., N.W., Washington, D.C. 20545.

NATIONAL ENERGY ACT

Several provisions of the national energy act, now awaiting final legislative action and Presidential approval, are intended to promote the commercialization of solar energy systems. They include tax credits for homeowners and businesses, residential loans, grant programs and a big federal buy for photovoltaics.

Low-interest loans could be made by banks and other lenders at interest rates ranging from 7 to 12 percent for periods of up to 15 years. Individual homeowners would be eligible for loans of up to $8,000 for a solar system.

Another provision of importance for homebuyers would increase by 20 percent the limits on federal mortgage insurance for houses where solar equipment is installed. An individual interested in buying a solar home with an FHA low-interest mortgage (now set at 8.5 percent) could thus exceed the current FHA mortgage limit of $60,000 to buy a home valued at up to $72,000.

Conferees also expanded the energy conservation improvements eligible for federal home improvement loan insurance to include not only "active" but also "passive" solar energy modifications, such as installing windows with a sunny exposure.

A solar income tax credit for homeowners would be 30 percent of the first $2,000 and 20 percent of the next $8,000, for a maximum of $2,200. Equipment qualifying for the credit includes heating, cooling and hot water units, as well as wind systems providing any form of energy. Similar credits were approved for conservation measures that are highly recommended for achieving maximum efficiency in a solar system's operation.

Another provision would make industries and businesses eligible for an additional 10 percent credit above the regular 10 percent investment credit for installing solar and wind devices to provide heating, cooling and electricity and biomass conversion systems.

A three-year, $98 million federal purchase of photovoltaics is included as an incentive to spur mass production of these solar electric cells in an effort to drive down prices. The cells would be used at remote federal installations.

The federal government also is directed to retrofit federal office space with energy conservation materials and solar energy systems where feasible. In addition, solar energy systems are to be considered in the construction of new federal facilities.

It should be noted that these incentives and programs have not yet been enacted and are still subject to modification.

STATE AND LOCAL INVOLVEMENT

State programs

More than half the states have enacted legislation aimed at promoting solar development. In addition to various financial incentive programs designed to encourage purchase and installation of home solar units, state actions have included the financing of research and development, modification of state building codes to ease the introduction of solar devices, establishment of informational and promotional activities, promulgation of solar energy product standards and the legal recognition of "sun rights."

The number of state solar bills adopted doubled from 1975 to 1976, and then again in 1977. Several types of financial incentives have been implemented: property tax credits, which allow an owner to deduct part or all of the cost of a solar unit from a property tax payment; property tax deductions, which allow the exemption from increased property assessment of all or part of a solar unit's value; income tax credits, which operate similarly to property tax credits; direct loans for the purchase of solar equipment, some at low interest and/or with extended payback periods; and exemption of solar energy vendors from sales tax on their receipts.

NSHCIC keeps an up-to-date run-down of state solar developments and can direct interested parties to the proper state offices. The National Conference of State Legislatures also monitors state actions and reports on them in its "Energy Report to the States."

NCSL contract: Bill Mitchell, 303–623–66000. DOE contact: Lynda Connor, State Programs, 566–6192.

Incentive information for local governments

Officials in local governments interested in methods of encouraging solar commercialization will find helpful an information packet prepared by the National Association of Counties. The packet offers advice on local demonstration projects, consumer protection for solar users, utility rate restructuring and direct and indirect financial incentives. It is available free by writing the NACO Energy Project, 1735 New York Ave., NW, Washington, D.C. 20006.

INFORMATION SERVICES

A number of government agencies, trade associations and nonprofit organizations provide a full range of information on solar energy, from general background for the uninitiated to detailed professional advice for the solar technician.

The National Solar Heating and Cooling Information Center (NSHCIC) was established by the federal government to serve as the primary source of solar information for the public. By calling the center's toll-free number, individuals can request basic information in layman's terms, the names of architects and builders in their areas specializing in solar design, detailed technical findings, listings of books and periodicals on specific subjects and the latest information on available government services.

ESC has found NSHCIC to be the quickest and most broad-based information resource available.

Also, NSHCIC can help arrange for exhibits and speakers for community groups, professional conferences and trade shows. In most cases, the center can answer questions immediately, forward information directly in a few days or refer inquiries to the proper sources. NSHCIC can be reached by writing: Solar Heating, P.O. Box 1607, Rockville, Maryland 20850. Their toll-free number is 800–523–2929, in Pennsylvania 800–462–4983.

Similar services are provided by the nonprofit Solar Energy Institute of America (SEINAM), which offers information through exhibits, seminars, publications and a public information telephone line. The institute maintains regional listings of architects and builders and a nationwide speakers' bureau. Although SEINAM is a membership organization (membership entities one to a solar energy products catalog and a monthly newsletter), inquiries from anyone are welcome.

SEINAM will also check out consumer complaints about faulty products, installations or service. The institute can be reached at: SEINAM, 1110 Sixth St., NW, Washington, D.C. 20001, 202–667–6611.

The Solar Energy Research Institute is the nation's first solar laboratory, created by Congress to promote the use of solar energy and support DOE's solar energy program. SERI, as it is called, is located in Golden, Colo., and employs the largest and most impressive group of solar experts in the country. Among its many responsibilities, SERI is charged with analyzing and distributing technical information, conducting educational programs, providing technical assistance and supporting international cooperative programs.

For further information on SERI and its public information services, call Hank Raze, 303–234–7171.

Solar Action, a Washington-based citizen's group, has recently been organized to coordinate planning for Sun Day, a national day of solar celebration scheduled for May 3, modeled after the successful Earth Day of 1970. In addition to providing fact sheets and bibliographies in a variety of solar areas, Solar Action would be helpful to community groups wishing to sponsor activities promoting solar energy. Contact: Richard Munson, Sun Day, Suite 1100, 1028 Connecticut Ave., NW., Washington, D.C. 20036, 202–466–6880.

The federal government's Government Printing Office (GPO) has several solar-related publications available to the public. A free pamphlet, "Solar Energy, Subject Bibliography No. 9," lists those materials available through GPO. Inquiries should be directed to: Superintendent of Documents, United States Government Printing Office, Washington, D.C. 20402, 202–783–3238.

The Solar Energy Industries Association (SEIA), a trade group organized to promote the interests of the solar industry, provides a number of services for its members. Of interest to the public may be SEIA's Solar Industry Index, which contains a nationwide listing of solar product suppliers and manufacturers as well as general information on solar home units. To order the index or for membership information, contact: Cedric Grgurich, SEIA, 1001 Connecticut Ave., NW., Washington, D.C. 20036, 202–293–2981.

Persons interested in designing their own solar installations can get assistance from the American Society of Heating, Refrigerating and Air Conditioning Engineers (ASHRAE) or the National Association of Home Builders (NAHB). Professional engineers and architects and individuals in the building industry interested in expanding into the solar market can also contact these groups, which may offer direct advice or refer to individuals in their region.

They can be reached at: ASHRAE, Director of Research and Technical Services, 345 East 47 St., New York, New York 10017, 212–644–7953; NAHB Research Foundation, P.O. Box 1627, Rockville, Maryland 20850, 301–762–4200.

DOE maintains a Technical Information Center (TIC) for the dissemination of scientific and technical data compiled from all the research conducted by DOE and its contractors. This information is of great use to planners and builders of solar installations, but is generally too detailed for the average homeowner. TIC operates an extensive computerized data base and offers microfiche service. The center can be reached at: DOE Technical Information Center, P.O. Box 62, Oak Ridge, Tennessee 37830, 615–483–8611.

Similar information is available from the Commerce Department's National Technical Information Service (NTIS), which includes solar data within its wide range of detailed materials. NTIS offers a free General Information Catalog which can be obtained from NTIS, 5285 Port Royal Road, Springfield, Virginia 22161, 703–557–4600.

HUD Solar Status is a monthly report distributed by the NSHCIC providing useful information on federal and state solar programs. To be placed on the mailing list write: National Solar Heating and Cooling Information Center, Status Mail, Box 1607, Rockville, Maryland 20850.

Solar Energy Research and Development Report is a monthly publication on developments within DOE's solar division. It highlights individuals, conferences and funding opportunities in the field of solar energy.

To get on the mailing list, send your request to: Technology Transfer Branch, Office of Conservation and Solar Applications, Department of Energy, Washington, D.C. 20545.

Listed below are additional individuals and organizations which can help provide more information on solar energy.

Travis Price, American Institute of Architects, 1735 New York Ave., NW, Washington, D.C. 20006, 202–785–7300.

Susannah Lawrence, Consumer Action Now, 317 Pennsylvania Ave., SE, Washington, D.C. 20003, 202–547–1100.

Jeff Knight, Friends of the Earth, 620 C St., SE, Washington, D.C. 20003, 202–543–4312.

Steve Baer, Zomeworks, P.O. Box 712, Albuquerque, New Mexico 87103, 505–242–3552.

Environmental Action Reprint Service, 2239 East Colfax, Denver, Colorado 80206, 303–321–1645.

Blair Hamilton, National Center for Appropriate Technology, Box 3838, Butte, Montana, 406–723–5474.

Ken Bossong, Citizen's Energy Project, 1413 K St., NW, Washington, D.C. 20005.

Keith Haggard, New Mexico Solar Energy Association, Box 2770, Santa Fe, N.M. 87501.

Rick Katzenberg, American Wind Energy Association, 54468 CR 31, Bristol, Indiana 46507.

Shirley Kenworthy, Critical Mass, P.O. Box 1538, Washington, D.C. 20540, 202–546–4790.

Denis Hayes, Worldwatch Institute, 1776 Massachusetts Ave., NW, Washington, D.C. 20036, 202–452–1999.

Total Environmental Action, 1 Church Hill, Harrisville, New Hampshire 03450, 603–827–3374.

If you find that your program or organization is not listed in this fact sheet, or if you know about other solar programs or information resources, please let us know by writing: Mike McCabe, Environmental Study Conference, U.S. Congress, 3334 House Annex 2, Washington, D.C. 20515.●

DR. KISSINGER ON U.S. AFRICAN POLICY

● Mr. JAVITS. Mr. President, on April 19, 1978, Dr. Kissinger, our Nation's former Secretary of State spoke to the International Radio and Television Society in New York. Dr. Kissinger has very kindly provided me with excerpts from his remarks on that occasion. In those excerpts, Dr. Kissinger presents a poignant and valuable analysis of Soviet policy in Africa and its implications for U.S. policy. I believe that Dr. Kissinger's views will be of interest and of value to all Members of the Senate. Accordingly, I submit his views for the RECORD.

The material follows:

EXCERPTS FROM INFORMAL REMARKS DELIVERED TO THE INTERNATIONAL RADIO AND TELEVISION SOCIETY, NEW YORK, WEDNESDAY, APRIL 19, 1978

I would like to apply these considerations to one area which probably will not loom as large in the question period as I suspect the Middle East will, namely the problem of Africa.

In 1975 the Soviet Union for the first time introduced enormous quantities of military equipment and later Cuban expeditionary forces in an area about as far away from the Soviet Union as it is possible to be, in Angola. At that time we had no particular preference between the various factions that were fighting for control of the government of Angola. But we did believe that the introduction of proxy troops and of a billion dollars worth of military equipment, more than all the rest of the world was giving to all the rest of Africa put together, would create a problem that would make future solutions that much more difficult. We were prevented from doing what was necessary, which did not involve any American forces, by the Congress at the time.

In recent months, we have seen once again in Ethiopia another billion dollars worth of Soviet equipment and another twenty thousand Cuban troops, again in areas of no conceivable historic interest for either of those countries, and now we are dealing no longer with a local Africa situation but with a geopolitical challenge.

The move into Ethiopia cannot be analyzed in terms of the quarrels between Somalia and Ethiopia. Nor is the issue primarily who crossed the border first. The first thing to notice is that Soviet equipment went first to Somalia, a country that had put forward claims on the territory of all its neighboring states; Soviet equipment was thus guaranteed to be used in an expansionist way. And then when that equipment was used for the precise purpose that Somalia had always asked for it, the Soviet Union switched sides and became the defender of the territorial integrity which its own equipment had threatened to begin with. And seventeen thousand Cuban troops and a billion dollars worth of Soviet equipment went into Ethiopia.

It is too cynical to be asked to accept the proposition that what is involved here is the unselfish Soviet desire to respond to the appeal of a sovereign country. The Soviet purpose is geopolitical: to outflank the Middle East, to demonstrate that the US cannot protect its friends, to raise doubts in Saudi Arabia right across the Red Sea, in Egypt, in the Sudan, and in Iran. And now we hear that once again we may be facing the threat of Cuban and Soviet intervention in Southern Africa.

I would like to stress that there seem to me at least four principles to keep in mind. The first is, I hope that our Secretary of State will be successful in the negotiations he is now undertaking with the Soviet Union on the limitation of strategic arms. I believe that the control of nuclear weapons is one of the preeminent problems of our period and I agree that it should not be lightly linked with other issues.

But I also think that it is important that the Soviet Union understand that another move of the kind we have seen in Angola and Ethiopia will raise the presumption that we are facing a global geopolitical challenge incompatible with any definition of detente. And under those circumstances I do not see how any agreement could possibly be ratified and how detente could possibly survive. And I hope that that will be made clear to the Soviet Union.

The second is, it is time that one overcomes the ridiculous myth of the invincible Cubans. Who has ever heard of Cubans conducting a global foreign policy? We cannot conduct our foreign policy under the threat of the possible intervention of Cuban troops. It is a sign of the decline of our world position that we have inflicted on ourselves through Vietnam, the collapse of executive authority produced by Watergate, and our own internal disputes. Twenty years ago this would have been considered so absurd a proposition that nobody could have made it seriously and it is a proposition that is bound to undermine our position around the world.

Third, let us justify our foreign policy by arguments other than the fear of Cuban military intervention. We must make clear to other countries that we will not be blackmailed by Cuban troops or Soviet arms. Whatever arguments can be advanced for conducting our foreign policy we will not accept the proposition that if we do not accede to the arguments of individual countries they will then call in the Cubans, or the Soviets will then send arms.

And fourthly, of course we have an obligation to try to remove the legitimate causes of unrest and instability in Africa.

Negotiations to this effect are now going on and it would be inappropriate for me to go into them in detail. Of course the US must stand for majority rule. This we did when I was in office and I support the efforts of the present Administration in this direction. But majority rule must be given a concrete content. What exactly is the basis for our opposition to the so-called internal solution in Rhodesia? I favor the attempt to enable all leaders and factions to participate in the proposed elections. At the same time let us take care not to turn majority rule into a device by which those who could not win an election try to force their way into office by the threat of force. And majority rule must not become the slogan of those who have already rejected a multiparty system and already announced that what they want to do is create a one-party state. And majority rule must include protection for minority rights. If the black and white communities cannot live together under the rule of law we will see a race war of tremendous proportions develop. We cannot want to encourage this.

The problems that this Administration or any Administration faces in dealing with these issues is enormous. The issues cannot be partisan. When the President travels and the Secretary of State negotiates, he has to speak for all Americans. But their perception at a time when these problems are still subject to creative shaping is of crucial importance. It is in this spirit that I offer these extemporaneous remarks.●

THE TRAGEDY OF CAMBODIA

● Mr. EAGLETON. Mr. President, last week President Carter spoke out to condemn Cambodia as the "worst violator of human rights in the world today." We do not have the means to verify beyond doubt the reports that come out of Cambodia, so we do not have a precise measure of the atrocities that are occurring in that country under the regime of Pol Pot. We do have chilling details supplied by Cambodian refugees of the tactics of terror used by the Communist regime, and estimates of death ranging up to 2,000,000 in the 3-year period since the regime took over.

Cambodia has virtually closed itself off from the outside world, and thus it is not likely than an impartial investigative body will get inside to assess the extent of the human rights violations. However, this does not mean that men and women of strong moral conviction should remain silent. Since we have no ties with Cambodia at this time, we have no diplomatic channel through which to apply leverage. We do, however, have an obligation to speak up in the strongest terms possible to let Pol Pot and his barbaric regime know that we deplore and denounce their systematic disregard for even the most basic human rights.

Mr. President, I ask that the following articles be printed in the RECORD:

First. "President Charges Cambodia Regime Worst on Rights," Washington Post, April 22, 1978.

Second. "Cambodia's New Tragedy," Washington Post, April 24, 1978.

The material follows:

CAMBODIA'S NEW TRAGEDY

Perhaps half a million Cambodians died during the Indochina war, many from American bombs and in battles in which the United States played a part. So Americans cannot be too self-righteous in respect to reports of "holocaust" and "genocide" coming out of Cambodia now. But neither should Americans be inhibited in their protests by some sense of guilt for this country's earlier contributions to Cambodia's travail. Quite the contrary. If the United States showed too little concern for Cambodia in an earlier period, then Americans should be all the readier to speak out now, for whatever it may be worth. Something terrible, if hard to see and measure, is happening to a great many Cambodian people, and outsiders with any protection to moral worth are duty bound to speak out.

The facts are few but the outline of Cambodia's new tragedy seems to be clear enough. The communist regime that took over three years ago first drove the several million city dwellers like cattle to the countryside, a transfer it justified by the food crisis existing at the time. The regime then enforced upon the population a political discipline resulting in physical extermination on a scale evidently proportionate to

that practiced by Stalin and Hitler. There are questions about the dimensions of the tragedy and the quality of the evidence describing it, but there can be no doubt that to wait for a precise, verifiable accounting before uttering a protest is unthinkable. By any standards the civilized nations of the world might apply, the new rulers of Cambodia are barbarians.

One of the problems, of course, is that the Cambodian communist leadership has cut virtually all its ties with the outside world, even with its communist neighbors, with one of which—Vietnam—it is currently waging a war. Thus it is immune to most of the usual pressures that the body of nations has available to apply against renegade states. That does not, however, absolve the international community from taking a public stand against the repression that has been going on in Cambodia It must be confronted, discussed and investigated insofar as that is possible—and condemned, again and again.

PRESIDENT CHARGES CAMBODIA REGIME WORST ON RIGHTS

President Carter yesterday condemned Cambodia as "the worst violator of human rights in the world today," saying the government denies its people basic rights and dignities.

In a strongly worded statement issued by the White House, Carter said thousands of refugees have accused the regime of wrongdoing.

"America cannot avoid the responsibility to speak out in condemnation of the Cambodian government, the worst violator of human rights in the world today," he said.

Carter said the refugees have "recounted abuses that include mass killings, inhuman treatment of the supporters of the previous government . . . the total suppression of recognized political and religious freedoms, as well as deprivation of food and health care."

The president, who has not pointed his finger directly at nations accused of human rights violations since the early days of his administration, called on the countries of the world to protest.

"It is an obligation of every member of the international community to protest the policies of this or any nation which cruelly and systematically violates the right of its people to enjoy life and basic human dignities," he said.

Jerrold Schecter, a spokesman for the National Security Council, said the statement was issued "because we wish to focus world opinion on this."

"It is something we wanted to reiterate," he said.

In Oslo, Norway, hearings began yesterday by a private group that is examining the Cambodian situation.

Carter said in his statement his administration supports "the growing international protest against the policies of this inhumane regime."

He said he welcomed the efforts of Amnesty International, a London-based group that won the Nobel Peace Prize for efforts to protect human rights, to press the Cambodian government into offering an accounting of the charges.

Earlier this month, the Canadian House of Commons adopted a unanimous motion of protest against the Southeast Asian regime.●

ADDRESS BY MAJ. GEN. MILNOR ROBERTS, EXECUTIVE DIRECTOR OF RESERVE OFFICERS ASSOCIATION

Mr. THURMOND. Mr. President, an outstanding address, entitled "National Defense: While There Is Yet Time," was presented April 15, 1978 by Maj. Gen. Milnor Roberts, executive director of the Reserve Officers Association, at the South Carolina Department Convention.

General Roberts' remarks presented in an understandable manner the risky state of U.S. defenses today, how and why we find ourselves at this point, and what to do about it.

Mr. President, I ask unanimous consent that this address be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

NATIONAL DEFENSE: "WHILE THERE IS YET TIME . . ."

Suddenly and without warning, hundreds of Soviet-bloc divisions spearheaded by 15,000 assault tanks and amphibious armor, spin from Warsaw Pact maneuvers and lunge westward. Their target: the English Channel.

Swarms of Soviet warplanes, armed with missiles, bombs and cannisters of death-dealing chemicals, strike NATO bases and stockpiles of U.S. tactical nuclear weapons.

Outnumbered and outgunned allied forces retreat before the massive Communist blitzkrieg. At sea, Soviet submarines, prepositioned hours before, intercept and attack U.S. convoys attempting to rush reinforcements. Behind the lines, Communist saboteurs emerge in Western Europe's cities and industrial centers, creating widespread havoc.

With Western Europe about to be overrun, the President of the United States is faced with a life-or-death decision: To accept the Soviet conquest of all Europe or to unleash America's nuclear counterforce, thereby risking a world-wide holocaust.

This "worst-case" scenario may never happen. But the possibility that it could occur gives allied leaders nightmares.

"Today," says General Alexander M. Haig, Jr., Supreme Allied Commander Europe, "the greatest single threat to stability and peace continues to reside—as it has for 29 years—in the immediate presence of massive Soviet military power . . . the greatest peacetime aggregation of military power the world has ever seen."

In attempts to reduce this massive threat to world peace, successive U.S. Presidents over the postwar years have initiated talks aimed at controlling arms and reducing nuclear weapons stockpiles.

In contrast to U.S. good faith, Soviet leaders have used the arms talks to camouflage Russia's continuing all-out military buildup while seeking to stall ours.

Rather than acting fully to meet the growing Soviet danger, U.S. Administrations have adopted the more politically expedient course of reassuring the nation—and themselves—that overall U.S. military strength remains at least equal to that of Russia.

President Kennedy, in his 1963 State of the Union address, said: "The cost of freedom is always high, but Americans have always paid it . . ."

In January, 1978, President Carter told the NATO Council in Brussels that "our defense must always be strong enough to deter any thoughts of aggression. . . . We must be prepared for combat we always hope to avoid."

Words, however brave and reassuring, are not enough. Soviet leaders are fully aware of our actual military strength and weaknesses. They are quite capable of calculating the risks of further aggression and their chances of exacting more tribute with nuclear blackmail.

What Americans desperately need are not simple reassurances from Washington, but the hard facts—however shocking—on the true state of our defenses.

In the 1962 Cuban missile crisis, U.S. military power was such that Nikita Krushchev was forced to back down and pull his missiles out of Cuba. From that point on, the Soviets embarked on an all-out drive to wrest strategic superiority from the U.S.

In the 1973 Arab-Israeli war, Russia's power was such that the threat of Soviet intervention forced America's ally, Israel, to halt its drive against Egypt. And had there been a U.S.-Soviet confrontation in the eastern Mediterranean, Admiral Elmo Zumwalt, then U.S. Chief of Naval Operations, says "we would have lost."

In March, 1978, Russia's deputy defense minister, Nickolai Vasilyavich Ogarkov, told visiting U.S. Congressman John Breckenridge: "You once had military superiority and felt secure. You no longer have that superiority and you will never have it again. And now you will know what it means to feel threatened."

Teddy Roosevelt is remembered for his policy of keeping the peace: "Talk softly and carry a big stick." In a speech at Wake Forest University, President Carter warned the Soviets to restrain their massive arms buildup and quit their military meddling in Africa and elsewhere, or, the President said, we would have to increase our defenses. But some critics contend that the President, while talking tough, is carrying only a relatively small stick.

The Soviets appeared singularly unimpressed by Mr. Carter's words. They quickly responded with some blunt talk of their own, accusing the President of "gross blackmail . . . impermissible in international relations" and warning of a "sharp increase in the danger of a nuclear missile catastrophe."

In so many words, the Kremlin demanded that the U.S. quit bluffing and accept without further delay Soviet terms for a new strategic arms limitation treaty—a treaty that would assure Russia's superiority over the U.S. for the foreseeable future. And the Soviets gave the brush-off to President Carter's admonition against Russia's "excessive" arms buildup and intervention in local conflicts.

Instead, the Soviets are speeding development of eight new missile systems, some powerful and accurate enough to destroy our aging ICBM's in a surprise first-strike before they could retaliate. They also are building a nuclear super-submarine comparable to our yet-to-be completed Trident, and are testing a wide range of exotic new space weapons including a "killer satellite" capable of shooting down our vital reconnaissance and communications satellites.

What seems clear is that the U.S. has waited about a dozen years too long before attempting to overcome the Soviet drive for world supremacy. The plain fact is that in raw military power, the U.S.S.R. already has surpassed the U.S. in most major areas. And knowing this to be so, the Soviet leaders feel they are now in a position to call the tune.

The latest statistics spell out clearly just how the U.S., mesmerized by detente, has fallen behind.

Since 1964, Russia has increased its strategic nuclear capabilities by roughly 500 percent. It now has just under 4,000 strategic offensive weapons—missiles and bombers—compared to our 2,125. That's a Soviet advantage of nearly 2 to 1. According to Dr. Eugene Wigner, Princeton University's Nobel award winning physicist, the Soviet lead in total explosive power is 6 to 1 over the U.S.

The new Soviet navy is now the world's largest. In surface ships and submarines, it outnumbers the U.S. Navy by 1,400 to 453. And our once proud Navy may soon be reduced to the status of a convoy escorting force.

In strategic defensive weapons—surface-to-air missiles and jet fighters—the Soviets

boast an overwhelming advantage—14,664 to only 324 for the U.S. It has 2,600 interceptor planes to just 324 for the U.S. It also possesses 12,000 SAM's (surface-to-air missiles) to our none, and 64 ABM's (anti-ballistic missiles) to our none.

In ground forces, the Soviets have expanded from 140 divisions in 1964 to more than 170 divisions today. One half of this huge force is positioned for war in Europe. In military manpower, the U.S.S.R. leads the U.S. by 4.8 million to 2.1 million. All major combat units in the Red army are trained and equipped for chemical (i.e. poison gas) warfare. Our armed forces have virtually no CW capabilities or defenses.

In conventional weapons, the disparity is even more alarming: 50,000 Soviet tanks to 10,000 for the U.S.; 55,000 Soviet armored vehicles to our 22,000; 20,000 Soviet artillery pieces to our 5,000 and 7,000 heavy mortars to our 3,000.

In virtually every major arms component except helicopters, the U.S.S.R. possesses overwhelming superiority over the U.S., in numbers, firepower and, to a growing degree, technical quality.

Soviet military spending, in real terms, now exceeds that of the U.S. by some 50 percent—by 75 percent in military hardware alone. All told, close to 20 percent of Russia's GNP (gross national product) goes into arms, compared to less than 6 percent in the U.S.

Clearly, it will take more than tough words to reverse America's decline toward second-rate status. And unless and until the U.S. rebuilds its defenses, we can expect more Soviet demands and blackmail—or worse.

At the conference table, the Soviets already are dictating the terms.

President Carter says he'll never sign an agreement that makes the U.S. weaker than Russia. But the strategic arms limitation treaty as drafted in Geneva appears to do just that.

An examination of major provisions of SALT–2, as the treaty is called, indicates that Soviet advantages from the 1972 SALT–1 accord will be enlarged and extended for at least another three to eight years.

According to the newly-organized "Coalition for Peace Through Strength," sponsored by the American Security Council, SALT–2 "will legalize and perpetuate Soviet strategic military superiority." It says the claim that SALT–2 provides for parity because both sides are limited to 2,400 strategic weapons is "an incredible misrepresentation."

To support its charge, the Coalition cites several specific weaknesses and loopholes in SALT–2. Soviet bombers which can hit the U.S. are not counted in the 2,400 strategic weapon ceiling while all U.S. long-range bombers are counted.

Soviet ICBM's on average carry six times more explosive power than U.S. ICBM's. Yet, SALT–2 will not permit the U.S. to build "heavy" missiles as the U.S.S.R. has done.

Ground and sea-launched "cruise missiles" of over 600-kilometer range are prohibited by SALT–2. This means the Soviets could strike 50 percent of the U.S. population with submarine-launched cruise missiles while the U.S. could reach less than 10 percent of the more widely dispersed Soviet population.

SALT–2 will restrict or prohibit the development of new strategic missile systems. But this will only prevent the U.S. from matching the eight new Soviet ICBM's which are in testing or production, compared to none for the U.S.

SALT–2 carries no provisions for on-site inspection. Thus, the Soviets can cheat on SALT–2 as they have on SALT–1. For example, the SALT-treaties expressly prohibit any testing aimed at upgrading an anti-aircraft missile system into an anti-ballistic missile, or ABM, system. Yet, on at least five occasions, the Russians have fired SAM–5 anti-aircraft missiles to test their capability as ABM's.

As another example, in SALT–1 the U.S. said it would regard the deployment of mobile ICBM's as "inconsistent with objectives of the agreement." But U.S. intelligence has revealed that the Soviets are now busy deploying a mobile intermediate-range ballistic missile, the SS–20, which can easily be converted into a 6,000-mile range weapon capable of hitting all U.S. targets.

Despite President Carter's unilateral scrapping of the B–1 bomber which was to have replaced our aging and vulnerable B–52, the Soviet Union has refused to limit production of its supersonic "Backfire" bomber or to include it in SALT's limitation of strategic weapons.

What this means is that Soviet leaders see the SALT agreements in quite a different light than do U.S. leaders. While the U.S. has frozen its strategic missile strength at 1967 levels and cut back on its Air Force, Navy and other conventional forces, the Soviets have continued the greatest arms buildup in history behind the mask of detente and SALT.

Rather than rushing into another self-defeating SALT deal, the Administration would do well to look first to its defenses. Negotiating with the Soviets from a position of relative U.S. weakness can only increase the danger to our national security.

A decade ago, there was no question that the United States possessed military superiority over the Soviet Union. Today, there can be little doubt that the tables are turned and Russia is No. 1 in overall military power.

The reason for this dramatic and alarming turn-about is clear: Successive U.S. Administrations have been hoodwinked into cutting back on our defenses in the hope the Soviet Union would settle for parity or what the arms controllers now call "essential equivalence."

Unfortunately, it hasn't worked out that way. Instead of being satisfied with merely catching up, the Soviets have continued their massive arms buildup faster than ever. And instead of settling for the U.S. policy of "mutual assured destruction," or MAD, Soviet strategists have adopted a war-winning philosophy.

Of course, the Kremlin has been careful to cloak its aggressive designs in words of peace. Americans, yearning for peace after the Vietnam debacle, have eagerly embraced such illusions as "detente," and entered enthusiastically into Strategic Arms Limitation Talks with the Soviets.

Since the SALT talks began in 1970, Soviet military spending has shot up by more than 50 percent. The Soviets are now outspending the U.S. in total military capability by $50 billion or more a year. Since 1958, the U.S.S.R. has doubled the military share of its GNP, or gross national product, to nearly 20 percent. By contrast, in the past 24 years the U.S. military's share has been slashed from 12 to 5.2 percent of the GNP. And it's still headed down.

In strategic or nuclear weapons, we're way behind Russia in both numbers and megatonnage, and the Soviets are still outspending us by 3 to 1.

The U.S. Navy has been cut in half in the past ten years, and the Administration's 1979 budget scraps several new shipbuilding programs. It's no exaggeration to say that the Red navy, whose ships outnumber those of the U.S. by better than 2 to 1, now rules whatever waves it wants.

Our Air Force has been cut back from 935 strategic bombers 12 years ago to just 415 aging B–52's today. And despite Soviet deployment of more than 100 new, supersonic "Backfire" bombers with intercontinental range, the Administration and Congress have scrapped our planned B–1 bomber altogether.

Other unilateral disarmament moves by the U.S. include dismantling of our one and only ABM or anti-ballistic missile defense system; slowdowns or stretchouts in modernization of our outmoded ICBM force and Trident submarine fleet, and an apparent agreement at the SALT talks in Geneva to limit the range of our yet-to-be deployed airborne cruise missiles to an ineffective range of 1,500 miles.

One of the most striking disparities involves civil defense. The Soviets have poured at least $1 billion a year into elaborate civil defense and industrial programs for the past twenty years. U.S. civil defense gets less than one-tenth as much to maintain a pathetic bare-bones program. As a consequence, experts estimate that in any all-out nuclear exchange, more than 120 million Americans would be killed while Soviet losses would be under 15 million—fewer than died in World War II.

Nowhere is the U.S. defense posture more seriously crippled than in the vital area of research and development. Although the Soviet R and D effort is far greater than ours, the Administration has refused to increase U.S. spending on new defense improvements above the current $12.5 billion level.

Warning that the Soviets have overcome the U.S. lead in certain areas of technology, Anthony Battista, a staff expert with the House Armed Services Committee, told a Congressional hearing: "The Russians are not coming: they're here!"

In a recent nationwide poll by the Opinion Research Corporation, 90 percent of the people questioned said the U.S. should be equal or superior to Russia in military strength—with most favoring superiority. And 63 percent said they would be willing to spend an additional 10 billion dollars in taxes to keep the U.S. from falling behind the Soviets.

The question that naturally follows is: Why hasn't the Administration and Congress carried out the wishes of the majority of the American people and kept our defenses from falling behind the Soviets?

The answer can only lie in the persuasion of influential advisers and policymakers in Washington who somehow believe that unilateral disarmament leads to peace and that more defense dollars should diverted to domestic social needs.

General George C. Marshall, architect of the allied victory in World War II and post-war Secretary of State, summed up the illusions that have characterized U.S. policy: "We have tried since the birth of our nation to promote our love of peace by a display of weakness. This course has failed us utterly."

And yet, a new generation of Americans has ignored the warning of George Marshall. Despite clear evidence that the Soviets are amassing the most formidable and threatening military force since Hitler's Germany, Senator George McGovern has called for a $5 to $10 billion cut in the defense budget and transfer of the money to domestic programs.

The so-called "Coalition for a New Foreign and Military Policy," composed of 36 pacifist and ultra-leftist organizations, has mounted a nationwide campaign to lobby Congress for still deeper defense cutbacks. Led by veterans of the anti-Vietnam campaign that helped deliver Indochina to the Communists, the new coalition claims credit for shooting down the B–1 bomber and for pressuring Congress to deny World Bank loans to several anti-Communist allies.

The Coalition's latest bulletin to supporters begins: "We all know that Parren Mitchell is right: 'it is hard, dirty, gut work, turning the attitudes of the nation around.'" The liberal Congressman and Senator McGovern are leading the latest fight to cut military spending and divert funds to so-called "human needs" programs.

The Coalition is now attempting to block U.S. development of the "neutron bomb," claiming, as do Soviet propagandists, that it is a monstrously inhumane weapon designed to kill people while protecting property. Actually, it is an enhanced radiation warhead designed to penetrate Soviet tanks and defend Western Europe against the threat of a massive Warsaw Pact blitzkrieg without destroying the surrounding countryside.

By contrast, the Soviets' newly-deployed SS-20 mobile intermediate-range ballistic missile, targeted on Western Europe, is 2,000 times more devastating than the neutron weapon which President Carter is being pressured into banning. Yet, no one hears of demonstrations against the Soviet SS-20.

The fear of public protest has also deterred the U.S. from equipping its forces to combat Soviet-led chemical warfare weapons. U.S. military intelligence reports that Warsaw Pact forces are receiving intensive training in chemical, biologial and radiological warfare and most front-line army units are fully equipped for it. U.S. and NATO forces have nothing by comparison. And Washington's attempts to get Moscow to agree to outlaw such indiscriminate and deadly weapons have gone unanswered.

Again, one listens in vain for the protests of the Jane Fondas.

It is, rather, high time to heed the words of James Schlesinger, who, as Secretary of Defense, said: "The underlying reality is that at no point since the 1930's has the Western World faced so formidable a threat to its survival."

Going back to those dark days of the 1930's, it was Winston Churchill who warned an appeasement-minded England that: "Virtuous motives, trammeled by inertia and timidity, are no match for armed and resolute wickedness. A sincere love of peace is no excuse for muddling hundreds of millions of humble folk into total war."

Churchill's warning applies with infinitely greater urgency to the free world of today. If we ignore it, there could be no tomorrow.

And yet, Walter Cronkite has observed: "There are always groups in Washington expressing views of alarm over the state of our defenses. We don't carry those stories. The story is that there are those who want to cut defense spending."

Cronkite's remark to a Gannett News Service reporter in November 1974, however offhand and inadvertent, appears to reflect the built-in bias of much, if not most, of the major news media. It persists despite the threat posed by Russia's relentless arms buildup—a threat that is well concealed from most Americans.

In this, opinion makers in the media are joined by policymakers in Washington. Anxious to shore up the crumbling facade of detente, they assure the American people and Congress that U.S. defenses are "essentially equivalent" to Russia's and that more billions of dollars can be safely diverted to domestic social programs where, incidentally, the votes are.

Active duty military officers who dare publicly to disagree are rebuked, removed or prematurely retired. Retired officers and private military experts who warn of the nation's lagging defenses are labeled "cold warriors," "alarmists," "extremists."

Thus, relatively few Americans are aware, for example, that our one and only ABM—anti-ballistic missile—system was dismantled a month after becoming operational by a 52–47 vote of the Senate and that our nation is now defenseless against a surprise enemy missile or bomber attack.

The Administration's planned withdrawal of U.S. forces from South Korea is obscured by the headlines of Korean bribery scandals. The onrushing debacle in Africa is cloaked in pious pontifications about human rights violations in the remaining non-Marxist countries. The Soviet and Cuban-backed drive to conquer the "Horn" of Africa commanding vital sea lanes from the Middle East oilfields is met by pro forma protests and helpless hand-wringing in Washington.

The anti-Communist governments of South Africa, South Korea, Brazil, Chile, Nicaragua and Taiwan are scorned or excoriated by the liberal establishment while monstrous human rights violations in the Iron Curtain countries, Cuba, Indochina, and the Marxist dictatorships of Libya and black Africa are barely noted or brushed off. Meantime, the liberal establishment continues to promote trade, aid and the export of vital U.S. technology to Communist regimes dedicated to our own destruction.

The diplomatic frenzy for a new strategic arms limitation agreement with Moscow takes precedence over the anguished pleas of Soviet dissidents for the observance of the Helsinki agreement on East-West relations. Soviet threats to reintroduce missiles into Cuba are shrugged off, as are Fidel Castro's close ties with Panamanian dictator Omar Torrijos. This while the White House twists arms to force Senate ratification of the Panama Canal treaty surrendering control of that inter-ocean lifeline.

At home, U.S. ports are opened to Soviet seamen and visas granted to foreign Communist leaders and propagandists, while critics of the FBI and CIA applaud crippling new restrictions against our already demoralized intelligence and security services.

In Hollywood, Jane Fonda stars in a post-Vietnam movie heaping fresh abuse and derision on America's abandoned attempt to defend freedom in Indochina. Public opinion polls suggest that Americans would fight Communists aggression abroad only if Canada were attacked.

Hanoi withholds information about hundreds of Americans still listed as MIA's while Washington talks of "normalizing" relations with that Communist regime. Members of Congress, businessmen and tourists flock to Cuba for carefully-conducted tours, while Castro ships more troops to Africa and continued to hold tens of thousands of political prisoners, including several Americans. Officials in Washington make frantic efforts to suppress the horror story of Frank Emmick, an American businessman released after serving more than 14 years in the Cuban "Gulag" on false charges of spying for the CIA. Liberal-oriented newspapers and TV networks black out Emmick's first-person account of outrageous cruelty suffered in Castro's dungeons.

Viewed objectively, Americans might be excused for wondering if Pogo, the comic-strip character, was not right when he said: "We met the enemy and he was us."

But Pogo may have been overly pessimistic.

There are signs the pendulum may be shifting a bit. Stung by a two-year American Security Council study confirming blatant anti-defense bias by CBS' Evening TV News Show, that network and others appear at last to be giving fairer treatment to the beleagured Pentagon. The tireless and dedicated efforts of a small band of private ombudsmen called Accuracy in Media, or AIM, are beginning to pay off in greater attention to objectivity on the part of the liberal-dominated press and networks. Says AIM's Chairman Reed Irvine: "Our objective is to encourage truthfulness, fairness and responsibility in the news media."

A two-volume study by ex-Washington Post reporter, Peter Braestrup, recounting in stark detail how the media misreported the 1968 Tet offensive in Vietnam as a Communist rather than an allied victory, has provided journalism students with some revealing new evidence and left not a few ex-war correspondents with red faces.

As General William C. Westmoreland, former U.S. Commander in Vietnam, has said: "We must be alert as a nation to the vulnerability of our political system and open society to manipulation by an adversary."

Indeed, only by insisting on the full truth fairly told can the American people make the judgments necessary to keep our nation strong, free and in peace. There is no other way.

HELMS OPPOSES GOLD SALES

Mr. HELMS. Mr. President, I learned with great regret last week, the decision of the Treasury Department to sell 1.8 million ounces of gold from U.S. stocks, to "soak up dollars."

The sales of gold will net about $300 million over the next 6 months. That is the equivalent of about 4 percent of the growth in the money supply—not much in the way of "soaking up dollars." Unfortunately, I have heard no call from Treasury for slower money supply growth.

The sale of gold will net the Federal Government in 6 months less than the Federal Government goes into debt in just 2 days. Yet, no call from Treasury for smaller deficits.

The sales of gold will no more help the dollar over the long run than throwing a sandbag into a rampaging river will halt its flow.

Sandbags can help discipline a river when it starts rising, just as gold can and has in the past disciplined foolish, inflationary Government spending. Selling gold today to aid the dollar is attacking a flood with a sponge. It treats one symptom of the dollar's decline—the dollar price of gold. It will not cure the sickness—massive deficit and expansionary monetary policy.

Selling gold today allegedly soaks up dollars abroad. Some major world bankers have made this contention with a straight face. The world demand for dollars will be determined by domestic fiscal and monetary policies, not gold sales. In fact, the sale of every ounce of gold claimed by the Treasury at the current market price would soak up an amount equal to about one-third of the value of U.S. Treasury securities held by foreign central banks alone.

If the Federal Government would sell any other asset it owns, the effect would be the same. If it sold something like mineral leases on coals lands, it would take in dollars but in addition, the Nation would get coal. That would mean we might be less dependent on foreign energy sources and would pay out less. That would, at least, make some sense.

If sales of a U.S. asset helps soak up dollars, why not sell national parks, or the backyard of the White House? There is a good reason: These assets are important and of great value to the Nation. The public lands provide great benefits to the American people. American gold holdings are no less important, and I believe they may be more important.

Mr. Robert Roosa, President Kennedy's Under Secretary of the Treasury said it most succinctly recently when asked about gold sales:

In this kind of world, I think we should retain our ultimate assets. It's the storm

cellar we should retain in case the system breaks down.

Selling gold to halt the decline of the dollar is like turning out the lights in the White House to solve the energy shortage or selling "WIN" buttons to fight inflation. Such actions cloud the issue. They do not solve the problems.

THE ENERGY "CRISIS"

Mr. HELMS. Mr. President, it has now been a year since President Carter presented his energy program to the Congress for consideration. The proposals were predicated on an "energy crisis" for which he said we had no alternative to waging "the moral equivalent of war." It was, the American people were led to believe, only a matter of time until the lights went out.

This "crisis" was always a bit suspect, and the events and trends of the past year have made it even more so. If there are energy supply problems, they are problems largely created by the Federal Government, and the interference of the Federal bureaucracy in the free market economy.

Indeed, it is safe to say that the one thing the Federal Government does well is to create crises. They come in many varieties. For instance, two winters ago we had a natural gas "crisis" because of a temporary shortage brought about by the Federal regulation of gas prices. Now there is a "crisis" of a surplus of oil on the west coast because of Federal regulations which prevent the oil companies from correcting the oversupply by the time-honored means of finding a buyer and selling it to him at a mutually acceptable price. Bureaucrats are very skillful at creating oversupplies and undersupplies. Only the free market can create the right amount of supply.

In any event, if there is an "energy crisis," or, more accurately, an inchoate energy crisis, it is simply that our heavy importation of foreign oil leaves us politically and militarily vulnerable. Now it may be argued that from time to time political and military considerations supersede sound economics, but that is no reason to lay aside economic commonsense in devising solutions to these political and military problems. If heavy importation of oil is a political and military problem, then it seems logical that we should adopt economic policies that will cause us to import less oil.

In fact, however, we are doing just the opposite. Because of the so-called entitlements program, whereby domestic oil producers are required to subsidize oil importers for the higher cost of imported oil, there is no incentive to import less oil even though it is more expensive. It is a bit like a man buying a new car. He might have an incentive to purchase a Chevrolet over a Cadillac because a Chevrolet is cheaper. But if the Government comes along with a policy taxing Chevrolet buyers to subsidize Cadillac buyers so that the net cost of Chevrolets and Cadillacs is the same, then there is little motive not to buy a Cadillac. Anyone can understand that, except apparently the politicians.

If Congress does not pass an energy program, the President has threatened to impose by Executive order import fees on crude oil. Normally, this might have the effect of reducing imports. But because of the cleverly devised bureaucratic entitlements program, which will not allow foreign oil to be any more expensive than domestic oil, all that import fees will do is make oil in general more expensive. That in turn is supposed to reduce consumption although there is no evidence to indicate that any such thing will happen. It will, however, be sure to create an increase in the cost of living. It is for this reason that I have joined my distinguished colleague, Senator DOLE, in cosponsoring Senate Concurrent Resolution 73, which expresses the sense of the Congress in opposition to the imposition of an import fee on crude oil by the President.

In last Thursday's Wall Street Journal there appeared an outstanding editorial summarizing the energy situation on the first anniverary of the declaration of the moral equivalent of war. Mr. President, I ask unanimous consent that the editorial appearing in the April 20, 1978, edition of the Wall Street Journal entitled "Meow" be printed in the RECORD at this point.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MEOW

Today we celebrate the first anniversary of President Carter's famous MEOW, the moral equivalent of war. His energy proposals remain bogged down in Congress, but even without the benefit of his program a lot has happened.

During the year we now celebrate, the only detectable energy shortage occurred in those sections of the nation overly dependent on American-produced coal. In California, crude oil is a drug on the market. World-wide, the International Energy Agency sees a "temporary" surplus of oil lasting into the 1980s. U.S. oil imports are no longer growing; indeed the American Petroleum Institute reported yesterday that they fell 14% during the first three months of the year.

Over the year, the price of oil has been steady, meaning that it fell after inflation adjustment. The administration felt free to kill a deal to import huge quantities of natural gas from Mexico because it doesn't like the price U.S. companies have agreed to pay. But the President, Czar Schlesinger and the like continue to assure us that the energy crisis is just around the corner.

Actually, the crisis has more-or-less officially been postponed until 1985 at the earliest. If you want to conjure up a big crisis then, you assume: first, that the Soviet Union will swing from an oil exporter to a big importer, somehow finding the foreign exchange to foot this bill; and second, that Saudi Arabia will cap its production because it likes the old values better than the new money. Because the CIA finds this scenario likely, we're told, we need a big new tax on the production of oil in the United States.

What we have been witnessing in the past year in the huge adjustive power of the price mechanism, even when politicians do all they can to hamper it. Stanford's Henry S. Rowen observes that since 1973, real gross national product has increased by about 11% while energy consumption has increased by only about 3%. This means that even without legislation, a great deal of conservation is going on as a response to the price increases. Prof. Rowen calculates that, holding production constant, consumers are reducing their energy consumption by about 2% yearly.

Higher prices are not only reducing demand but calling forth greater supply. With environmental and legal roadblocks finally overcome, oil is flowing from Alaska and exploration has started off the Atlantic coast. With somewhat higher gas prices and higher prices for "new" oil, drilling and discoveries in the U.S. have both increased, though not yet fast enough to keep up with consumption. But supply incentives are still uncertain, given the government's record of expropriating the returns from new oil with successive tiers of price controls and state or federal taxes.

It is this supply-demand balance called forth by the price mechanism, and not the beneficence of Saudi Arabia, that has kept OPEC from increasing its prices during the past year. Even a cartel is not immune to the laws of supply and demand; at some point higher prices mean lower sales and lower net income.

The improvement in the energy outlook in the past year has come despite government policy, not because of it. Indeed, the U.S. government has been OPEC's biggest economic ally. American oil imports are high because of the government's entitlements program, which in effect taxes the production of domestic oil and uses the proceeds to subsidize imports. Mr. Carter proposes to "cure" this by taxing domestic oil and using the proceeds to subsidize the consumption of home heating oil.

The way to reduce imports would be to end all entitlements and price controls, paying Americans as much for oil as you pay foreigners. This step would increase the price of gasoline by a maximum of seven cents a gallon; some argue that in fact the price would fall because of greater efficiency. Yet the government sees this simple step as an anathema.

The government's record during 1977 scarcely gives reason for confidence in its prescience about 1985. Over the years there has always been a finite supply of energy visible at any one time; the reason is that it is not economic to develop resources too far in advance. Above all, it is risky to invest too much capital in a single source or single technology. You may guess wrong. Huge sums invested in coal will be wasted if there is a breakthrough in producing geopressurized methane.

We do not know where future energy will come from, but we do know that there is a nearly endless list of possibilities, from coal to methane to nuclear to solar. Over the years, market price mechanisms have proven their ability to make such choices and such transitions smoothly. There will be no crisis if we let them do their work. The only way there will be an energy crisis in 1985 is if the government causes one. While the administration still has not grasped this, the biggest change since MEOW was declared a year ago is that more of the public and more of Congress now understand.

SECURITIES INVESTOR PROTECTION ACT AMENDMENTS OF 1978

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of calendar order No. 698.

The PRESIDING OFFICER. The bill will be stated by title.

The assistant legislative clerk read as follows:

A bill (H.R. 8331) to amend the Securities Investor Protection Act of 1970.

The PRESIDING OFFICER. Without objection, the Senate will proceed to its consideration.

There being no objection, the Senate proceeded to consider the bill (H.R. 8331) which had been reported from the Committee on Banking, Housing, and Urban Affairs with amendments as follows:

On page 1, line 5, strike "1977" and insert "1978";

On page 3, line 4, after "insurance" insert "company";

On page 46, line 25, strike "determination has" and insert "determination) has";

On page 51, line 6, strike "(3)" and insert "(5)";

On page 52, after the comma, insert "as redesignated by this Act,";

On page 54, line 19, after the comma, insert "as redesignated by this Act,";

On page 66, line 2, strike "subscription transferable" and insert "subscription, transferable";

On page 67, beginning with line 8, insert the following:

SMALL ISSUE EXEMPTION

SEC. 18. Section 3(b) of the Securities Act of 193 (15 U.S.C. 77c(b)) is amended by striking out "$500,000" and inserting in lieu thereof "$2,500,000".

AMENDMENT TO THE SECURITIES EXCHANGE ACT OF 1934

SEC. 19. Section 11(a)(3) of the Securities Exchange Act of 1934 (15 U.S.C. 78k(a)(3)) is amended by striking out "May 1, 1975" and inserting in lieu thereof "February 1, 1978" and by striking out "May 1, 1978" each place it appears and inserting in lieu thereof "November 1, 1978".

Mr. WILLIAMS. Mr. President, as chairman of the Senate Subcommittee on Securities, I am pleased to lay before the Senate for its immediate consideration H.R. 8331, the Securities Investor Protection Act Amendments of 1978. The bill would amend in significant respects the Securities Investor Protection Act of 1970 by streamlining liquidation procedures available under the act, reducing the expense and complexity of the procedures under the act, and providing public customers of failing brokerage firms with increased and improved insurance coverage. I urge the immediate passage of the amendments.

Since Congress has not revisited or reexamined the Securities Investor Protection Corporation, created to administer the act, since its creation in 1970, a brief review of the circumstances surrounding its creation and its experience during the past 8 years should be useful to my colleagues. In the closing days of 1970, Congress established the Securities Investor Protection Corporation in response to the Wall Street back office crisis and the bear market of the late 1960's. During this turbulent period, hundreds of brokerage firms went out of business. Their public customers were exposed to serious financial losses and public confidence in the securities markets was shaken badly.

To restore public confidence in the securities markets and protect public investors against the failure and insolvency of brokers and dealers, the Securities Investor Protection Act of 1970 was adopted. Under the original statute and as it now stands, the Securities Investor Protection Corporation may advance a maximum of $50,000 to protect the claim of any one customer of a failed broker-dealer, but no more than $20,000 of that amount may be advanced to pay claims for cash as opposed to claims for securities. These payments supplement distributions of available securities and cash from the debtor's estate.

Since the enactment of the SIPC legislation, 129 of the over 8,700 broker/dealers which have been SIPC members over the past 8 years have been liquidated under the act. As of March 31, 1978, SIPC had made net advances to trustees totaling $54,518,825. In addition, significant amounts of securities and cash in the debtor's possession have been distributed to customers by the trustees. SIPC estimates that to date securities and cash having a value of over $279 million have been distributed to approximately 105,000 customers in the course of liquidation proceedings. These figures demonstrate vividly the effect which the SIPA program has had on investors throughout this country and point up the wisdom of Congress in establishing SIPC and the SIPA program in 1970.

In short, SIPC has protected investors against loss in the manner envisioned by its creators and at no cost to the taxpayer. As of March 31, 1978, SIPC had assessment revenues from its members which totaled over $198 million. In addition, SIPC had earned approximately $31 million in interest income on its investments, giving SIPC total revenues of $229 million. SIPC's expenses from inception to this date totaled approximately $64.5 million. As noted above $54.5 million of that total represents advances made to trustees in SIPA liquidations and the balance represents overhead expenses for SIPC's operations to date. It may be noted that SIPC's expenses for its internal operations have been slightly less than one third of the interest income SIPC has earned on its investments. Currently, the SIPC fund totals approximately $161.5 million.

As my colleagues may recall, SIPC was considered and passed on an emergency basis. The need for prompt action required that certain technical problems relating to the procedures for liquidating securities firms would be left for later solutions in light of actual experience under the new act. At his first confirmation hearing in November 1973, then and still SIPC Chairman Hugh F. Owens, advised the committee that SIPC would undertake a thorough study of possible amendments to the SIPC Act. Pursuant to this commitment, Chairman Owens appointed a broadly based task force to explore better, quicker and more efficient methods of achieving the investor protection and concomitant investor confidence envisaged by Congress when it passed the 1970 act.

The task force issued its report in July 1974, and the SIPC Board of Directors approved virtually all of its recommendations. These were subsequently incorporated into legislative proposals and transmitted to the Congress. In 1974, I introduced the SIPC legislation as S. 4255; in the 94th Congress, in 1975, it was S. 1231.

In the 95th Congress H.R. 8331 was introduced in the House of Representatives in July 1977, and hearings were held by the appropriate subcommittee on the Committee on Interstate and Foreign Commerce on August 1, 2, and 3, 1977. The bill was approved by the House of Representatives on November 1, 1977. The Subcommittee on Securities held hearings on the bill on April 25, 1978, and the bill was approved by a unanimous vote of the full Senate Banking Committee.

While there have been some useful and constructive revisions made in the original SIPC recommendations by the House of Representatives, the basic wisdom and advice from SIPC have been preserved almost completely intact. As it is now before us, the bill is a positive step in the direction of more efficient solutions to the broad range of problems which confront SIPC. In my judgment, this bill goes a substantial way toward improving the protections afforded securities customers and enabling SIPC to perform its role more expeditiously and efficiently.

As passed by the House, the Securities Investor Protection Act would achieve a number of important changes in the original 1970 act.

First, the bill would increase the extent of SIPC protection for customers' cash and securities in an account with a broker-dealer. The act currently protects customer accounts up to a total of $50,000, with a ceiling of $20,000 for cash. H.R. 8331 would double the amount of protection, raising to $100,000 the total amount of protection, and to $40,000 the level of protection for customers' cash. This corresponds to the changes in 1974 in the FDIC, FSLIC, and FCUIC legislation which doubled the coverage for depositors.

Second, the bill would modify the act to provide protection which better comports with the expectation of both cash and margin customers. This would be accomplished by moving away from a strict insurance concept and toward a scheme of returning customers' accounts intact as they existed when the broker-dealer became insolvent. The benefits to the customers of firms in liquidation will be immeasurable since they will no longer be deprived for lengthy periods of the use of, or access to, their cash or securities.

Third, liquidation procedures would be streamlined and the cost of liquidations reduced by authorizing SIPC to make payments directly to customers without the necessity for a judicial proceeding. And SIPC would itself be the trustee for liquidation of small brokers and dealers where the claims do not exceed $750,000 and where there are fewer than 500 customers.

Fourth, the bill would continue the exemption from SIPC membership and from SIPC assessment for exclusive dealers in mutual fund shares and variable annuities. I believe it is entirely appropriate to retain these exemptions since exclusive dealers in these instruments do not present the kind of risk intended to be covered under SIPC. However, the bill would subject to limited assessment transactions in money market instruments, which were exempt from assessment under the 1970 act.

Mr. President, it is not often that legislation enacted in haste works as

smoothly or as successfully as SIPC has over the past 8 years. Much of the credit belongs to Chairman Owens for his continuing leadership and devoted public service, first, in two terms at the Securities and Exchange Commission, and now in his second term as SIPC Chairman. While I hope SIPC's services are not in great demand in the years ahead, I believe the program is entrusted to extremely well-qualified, able, and experienced individuals who can discharge properly the additional duties the bill would confer upon SIPC.

Mr. President, with the exception of several technical and conforming amendments to the bill, the Senate Banking Committee approved the House-passed version of the bill. However, the committee added provisions to the bill to amend the Securities Act of 1933 and the Securities Exchange Act of 1934 which I would like to explain.

The first amendment is to section 3(b) of the Securities Act of 1933 to assist small businesses in raising capital.

Essentially, the amendment would increase from $500,000 to $2,500,000 the aggregate amount of an issue which may be exempt from the full registration and prospectus requirements of the Securities Act of 1933.

The Commission would retain its present flexibility to adopt rules classifying offerings under regulation A and otherwise so that it could tailor disclosure obligations and other safeguards based on a balance between the protection of investors and the standards set forth in that section.

The substance of the amendment is contained in S. 2305 which was introduced on November 4, 1977, with the cosponsorship of the full membership of the Banking, Housing, and Urban Affairs Committee and a majority of the Select Committee on Small Business.

Increasing the ceiling on regulation A offerings will remove one statutory obstacle to guaranteeing the access of small businesses to the capital raising mechanisms in our economy. The Federal securities laws have always reflected the national policy of encouraging the growth and expansion of small business. From the time of the original enactment of the Securities Act of 1933, the Congress has provided special treatment for small business by the Securities and Exchange Commission. Under section 3(b) of the act, the Commission is authorized to exempt certain classes of securities if the total offering price to the public does not exceed a specified amount. In 1933, the amount was $100,000 and twice in the past the Congress has acted to increase the amount of the small business exemption—in 1945 to $300,000, and most recently in 1970 to $500,000—in recognition of changes in the general economic conditions and increased costs of conducting business.

In the 8 years since the last amendment to section 3(b) of the act, costs have continued to rise throughout the economy, with the result that $500,000 has substantially less purchasing power today. In many cases, it is an inadequate amount to finance properly a small established business seeking to modernize or expand, or a newly organized venture requiring a substantial amount of seed capital. To be a useful tool to small business, the Congress must raise the statutory ceiling and encourage small businesses—the centerpiece in our economic system—to remain competitive, dynamic and innovative.

Mr. President, the bill reported by the Banking Committee would also extend for 6 months, until November 1, 1978, the effective date of section 11(a) of the Securities Exchange Act of 1934. This section was added to the Securities Exchange Act by the Securities Acts Amendments of 1975 (Public Law 94–29) and makes it unlawful for a member of a national securities exchange to effect any transaction on the exchange for the member's own account, the account of a person associated with a member or, an account with respect to which the member or an associated person exercises investment discretion. Section 11(a) became effective immediately upon its enactment as to those who became exchange members after May 1, 1975, but its effectiveness is delayed until May 1, 1978, as to pre-May 1, 1975, members.

That section was the result of a compromise reached after considerable debate. As a result of the section, much of the economic incentive for institutional money managers to move into the brokerage business was removed, while at the same time brokerage firms which manage accounts were precluded from performing the brokerage for those managed accounts.

On February 22, 1978, the Securities and Exchange Commission submitted a recommendation to Congress that the full effectiveness of section 11(a) be delayed until November 1, 1979. Foremost among the reasons cited by the Commission for the delay was the possible adverse impact that the section would have upon the implementation of a national market system for securities.

In addition, the Commission observed that the implementation of 11(a) would have unintended anticompetitive effects, particularly with respect to the smaller and regional firms, resulting in further concentration within the securities industry. Finally, the Commission expressed concern that since section 11(a) applies only to brokerage transactions by members of national securities exchanges, member firms which rely heavily on revenue deprived from money management will resign their exchange memberships in order to preserve these important revenue streams. The result may be a weakening of the exchanges.

Subsequently, on March 14, 1978, the Commission announced the adoption of a series of rules and interpretations to implement the section. The package of regulatory actions clarified and resolved most of the ambiguities or uncertainities which have been identified over the 3 years section 11(a) has been the law of the land. In my view, the issuance of these rules last month creates a series of additional problems for the Commissions, the securities industry, fiduciaries, self-regulatory organizations, and the Congress.

First, the rules tend to undermine the reasons advanced by the Commission in support of its request for an 18-month delay in the effective date insofar as the Commission has resolved some difficult interpretative matters which have been the subject of intense debate for several years. While it is not possible to predict the impact of section 11(a) on the national market system—a system which may or may not be in place 18 months from now—at long last the SEC has provided broker-dealer money managers and their institutional accounts some guidance in complying with the section. Certainly, this should have been done months, if not years, ago.

It has become clear, however, that the section should not be delayed for another 18 months. Instead, I believe a short 6-month extension by the Congress would alleviate the serious consequences which lie immediately ahead.

The recent adoption by the Commission of these rules makes it a practical impossibility for firms to implement the necessary business adjustments—such as reprograming systems and renegotiating customer contracts—in order to be in full compliance with the strictures of section 11(a) by May 1, 1978. Even under the best circumstances, restructuring long-term, formal, and complex brokerage and money management relationships and agreements would be a time-consuming process. It is a process that in most cases simply cannot be completed in the period between March 14, 1978, and May 1, 1978, some 6 weeks. The Commission's tardiness in promulgating rules has the effect of placing an enormous economic and legal burden on the industry which cannot be justified and which would be avoided by a short postponement.

In addition, if section 11(a) is allowed to take effect on May 1, 1978, broker-dealers engaged in money management and brokerage activities would still be faced with the broad prohibitions contained in the Employment Retirement Income Security Act of 1974 (ERISA). In other words, there would be conflicting statutory treatment under the Exchange Act and ERISA of the same conduct. This is a result which the Congress never intended and, in fact, wished to avoid. This is reflected in the following passage from the conference report on the Securities Acts Amendments of 1975.

> The conferees believe that the Department of Labor and the Internal Revenue Service in administering the Employee Retirement Income Security Act ("ERISA"), should provide an exemption from the prohibited transactions provisions of that statute to permit securities firms to continue to provide brokerage services to accounts with respect to which they exercise investment discretion until May 1, 1978. Such an exemption would conform that statutes and the provisions of this bill, thus permitting securities firms to phase out this combination of businesses in an orderly way. Similarly, the conferees hope that the Department of Labor and the Internal Revenue Service will, to the maximum degree consistent with the policies of ERISA, conform the prohibitions in that statute applicable to securities firms and municipal securities dealers to the provisions and policies of this bill.

The Department of Labor and the Internal Revenue Service granted the exemption on October 31, 1975, and by its

own terms, it will expire on May 1, 1978, the date section 11(a) becomes effective. Thus, the congressional goal of coordination and congruity will not be achieved.

At the present time, because the Commission never signaled its intention to promulgate rules under section 11(a) to the Department of Labor and the Internal Revenue Service, there is no administrative action pending to address the ERISA issues. These agencies are unable, as a result of the structure of their statutes, to act prior to May 1, 1978, to issue rules conforming to the SEC's or to extend the current exemption. It appears that only the Congress can act in time to avoid this "Catch 22" situation.

Finally, there are serious practical problems raised by the SEC's rules, and perhaps by section 11(a) itself. One example is the treatment of proprietary trading under section 11(a)(1)(G) which permits a member to effect transactions for its own account if, among other things, the transaction is in accordance with Commission rules which, as a minimum, assure that such transactions are not inconsistent with the maintenance of fair and orderly markets and yield priority, parity, and precedence to orders for the accounts of persons who are not members or associated persons of members.

To implement this provision of section 11(a), the Commission has adopted, at least temporarily, a yielding requirement which representatives of the major exchanges consider to be unworkable and potentially disruptive to orderly trading on the floors of the various exchanges. Exchange members will not be able to identify all of their orders and it is likely that the exchanges will not be prepared to monitor the conduct of trading as they are required to do. To put the problem in real dimensions, even the SEC concedes the problems in this area:

> Neither the Commission nor the exchanges have had an opportunity to test the operation of the rule in any trading environment in which Section 11(a) is fully effective . . . it is unclear at this time whether the order identification process and yielding requirements are practicable.

With the recordbreaking trading volume experienced in recent weeks, the operation of these untested rules poses serious problems.

Mr. President, section 11(a) of the Securities Exchange Act of 1934 was developed over several sessions of several Congresses. It has been law for several additional sessions of Congress. Yet the confusion that has long surrounded the issues of fair competition in the brokerage and money management field and the proper treatment of potential conflict of interests persist as a result of foot dragging by the Securities and Exchange Commission and to a lesser degree by the major securities exchanges and large segments of the brokerage industry.

The time has come for the debate to end and for the confusion to be replaced by concrete and deliberate self-regulatory and administrative action. To allow the industry to restructure existing business relationships, reprogram computers, and do whatever else is necessary; to permit the SEC and the ERISA administrators to take coordinated and consistent actions, and to avoid disruption to our trading markets, the committee decided to enact a 6-month postponement of the May 1, 1978 effective date of section 11(a). Within this 6-month period, the SEC will have to identify—for once and for all—the technical difficulties raised by the section and use their present authority to resolve the problems. If the Commission concludes there are problems which require additional legislation, it should transmit the recommendations to the Congress without further delay. Given the fact that section 11(a) has applied with full force to firms which became exchange members after May 1, 1975, the Commission has had sufficient time to familiarize itself with at least some of the problems. Finally, because the problems I have identified affect all exchange members, regardless of when they became members, the amendment would enact a 6-month deferral across the board.

Mr. President, with the passage of H.R. 8331 today, the Congress will strengthen the important role of the Securities Investor Protection Corporation in maintaining investor confidence in the integrity in the securities industry and the securities markets.

Mr. President, I urge the immediate passage of the amendments and recognize that this measure has been brought here with the full cooperation of Senators on the minority side, Senator TOWER and Senator BROOKE, and it comes as a necessary improvement of a law that has created protection and has worked in the most exemplary fashion.

We noted that yesterday when nominees were considered to the Board of SIPA. It has been one of the best things we have seen in Government, and this will make it even more effective.

Mr. TOWER. Mr. President, will the Senator yield?

Mr. WILLIAMS. I yield.

Mr. TOWER. Mr. President, I concur with my distinguished friend from New Jersey, the chairman of the Securities Subcommittee of Banking, Housing, and Urban Affairs.

Mr. President, the Committee on Banking, Housing, and Urban Affairs yesterday favorably reported H.R. 8331, as amended. I would like to review briefly the contents of that bill, with particular emphasis on the amendments added by the committee.

H.R. 8331, as passed by the House in November 1977 contains a number of needed amendments to the Securities Investor Protection Act of 1970 (SIPA) which will make that act more responsive to the needs of customers of securities broker-dealers who experience financial difficulties. The Banking Committee has favorably considered these improvements and recommends their passage.

Two amendments to H.R. 8331 were added by the Committee on Banking, Housing, and Urban Affairs.

The first amendment relates to the effective date of section 11(a) of the Securities Exchange Act of 1934 which, without action by the Congress, would go into effect on May 1, 1978.

The amendment adopted by the Banking Committee would change the effective date of section 11(a) from May 1, 1978, until November 1, 1978. The Securities and Exchange Commission ("SEC"), which has the principal responsibility for implementation and enforcement of the Federal securities laws, requested that the effective date of section 11(a) be extended for 18 months, until November 1, 1979, and the House passed a bill to that effect.

Section 11(a), which was passed as a part of the Securities Acts Amendments of 1975, generally prohibits a broker-dealer which is a member of a national securities exchange from effecting any transaction on such exchange for its own account, the account of an associated person, or an account over which either the member or an associated person exercises investment discretion. There are a number of statutory exceptions to the prohibitions of section 11(a), and in addition, the SEC is empowered to promulgate rules to exempt other kinds of transactions provided that to do so is consistent with section 11(a), the protection of investors, and the maintenance of fair and orderly markets.

The SEC, on March 14, 1978, announced the adoption of rules under section 11(a); it is this fact which, in my view, necessitates the action taken by the Banking Committee in endorsing a 6-month delay in the effective date of section 11(a), for the following reasons. First, the lateness of this announcement of rules by the SEC means that it will be impractical for exchange members to reprogram their operations in order to be in compliance with the new rules by May 1, 1978. Second, these rules are not consistent with comparable provisions of the Employee Retirement Income Security Act of 1974 "ERISA," at least in part because the Department of Labor and the Internal Revenue Service have not had an opportunity to consider and respond to the SEC's rules. In light of the congressional purpose, as expressed in the Securities Acts Amendments of 1975 conference report, for the applicable ERISA provisions to be as consistent as possible with section 11(a), a short delay in the effective date of section 11(a) is appropriate.

The second amendment adopted by the Banking Committee represents a step toward providing much needed relief for small businesses.

It incorporates the provisions of S. 2305, which would amend section 3(b) of the Securities Act of 1933 by increasing the ceiling from $500,000 to $2,500,000 on the "small offering" exemption from the requirements of that act. That exemption is in the law because of a recognition of the needs of small business to raise capital without the burden of incurring all of the costs associated with full securities registrations. However, the $500,000 limitation, in light of the high costs which are encountered even under the SEC's "regulation A" exemption, is too restrictive. Raising the limit to $2,500,000 will make such offerings a much more practical alternative capital-raising mechanism for many small businesses. The amendment would authorize the SEC to exempt such offerings, and I

commend its passage to my colleagues. I also urge the SEC to act promptly in implementing this expanded exemption once the bill is passed.

I am particularly pleased that the Committee on Banking, Housing, and Urban Affairs has approved this increase in the ceiling on "small offerings" that are exempt from the requirements of the Securities Act of 1933. This was an important recommendation made in the study of small business by the Small Business Administration. That study was completed in June 1977 and was an outgrowth of legislation that I introduced in 1975 to authorize a major study of small business in America.

I urge the Senate's favorable action on the bill.

Mr. BROOKE. Mr. President, will the Senator yield?

Mr. TOWER. I yield.

Mr. BROOKE. Mr. President, as a member of that Securities Subcommittee, I wish to make the following statement.

Mr. President, during the past several years, the Securities Investor Protection Corporation, established by Congress in 1970 as a nonprofit corporation, has provided protection for customers of securities broker-dealers which have become insolvent. SIPC is supported by statutorily imposed assessment on its broker-dealer members, thereby relying on private rather than Government funds for its insurance and administrative funds. H.R. 8331 is designed to improve SIPC's effectiveness and operations by, among other things, increasing the maximum insurance available to each customer of an insolvent broker-dealer, providing SIPC with rulemaking authority, and authorizing SIPC to designate one of its employees as trustee of certain small broker-dealers which have become insolvent. It is clear to me that the revisions to the Securities Investor Protection Act contained in H.R. 8331 would assist SIPC in its work on behalf of securities customers and I wholeheartedly support the bill.

In addition to the SIPC provisions of H.R. 8331, two amendments have been added to the bill by the Banking Committee. One would increase the amount of the small offering exemption in section 3(b) of the Securities Act of 1933 from $500,000 to $2.5 million. As a cosponsor of the bill (S. 2305) introduced specifically to raise the monetary limit of exempt offerings, I support this amendment to H.R. 8331. By increasing the statutory limitation, the bill would provide small businesses with a much greater opportunity to raise necessary capital funds in our Nation's securities markets.

The other amendment to H.R. 8331 would delay for 6 months the May 1, 1978, effective date of section 11(a) of the Securities Exchange Act of 1934. Section 11(a) will prohibit a broker-dealer which is a member of a securities exchange from effecting any transaction on such exchange for an account over which it exercises investment discretion. This provision was designed to promote competition between broker-dealers and institutional money managers and also to prevent the possibility of conflicts of interest from arising when a broker-dealer also acts as an investment adviser. Such conflicts may result, for example, in excessive trading in managed accounts.

Since section 11(a) was enacted as a part of the securities acts amendments of 1975, the Securities and Exchange Commission has proposed rules to implement that section and, approximately 1 month ago, adopted final rules in this area. Because of the length and complexity of such rules, it is doubtful that broker-dealers will have had enough time to review the rules and adjust their business operations by the May 1 effective date. Moreover, these rules are not entirely consistent with similar securities trading rules adopted by the IRS and Labor Department under the Employee Retirement Income Security Act of 1974, thus necessitating further coordination among the agencies and the SEC so as to insure the consistency of such rules. In my view, the needs of the broker-dealer community and the need for fair and consistent Government policies militate in favor of delaying the effectiveness of section 11(a) and, thereby, the SEC's rules.

In addition to the matter of the SEC rules under section 11(a), I believe a delay is appropriate so that the SEC may further its development of the national market system without the immediate imposition of the satutory trading standards and restrictions contained in section 11(a). However, in supporting a delay, I also believe the SEC should continue to work with the broker-dealer community to provide for a national market system which is structured to accommodate the eventual implementation of the trading restrictions contained in section 11(a).

I have discussed the problem of the effective date of section 11(a) with my Senate colleagues, as well as receiving comments from my constituents, and I agree with Senator WILLIAMS that a 6-months delay is in order. Accordingly, Mr. President, I urge my fellow Senators to support the expeditious review and approval of H.R. 8331, as amended.

Mr. WILLIAMS. Mr. President, I ask that the committee amendments be considered en bloc.

The PRESIDING OFFICER. The question is on agreeing to the committee amendments en bloc.

The committee amendments were agreed to en bloc.

The committee amendments were ordered to be engrossed and the bill to be read a third time.

The bill was read the third time, and passed.

Mr. TOWER. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. WILLIAMS. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

SENATE RESOLUTION 440 AND SENATE RESOLUTION 441—SUBMISSION OF WORLD MONETARY AND CAPITAL POOL RESOLUTIONS

Mr. JAVITS (for himself, Mr. CHAFEE, Mr. DANFORTH, Mr. MATHIAS, Mr. PERCY, Mr. SPARKMAN, Mr. STAFFORD, Mr. STEVENS, Mr. STEVENSON, and Mr. MARK O. HATFIELD) submitted the following resolution, which was referred to the Committee on Foreign Relations:

S. RES. 440

Whereas leadership in today's international economy must evolve from a close cooperation between the United States and the other industrialized nations which is based on a sense of interdependence and acceptance of the pivotal nature of their economic performance for the well-being of the whole international economic system;

Whereas the recent disorders in the foreign exchange markets and decline of the value of the United States dollar reflect the concern of the international money markets about uncertainty regarding the actions of and decisions to be taken by the political leaders of the industrialized countries in addressing the major economic issues, particularly the dangers of inflation and structural unemployment:

Whereas the critical need exists for the United States to adopt a meaningful energy policy, measures to foster the international competitive position of United States exports in the international marketplace as appropriate monetary and fiscal policies;

Whereas the most recent joint program adopted by the United States and the Federal Republic of Germany to counter mounting speculation against the dollar in foreign exchange markets is but a short-term measure yet is designed to meet esentially long-term underlying structural problems facing the international monetary system;

Whereas such dislocations to the international monetary system could be overcome if the industrialized countries had an overall plan to share the responsibilities resulting from the present interdependence of the industrialized countries;

Whereas such a plan should seek to expend the international reserve role of the currencies of other industrialized countries to meet the problem caused by the exclusive reliance on the dollar as the key international monetary reserve asset;

Whereas it is recognized that such an overall plan could create severe dislocations in the short term to the international monetary system and to the dollar;

Whereas such short-term dislocations could be successfully countered by a coordinated intervention plan if a long-term approach were in place that would recognize the beneficial effect to the long-term health of the international monetary system of such a shift to a broader based reserve system;

Whereas unilateral actions, including capital controls and protectionist trade barriers, taken by individual governments, including the United States, to protect their currencies and insulate their economies from the negative effects of changes in currency relationships could force more and more countries to adopt similar restrictions with serious implications for continued international trade and economic growth;

Whereas these monetary issues are no longer amenable to solutions developed on a consultative ad-hoc basis but rather require long-term solutions reflecting the interdependence of countries today;

Whereas it is essential that confidence be rebuilt in the multilateral approach to solutions to our international economic problems; and

Whereas the forthcoming Economic Summit to be held in July in Bonn provides the immediate opportunity for the development of such a concerted, multilateral approach;

Whereas it is the growing consensus among the leaders of the other industrialized countries that, if these international initiatives are to succeed, the United States must take steps to put its own house in order: (1) by adopting a meaningful energy policy that will begin to cut U.S. dependence on im-

ported oil and generate the required investment to spur new energy technology; (ii) by undertaking monetary and fiscal policies that recognize the deleterious effects of inflation on the United States domestic economy as well as on the international position of the dollar and, therefore, on the currencies of the other countries; and, (iii) by adopting a comprehensive program to improve the competitiveness of United States exports in international markets; Now, therefore, be it

Resolved, That it is the Sense of the Senate that—

(1) The President recognize the severity of the international monetary crisis, which, if unchecked, has the potential of disrupting the domestic as well as international economy through a loss of confidence in the ability of governments to deal with the major economic issues of our time;

(2) The President undertake discussions culminating in the Economic Summit in July with the other industrialized countries with a view toward developing a closely coordinated approach to the grave international economic issues based on a sense of interdependence and mutual cooperation;

(3) Such an approach recognize the essentially structural problem facing the international monetary system caused by the exclusive reliance on the dollar as the key international monetary reserve asset and, consequently, should focus on a long-term solution to meet that problem.

Mr. JAVITS (for himself, Mr. CHAFEE, Mr. DANFORTH, Mr. MATHIAS, Mr. PERCY, Mr. STAFFORD, Mr. STEVENS, and Mr. STEVENSON) submitted the following resolution, which was referred to the Committee on Foreign Relations:

S. RES. 441

Whereas many of the economic difficulties facing both developed and developing countries today are the legacy of the shock suffered by the world economy as a result of the massive escalation of oil prices since 1973, which continues to impose great burdens on the world economy;

Whereas the cost of oil imports continue to drain away important parts of the purchasing power of oil importing nations, chronically upsetting their international balance of payments, and requiring the continued borrowing of large amounts of capital;

Whereas economic growth has stagnated in many countries and the rise in the capital stock needed to increase productivity, raise standards of living, expand markets, and avoid inflationary bottlenecks is not occurring;

Whereas it is essential that the OPEC countries in surplus, because of their growing stake in the economies of the industrialized nations, be tied more intimately into the international economy and be asked to assume greater responsibility for its proper functioning;

Whereas the inability of major OPEC surplus countries to absorb their current account surpluses has resulted in their accumulation of a surplus aggregating approximately $175 billion in the last four years, with some projections of a surplus aggregating as high as $200 billion for at least the next five, if not double that figure in the next ten years;

Whereas the recycling of the surplus OPEC funds through a sophisticated and resourceful complex of financial intermediaries (largely commercial banks) may have served the investment needs for the OPEC surpluses, it has failed to generate the macroeconomic policies in the oil importing countries needed to restore efficiently the equivalent purchasing power to the oil importing countries, especially the developing countries;

Whereas the oil importing developing countries require productive investment in order to cover their oil import deficits and to complement the aid and investment of the developed countries in stimulating the noninflationary growth and the expansion of broader markets for goods and services which the international economy requires so urgently to deal with stagnation and inflation;

Whereas without the expansion of markets, whether in the developing or developed countries, it will be extremely difficult to counter the escalating demands of protectionist forces to limit imports into the United States as well as United States investment abroad by demonstrating that an open international system results in higher levels of U.S. employment and domestic economic activity than does a closed international system with protectionist barriers to the free flow of goods and capital;

Whereas it is essential that a mechanism be created to make available a part of the surpluses of the OPEC countries as capital investment for these developing countries, which would stimulate economic growth in these countries and expand demand for the exports of the industrialized countries;

Whereas such a capital pool would be available only to those developing countries which would engage to develop rational economic policies that recognize their responsibilities to the international economic system on a basis of self-help and mutual cooperation: Now, therefore, be it

Resolved, That it is the sense of the Senate that—

(1) The President together with the leaders of other industrialized countries begin discussions with the leaders of the OPEC countries with a view toward establishing a $50–$100 billion capital pool for productive investments in the developing countries on appropriate terms and conditions which will recognize the concerns of the surplus OPEC countries, the recipient developing countries, the developed countries and the International Financial Institutions;

(2) The President consider the political and security implications of these proposals in his discussions with the leadership of such OPEC countries; and

(3) The governments of the industrialized countries take into consideration—under conditions mutually agreeable to both them and such OPEC countries—the concerns of the OPEC surplus countries regarding the sustained value of their funds invested in the capital pool and their need for liquid assets in the event of unforeseen economic emergencies.

Mr. JAVITS. Mr. President, I am submitting two resolutions; First, a resolution dealing with the problems facing the international monetary system, which is cosponsored by Senators CHAFEE, DANFORTH, MATHIAS, PERCY, SPARKMAN, STAFFORD, STEVENS, STEVENSON, and HATFIELD; and second, a resolution dealing with the need for a major capital pool for productive investment in the developing countries, which is cosponsored by Senators CHAFEE, DANFORTH, MATHIAS, PERCY, STAFFORD, STEVENS, and STEVENSON.

Mr. President, on February 8, 1978 in a speech on the floor of the Senate, I sought to alert my colleagues and the Nation to the critical situation facing the international economy. At the time, I called for far-reaching and innovative economic and political measures in order to strengthen the fragile structure of the international monetary and economic system and avoid the dismantling of the open and private international system that we have worked so hard to develop since the end of World War II.

Recent good news from the financial markets about the strengthening of the dollar cannot be permitted to overshadow the fundamental structural problems that continue to threaten the international monetary system. Confidence in the dollar and in the underlying U.S. economic policy is at best questionable and may have been so shaken in the last year that a major recovery in the dollar will be difficult to sustain.

Between the first quarter of 1978 and the fourth quarter of 1977, there was a significant shift in the currency composition of new international bond issues, with the volume of dollar issues declining and the volume of issues denominated in German, Swiss, and Japanese currencies increasing far beyond that of previous years. Uncertainty whether President Carter's anti-inflation program will have any real teeth may make investors reluctant to hold principally dollars; and as a result, we may see a continuation of this trend.

The balance-of-payments statistics for February show that our trade balance was in deficit by more than $4.5 billion while our dependence on foreign oil imports, although slackening from last year's record first-quarter figures, continued. Inflation has again threatened to become virulent, with the Council on Wage and Price Stability concluding that the underlying rate of inflation "seems hopelessly stuck within the range of 6 to 7 percent."

We are also witnessing mounting protectionist pressures in the Congress. I am particularly concerned by proposed legislation that will seek to expand the buy American provisions; and by the present attempt in Congress to override the President's decision not to impose increased tariffs on industrial fasteners. Such actions raise serious doubts about our commitment to an open international trading system and worsen inflationary pressures, which pose a much greater threat to the American worker than does import competition.

My concerns about the international economic situation are shared by many leaders of opinion within the business and banking communities as well as within the Government. Although reactions—which I welcome—to the substantive proposals made in my February 8 speech were mixed, there was almost unanimous agreement with my analysis that the present malaise facing the international economy has reached critical proportions.

Secretary of the Treasury Blumenthal said that I had "quite accurately focused on the main economic problems which confront us" and indicated that "neither the U.S. administration nor foreign government leaders are satisfied with a world economic outlook which still exhibits record levels of unemployment, high rates of inflation, and persistently large imbalances in international payments which place strains on the international monetary system."

Arthur Burns, former Chairman of the Board of Governors of the Federal Reserve System, shared my concern about the serious problems facing the international economy and confirmed my emphasis on seeking ways to encourage capital investment and adopting necessary structural adjustments in industrial

countries. Calling my proposed solutions "bold and imaginative," he agreed with my assessment that there is a need to channel OPEC funds into productive investments.

Under Secretary of State for Economic Affairs Richard Cooper indicated that we do not "differ in regard to the gravity of the international economic problems we face."

I was particularly impressed by the responsive chord that my analysis and proposed solutions struck with leaders of the business and banking communities, whose daily operations are so intimately related to the health of the international economy. Henry Ford II wrote that one of the first priorities for our own and other governments should be to seek to broaden OPEC investments to include long-term savings or equity placements, as I urged in my speech.

Henry Kaufman of Salomon Brothers also endorsed my suggestion that "we encourage the oil-producing nations to acquire longer dated financial assets in order to strengthen the international monetary system."

Peter Peterson, chairman of the board of Lehman Brothers Kuhn Loeb, wrote that it may be time now for Members of the Congress and of the executive branch "to explore alternative proposals and to consult on appropriate ways through intensive but low-key discussions with OPEC, the industrialized countries, and the developing countries—and try to move forward in mutually acceptable ways" to deal with what he calls the "OPEC overhang problem."

David Rockefeller, chairman of the board of the Chase Manhattan Bank, joined me "in hoping that we might over a period of time see more of the OPEC surplus funds channeled into long-term investments." Having just returned from a trip to the Middle East, Mr. Rockefeller indicated that he found that the overriding concern at the moment is the depreciation of the dollar.

Howard Clark, chairman of the Executive Committee of American Express, wrote that our primary attention should focus on our enormous international payments deficit, because our major trading partners perceive that the deficit is a reflection of the health of the U.S. economy, which thus tends to continue the decline in the international value of our currency.

Both Irving Shapiro of Dupont and Reginald Jones of General Electric focused on my call for a major capital pool for directed investment in the developing countries. Mr. Shapiro shared my view that before any targeted investment flows can be undertaken, the developing countries must create a basically favorable investment climate, which will minimize the inherent risks of investing in such countries. Mr. Jones suggested that the United States "support more effectively the development of the poor LDC's, which, indeed, may require an improved recycling of petrodollars through long-term investments."

Mr. President, not only are we living in difficult times, but also in a world full of economic contradictions. Much of the conventional wisdom that guided our economic thinking in the past is no longer applicable. We see a falling dollar, but we wonder whether this will lead to a marked improvement in the balance of trade. The appreciating yen had made Japanese automobiles more expensive in the United States; yet because U.S. automobile manufacturers are raising their prices, Japanese automobile sales in the United States are as strong as ever; and we receive daily reports that the Japanese are intensifying their export drive and are once again putting their genius to work to move into more advanced technological industries.

Our trading partners tell us that we in the United States must take action to cut inflation—essentially by cutting back real growth—yet, at the same time, they insist that the U.S. economy must continue to grow, because their economies are so closely tied to the U.S. economic performance.

Mr. President, how we manage our domestic economy is closely linked to the health of the international economy and the value of the U.S. dollar abroad. How can we expect to check inflation if we continue policies which tolerate some of the lowest productivity of any industrialized country, fail to stimulate required capital formation, allow our research and development to lag dangerously, and propose to inhibit economic development and the acquisition of markets by a lack of enterprise and competitive incentives? I am especially concerned that in his anti-inflation program, President Carter has failed to propose a comprehenisive strategy that will deal with these factors.

I am certain that the President and his counterparts in the other industrialized countries can read the signs as well as I can. What they fail to understand, however, is the essentially long-term nature of the problem, and hence, the need for more long term and less ad hoc solutions. Short-term panaceas such as limited monetary swap arrangements, gold sales, or Presidential assurances, although important psychologically, are not the types of solutions required to meet the structural problems that are perplexing the international economy. The U.S. balance-of-payments problem can only be tackled by a long-term strategy that will curb our thirst for oil imports as well as generate the required investment to spur new energy technology.

In addition, we need a commitment by the administration to a national export policy which will create an environment within all parts of Government conducive toward the serious promotion of exports. I plan to review very carefully the report of the Cabinet-level task force, chaired by Secretary Kreps, which has been appointed by President Carter to develop additional measures to promote exports.

Mr. President, it is on the question of the value of the dollar that we need most a concerted long-term approach. I believe that the dislocation facing the international monetary system today can be overcome if the industrialized countries establish an overall plan to share the responsibilities resultng from the pivotal nature of their economic performance for the well-being of the whole international economic system. The industrialized countries must undertake domestic economic policies that are responsive to the needs of the internatonal economic system as well as their individual domestic concerns. In addition, one possible—although by no means the only—approach that the President could undertake in concert with the leaders of the other industrialized countries—which could be announced at the Economic Summit in July—would be a long-term monetary plan that would gradually replace the present exclusive reliance on the dollar as the key international monetary reserve asset by a reliance in a combination of reserve assets, the SDR, which would include the currencies of the major industrialized countries.

Now, Mr. President, we also have a very grave problem with our European allies who are adopting very different policies respecting the credits they extend to the East, that is, to the Communist countries and to the Soviet Union, than our credit policies; our allies are very intensively competing in granting credit to enter these Eastern markets in a way which neither does them nor us any long-term good.

The recent movement by the members of the European Common Market toward a unified monetary program, although encouraging as another sign of greater economic integration in Europe, is at the same time troublesome when one considers that its reason is the erosion of confidence in the U.S. dollar and its objective is to isolate the European currencies from the U.S. dollar. It is imperative that we insure that any proposed solutions to our monetary problems be worked out multilaterally—not regionally—in the Economic Summit, which will bring together the leaders of the United States, West Germany, and Japan, as well as of England, France, Italy, and Canada in Bonn on July 16 and 17. We can only hope to achieve this approach if the United States takes an active leadership role in formulation of these proposals.

One other area of concern that we have not addressed in a coherent fashion is the implication of the present recycling of the OPEC financial surpluses for the economic prosperity of the oil importing developing countries. While the recycling of these funds through a sophisticated and resourceful complex of financial intermediaries (largely commercial banks) may have served the investment needs for the OPEC surpluses, the present system has failed to generate the macroeconomic policies in the oil importing developing countries needed to restore efficiently the equivalent purchasing power to the oil importing countries, especially the developing countries.

These countries require productive investment in order to cover their oil import deficits and to complement the aid and investment of the developed countries in stimulating the noninflationary growth and the expansion of broader markets for the goods and services which the international economy requires so urgently to deal with stagnation and in-

flation. It is not only out of concern for the plight of these countries but also out of self-interest for the economies of the United States and the other industrialized economies that in my February 8 speech I called for the establishment of a large capital pool for productive investments in the developing countries. Such targeted investments would stimulate economic growth in these countries and, most importantly, would expand demand for the exports of the industrialized countries. Such new markets for our goods would lead to higher levels of U.S. employment and domestic economic activity and would effectively counter the escalating demands of protectionist forces respecting imports into the United States as well as U.S. investment abroad.

The place, Mr. President, where the most can be done is at the Economic Summit which will take place among the leaders of the major industrialized countries of the world in Bonn in July of this year. My reason for introducing these resolutions, which I shall pursue in the Foreign Relations Committee or such other committee to which they are referred, is to awaken our own leadership, our own Members of Congress, and the leadership of the other industrialized nations to this opportunity which cannot be missed, otherwise the Bonn Summit will pass as another routine summit conference and, frankly, Mr. President, we do not have time for such "business as usual". The danger we run is too imminent and too great to allow this opportunity to pass.

If we act together in an intelligent multilateral way, we can guarantee the prosperity of this world for a century. But if we go on as we are going on today, Mr. President, in my judgment, we are almost surely heading for a very, very serious economic reverse with enormous social consequences.

The fact that so many who are, as I say, in high authority of finance, business, and government, recognize that everything I say is true, but still cannot seem to summon themselves to do what ought to be done, makes it essential that this idea, that this message, be repeated again, again, and again.

Mr. President, as I have already indicated, our political leaders sense the problems but are short on proposing solutions. We are witnessing in the United States as well as in the rest of the world a drift in economic policy—a lack of initiative and boldness in a time of near crisis.

In this period when conventional wisdom is being challenged and when leadership seems to be at an all-time low, it is critical that we engage in an open dialog about the economic health of the Nation as well as of the world. This was the purpose of my February 8 speech.

Today I am introducing two concurrent resolutions that will put the Congress on record in support of a search for long-term solutions for the many international economic problems facing us today.

The first resolution stems from our concern that the recent disorders in the foreign exchange market and the decline in the value of the dollar reflect the concern of the markets about the uncertainty and hesitancy of the political leadership of the industrial countries in addressing these major economic issues. We in Congress should urge the President to take a closer look at what he is doing and saying and to insure that the individual policies of his administration and his as well as his staff's statements are not counterproductive to achieving the needed economic objectives.

Most importantly, we in the Congress should call on the President to recognize the severity of the economic crisis that we are in today and to meet that crisis through a closely coordinated approach with the other industrialized countries, which will culminate in the July Economic Summit in Bonn. British Prime Minister Callaghan's five-step proposal for international collective action to boost confidence in the world, which he made to President Carter in their recent meetings, as well as the recent decision by the European Common Market leaders to put together a common economic program to be presented to Japan and America at the July summit, are certainly movements in the right direction and should be encouraged as multilateral rather than regional solutions to our monetary problems.

At the same time that we seek to develop a coordinated international posture, we must insure that our own house is in order. We must be certain that our monetary and fiscal policies reinforce our fight against inflation while we cut dependence on imported oil and expand our export opportunities abroad.

Accordingly the second resolution calls on the President, together with the leaders of other industrialized countries, to begin discussions with the leaders of the OPEC countries with a view toward establishing a $50 to $100 billion capital pool for productive investment in the developing countries. It is a question of directing investment where it is most needed, a problem which I must admit reluctantly is not being met by the free market system. The commercial banks have served as excellent intermediaries for the rechanneling of the OPEC funds to deficit countries, but they cannot undertake to insist that the funds be used in the most efficient manner by the recipient countries. This is the job of governments and the international institutions, such as the IMF, the World Bank, and the international regional financial institutions. Together with these institutions, the administrators of the proposed capital pool would use the funds for productive investments in the developing countries—and I do not exclude Eastern Europe, the PRC, and the U.S.S.R. on proper terms—which will stimulate economic growth and demand in the rest of the world.

Mr. President, I hope that the Foreign Relations Committee will soon hold hearings on these resolutions. More importantly, I hope that the administration will pay heed to the concerns that are expressed in these resolutions, which I believe reflect the concerns not only of many of us in the Congress, but also of the American people as well as of our allies and other peoples abroad.

I hope very much that the President of the United States will treat this summit as if it were a great peace conference and will take with him a congressional delegation representative of both the House and the Senate. In that way, our trading partners, those with whom we are economically associated, will realize the seriousness of the situation.

Mr. President, this may very well be one of the final chances that we will have to do with this world what needs to be done: The interdependence of the world now is so great that while we cannot act alone, we can furnish the spark and the leadership which will cause others to act together with us.

I hope, Mr. President, this message will be heard.

● Mr. MATHIAS. Mr. President, I am pleased to join with my distinguished colleague, Senator JACOB JAVITS of New York, in cosponsoring two very important resolutions. The first calls on President Carter to hold discussions with the industrialized countries to develop a common approach to the serious problems facing the international monetary system. The second resolution calls on the President to initiate discussions with other industrialized countries and members of the Organization of Petroleum Exporting Countries (OPEC) with the view of setting up a capital pool for productive investment in the developing countries.

These resolutions recognize that we live in an interdependent world. Our economic health is directly tied to that of other nations. Our exports, for example, play an increasingly vital role in our own economic growth. Imports provide materials crucial to our well-being. The facts speak for themselves.

In a recent speech given before the National Governors' Association Secretary of State Cyrus Vance enumerated some of these facts:

One out of every eight manufacturing jobs in the United States depends on exports.

Every third acre of U.S. farmland produces for export.

Exports of our goods and services now contribute nearly $200 billion to our gross national product.

Clearly, our ability to export is tied directly to other countries' ability to import. Inflation in Europe means not only that European goods cost more in the United States—thus adding to our inflation—but that there is less money available in Europe to purchase U.S. exports.

On the import side, our interdependence with the world economy is even more startling. We imported close to 50 percent of our crude oil needs in 1977 at a price tag of over $45 billion. But this is only the most obvious of our import needs. Peter Bourne, special assistant to President Carter, indicated recently in an article in the New York Times that "By 1985 the United States will depend on imports for more than one-half of our supplies of 9 out of 13 critical minerals."

What is not widely recognized is the degree of our interdependence with

Third World countries. We continue to view them only as recipients of our foreign aid largesse. But according to Carter administration officials, "U.S. exports to the developing world are now greater than its exports to all of Europe or Japan." Developing countries are key sources of copper, tin, natural rubber, and bauxite.

We are, in short, an integral part of a world economy. The world's economic health directly affects ours. Economic problems are not contained by national boundaries.

This economic interdependence is particularly evident with respect to the international monetary system. The instability which has characterized the system in recent months has raised fears regarding the future. A number of unsettling factors are at work.

The U.S. dollar remains the premier world reserve currency but without the aura of strength that gold backing once gave it. World confidence in the dollar's strength has quite naturally been tied to confidence in the strength of the U.S. economy. Our failure to reduce our dependence on large quantities of imported oil has raised concern abroad. Clearly, transferring almost $50 billion annually to oil-exporting countries cannot be viewed as a confidence-building exercise on our part. Our persistent inflation, unemployment, and the size of our annual Federal budget deficit have further sapped foreign confidence in our ability to manage our economic affairs.

A second unsettling factor has been the increasing transfer of economic power to countries which have not traditionally been major actors on the international financial scene. The inherent power of a Saudi Arabia to make waves through its vast foreign exchange holdings has lent a degree of unpredictability to international monetary affairs.

Finally, the international exchange rate system has refused to function in an orderly manner. The recent precipitous decline in the value of the U.S. dollar relative to other major world currencies has raised a number of serious questions about the future of the system itself.

The two resolutions being introduced today point to the interdependencies in the international economic system and to the problem plaguing that system. They call on the President to initiate discussions aimed at resolving these problems. It is the belief of the cosponsors of these resolutions that the uncertainties which sap confidence in the international economic system must be addressed. The OPEC nations must be encouraged to become partners with the industrial countries in the smooth functioning of the system.

These resolutions call on President Carter to place high priority on moving to grapple with these problems. In doing so, we believe that he will have the support of Congress in this important effort. These resolutions are intended as a clear indication of that support.●

GUIDELINES FOR REHABILITATING HOUSING—S. 2637

AMENDMENT NO. 1819

(Ordered to be printed and referred to the Committee on Banking, Housing, and Urban Affairs.)

Mr. PROXMIRE. Mr. President, I am submitting an amendment to S. 2637, the housing and community developments of 1978, that would direct the Secretary of HUD to develop guidelines for rehabilitating existing housing. These guidelines would be made available to cities and States for their voluntary adoption. They would be designed to assist local building officials in interpreting and adapting local codes to meet the special needs of rehabilitation projects. The purpose of the guidelines is to encourage the rehabilitation and conservation of our older building stock. By making our existing housing stock safe, sound and functional, we can very significantly aid in achieving our national housing goals, revitalizing our urban areas and reducing Federal expenditures.

On March 24 of this year, the Committee on Banking, Housing, and Urban Affairs held a hearing concerning the impact that building codes have on rehabilitation. The witnesses testified that building codes, although intended to regulate safety and health in new construction, are also applied to rehabilitation projects, particularly those involving major rehabilitation. Testimony indicated that, when applied to rehabilitation, building codes unnecessarily add 10 to 20 percent to the costs of rehabilitation projects; they discourage otherwise feasible projects; they delay approval of projects because of the lengthy administrative procedures involved; and they encourage illegal activities, such as payoffs to building officials by citizens seeking to avoid unreasonable requirements. The testimony received by the committee strongly indicates that congressional action is needed to remedy this problem.

The impact of building codes on rehabilitation is not a new problem. Ten years ago, a commission led by former Senator Paul Douglas declared:

> There is widespread recognition among code experts that current code standards, which are intended for new construction, should not be applied literally to the alteration of existing buildings. Administrators of the rehabilitation programs in cities throughout the country have found that costs become excessive when present building code standards are followed . . .

The Douglas Commission recommended that Congress:

> . . . authorize the Secretary of Housing and Urban Development to develop model standards to be incorporated in local building codes with special reference to the rehabilitation of existing housing.

Although the problem is not new, what is new is the level of Federal support for rehabilitation. In fiscal year 1979, Congress is being asked to provide $1.6 billion for rehabilitation, an increase of over 160 percent above the Federal rehabilitation activity in fiscal year 1977. Of this figure, as much as $240 million could be wasted because unnecessary building code requirements will be applied to federally-funded rehabilitation projects.

Building codes are a responsibility of the States and their political subdivisons. I do not believe that it is either necessary or desirable for Congress to mandate a Federal rehabilitation code. To do so would preempt the States' authority to regulate the safety and health aspects of buildings. Nor do I believe it desirable at this time to direct HUD to develop a new rehabilitation code. This would be a costly and time-consuming effort, that could have little immediate impact.

The amendment I am introducing today would call upon HUD, as part of the technical assistance it furnishes to States and cities, to develop a model rehabilitation guideline to be used in conjunction with existing building codes. This model rehabilitation guideline would aid in interpreting existing requirements, would provide technical data on building materials used in the past but not provided for in modern building codes; would suggest alternative ways to solve specific rehabilitation problems, and acceptable tradeoffs in order to make older buildings safe and useful; and would provide the up-to-date technical information needed by local and State officials responsible for administering local laws governing rehabilitation activities.

The legislation I am introducing directs HUD to develop and publish the model rehabilitation guideline within 18 months after the date of enactment. The amendment also authorizes HUD to furnish other technical assistance to assist States and jurisdictions in adopting and using the guideline. The Secretary of HUD would be required to report to Congress, not later than 18 months after the publication of the model rehabilitation guideline, concerning actions taken by State and local governments to adopt the guideline, and recommendations for further legislative action, if any.

Mr. President, the committee received testimony that Federal action on this matter is necessary and urgent because neither the States nor the cities have the technical and other resources needed to develop such a rehabilitation guideline. The amendment I am introducing will resolve this problem and will, I believe, help to eliminate a potential waste of Federal funds in carrying out the rehabilitation of older housing under building codes which may not be well suited for rehabilitation efforts.

I ask unanimous consent that the amendment be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

AMENDMENT NO. 1819

At the appropriate place in the bill, insert the following:

SEC. . Title V of the Housing and Urban Development Act of 1970 is amended by adding at the end thereof the following:

"REHABILITATION GUIDELINES

"SEC. 510. (a)(1) The Secretary shall develop model rehabilitation guidelines for the voluntary adoption by States and communities to be used in conjunction with existing building codes by States and local officials in the inspection and approval of rehabilitated properties.

"(2) Such guidelines shall be developed in consultation with the National Institute of Building Sciences, appropriate national organizations of agencies and officials of State and local governments, representatives of the building industry, and consumer groups, and other interested parties.

"(3) The Secretary shall publish such guidelines for public comment not later than 1 year after the date of enactment of this section, and promulgate them no later than 18 months after such date of enactment.

"(4) The Secretary shall furnish technical assistance to State and local governments to facilitate the use and implementation of such guidelines.

"(b) The Secretary shall report to Congress not later than 36 months after the date of enactment of this section regarding (1) actions taken by State and local governments to adopt guidelines or their equivalents, and (2) recommendations for further action.

HOLOCAUST—THE POWER OF LANGUAGE AND THE GENOCIDE CONVENTION

Mr. PROXMIRE. Mr. President, for several days now I have been discussing the NBC presentation, "Holocaust". Seldom has any production moved millions of Americans as much. It clearly demonstrated the awesome power of television—to inform, to educate, and, most importantly, to move its viewers.

In watching "Holocaust", I was particularly fascinated by the frighteningly clever use of language by the Nazis to obscure their real intentions. As we follow the career of the lawyer Dorf, we see his career advance as he learns to employ such nice turns-of-phase as "Jewish question", "resettlement camps", and "final solution". These delicate verbal acrobatics were meant to obscure the Nazi plans for the premeditated and systematic extermination of 6 million Jews.

Of course, with the benefit of hindsight, we are able to see these phrases for the sham that they were. But the use of these terms, combined with German propaganda, served to reduce the concern in both Europe and the United States for the plight of the Jews and other victims of the Nazi regime. And, most importantly, it bought time.

Again and again, we see Dorf use these verbal gymnastics to give a cloak of legitimacy to Nazi atrocities. When the Nazis staged riots and destroyed Jewish property, Dorf was faced with a dilemma since under German law the insurance companies were required to pay compensation to the victims. Dorf concluded that he could employ language here as well to conclude that since the Jews were "responsible" for this so-called citizen uprising in the first place, the government could legitimately confiscate all payments to the Jewish victims.

Mr. President, the lesson is clear. Countries cannot always be relied upon to prevent genocide within their own boundaries. It is the moral duty of all nations to protect the victims of such actions. That is why over 80 nations have ratified the Genocide Treaty, a treaty in which members resolve to prevent and punish acts of genocide. The lives of all individuals throughout the world are a cause for international concern. And if the United States is serious about protecting these lives—if we have learned the lesson of "Holocaust"—we must join in this united opposition to genocide. Sympathy for victims after the fact accomplishes little; active efforts to expose potential acts of genocide and prevent them can save lives.

As I have said time and again, we should have been the first to ratify this convention. I can only hope now that we will not be the last.

HOW NEW YORK CAN BALANCE ITS BUDGET: CUT LOBBYING

Mr. PROXMIRE. Mr. President, in considering the action the Congress should take on Federal assistance for New York City, one of the considerations we take into account is the expenditures the city and the State are making now. Is that spending excessive? Obviously to the extent the city can reduce its spending it can move closer to a balanced budget.

It can once again move to the status enjoyed by New York City before 1975 and by every other city in the country throughout our history. That is it can be self-reliant, and not dependent on the Federal Government for a loan, a guarantee or any other kind of assistance to prevent bankruptcy.

In recent weeks I have cited a number of areas where New York City can save money. We have pointed to the millions of dollars of documented waste in the city's park department, to the multimillions lost because of failure to enforce contracts as in the case of the Pullman Company's penalties of more than $10,000,000 that has not been enforced by the city, to the Yankee stadium sweetheart deal. And I am sure there are many others.

Another admittedly limited area of spending where New York seems to be out in front is in its lobbying the Federal Government for more Federal funds. In an article in this morning's New York Times, Edward C. Burks reports on the hundreds of thousands of dollars New York is spending in this operation.

Now, it is true that many States have big lobbying operations here in Washington to lasso the Federal tax dollar. My own State of Wisconsin has three full-time persons paid a total of $64,000 and the University of Wisconsin has a part-time lobbyist who is paid about $10,000 per year. Altogether, counting expenses Wisconsin spends about $86,000 to lobby the Federal Government. I regret that. I think it's too much. If I were governor the State would spend nothing in Washington. If our nine Congressmen and two Senators and our ample staffs cannot do the job, we should be replaced.

Nevertheless in criticizing New York, it is only fair to admit that Wisconsin also spends money to lobby the Federal Government, but far less—on any count than New York.

As compared to Wisconsin's three full time and one part time lobbyist, New York has 38 people according to Mr. Burks. New York spends about $750,000 in its lobby effort. And everyone, but everyone seems to be represented.

According to the New York Times:

Governor Carey has an Office of Federal Affairs here. Mayor Koch has an office. Then there are the offices of the State Senate and the State Assembly . . . special offices of the city's Board of Education, the State's Department of Education, the State University of New York and even an office for Nassau county.

Mr. President, the very high salaries for very young lobbyists raises another question on this big expenditure.

But, Mr. President, into the excellent representation New York has in the Congress. With Senator JAVITS and Senator MOYNIHAN and their fine staffs, with its powerful delegation in the House and their staffs. And with the demonstrated capacity of these professional experts in getting more than a fair shake for their State and city, the size and especially the cost of this New York expenditure is excessive and still another example of where and how a New York that has the will to do the job, can find the way.

But apparently Mr. President even all this is not enough. To help the city's lobbying effort with Congress, Mr. Koch dispatched his counsel Philip Trimble to Washington for 4 weeks to be the laision with Governor Carey's committee that is buttonholing Congressmen on behalf of the city.

Mr. President, I ask unanimous consent that the New York Times article by Edward Burks to which I referred be printed in the RECORD at this point.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EIGHT UNITS LOBBY FOR NEW YORK IN WASHINGTON

(By Edward C. Burks)

WASHINGTON, April 25.—In pursuit of golden Federal grants and favorable legislation for New York State, New York City and various subdivisions therof, eight separate offices are now operating full-tilt in the capital. At latest count 38 people are in lobbying in the spirit of "Excelsior" (ever upward), the New York State motto.

Governor Carey has an Office of Federal Affairs here. Mayor Koch has an office. Then there are the offices of the State Senate and the State Assembly, which set up operations here last year. Not to be forgotten are the special offices of the city's Board of Education, the state's Department of Education, the State University of New York and an office for Nassau County.

The salaries of the lobbyists and their support personnel range from the $43,000 of Julian Spirer, director of the New York City office, originally established by former Mayor John V. Lindsay, downward to about $7,500 for some clerks. Altogether about $750,000 is being spent by taxpayers in New York State to maintain the lobbying and reporting force, which is just one short of equaling the combined number of New York Senators and Representatives in Washington.

MINNESOTAN HEADS OFFICE

Mr. Spirer, a 30-year-old Brooklyn-born, Harvard Law School graduate, thrives on his current major lobbying effort—trying to get Congress to approve a $2 billion loan program for New York City this spring. Before being hired by Mayor Koch early this year to run the city's office, Mr. Spirer was associated with the Manhattan law firm of Paul, Weiss, Rifkind, Wharton & Garrison, and then was counsel here to Representative Benjamin S. Rosenthal, Democrat of Queens, one of the city's most influential Congressmen.

In a glass and concrete building near Union Station called the Hall of States, Brad C. Johnson, a 29-year-old Minnesota native, is acting director of the New York State office, an arm of the Governor's office. Mr. Johnson, who is a lawyer, is paid $32,250.

He heads a staff of 12 generally considered one of the best-functioning state office groups in the capital. He finds the most effective way of fighting for state-supported projects "is * * * through our own Congressmen, who are much more effective now than in the past."

What does all this lobbying activity produce? Mr. Johnson and Mr. Spirer have no doubt that some major gains have resulted.

Last year, for example, the two offices, working closely with New York Representatives, reported that the state got $500 million in "extra" annual financing (close to $300 million of it for the city). That was partly because of improvement in formulas—fought for by New Yorkers—to provide more aid for housing, jobs and training in areas hard-hit by unemployment, and for rehabilitating poverty areas.

But with eight prospectors in the field, it is sometimes a matter of trying not to step on the toes of a fellow New Yorker looking for the same funds.

Many states have set up offices in Washington to get in closer touch with the Federal Government and its life-giving or life-saving grants and special legislation. A few cities have also done so, as well as a sprinkling of state education departments. But none can match the lobbying line-up from New York State. Here is the list of the eight offices with their directors and employees:

New York State's office, a branch of the Governor's Office—Mr. Johnson and his specialists, including five lawyers, cover a broad spectrum of Federal activities and work closely with the State Congressional delegation to keep members informed on bills.

New York City's office, reporting directly to Mayor Koch—Mr. Spirer, heading a staff of six, has set up a "coordinating council," including senior representatives from every major city department and agency that keep in constant touch with the Washington office.

New York State Senate—Jack R. MacKenzie, a 55-year-old native of Troy, N.Y., and a veteran of a number of government and Republican Party jobs, heads the four-member office at a salary of $35,000.

New York State Assembly—Jeffrey M. Wice, a Valley Stream, L.I., native who will be 26 on May 1, also heads a four-member staff, at $27,500.

New York City Board of Education—A staff of two headed by Fern Lapidus, with a $26,000 salary, and working from its own quarters within the New York City Office.

New York State Department of Education—Miriam Kazanjian, the director, has a little office for two and receives a salary of about $20,000.

State University of New York—In the multimillion dollar business of applying for and getting Federal grants, this six-member, six-room office is headed by William F. Claire, who receives $35,000. (The $200,000 budget of this office is paid from Federal funds).

Nassau County—John Faso has an office and a secretary in the National Association of Counties headquarters here.

LAROCCA A "SUPERCONSULTANT"

With the New York City loan issue now coming to the fore in Congress, Governor Carey and Mayor Koch have prevailed on the previous head of the New York State office, James L. Larocca, to become a sort of special superconsultant.

Mr. Larocca, who had reached a salary level of $43,000 last year in the state office before becoming the state's Energy Commissioner, has agreed to use his Washington expertise and contacts to see what he can do for the city loan assistance plan.

As Energy Commissioner he has continued to make visits to Washington on energy matters, and he has kept in close touch with Mr. Johnson.

Does this heavy artillery from New York cause more confusion than effectiveness?

Mr. Larocca says that the two houses of the Legislature were in the best position to decide on the need for separate offices in Washington, which were established late last year. But as for the many New York related offices here, he said: "It can create a confusion in Congress with too many people walking around with portfolios, emblazoned with the words 'New York' ".

He sees another problem. With representatives from the Governor's office, the Assembly and the State Senate all testifying before a Congressional committee, for example, and with varying viewpoints, members of the committee may not know what the "real" New York position is or if there is one. This is a situation of "exploitable confusion," Mr. Larocca says.

There have been some indications of chilliness involving the firmly established Governor's office here and at least one of the newcomers, the State Senate office. Mr. MacKenzie, head of the Senate office, contends that several requests to the Governor's office for details on the Governor's position on energy legislation have been unanswered. But on the other things they cooperate, he insists.

Mr. Johnson says only that "the proliferation of offices may be confusing to Congress and the Administration." Privately, however, a number of New York lobbyists who have been here for some time do not view the establishment of the State Assembly and State offices here as necessary.

VALUES EDUCATION COMMISSION IS COMMENDED BY SENATOR RANDOLPH

Mr. RANDOLPH. Mr. President, recently the members of the legislature of the State of Maryland passed significant legislation having to do with a study commission. This body would not attempt to regulate the courses given in the schools of that State. It would emphasize the belief, which I think is fundamentally correct, that there are certain disciplines in the instruction of our children and our youth which are not embraced by the conjugation of the Latin verbs or the rules of geometry.

I believe that the action of that State legislative body is indicative of the desire, not just to look backward, but to realize that there were characteristics which were in abundance in the men and women who brought this Republic into being. From their lives and their considerable contributions to the growth of this Republic, we can learn that which helps to mold the character and the strength of many generations.

On its last day of the session, April 10, 1978, the Maryland State Legislature passed Senate Joint Resolution 64, to establish a Values Education Commission, which culminated the diligent and persevering efforts of Senator Lawrence Levitan and Delegate Eugene Zander, both of Montgomery County. Many people were active in this effort. Among them were W. Clement Stone, president, Religious Heritage of America; Mary Ann Kirk and Dr. Bob Childers, vice presidents of education, Religious Heritage of America. The text of the resolution is as follows:

RESOLUTION NO. 64

Our fellow citizens generally are greatly concerned today by the apparent diminution of our traditional adherence and devotion to high standards of moral and ethical conduct. This concern is felt to pervade the areas of both private and personal interrelationships and public governmental activities.

Unhappily, all too often one observes or learns by extensive publicity of breakdowns in the normal standards of individual behavior and violations of public trust.

Although the great majority of our people are aware of this unhappy condition, a sense of helplessness as to how to bring about a remedy appears to have taken hold of their consciousness. Concentrated attention to procedures which might serve to inculcate an appreciation of and devotion to our best values is called for. Responsibility for formulating a broad program of values education surely rests on the popularly elected State Legislature as well as educators.

The obvious first problems to face are: "Where do we begin, and how far do we go?" Our leading national thinkers, educators, clergymen, and learning experts agree that the elementary school is the appropriate place to start a program of appreciation of ideals and desirable personal and public conduct. It is at this time students develop positive attitudes about our form of government, moral codes, and value judgments.

The early school years are specially important because a critical stage of development is beginning—that of thinking in the abstract, making judgments that will form the basis of character for the years to come.

But there concerns must be carried through to middle school, high school, and college, and into personal and public life. The intermediate years are times of experimentation and value assessment; the upper years are periods of judgment and value testing.

There are large numbers of parents and educators who feel deeply that today's society and particularly our schools, must address this void in the educational orientation and development of our children; now, therefore, be it

Resolved by the General Assembly of Maryland, that the Governor appoint a 20-member Commission, with adequate funding, for the purpose of identifying and assessing ongoing programs in moral and values education in the schools of Maryland, and to make recommendations toward the implementation of Values Education into the curriculum.

The Commission should be balanced on the State and local level, and comprised of representatives from the following: State Department of Education, State Government, State School Board, local school board, State Association of PTA's, curriculum specialists, school teachers, school principals, clergy (Judeo-Christian sector), youth, school counselors, Chamber of Commerce, Department of Labor, and Industrial Development, media, sports, service organizations, and the public at large.

Suggested materials should include materials that provide good role and good deed

models and attitudes that foster a sense of civic morality. Examples are: Lives of our early founders, great Americans of the past and present, the great documents which were the basis of the heritage of America, notable statements of principle by recent minds that emphasize devotion to ethical and moral values; and be it further

Resolved, That this program should not require a separate course designation with its own block of time in a school period. It could, however, be an addition to or used in conjunction with all areas of the curriculum with special emphasis in Social Studies or American History. To be useful, though, it would need to be treated as a distinct element of each course with its own resources and its own unique implementation format. This type of "values" program will serve to foster a respect for high standards of conduct and help students make effective value judgments, and to familiarize them with their "place in the world"; and be it further

Resolved, That it is the sense of the General Assembly that the type of "values education" described is desirable from the point of view of elevating the general ethical and moral standards of our future citizens; and be it further

Resolved, That copies of this Resolution be sent to the Acting Governor, the Honorable Blair Lee III; the President of the State Department of Education, the Honorable Richard Shifter, P.O. 8717, Baltimore-Washington International Airport, Baltimore, Maryland 21240; and the State Superintendent of Schools, Dr. David W. Hornbeck, P.O. Box 8717, Baltimore-Washington International Airport, Baltimore, Maryland 21240; and be published generally throughout the State.

Mr. RANDOLPH. Mr. President, the individual child identifies with a home, a community, and a school. However, the environmental quality of the home and the school varies greatly and impacts the child's attitude and outlook on life accordingly. The school is a significant common denominator shared by young people.

Thomas Jefferson said:

It is important not to change basic values, but only to change our approach to the subject.

"Going back to basics" has a new connotation. It is no longer enough to be able to read, write, and calculate, but we must strive to be practicising citizens who contribute to strengthening our heritage, our cultures, our beliefs, our purposes. Yes, the whole person.

The introduction of historical personalities as "role models"—men and women who have had a dominant part in forming our country—is a viable way of teaching values. The inclusion of men and women of such insight and character challenges the learner to determine for himself or herself what really matters and to participate in building a worthwhile career, and indeed, a better America.

Values can be taught through examples. Those men and women of our earlier, formative periods of history were not without blemish, but they were inherently honest. They had the interest of their country as a source of individual strength.

We quest for truth. We search for the answers and often we find, as we study, the past events which brought our Nation into being, and those traits of character which we can emulate.

We are people who gain strength from lessons of our pioneers. We owe to them a tremendous debt of gratitude.

On the eve of the Battle of Trenton, N.J., Gen. George Washington was attempting to assess strengths within a small tattered and battered band of patriots. The signs pointed to victory for the British on the morrow. General Mercer was assigned to check on hospital and medical supplies. He reported to the Commander-in-Chief: "We have no medicine. We have no food. We have not a bandage fit to be used.

"But we have," he concluded, "our faith."

So let us have "role models" who emphasize that how you do something is as important as what you do. Let us challenge the student to take risks to achieve a goal.

In every area of our country—within each State, county, and community—there are values of history that can be brought to the attention of our youth. Although we are a diverse people, we Americans join together in the knowledge that it was the desire for freedom that brought our country into existence.

The State of Maryland will be the first to create a Values Education Commission. The flame of faith is now aglow in "The Free State." May other States see the light and feel its warmth.

UNANIMOUS-CONSENT AGREEMENT—NAVIGATION DEVELOPMENT ACT, H.R. 8309

Mr. ROBERT C. BYRD. Mr. President, I have cleared this with the leadership on the minority side and with Mr. LONG, Mr. GRAVEL, Mr. DOMENICI, Mr. DANFORTH, Mr. ALLEN, Mr. MELCHER, and other Senators.

I ask unanimous consent that at such time as H.R. 8309, Calendar No. 459, the Navigation Development Act, is called up before the Senate, there be 7 hours on the bill, to be equally divided among Mr. RANDOLPH or his designee and Mr. LONG, on this side, and the minority leader or his designee, on the other side of the aisle, for the opposition; that Mr. CRANSTON have 1 hour on the bill, under his control; that there be a time limitation on any amendment of 1 hour, with the following exceptions: 3 hours on an amendment by Mr. DOMENICI, 3 hours on an amendment by Mr. DANFORTH, 3 hours on an amendment by Mr. LONG, 2 hours on any amendment to the Domenici amendment, 70 minutes on an amendment by Mr. GRAVEL, 70 minutes on an amendment by Mr. MELCHER, and 70 minutes on each of three amendments by Mr. ALLEN; 30 minutes on debatable motions, appeals and points of order submitted and that rule 12, paragraph 3, be waived; that the agreement be in the usual form.

Provided, further, that if the bill should be called up on next Tuesday, no amendments on user fees or with respect to lock and dam 26 be eligible to be called up on that day; also in the "if" proviso, that the final disposition of the bill occur no later than 2 p.m. on Thursday.

The PRESIDING OFFICER. Is there objection?

Mr. BELLMON. Mr. President, reserving the right to object, the distinguished majority leader has stated that this has been cleared on the minority side?

Mr. ROBERT C. BYRD. Yes, it has.

Mr. BELLMON. I have no objection, Mr. President.

The PRESIDING OFFICER. Without objection, it is so ordered.

The text of the agreement follows:

Ordered, That when the Senate proceeds to the consideration of H.R. 8309 (Order No. 459), an act authorizing certain public works on rivers for navigation, and for other purposes, debate on any amendment (except on one amendment each by Senators Domenici, Danforth, and Long, on each of which there shall be 3 hours; on any amendment to Senator Domenici's amendment, on which there shall be 2 hours each; and on one amendment each by Senators Gravel and Melcher, and on 3 amendments by Senator Allen, on each of which there shall be 70 minutes) shall be limited to 1 hour, to be equally divided and controlled by the mover of such and the manager of the bill, and debate on any debatable motion, appeal, or point of order which is submitted or on which the Chair entertains debate shall be limited to 30 minutes, to be equally divided and controlled by the mover of such and the manager of the bill: Provided, That in the event the manager of the bill is in favor of any such amendment or motion, the time in opposition thereto shall be controlled by the minority leader or his designee: Provided further, That no amendment that is not germane to the provisions of the said bill shall be received.

Ordered further, That on the question of final passage of the said bill, debate shall be limited to 7 hours, to be divided with 3 hours to be jointly shared by the Senator from West Virginia (Mr. Randolph) and the Senator from Louisiana (Mr. Long), or their designees; with 3 hours to be under the control of the Senator from Tennessee (Mr. Baker), or his designee; and with 1 hour to be under the control of the Senator from California (Mr. Cranston): Provided, That the said Senators, or any of them, may, from the time under their control on the passage of the said bill, allot additional time to any Senator during the consideration of any amendment, debatable motion, appeal, or point of order.

Ordered further, That if the said bill is called up on Tuesday, May 2, 1978, no amendments relative to user fees or lock and dam No. 26 shall be in order on that day.

Ordered further, That if the said bill is called up on Tuesday, May 2, 1978, the final vote thereon shall occur no later than 2:00 p.m. on Thursday, May 4, 1978.

TRANSFER OF TIME-LIMITATION AGREEMENT

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the time agreement on S. 743, Calendar No. 671, the "Dealer Day in Court" bill, be transferred to the companion bill, H.R. 130, Calendar No. 670. This request has been cleared on both sides.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR CONSIDERATION OF H.R. 8309 ON TUESDAY, MAY 2, 1978

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that on Tuesday, May 2, following the recognition of the two leaders under the standing order, or in the event orders for the recognition of Senators have been entered in

the meantime, then following such special orders, the Senate proceed to the consideration of calendar order No. 459, H.R. 8309, which is the waterway users bill.

The PRESIDING OFFICER. Without objection, it is so ordered.

TIME-LIMITATION AGREEMENT—S. 2146

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that on S. 2146, Calendar No. 687, the Consolidated Farm and Rural Development Act, there be a time limitation agreement as follows:

Two hours on the bill, to be equally divided between the Senator from Georgia (Mr. TALMADGE) and the Senator from Nebraska (Mr. CURTIS);

One hour on any amendment, 30 minutes on any amendment in the second degree, debatable motion, appeal, or point of order if such is submitted to the Senate;

Two hours on an amendment by the Senator from Maine (Mr. MUSKIE);

That the agreement be in the usual form;

That the measure not be called up before Monday, May 1; and

That any rollcall votes ordered to be voted on that bill or in relation thereto be voted back to back, at a time to be designated on Tuesday, May 2, such time to be decided by the close of business on Monday.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR RECESS UNTIL 10 A.M. TOMORROW

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that when the Senate completes its business today it stand in recess until the hour of 10 o'clock tomorrow morning.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR EXECUTIVE SESSION TOMORROW

Mr. ROBERT C. BYRD. Mr. President, is there an order for recognition of a Senator tomorrow?

The PRESIDING OFFICER (Mr. LEAHY). The Senator from Vermont (Mr. LEAHY) has an order for recognition tomorrow morning.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that following the recognition tomorrow of the distinguished Senator from Vermont (Mr. LEAHY), who now presides over the Senate, the Senate go into executive session to proceed with the consideration of the nomination of Mr. Charles Luna, of Texas, to be a member of the Board of Directors of the National Railroad Passenger Corporation.

The PRESIDING OFFICER. Without objection, it is so ordered.

VITIATION OF ORDER FOR RECOGNITION OF SENATOR LEAHY ON TOMORROW

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the recognition of Mr. LEAHY on tomorrow for 15 minutes be vitiated.

The PRESIDING OFFICER (Mr. LEAHY). Without objection, it is so ordered.

The Chair thanks the distinguished majority leader.

RECESS UNTIL 10 A.M. TOMORROW

Mr. RANDOLPH. Mr. President, if there be no further business to come before the Senate, I move, in accordance with the previous order, that the Senate stand in recess until 10 a.m. tomorrow.

The motion was agreed to; and at 6:21 p.m., the Senate recessed until tomorrow, Thursday, April 27, 1978, at 10 a.m.

HOUSE OF REPRESENTATIVES—*Wednesday, April 26, 1978*

The House met at 2 o'clock p.m.

The Chaplain, Rev. Edward G. Latch, D.D., offered the following prayer:

The hour cometh and now is when the true worshipers shall worship the Father in spirit and in truth.—John 4: 23.

O God, our Father, with bowed heads we pause at the beginning of this day's duties to lift our spirits unto Thee unto whom all hearts are open, all desires known, and from whom no secrets are hid. Cleanse the thoughts of our hearts by the inspiration of Thy holy spirit that we may fervently love Thee and faithfully seek to do Thy will in our service to our country.

We come disturbed by the troubles of our time, perplexed by persistent problems, worn out with worries and tempted to yield to the temptations that try our souls. Give us the strength to carry on and the courage to stand up for what is right that we may keep our honor bright, our love loyal, our patriotism high, and our faith undimmed. Send us out into this day strong in Thee and in the power of Thy love. Amen.

THE JOURNAL

The SPEAKER. The Chair has examined the Journal of the last day's proceedings and announces to the House his approval thereof.

Is there objection to the approval of the Journal?

Mr. RUSSO. Mr. Speaker, I object.

The SPEAKER. Objection is heard.

The question was taken; and the Speaker announced that the yeas appeared to have it.

The question is on the approval of the Journal.

Mr. RUSSO. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 382, nays 9, answered "present" 1, not voting 42, as follows:

A motion to reconsider was laid on the table.

MESSAGE FROM THE PRESIDENT

A message in writing from the President of the United States was communicated to the House by Mr. Chirdon, one of his secretaries.

MESSAGE FROM THE SENATE

A message from the Senate, by Mr. Sparrow, one of its clerks, announced that the Senate had passed a bill of the following title, in which the concurrence of the House is requested:

S. 2552. An act to amend the act of July 19, 1940, relating to travel in the United States, to authorize additional appropriations.

The message also announced that the Senate further insists upon its amendments to the bill (H.R. 6782) entitled "An act to permit marketing orders to include provisions concerning marketing promotion, including paid advertisement, of raisins and distribution among handlers of the pro rata costs of such promotion," disagreed to by the House; agrees to a further conference asked by the House on the disagreeing votes of the two Houses thereon, and appoints Mr. TALMADGE, Mr. EASTLAND, Mr. MCGOVERN, Mr. ALLEN, Mr. HUDDLESTON, Mr. DOLE, Mr. YOUNG, and Mr. CURTIS to be the conferees on the part of the Senate.

BREZHNEV'S NOTHING OFFER

(Mr. SIKES asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. SIKES. Mr. Speaker, the Brezhnev offer to stop building neutron bombs in return for a similar concession for the United States borders on the ludicrous. Russia does not have a neutron bomb. The United States does. Russia is offering us something they do not have in return for something in being which is very important to the Western Powers. Russia does not need a neutron bomb. The United States and our NATO allies do. The neutron bomb is primarily a defensive weapon. It can be effective in blunting a massive enemy attack, particularly one spearheaded by armor.

The neutron bomb is a one-of-a-kind weapon. It kills by radiation, not by concussion or from wounds. It does not destroy buildings and other permanent structures.

It is delivered by artillery shells fired from a 105 millimeter artillery piece. That means it has a very high degree of accuracy and its delivery is not affected by weather. The overwhelming superiority of Russian tanks and armored personnel carriers make it extremely important that the NATO and U.S. forces have more effective defense weapons.

President Carter has indicated that he may halt the U.S. program. This development has disturbed our allies and upset our military leaders. The Russians obviously are moving to take advantage of the situation with a nothing offer.

PERMISSION FOR COMMITTEE ON GOVERNMENT OPERATIONS TO FILE REPORT

Mr. FASCELL. Mr. Speaker, I ask unanimous consent that the Committee on Government Operations may have until midnight tonight to file a report.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Florida?

There was no objection.

THE IMMIGRATION PROBLEM OF LEV FURMAN

(Mr. HYDE asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. HYDE. Mr. Speaker, as part of the ongoing "Vigil for Freedom" we in the House are undertaking on behalf of Soviet Jews, I would like to discuss the emigration problem facing Lev Furman, a 30-year-old "refusnik" from Leningrad.

Mr. Furman, a radio engineer by profession, has not been able to find work in his field since applying for an exit visa in May of 1974.

In April 1977, authorities stepped up their usual methods of harassing the Furman family by arresting Mr. Furman's ailing father, a 68-year-old cancer patient. Authorities claim he was arrested and jailed because neighbors complained about him. Friends of the Furman family are convinced that the arrest was a punishment for allowing his son to apply for an exit visa to Israel.

Lev Furman is one of nine teachers of Hebrew conducting special seminars in Leningrad. Recently, the President of Israel awarded him the Shazar Prize for "education in absentia." The Soviets, obviously, were not impressed. On July 15, 1977, the militia burst into the apartment of a friend while Lev was giving his weekly Hebrew lesson. They recorded the names of the six people present and took Lev to the police station. Three days later, he was sentenced to 10 days detention for "obstruction."

Lev Furman is but one of thousands of Soviet Jews whose only crime is a desire to live in freedom.

ANNUAL REPORT OF SECRETARY OF INTERIOR IN ACCORDANCE WITH FEDERAL COAL MINE HEALTH AND SAFETY ACT OF 1976—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES

The SPEAKER pro tempore laid before the House the following message from the President of the United States; which was read and, without objection, together with the accompanying papers, referred to the Committee on Education and Labor:

To the Congress of the United States:

In accordance with Section 511(a) of the Federal Coal Mine Health and Safety Act of 1976, I hereby transmit to you the Annual Report of the Secretary of the Interior.

Part I of the report details the activities of the Mining Enforcement and Safety Administration. Part II describes the mining research activities of the Bureau of Mines.

The report covers a period of time before I took office.

JIMMY CARTER.

THE WHITE HOUSE, *April 26, 1978.*

ARMS CONTROL AND DISARMAMENT AGENCY AUTHORIZATIONS

Mr. ZABLOCKI. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 11832) to authorize appropriations for fiscal year 1979 under the Arms Control and Disarmament Act.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from Wisconsin (Mr. ZABLOCKI).

The motion was agreed to.

IN THE COMMITTEE OF THE WHOLE

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill, H.R. 11832, with Mr. PATTISON of New York in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

The CHAIRMAN. Under the rule, the gentleman from Wisconsin (Mr. ZABLOCKI) will be recognized for 30 minutes, and the gentleman from Michigan (Mr. BROOMFIELD) will be recognized for 30 minutes.

The Chair recognizes the gentleman from Wisconsin (Mr. ZABLOCKI).

Mr. ZABLOCKI. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, the bill before us, H.R. 11832, has but one purpose—to authorize the appropriation of $18,395,000 for fiscal year 1979 operations of the Arms Control and Disarmament Agency. The bill was unanimously supported by the Committee on International Relations.

Mr. Chairman, the bill authorizes the appropriation of $2 million more than was originally requested by the administration. The increase approved unanimously by the Committee on International Relations reflects the committee's interest in supporting the Arms Control and Disarmament Agency as a vigorous advocate for arms control within the executive branch.

The bill makes two changes in the authorization legislation proposed by the administration:

First, it provides $1 million to be used to support the safeguards programs and activities of the International Atomic Energy Agency. This continues the upgraded support of IAEA activities mandated by Congress in last year's authorization.

Second, H.R. 11832 provides $1 million to cover projected increases in the cost of the SALT negotiations caused by a significant devaluation of the dollar against the Swiss franc in early 1978. This 1978 devaluation had not been taken into account when ACDA submitted its authorization request to OMB late last year. As a result of its oversight reviews, the committee found it desirable to add the needed funds to enable ACDA to support ongoing SALT negotiations at their current level in the face of the dollar depreciation.

This brings me to a brief discussion of some of the responsibilities the Congress has given to ACDA in recent years.

Congress has a constitutional responsibility to share in the formulation of our national security policy. In order to fulfill that role properly, it needs information on proposed defense and other nonweapons programs that affect the national security of the United States. It also needs information on the ability of the United States to monitor compliance with existing arms control agreements as well as arms control proposals that are made by or received by our Government.

In this respect, Congress has given ACDA two important responsibilities in these areas.

First, Congress enacted 2 years ago section 36 of the Arms Control and Disarmament Act requiring arms control impact statements. Earlier this year on March 13, Congress received detailed arms control impact statements on more than 70 programs for fiscal year 1979. Most unfortunately, these statements were submitted 7 weeks late diminishing their utility this year. On the positive side, however, this year's statements are generally well written, informative, and sufficiently analytical to provide new and useful insights into the arms control implications of defense and other programs that affect arms control policy and negotiations in the future.

Second, last year Congress gave ACDA additional responsibilities in the area of verification of arms control agreements. The committee received several briefings and reports over the last year bearing on the responsibilities of ACDA as required under section 37 of the Arms Control and Disarmament Act. On February 23 and March 24, 1978, the committee received a classified report on the verifiability of proposals made by the parties to the strategic arms limitation talks. In addition, some of the arms control impact statements submitted to Congress deal extensively and objectively with verification issues and problems, and present judgments as to the degree of verifiability of several significant arms control proposals via national technical means.

In closing, Mr. Chairman, I want to remind my colleagues that H.R. 11832, which received unanimous approval by the Committee on International Relations, enables ACDA to effectively discharge its necessary responsibilities to conduct a variety of arms control negotiations and to maintain U.S. national security interests.

The $18,395,000 this bill authorizes represents three one-thousandths of 1 percent of the total budget authority for fiscal year 1979. In fact, the long-term effect of this expenditure could be to the economic benefit of the United States if, by a more successful arms control policy, unnecessary or destabilizing weapons proposals can be avoided or delayed, thereby contributing to legitimate U.S. national security requirements and interests.

Finally, Mr. Chairman, as to the ongoing SALT negotiations, I want to assure my colleagues that any SALT agreement will be carefully and fully scrutinized by the Committee on International Relations before any approval is granted by the Congress. As chairman of the full committee and the Subcommittee on International Security and Scientific Affairs, which has jurisdiction over SALT, I pledge to continue to have briefings and conduct oversight hearings in the future as the SALT negotiations progress.

Mr. Chairman, I urge favorable consideration of this measure before us today, and I reserve the balance of my time.

The CHAIRMAN. The Chair recognizes the gentleman from Michigan (Mr. BROOMFIELD).

Mr. BROOMFIELD. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, the legislation we have before us today provides the Arms Control and Disarmament Agency with an authorization of appropriations which will permit the Agency to participate in a variety of arms control negotiations including the strategic arms limitation talks in Geneva. Among other things, the ACDA authorization for fiscal year 1979 also allows the Agency to improve nuclear safeguard programs worldwide as well as to meet its new statutory responsibilities required by nuclear nonproliferation legislation.

I believe that the strategic arms negotiations are important to the security of our country—and must be continued. In negotiating SALT, however, I would hope that the Arms Control Agency will be able to assure the American people that the Soviets are cooperating on issues worldwide before we can, with confidence, conclude any new agreements.

The Soviet Union's manifest escalation of the arms race—its lack of sincerity in arms control—its intervention in Africa—should make us all, including the Arms Control Agency, wary of Soviet intentions. Of particular concern should be recent Soviet actions in Africa which are hardly conducive to the building of confidence and trust so sorely needed in the United States–Soviet relationship and its keystone—the strategic arms talks.

The spreading Soviet-Cuban influence on the African Continent began in Angola with Cubans fighting blacks to preserve a regime lacking popular support. With the war in the Horn, the Soviets have continued their designs and they are now as some speculate, beginning to turn their attention to Rhodesia. Ethiopia could very well serve as a staging area from which Cubans can attack the black majority in Rhodesia.

As for recent Soviet sincerity in arms control—while the Russians have engaged in talks to reduce arms in central Europe. They have continued to build up the military in the Warsaw Pact—while the Soviets have engaged in strategic arms negotiations, they have continued to improve their strategic strike capabilities, given this recent record in the maintenance of international security and peace, can we indeed trust the Soviet Union in negotiating a new strategic arms agreement?

It is for these very reasons that I ask the Arms Control Agency, to the fullest extent possible, to move with patience and caution—with an awareness and a mindfulness of Soviet intentions as well as U.S. strategic capabilities—in attempting to conclude a new strategic arms agreement.

To be sure, the Arms Control and Disarmament Agency is a necessary organi-

zation—an organization worthy of a continuing authorization. In the past year, however, I have been troubled by the Agency's inability—or perhaps reluctance—to firmly and consistently respond, at the negotiating table, to Soviet political and military objectives worldwide. As a result, while I support this year's authorization for the Arms Control and Disarmament Agency, I do so with some reluctance.

I noted with considerable interest that former Secretary of State Henry Kissinger expressed some of the same concerns about the sincerity of Soviet intentions in a speech on April 19 before the International Radio and Television Society in New York City. Following are excerpts from Secretary Kissinger's speech:

EXCERPTS FROM INFORMAL REMARKS DELIVERED TO THE INTERNATIONAL RADIO AND TELEVISION SOCIETY

I would like to apply these considerations to one area which probably will not loom as large in the question period as I suspect the Middle East will, namely the problem of Africa.

In 1975 the Soviet Union for the first time introduced enormous quantities of military equipment and later Cuban expeditionary forces in an area about as far away from the Soviet Union as it is possible to be, in Angola. At that time we had no particular preference between the various factions that were fighting for control of the government in Angola. But we did believe that the introduction of proxy troops and of a billion dollars worth of military equipment, more than all the rest of the world was giving to all the rest of Africa put together, would create a problem that would make future solutions that much more difficult. We were prevented from doing what was necessary, which did not involve any American forces, by the Congress at the time.

In recent months, we have seen once again in Ethiopia another billion dollars worth of Soviet equipment and another twenty thousand Cuban troops, again in areas of no conceivable historic interest for either of those countries, and now we are dealing no longer with a local Africa situation but with a geopolitical challenge.

The move into Ethiopia cannot be analyzed in terms of the quarrels between Somalia and Ethiopia. Nor is the issue primarily who crossed the border first. The first thing to notice is that Soviet equipment went first to Somalia, a country that had put forward claims on the territory of all its neighboring states; Soviet equipment was thus guaranteed to be used in an expansionist way. And then when that equipment was used for the precise purpose that Somalia had always asked for it, the Soviet Union switched sides and became the defender of the territorial integrity which its own equipment had threatened to begin with. And seventeen thousand Cuban troops and a billion dollars worth of Soviet equipment went into Ethiopia.

It is too cynical to be asked to accept the proposition that what is involved here is the unselfish Soviet desire to respond to the appeal of a sovereign country. The Soviet purpose is geopolitical: to outflank the Middle East, to demonstrate that the US cannot protect its friends, to raise doubts in Saudi Arabia right across the Red Sea, in Egypt, in the Sudan, and in Iran. And now we hear that once again we may be facing the threat of Cuban and Soviet intervention in Southern Africa.

Mr. WINN. Mr. Chairman, will the gentleman yield?

Mr. BROOMFIELD. I now yield to the gentleman from Kansas (Mr. WINN).

Mr. WINN. Mr. Chairman, I rise in support of H.R. 11832.

H.R. 11832, which authorizes $18,395,000 for the Arms Control and Disarmament Agency for fiscal year 1979, will allow the Agency to continue to participate in a number of arms control negotiations. With this authorization, ACDA can continue to contribute to the staffing of the comprehensive test ban negotiations, the mutual and balanced force reductions talks, United Nations arms control conferences, the U.S.-U.S.S.R. chemical and radiological weapons negotiations, the Indian Ocean arms control talks, Antarctic Treaty inspections, as well as the strategic arms limitation talks in Geneva.

As you know, the administrative costs of the SALT negotiations are met by ACDA funding. These costs include rent for office space and equipment in Geneva as well as travel and administrative personnel.

In providing an authorization for the operations of the SALT negotiations, I would like to emphasize—with much concern—that the Arms Control Agency be fully responsive to Department of Defense and other agency views. Moreover, I cannot help but note an impression of U.S. weakness in relation to the current strategic arms negotiations. Already the United States has made more than its share of SALT concessions—not to mention the fact that we have unilaterally canceled the B-1 bomber, closed the Minuteman strategic missile production line, and slowed development of the MX mobile missile as well as the Trident submarine and sea-launched ballistic missile programs.

H.R. 11832 also provides ACDA with an authorization of appropriations for nuclear safeguards programs, and can help the Agency meet its new statutory responsibilities required by nuclear nonproliferation legislation in which our committee has taken an intense interest. One-half of the $2-million authorization increase approved by the committee has been earmarked for the purpose of improving nuclear nonproliferation programs through the activities of the International Atomic Energy Agency, which ACDA contributes to. One of the primary purposes of the IAEA is to insure that nuclear material, equipment, or facilities are not used in such a way as to further a country's military causes through the development of nuclear explosives. Through ACDA's contributions, IAEA has been better able to develop and provide for improved nuclear safeguards—safeguards which may better deter the achievement of an unwanted nuclear explosive capability as well as the diversion of that kind of capability to terrorist groups.

In conclusion, I believe that ACDA is a necessary organization—given the many responsibilities that the Agency is fulfilling. In supporting this year's authorization, however, I would again like to reiterate my concerns that ACDA, in receiving its authorization, will be fully responsive to a diversity of arms control views including those of various Government agencies, as well as the Congress.

Mr. BROOMFIELD. Mr. Chairman, I yield such time as he may consume to the gentleman from Illinois (Mr. FINDLEY).

Mr. FINDLEY. Mr. Chairman, the task of the Agency whose funding we authorize today is arms control. Now one important element of arms control is verification. Verification enables nations to limit their strategic arsenals by assuring them that an agreement designed to provide mutual deterrence does not assume a one-sided character. By instilling confidence that observance of accepted terms is strict, verification stimulates nations to seek further arms limitation agreements. Verification, therefore, enhances global stability.

Recent reports from the Arms Control and Disarmament Agency, however, most often subordinate verification to other objectives—concluding a SALT II agreement with the U.S.S.R., for example. One gains the unfortunate impression that ACDA regards verification as an obstacle rather than as a stimulus to arms control.

Particularly distressing is the Agency's approach to verification of the cruise missile. In negotiations with the Soviet Union, the United States has accepted 2,500 kilometer and 600 kilometer range limits on the cruise missile. Yet, cruise missile range limits are unverifiable since the range of a given missile varies according to the amount of fuel it carries, the altitude and the speed at which it flies. Despite our inability to verify observance of the range limits, we have accepted range restrictions clearly disadvantageous to the United States. A 600 kilometer range limit on sea-launched cruise missiles (SLCM's) and ground-launched cruise missiles (GLCM's) makes no military sense to the United States. Although over 50 percent of the U.S. population lives within 600 kilometers of our coastlines, the 600 kilometer range puts most Soviet urban centers beyond the reach of our SLCM's.

But verification is apparently not a constant at ACDA. Although we are urged to accept range restraints disadvantageous to us that are unverifiable, we are also told we must forego the conventional cruise missile because there is no way to distinguish a cruise carrying a conventional warhead from one carrying a nuclear warhead. All cruise missiles must be treated as nuclear which means it is unlikely that we will deploy conventional cruise. We are in the process of reducing to a minimum benefit a weapons system that shows great promise from an arms control standpoint. It is a slow-moving second-strike weapon that could enhance the security of the United States and of our European allies as well as raise the nuclear threshold.

There are other grave difficulties verifying the SALT II agreement being negotiated. Unfortunately, they all seem to work to the great disadvantage of the United States.

How do we verify, for example, that the Soviets do not plan to convert the SS–20 missile into an intercontinental range SS–16 by adding a third stage? Such a conversion could occur with little warning in a period of crisis.

If we agree to accept restrictions on our technology, how do we verify what technological improvements the Soviet Union is making in its weapons systems? What constitutes a technological improvement?

Verification of the Backfire bomber and its rate of production is one more difficulty that works to our disadvantage.

Whether we call it cheating or stretching an agreement to the limit or taking advantage of loopholes, we must not write ourselves into an agreement that will enable the Soviet Union to reveal in a crisis situation that it has altered the strategic arms balance without our knowledge and to our disadvantage. Therefore, I urge my colleagues to consider carefully the role of verification in arms control and the task of this Agency in assuring that verification remains an integral element of arms control. This is something we should all watch closely as the negotiation of a SALT II treaty proceeds.

Mr. BAUMAN. Mr. Chairman, will the gentleman yield?

Mr. BROOMFIELD. I yield to the gentleman from Maryland.

Mr. BAUMAN. I thank the gentleman for yielding.

Mr. Chairman, I want to compliment the gentleman from Michigan (Mr. BROOMFIELD) for his remarks and say that I think a great many Members of the Congress share his concern about the actions of this Agency. It has been my impression, although I do not have the honor to serve on the gentleman's committee, that unilateral disarmament seems to be the theme running through much of the so-called American position in the SALT talks. I am not even sure that the United States has a position at the SALT talks.

While certainly I can understand the gentleman's arriving at the conclusion that this authorization ought to be supported, I personally cannot vote in favor of this legislation because of the disarmament policies adopted by the Carter administration. I think we are closer today to being at a strategic and military disadvantage compared to the Soviet Union than at any time in our history. Much of that weakness stems from this Agency and its totally misguided concept of combating communism and what the Soviet Union seeks to do to the United States.

Mr. BROOMFIELD. Mr. Chairman, I thank the gentleman for this contribution.

Mr. Chairman, I reserve the balance of my time.

Mr. ZABLOCKI. Mr. Chairman, I have no further requests for time.

The CHAIRMAN. If there are no further requests for time, the Clerk will read.

The Clerk read as follows:

H.R. 11832

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 49(a) of the Arms Control and Disarmament Act (22 U.S.C. 2589(a)), is amended to read as follows:

"SEC. 49. (a) To carry out the purposes of this Act, there are authorized to be appropriated for fiscal year 1979 the sum of $18,395,000 (and such additional amounts as may be necessary for increases in salary, pay, retirement, other employee benefits authorized by law, and other nondiscretionary costs) of which $1,000,000 shall be available only for the purpose of furthering the nuclear safeguards programs and activities of the International Atomic Energy Agency. The sum authorized to be appropriated by this subsection shall remain available until expended.".

SEC. 2. The amendment made by the first section of this Act shall take effect on October 1, 1978.

Mr. ZABLOCKI (during the reading). Mr. Chairman, I ask unanimous consent that the remainder of the bill be considered as read, printed in the RECORD, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from Wisconsin?

There was no objection.

AMENDMENT OFFERED BY MR. SIMON

Mr. SIMON. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. SIMON: On page 2, line 3, after the word "Agency" insert ", and of which such sums as may be necessary shall be available to conduct a study of the arms control study centers at academic institutions, and to report the results of such study with possible recommendations to Congress not later than January 31, 1979."

Mr. SIMON. Mr. Chairman, I believe this is a noncontroversial amendment. The committee report points out very properly that there is a problem in our academic centers. They have made and are making significant contributions, but they face problems. I frankly do not know precisely the dimensions of the problem. We do know, for example, that at Stanford University their arms control center has folded. We know there are problems elsewhere.

This simply asks the agency, with no additional authorized sums, to take a look at what is happening at these academic centers and report back to the Congress.

Mr. ZABLOCKI. Mr. Chairman, will the gentleman yield?

Mr. SIMON. I yield to the gentleman from Wisconsin.

Mr. ZABLOCKI. Mr. Chairman, I wish to advise the gentleman that I certainly appreciate the gentleman's courtesy in making the amendment available to the committee. I have studied the amendment very carefully. I wish to say this modest amendment is consistent with the findings of the Subcommittee on International Security and Scientific Affairs which held hearings on the issue and the committee report.

Mr. Chairman, we accept the amendment.

Mr. SIMON. Mr. Chairman, I thank the distinguished chairman.

Mr. BROOMFIELD. Mr. Chairman, will the gentleman yield?

Mr. SIMON. I yield to the gentleman from Michigan.

Mr. BROOMFIELD. Mr. Chairman, I join in complimenting the gentleman from Illinois for the amendment. I think it improves the bill, and we also accept it on the minority side.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Illinois (Mr. SIMON).

The amendment was agreed to.

The CHAIRMAN. Are there further amendments? If not, under the rule, the Committee rises.

Accordingly the Committee rose, and the Speaker pro tempore (Mr. MCFALL) having assumed the chair, Mr. PATTISON of New York, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 11832) to authorize appropriations for fiscal year 1979 under the Arms Control and Disarmament Act, pursuant to House Resolution 1144, he reported the bill back to the House with an amendment adopted by the Committee of the Whole.

The SPEAKER pro tempore. Under the rule, the previous question is ordered.

The question is on the amendment.

The amendment was agreed to.

The SPEAKER pro tempore. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

The SPEAKER pro tempore. The question is on the passage of the bill.

The question was taken; and the Speaker pro tempore announced that the ayes appeared to have it.

Mr. BROOMFIELD. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER pro tempore. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 332, nays 74, not voting 28, as follows:

Brown, Mich.	Leggett	Teague
Conyers	Mann	Thornton
Crane	Mathis	Tucker
Eilberg	Moss	Waxman
Fraser	Nix	Whitley
Frey	Risenhoover	Young, Tex.
Gammage	Roberts	
Howard	Rodino	

The Clerk announced the following pairs:

Mr. Eilberg with Mr. Brown of Michigan.
Mr. Rodino with Mr. Fraser.
Mr. Waxman with Mr. Teague.
Mr. Baucus with Mr. Runnels.
Mr. Risenhoover with Mr. Conyers.
Mr. Roe with Mr. Mathis.
Mr. Crane with Mr. Jones of North Carolina.
Mr. Nix with Mr. Whitley.
Mr. Krueger with Mr. Roberts.
Mr. Breckinridge with Mr. Thornton.
Mr. Mann with Mr. Moss.
Mr. Gammage with Mr. Tucker.
Mr. Howard with Mr. Leggett.

Mr. HILLIS changed his vote from "yea" to "nay."

So the bill was passed.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

GENERAL LEAVE

Mr. ZABLOCKI. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on the bill (H.R. 11832) just passed.

The SPEAKER pro tempore (Mr. McFALL). Is there objection to the request of the gentleman from Wisconsin?

There was no objection.

PUBLIC DISCLOSURE OF LOBBYING ACT OF 1978

Mr. DANIELSON. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the further consideration of the bill (H.R. 8494) to regulate lobbying and related activities.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from California (Mr. DANIELSON).

The motion was agreed to.

IN THE COMMITTEE OF THE WHOLE

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the further consideration of the bill H.R. 8494, with Mr. MEEDS in the chair.

The CHAIRMAN. When the Committee of the Whole rose on Thursday, April 20, 1978, pending was the Committee amendment in the nature of a substitute, which was considered as having been read and open to amendment at any point.

Are there any further amendments to the Committee amendment?

AMENDMENT OFFERED BY MR. DANIELSON

Mr. DANIELSON. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. DANIELSON: Page 28, strike lines 1 through 5, and insert the following:

"(4) The term 'employ' means to use or engage the services of an individual, usually for wages or salary, while retaining the right to control and direct that individual as to the result of the services and the details and means by which the result is accomplished."

Mr. DANIELSON. Mr. Chairman, this amendment is intended to put into being a little bit more workmanlike definition of the term "employ." The term "employ" as used in the bill refers to employment of a person to make lobbying communications. I have served copies of the amendment upon the distinguished ranking minority Member leader and his colleagues on the Republican side of the House.

I respectfully submit that all the amendment does is strike a definition which, actually, is too broad and includes independent contractors as well as employees within the term "employ." What I have substituted in this proposed amendment would be the traditional definition of "employ" which one can find synthesized from Black's Legal Dictionary and Webster's International Dictionary. There is nothing very sensational about it except to present a clear meaning of the word "employ."

AMENDMENT OFFERED BY MR. KINDNESS AS A SUBSTITUTE FOR THE AMENDMENT OFFERED BY MR. DANIELSON

Mr. KINDNESS. Mr. Chairman, I offer an amendment as a substitute for the amendment.

The Clerk read as follows:

Amendment offered by Mr. KINDNESS as a substitute for the amendment offered by Mr. DANIELSON: On page 28, line 3, strike the comma after the word "value" and insert a semicolon.

On page 28, strike the language beginning with the word "but" on line 3 through to the semicolon on line 5.

Mr. KINDNESS. Mr. Chairman, the amendment that I am offering as a substitute for the amendment proffered by the gentleman from California (Mr. DANIELSON) is an amendment that was printed in the RECORD the other day.

The gentleman from California (Mr. DANIELSON) I believe is attempting to meet the problem raised by this amendment that was published in the RECORD, but it fails to do that, and for that reason I offer the amendment originally proposed.

Mr. Chairman, what we have here is a situation in which the term "employ"

was, probably with good intentions, inserted in the full Committee on the Judiciary so as to say the utilization of the services of a volunteer does not come within the term "employ."

We all know that a lot of lobbying is done by people who are volunteers. We know that in a lobbying capacity persons who are frequently before the Congress, and who are frequently in touch with Members of the House as well as Members of the other body, are people who receive no pay from the organization for which they purport to be speaking. Ralph Nader is probably a good example because we cite him more than anyone else, and I believe that to be the case, that, ordinarily, he is acting in behalf of an organization or speaking for an organization, that does not directly pay him something. Therefore, when we say in the bill that "employ" does not include the utilization of the services of a volunteer, we are going too far. The amendment I offer as a substitute simply strikes the words: "but does not include the utilization of the services of a volunteer;".

The gentleman from California (Mr. DANIELSON) has offered an amendment which, frankly, I do not understand and I cannot understand and which uses words unfamiliar in the context of this statute or the proposed statutory language. That amendment says:

The term "employ" means to use or engage the services of an individual, usually for wages or salary—

What does that mean? I do not know what that means.

Mr. DANIELSON. Will the gentleman yield at that point?

Mr. KINDNESS. If I might just finish the sentence in the gentleman's amendment, I will be happy to yield.

It goes on to say:

. . . while retaining the right to control and direct that individual as to the result of the services—

What does that mean, "result of the services"? You cannot control the results of the services.

Grammatically the amendment does not hold together, and the words which I have substituted strike the language and leaves the language as it has been before, and does it on the basis that we will not include volunteers who are frequently used in volunteer lobbying.

Mr. DANIELSON. Will the gentleman now yield?

Mr. KINDNESS. I yield to the gentleman from California.

Mr. DANIELSON. I thank the gentleman for yielding.

I would like to point out that the amendment which I have offered does not say that we control the results of the services. It says that the employer controls and directs the individual, the employee, as to the result of the services and the details.

I would also like to point out that the amendment which I have pending does exclude volunteers. I would also like to point out that one can pay an employee in kind as well as in money. One can hire someone for goods as well as for dollars.

Lastly, I would like to point out that the gentleman's substitute amendment retains within the definition independent contractors. My effort here has been to distinguish between an employee and an independent contractor, who does not belong in this definition.

Mr. KINDNESS. I thank the gentleman for his contribution, which I still say leaves the situation much more cloudy than the language which is in the bill. If we simply strike this, we would be left with the definition of the term "employee" reading as follows:

The term employee means the utilization of the services of an individual or organization in consideration of the payment of money or other thing of value.

The amendment offered by the gentleman from California (Mr. DANIELSON) would strike the language "or other thing of value," and that, I think, is essential to the definition.

Mr. SEIBERLING. Mr. Chairman, I move to strike the last word.

I find myself in agreement with the gentleman from Ohio (Mr. KINDNESS) with respect to the ambiguity of the amendment offered by the gentleman from California (Mr. DANIELSON), but I also find the amendment offered by the gentleman from Ohio to be objectionable, for the reasons stated by the gentleman from California. It seems to me that the language in the committee bill defining employee is quite clear. It is clear that it does not include the services of a volunteer. It is clear that it does include any individual who receives payment of money, or any other thing of value, for his services, and that would include an independent contractor. Therefore, I see no reason to adopt either the amendment offered by the gentleman from California or the substitute amendment offered by the gentleman from Ohio.

Perhaps I have some pride of authorship, since as I recall, I was the one who authored the language which is in the bill. The purpose of offering it and the purpose of the committee in adopting it, based upon the explanations we made at the time, was that we did not want to include volunteers but we did want to include anybody who was hired, whether he was an independent contractor or whether he was an actual employee for hire. So I do not see any reason for either of the two amendments to be adopted, and I would hope that we would stick with the committee language.

Mr. KINDNESS. Mr. Chairman, will the gentleman yield?

Mr. SEIBERLING. I will be glad to yield to the gentleman from Ohio.

Mr. KINDNESS. I thank the gentleman for yielding.

The question that is left, I think, by the language of the bill as it now stands is whether the expenditures would reveal only partial figures, would include transportation, overhead, printing, and things of that sort, other costs. I think the language that is in the bill—for which the gentleman claims authorship, and I believe that is correct—is done the least harm, I believe, by simply striking the last clause that allows the professional volunteers to escape the attention of the reporting process.

The amendment offered by the gentleman from California (Mr. DANIELSON), on the other hand, would eliminate the reporting for all of those other things of value for which people might be paid. I think if we are going to have a bill that covers lobbying disclosure, the burden ought to fairly fall on everyone who does lobbying, and that is what would be accomplished by the substitute amendment.

Mr. SEIBERLING. If the gentleman will yield back my time, I would simply like to say that the core of the bill, the definition of "employee," is the fact that it does exclude the services of a volunteer, and if we change that, then we make a considerable change in the thrust of this bill, which would make it even harder for a lot of us to vote for it.

Mr. MOORHEAD of California. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I rise in support of the substitute amendment. Under the terminology in the bill as it is written now, subparagraph (4) reads:

(4) the term "employ" means the utilization of the services of an individual or organization in consideration of the payment of money or other thing of value, but does not include the utilization of the services of a volunteer;

All the substitute amendment does is to strike out the last clause ", but does not include the utilization of services of a volunteer". What it leaves in the bill is the requirement that the individual receives money, or other thing of value. I believe that if the individual doing the work receives money or other thing of value, he should be included.

For that reason, I support the substitute amendment.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Ohio (Mr. KINDNESS) as a substitute for the amendment offered by the gentleman from California (Mr. DANIELSON).

The amendment offered as a substitute for the amendment was rejected.

The CHAIRMAN. The question is on the amendment offered by the gentleman from California (Mr. DANIELSON).

The amendment was rejected.

AMENDMENTS OFFERED BY MR. SANTINI

Mr. SANTINI. Mr. Chairman, I offer amendments, and ask unanimous consent that they be considered en bloc.

The CHAIRMAN. The Clerk will report the amendments.

The Clerk read as follows:

Amendments offered by Mr. SANTINI: Page 45, insert the following new section after line 10 and redesignate succeeding sections accordingly:

STUDY OF CERTAIN LOBBYING COMMUNICATIONS

SEC. 12. The General Accounting Office shall conduct a study of lobbying communications made by Federal, state and local units of government and associations of state or local elected officials, in order to determine whether the provisions of this Act should apply equally to all such entities. The office on shall, not later than January 1, 1979, sub-

mit a report to the Congress containing the findings of such study and containing legislative recommendations in accordance with such findings.

Page 46, line 4, strike out "subsection (b)" and insert in lieu thereof "subsection (b) and (c),".

Page 46, insert the following new subsection after line 10:

(c) Associations of state and local elected officials shall be subject to the provisions of this Act on January 1, 1980.

The CHAIRMAN. Is there objection to the request of the gentleman from Nevada?

There was no objection.

Mr. SANTINI. Mr. Chairman, I rise to offer an amendment to this bill. This new amendment will not exempt any group from coverage under the bill. It will not provide a loophole or allow favoritism for any lobbying organization.

What this amendment *will* do, is provide an opportunity for this Congress to take a closer examination of the form and substance of communications among the various governments in the federal system—Federal, State, and local.

The amendment differs substantially from the one I proposed last week. In this amendment, I simply call for a report on Governmental lobbying from the staff of the prestigious Advisory Commission on Intergovernmental Relations. It would be completed by the end of this year. I further provide in the amendment that Congress would have one year from that time to consider the findings of that study before the provisions of this bill would apply to associations of State and local elected officials.

Permit me to stress two important points about this amendment. First, this act will apply to these associations of Governors, legislators, and local officials unless Congress acts affirmatively to exempt them prior to 1980.

Second, this amendment applies only to associations of elected officials. I believe that the questions raised by my colleagues about the scope of the definition of "appointed" officials were well taken, and I have limited this amendment to associations of elected officials to avoid any confusion.

Mr. Chairman, I believe that this amendment is in the best interests of sound intergovernmental relations, and does not do violence to the spirit of this act. I have consulted with the affected associations, and they have offered their support for the amendment. Furthermore, the Advisory Commission on Intergovernmental Relations has already agreed to conduct this study.

During the consideration of this bill last week, I was visited by a city commissioner and State assemblyman from Nevada, and they expressed wholehearted support for the amendment. They agree with me that unless an analysis of this entire range of governmental lobbying is studied, the result will be law that treats the States, cities, and counties unequally. These Nevada officials know that under the bill as reported from the Judiciary Committee elected officials are exempt, but not their associations. While that is fine for entities who can afford to hire Washington representatives to lobby, it discriminates against the poor counties and cities in my State, who must rely on associations to lobby for them.

I urge support for this amendment.

Mr. BROOKS. Mr. Chairman, will the gentleman yield?

Mr. SANTINI. I am happy to yield to the gentleman from Texas.

Mr. BROOKS. Mr. Chairman, I want to say to my distinguished friend, the gentleman from Nevada, that I am pleased he has changed his amendment. It is a vast improvement over the previous version.

It is true the amendment does let those "big tigers" out of the cage for 1 year, but it also means they will be back in unless an impartial General Accounting Office gives some justification for further exemption and Congress acts to do so.

Mr. Chairman, I want to thank the gentleman for his own personal concern and awareness of the broadness of the problems that confront the Congress in dealing with this matter.

Mr. SANTINI. Mr. Chairman, I thank the gentleman for his remarks.

Mr. MOORHEAD of California. Mr. Chairman, I move to strike the last word, and I rise in opposition to the amendment.

Mr. Chairman, we have debated this subject over and over again in committee, in subcommittee, and on the floor.

This is another means that is used to try to exclude certain organizations from coverage by this legislation. It is hoped, of course, that by delaying this for 1 year, it could probably be brought up at a time without other people being involved in this legislation, and then they could be totally excluded.

I think when we start excluding organizations and individuals from lobbying reporting requirements on an extensive basis and from coverage under this bill, we are putting an onerous burden on all those who are covered, and we are starting to get a lineup of people who want to get out of coverage for one reason or another. I think it would be a mistake to exclude these organizations, even though they are fine organizations and are doing a very worthwhile work and even though that exclusion is only for the period of 1 year during a study. I am concerned that that 1 year will be expanded far beyond 1 year and far beyond into the future.

Mr. Chairman, I am sure, if that happens, they would be totally excluded in the future as they are at this time.

Mr. SANTINI. Mr. Chairman, will the gentleman yield?

Mr. MOORHEAD of California. I am happy to yield to the gentleman from Nevada.

Mr. SANTINI. Mr. Chairman, I thank the gentleman for yielding.

Would the gentleman not agree at this point that the entities identified to be excluded for this 1 year from the provisions of this bill are already reporting far more in the way of published detail and information then is required under this bill?

Would the gentleman not agree that that if disclosure is the essential purpose and function of whatever it is we have been grappling with here this afternoon and last week these entities are already disclosing far more information than is required in the bill, and therefore, it is logical at least to have a study period to determine whether or not they should be included in those provisions?

Mr. MOORHEAD of California. Mr. Chairman, I believe that once we pass this legislation every organization that lobbies should be reporting to the same places. In other words, an individual who wants to find out about lobbying activities should be able to come to one place and discover what these organizations or individuals are required to disclose.

When we start dividing it out according to what somebody is now required to disclose and what others are not required to disclose, we end up with a very confusing situation. I imagine a lot of this information is disclosed at the present time, but perhaps if we get this legislation through, we can guarantee that the disclosures should be made through the process we are setting up here. That is the Lobby Disclosure Act, and it should be under this act that information is disclosed.

Mr. RAILSBACK. Mr. Chairman, I move to strike the requisite number of words, and I rise in opposition to the amendment.

Mr. Chairman, I wish to state that I agree with the remarks of the gentleman from California (Mr. MOORHEAD).

This amendment would have the effect, as I understand it, of actually delaying the effective date as the lobbying bill would relate to associations of State and local elected officials. I think that would be a mistake.

As I said before, what we are trying to do is this: We are trying to paint everybody with the same brush. We are trying to treat everybody very fairly; we are trying to treat everybody very equally.

We are talking about organizations that, for $2,500 per quarter, actually retain somebody to lobby for them or who have in their employ an employee who actually works for 13 days or two employees who work for 7 days each.

So, Mr. Chairman, I would hope, even though I have the greatest respect for the gentleman from Nevada (Mr. SANTINI), that we would not adopt his amendment.

Mr. DANIELSON. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I wish to ask the gentleman from Nevada (Mr. SANTINI) a question.

I have in my hand a copy of the gentleman's amendment which I received from him 4 or 5 days ago, and in the gentleman's communication reference was made to the Advisory Commission on Intergovernmental Relations. I have another one now in which we have the General Accounting Office mentioned.

Except for that change, is there a difference in the amendment?

Mr. SANTINI. There is no difference. The General Accounting Office is the entity that will conduct this study.

Mr. DANIELSON. No difference except for that?

Mr. SANTINI. That is right.

Mr. DANIELSON. Mr. Chairman, I would like to state that I associate myself fully with the remarks of the ranking minority member, the gentleman from California (Mr. MOORHEAD), and the remarks of our distinguished colleague, the gentleman from Illinois (Mr. RAILSBACK), in opposition to the amendment.

AMENDMENTS OFFERED BY MR. KINDNESS AS A SUBSTITUTE FOR THE AMENDMENTS OFFERED BY MR. SANTINI

Mr. KINDNESS. Mr. Chairman, I offer amendments as a substitute for the amendments.

The Clerk read as follows:

Amendments offered by Mr. KINDNESS as a substitute for the amendments offered by Mr. SANTINI: On page 32, strike lines 22–25, and on page 33, strike lines 1–6, and insert the following in lieu thereof: "or appointed officials, a State college or university as described in section 511(a)(2)(B) of the Internal Revenue Code of 1954, group of organizations, or group of individuals (excluding any Federal department or agency, Indian tribe, any national or State political party and any organizational unit thereof, and any association comprised solely of Members of Congress or Members of Congress and congressional employees), and with respect to the activities of its Washington representative, a State or unit of local government; and".

On page 33, after line 12, insert the following new definition:

"(13) The term "Washington representative" means any agent or employee of a State or unit of local government who maintains a business address in the standard metropolitan statistical area which includes the city of Washington, District of Columbia, and whose function includes making lobbying communications.".

Mr. KINDNESS. Mr. Chairman, the amendment that is offered as a substitute in this case goes in the opposite direction from the amendments offered by the gentleman from Nevada (Mr. SANTINI). Indeed, if we start to create exceptions and exemptions beyond what are already contained in the bill, I think we are in trouble. We will not have a lobbying disclosure bill that is worth anything. But, in fact, this substitute amendment goes in the other direction. This amends the definition of "organization" to make it clear that Washington-based lobbyists for State and local governments will have to register and report under this statute.

The definition of the term "organization" is crafted to avoid coverage of the Washington offices of mayors, Governors, and other State and local officials. As is widely known, these offices exist for the primary purpose of lobbying for legislation. Lobbyists for local governments look like, talk like, act like, and think like any other lobbyists. Furthermore, they work on the same legislation. If a lobbying disclosure bill is to paint an accurate portrait of influences on legislation, these groups cannot be excluded from coverage. Clearly, the geographic exemption would exclude contacts by these people to their own representatives. When these lobbyists communicate with other Members of Congress, however, their activities should be reported.

It should be emphasized that Governors, mayor, State legislators, State and local civil servants will not have to register and report under this amendment in their individual capacities.

Mr. Chairman, I would like to point out that if we looked in the telephone book of the District of Columbia, we will find quite a number of States listed, and their offices. They are found on page 11359 of the telephone book, and you will find the State of Alaska; Connecticut; Florida; Illinois; Illinois Department of Business and Economic Development; the Stateof Maine; the State of Michigan; Minnesota; Montana; New Jersey; Ohio; South Carolina; the State of South Carolina has another office; and the State of Wisconsin. You will find many cities listed throughout the phone book.

An article in the April 26 issue of The New York Times points out: "Eight Units Lobby for New York in Washington."

In pursuit of golden Federal grants and favorable legislation for New York State, New York City and various subdivisions thereof, eight separate offices are now operating full-tilt in the capital. At latest count 38 people are in lobbying in the spirit of "Excelsior" (ever upward), the New York State motto.

If there is purpose for this legislation at all, it certainly includes all those who do lobbying. The gentleman from Nevada has offered an amendment that would take out from under the coverage of the bill those State and local governmental officials who join together in an organization to lobby. I think we should leave them covered as the bill does now, and go a step further and include the rest of those who do indeed lobby for local and State governments. It is not saying that they cannot do it; it is only saying that they report like everyone else.

Mr. Chairman, I would urge that the substitute be supported for that reason.

Mr. SANTINI. Mr. Chairman, will the gentleman yield?

Mr. KINDNESS. I yield to the gentleman from Nevada.

Mr. SANTINI. I appreciate the gentleman's emphasis on the inherent inequity that is present in the bill, and which we discussed at some length last week. I have observed in a published report on the pending amendments that will be offered on this floor a report that a Representative KINDNESS will offer an amendment to move the effective date of the act from October 1, 1978, to October 1, 1979.

Now, if the gentleman's proposal has merit in the context of the entire legislation, certainly it would have merit in the context of the critically divided issue of the so-called government employee lobbyist. I would hope that if the gentleman cannot have all of the pie, he would settle for a constructive piece of the pie in the context of his own thought processes in support of delaying the effective date of the bill, as he intends to offer it.

Mr. KINDNESS. I appreciate the gentleman's arguments, but it goes to the point, I think, that everyone who is going to be covered by this legislation, if it becomes law, ought to have notice and time enough to comply carefuliy with the provisions of the law, and not just those organizations of State and local governmental officials.

Mr. DANIELSON. Mr. Chairman, I rise in opposition to the substitute amendment offered by the gentleman from Ohio (Mr. KINDNESS).

Mr. Chairman and Members, this substitute goes 180 degrees in the opposite direction of the amendment offered by the gentleman from Nevada (Mr. SANTINI), and it strikes exceeding far into one of the basic provisions of this bill.

Under the bill as drafted, State and local units of government per se are not considered to be lobbying organizations. If the Governor of your State or your city or your county wishes to approach you to lobby, to convey their wishes or desires as to the content or disposition of a bill, the activities of your Governor, the activities of your mayor, the activities of your county board of supervisors, are not considered lobbying within the purview of the bill. You are not going to compel your Governor, for heaven's sakes, to register as a lobbying within the purview of the bill. munications.

As a matter of comity, a matter of courtesy and commonsense, we recognize that in a federal system we have a Federal Government, but we also have 50 States, and we have innumerable cities and counties. They are legitimate branches of government, elected by the people of America to represent them, and there is no logical reason why we should put any type of regulation upon the efforts of a Governor, a mayor, a board of supervisors, to tell us what they would like to have in the legislation pending here in the Congress.

Now, the Kindness substitute would make all of these people subject to the lobbying law. It says it in so many words, with respect to the activities of the Washington representative of the State or local unit of government. I respectfully submit that the Governor of Colorado, the Governor of Florida, the Governor of Kentucky, cannot sit back here in Washington watching the legislation and prevailing upon his Congressman—Mr. EVANS of Colorado, Mr. MAZZOLI, or Mr. OBERSTAR—and say, "Look, fellows, Colorado cannot stand this; Minnesota cannot stand this; Kentucky cannot stand it, or South Carolina cannot stand it."

So what does the Governor do? He has a representative who is permanently stationed here in Washington and who is in constant communication with the capitol building back in our own State, and he keeps us informed. It is as much of value to us here in the Congress as it is in the State.

I do not want any of the ladies and gentlemen who are Members to be going home and be seeking reelection this fall and saying we decided that our own

Governor, our own mayor, and our own board of supervisors have to come in and register as lobbyists. I say vote this amendment down out of hand.

Mr. EVANS of Colorado. Mr. Chairman, will the gentleman yield?

Mr. DANIELSON. I yield to the gentleman from Colorado.

Mr. EVANS of Colorado. Mr. Chairman, what the gentleman from California says is most interesting. What he says is if my Governor of the State of Colorado comes here he should be allowed to come back and communicate.

Mr. DANIELSON. He surely should.

Mr. EVANS of Colorado. Or he should be allowed to have a representative in Washington, D.C.

Mr. DANIELSON. That is right. He had better stay home.

Mr. EVANS of Colorado. But what if he gets together with the Governor of Wyoming and the two of them associate themselves to come back together? They are then suspect.

Mr. DANIELSON. They are then suspect under this substitute.

Mr. EVANS of Colorado. I thank the gentleman from California.

Mr. DANIELSON. I thank the gentleman from Colorado for his contribution.

Mr. RAILSBACK. Mr. Chairman, will the gentleman yield?

Mr. DANIELSON. I yield to the gentleman from Illinois.

Mr. RAILSBACK. Mr. Chairman, I thank the gentleman from California for yielding.

I wanted to make it very clear, and I think that by the recent colloquy between the two gentlemen who just spoke we are distinguishing what the subcommittee and this committee distinguished, that rather than having one individual State Governor or representative, where there may be a group with a collective purpose, that they may have more of an influence.

Mr. DANIELSON. That is correct. We are distinguishing between the governments of the local units that make up this United States and on the other hand the organizations of appointed officials, and so on. There is a distinction.

Mr. MAZZOLI. Mr. Chairman, will the gentleman yield?

Mr. DANIELSON. I yield to the gentleman from Kentucky.

The CHAIRMAN. The time of the gentleman from California (Mr. DANIELSON) has expired.

(On request of Mr. MAZZOLI, and by unanimous consent, Mr. DANIELSON was allowed to proceed for 2 additional minutes.)

Mr. MAZZOLI. Mr. Chairman, again I thank the gentleman from California for yielding.

I join my chairman in opposing the substitute as well as opposing the other amendment.

I would suggest to the gentleman something that he has brought to the attention of the House last week when we debated these same issues, and that is if the Governor of Kentucky and the Governor of California have a Washington representative to be on board and watch out for their interests of their States, that money which is paid to those Washington representatives has to be accounted for.

And if the gentleman would perhaps amplify a little bit, is not responsiveness and reporting inherent in the very nature of the tax money which goes to fund these offices?

Mr. DANIELSON. Absolutely. What we are trying to do is compel disclosure. These sums are reported on the State's payroll. They are public knowledge. There is no point, absolutely no point in including State Governors or local representatives.

Mr. SANTINI. Mr. Chairman, will the gentleman yield?

Mr. DANIELSON. I yield to the gentleman from Nevada.

Mr. SANTINI. Mr. Chairman, if there is no point because it is a matter of public record in terms of the individual State or the individual entities, how can the distinguished chairman suggest with all his wisdom and endurance in the face of all adversity here, how can the chairman suggest that it makes any sense to do it to the representative associations who publish three times the facts, and publish it in their monthly announcements and in their bulletins? They publish all their lobbying activities. They are proud of their lobbying activities. And if there is any rhyme or reason to the lobbying bill, certainly that rhyme or reason would not apply to this.

Mr. DANIELSON. I can chew on only one bone at a time and now I have the bone of Mr. KINDNESS' amendment, but I do suggest that decent respect and comity for our sister and brother governments throughout this great land demand that we not bring them in as lobbyists to report on their activities.

The CHAIRMAN. The time of the gentleman from California (Mr. DANIELSON) has again expired.

(On request of Mr. FISH, and by unanimous consent, Mr. DANIELSON was allowed to proceed for 3 additional minutes.)

Mr. FISH. Mr. Chairman, will the gentleman yield?

Mr. DANIELSON. I yield to the gentleman from New York (Mr. FISH).

Mr. FISH. Mr. Chairman, I have taken this time because I am not sure whether I support the amendment offered by my friend the gentleman from Ohio (Mr. KINDNESS) any more than I do the amendment in chief here, but I am not quite sure that you and he are talking about the same results. So I would appreciate if you would yield to my friend the gentleman from Ohio (Mr. KINDNESS).

Mr. DANIELSON. I would be most pleased to yield to the gentleman from Ohio (Mr. KINDNESS).

Mr. KINDNESS. Mr. Chairman, I thank the gentleman for yielding. I want to be sure the record is not left in a state of dishevelment as to the meaning of the substitute amendment.

Now the gentleman from California (Mr. DANIELSON) has referred to mayors and Governors and boards of selectmen and aldermen, that they would have to register and report. Surely the gentleman was confining the intent of his conversation in that regard to those who maintain a Washington office and a Washington representative of a State or a city.

Mr. DANIELSON. Yes.

Mr. KINDNESS. And for those only who are engaged in lobbying we are attempting to redress?

Mr. DANIELSON. Yes. I will quote the language which, in my opinion, would compel us, in effect, to tell each unit of local or State government if they contact us back here; namely, the last few words of the first paragraph that state:

> . . . and with respect to the activities of its Washington representative, a state or unit of local government; . . .

And then in the last paragraph:

> The term "Washington representative" means any agent or employee of a state or unit of local government who maintains a business address in the standard metropolitan statistical area which includes the City of Washington, District of Columbia, and whose function includes making lobbying communications.".

I will state, to amplify on that, and I cannot speak for other States, but I know the situation is true with reference to the State of California because we do maintain an office here in Washington and we do have a permanently stationed representative of the Governor of the State. The Governor has enough to do in California so that he cannot come traipsing back here every week because he has things he has to do out in Sacramento to try to make things work there, so he does have a representative. The representative supposedly is in constant communication with the State Capital. I know that if I have a problem that comes up involving the State of California I can call the local office and tell Joe Beaman to get in touch with the Governor and tell him how this or that will impact on the State of California. I think most States have this kind of facility.

Mr. KINDNESS. And that is generally true as to a great many other lobbying organizations.

Mr. DANIELSON. Except that they are not States, they are not cities, they are not the people of America governing themselves through their own elected officials.

Mr. KINDNESS. But they are lobbying.

Mr. DANIELSON. Oh, yes, yes.

The CHAIRMAN. The time of the gentleman has again expired.

(On request of Mr. SANTINI, and by unanimous consent, Mr. DANIELSON was allowed to proceed for 2 additional minutes.)

Mr. SANTINI. Mr. Chairman, if the gentleman will yield, just to carry the eloquent words of the gentleman from California (Mr. DANIELSON) one step further, the gentleman suggests that arms should not be cut off, but what do we do as far as the small counties, the small rural areas, the small cities and the small States who cannot afford to hire independent people to operate in an office on Pennsylvania Avenue or Independence Avenue, as the case may be? They have to rely on the associations to bring that voice that you have so eloquently enun-

ciated here to Washington. Those associations are paragons of virtue insofar as reporting. They comply far beyond any requests within this bill. I would suggest to you that I am just asking, Mr. Chairman, for a 1-year study by the GAO, for a 1-year delay for this Congress to respond. If they find that the terms of this bill should not apply, if the Congress says no then the bill does not apply.

Mr. KINDNESS. The gentleman is speaking to his amendment and not the substitute.

Mr. SANTINI. I welcome every chance I get.

Mr. DANIELSON. I would point out further that his argument is very appealing. But right now I am trying to address myself to the substitute.

Mr. Chairman, I yield back the remainder of my time.

Mr. MOORHEAD of California. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I think there is a major difference between a political organization that is made up of representatives from a number of cities or a number of counties, or a number of States, all of which will not agree with the organization on every piece of legislation, on one side and individual cities and individual States on the other. I think that we would be well served if we defeated both the substitute amendment and the original amendment. I feel that the bill as it is presently designed in this area is correct.

We have eliminated the actual Governors and actual city governments from disclosure because we feel that they are the acting governments of the people of the United States, disclosing what they want of us as the representatives of another level of government. If we include special political groups, which any organization of mayors or any organization of Governors has to be, then we are going far beyond the elimination level that I think we should go by.

I would concur with the chairman of the committee that we should vote "no" on the substitute and vote "no" on the original amendment.

Mr. FISH. Mr. Chairman, will the gentleman yield?

Mr. MOORHEAD of California. I yield to the gentleman from New York.

Mr. FISH. I thank the gentleman for yielding.

I support what the gentleman just said. I think that is the wisest course to take. But is it not true that the main amendment that we are considering here is really just another version of what we disposed of at least a week ago when we talked in terms of the effect on legislation of such organizations as the League of Cities and the Council of Mayors, and the attempt then to remove them entirely from the coverage? Now this is simply a back-door way of doing the same thing. But was not the reasoning at that time, reasoning still legitimate, that the lobbying efforts of these organizations are responsible for tens and tens of billions of dollars for housing and for city affairs that, no matter how worthy, should be disclosed to the public?

Mr. MOORHEAD of California. Yes.

Mr. FISH. I thank the gentleman.

The CHAIRMAN. The question is on the amendments offered by the gentleman from Ohio (Mr. KINDNESS) as a substitute for the amendments offered by the gentleman from Nevada (Mr. SANTINI).

The amendments offered as a substitute for the amendments were rejected.

The CHAIRMAN. The question is on the amendments offered by the gentleman from Nevada (Mr. SANTINI).

The question was taken; and on division (demanded by Mr. KINDNESS) there were—ayes 19, noes 17.

RECORDED VOTE

Mr. KINDNESS. Mr. Chairman, I demand a recorded vote.

A recorded vote was ordered.

The vote was taken by electronic device, and there were—ayes 197, noes 211, not voting 26, as follows:

[Roll No. 255]

NOT VOTING—26

Baucus	Howard	Rodino
Coleman	Jones, N.C.	Runnels
Conyers	Krueger	Teague
Crane	Mann	Thornton
Dent	Mathis	Tucker
Derrick	Moss	Waxman
Eilberg	Murphy, N.Y.	Whitley
Frey	Nix	Young, Tex.
Gammage	Roberts	

The Clerk announced the following pairs:

On this vote:

Mr. Conyers for, with Mr. Eilberg against.
Mr. Derrick for, with Mr. Waxman against.
Mr. Runnels for, with Mr. Nix against.
Mr. Gammage for, with Mr. Dent against.

Messrs. SKELTON, BUTLER, and WALSH changed their vote from "no" to "aye."

Messrs. PIKE, ICHORD, and OTTINGER changed their vote from "aye" to "no."

So the amendments were rejected.

The result of the vote was announced as above recorded.

AMENDMENT OFFERED BY MR. SEIBERLING

Mr. SEIBERLING. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. SEIBERLING: On page 33, lines 5–6, strike out "group of organizations, or group of individuals" and insert in lieu thereof "or group of organizations".

On page 33, line 9, after the semicolon, insert the following: "and

"(C) any group of individuals which has any paid officer, director or employee or which makes an expenditure in excess of $5,000 in any quarterly filing period for activities described in section 3(a);".

Mr. SEIBERLING. Mr. Chairman, I yield to the gentleman from California (Mr. EDWARDS).

Mr. EDWARDS of California. Mr. Chairman, I thank the gentleman from Ohio for yielding.

Mr. Chairman, I want to alert the members of the committee to the fact that I understand when the committee goes back into the House a motion to recommit with instructions will be offered, which I urge the support of.

The motion to recommit with instructions will require that the committee report the bill back immediately with the same bill as reported by the full Judiciary Committee, which is a bill that has no real constitutional problems and which was overwhelmingly reported by the House Judiciary Committee and which I believe will have wide acceptance, and we will be able to go home with a great feeling of satisfaction.

So when the motion to recommit comes along, I urge its approval.

I thank the gentleman from Ohio.

Mr. SEIBERLING. Mr. Chairman, this is a fairly simple amendment. It is similar to the amendment which I offered last week, the purpose of which was to make it clear that small groups of individuals who get together for some particular purpose—to see their Congressman, to get a private bill through, or hire a lawyer to do the same—would not be deemed an organization and subject to all the same reporting requirements that a huge corporation or some other big lobbying group would be subjected to. All the discussion that took place on that amendment is appropriate here with one exception.

The exception is that at that time the chairman of the subcommittee, the gentleman from California (Mr. DANIELSON), expressed the fear that because in my amendment, there was no limit to the amount that some small group of individuals could spend, it would open up a huge loophole in the bill. It was pointed out, for example, that a group of very wealthy people who could certainly pay to file the information required by this bill could get together, say the members of the Business Roundtable or the Chamber of Commerce, and, out of their own pockets, hire a lawyer to represent the point of view that their businesses favored and these people would still be exempted by the amendment offered at that time.

This amendment takes that into account and provides a group of individuals, whether large or small, is not an organization so long as they have no paid officers or employees or directors, and do not spend more than $5,000 in a calendar quarter. If a group can afford to spend more than $5,000 in a calendar quarter, then one can probably afford to go through the redtape of filing or reporting under this bill.

I would like to give the Members some concrete examples as to why this amendment is desirable. Occasions can arise, and we are all familiar with these things, where maybe a Federal dam project is proposed or a big highway or some other huge project, and suddenly some of the homeowners in the area find that they may be evicted and displaced from their homes. So they all get together, pass the hat and find someone who can come down to Washington and express their concerns. Certainly there is no compelling reason for Congress to require reports from small groups like that. All this amendment does is to exempt such groups where they do not spend a lot of money and do not have paid officers or employees. I would hope the gentleman from California would find favor in this amendment.

Mr. WIGGINS. Mr. Chairman, will the gentleman yield?

Mr. SEIBERLING. I yield to the gentleman from California.

Mr. WIGGINS. Mr. Chairman, I am going to support the amendment offered by the gentleman from Ohio (Mr. SEIBERLING) because it strikes "a group of individuals" from the bill. However there is still some uncertainty in my own mind, by leaving in the language "a group of organizations" as to just which individual within that group will have the duty to report, who is going to have that responsibility in "a group of organizations?"

Mr. SEIBERLING. My amendment does not deal with and does not make any change in the language of the bill that includes groups of organizations within the definition of an organization. I am only talking about groups of individuals. Sometimes there may be nice questions that will be raised when you have several groups who unite together to form sort of a coalition, but, if they do then they are caught by the bill. I am not trying to do anything about that.

The CHAIRMAN. The time of the gentleman has expired.

Mr. WIGGINS. Mr. Chairman, I rise in support of the amendment offered by the gentleman from Ohio (Mr. SEIBERLING).

Mr. Chairman, even if the amendment is adopted, this thing called "a group of organizations" may be covered by the act, depending on the circumstances. Is that correct?

Mr. SEIBERLING. If the gentleman will yield, it definitely would be covered, as I read the bill.

Mr. WIGGINS. A group of organizations may constitute an association, or it may be a loose coalition. If in fact it is a loose coalition, I am not sure which members of the group have all the responsibilities here. If the gentleman knows an answer to that it would help the record, because there may be such a coalition in existence.

Mr. SEIBERLING. If my amendment is adopted, one thing will be clear—that if just a group of individuals meet together and do not go outside the guidelines in my amendment then they are exempt. I think an association that has some formal organization, perhaps like maybe a labor union, even if it does not have a paid officer or employees, would be caught. Whether other groups or a coalition of individuals would be caught, I am not sure, I think they would. But I am not dealing with that question. The thing I am dealing with is that if some small group of citizens wishes to deal with some small legitimate grievance, they should not be swept within the ambit of this legislation.

Mr. WIGGINS. Mr. Chairman, I commend the gentleman from Ohio (Mr. SEIBERLING) for the removal of this classification known as a group of individuals. I can think of one such group of individuals that might be covered and that might be a group of individuals who decide to stage a parade. The group of individuals may carry signs advocating the Congress to follow their views. If, in doing so, they pay an organizer to organize the parade, and if that sort of a group is to be covered by this bill, then I think that is a further reason for rejecting the bill.

Mr. SEIBERLING. Mr. Chairman, if the gentleman will yield, of course they would have to spend more than $2,500 or they would not meet the threshold in the bill.

Mr. WIGGINS. I am assuming that the threshold would be met.

Mr. SEIBERLING. I share the gentleman's fears about this bill. I have grave doubts about its constitutionality. I believe it imposes such severe burdens, for some people, on the exercise of their First Amendment rights as to impair those rights significantly. This bill, with its complexities and its criminal sanctions, can be used to intimidate and harass ordinary people far too easily.

All I am trying to do in my amendment is, at least, to narrow the application of the bill so it does not sweep in every little group of individuals who go to Washington, or hire someone, to plead their cause with Congress.

Mr. WIGGINS. I thank the gentleman.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Ohio (Mr. SEIBERLING).

The question was taken; and on a division (demanded by Mr. SEIBERLING) there were—ayes 15, noes 22.

So the amendment was rejected.

The CHAIRMAN. Are there further amendments?

AMENDMENT OFFERED BY MR. KINDNESS

Mr. KINDNESS. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. KINDNESS: On page 28, strike lines 6–16.

On page 28, line 23, strike "other than exempt travel expenses".

Mr. KINDNESS. Mr. Chairman, the amendment that is offered at this point is one that has a considerable bearing on how the weight or burden of this bill falls. Since 2 years ago when this House considered lobby disclosure legis-

lation, the language has been in the bill that I now seek to strike. That language is "other than exempt travel expenses" and is an exclusion from the reporting requirements. "Exempt travel expenses" as used in the bill is the kind of expense for members of an organization to travel to Washington to make lobbying communications, their travel and per diem costs. We can think of a number of organizations that contact us with some regularity, perhaps each year, that fall into this category, and they do not have to account for all of that expense involved in bringing their members in from all over the country—the travel expense and the per diem expense while they are here that may be paid by or through the organization. A number of labor unions do this, and other organizations. I suspect that the American Agriculture Movement might possibly in some cases fall into this category, although many of the farmers who were here were paying their own way.

If an organization is going to have to report its real expenses of lobbying, certainly the travel and living costs here in Washington to bring flocks of people in here to exert pressure on the Congress ought to be included in the reporting of expenses. That is the purpose of this amendment. It would strike the definition of "exempt travel expenses" from the bill, as well as the reference to it in the expenditure provisions.

The concept of exempt travel expenditures was put in this bill for the one reason I have cited, and right now because of the presence of this concept in H.R. 8494, an organization will not have to include transportation costs and per diem amounts. We ought to have a bill that applies evenhandedly across the board to all sorts of organizations, however they operate, so that by adopting this amendment and striking this special treatment of travel expenses for the purpose of lobbying, we would have a much fairer, more evenhanded bill. I would certainly urge support of the amendment for that reason.

Mr. HARRIS. Mr. Chairman, I move to strike the last word in opposition to the amendment.

Mr. Chairman, I think the amendment should be spoken to in about 2 or 3 seconds. No. 1, the amendment fixes the threshold so that any type of volunteer group traveling to Washington almost surely would have to register. I think this would be a very unfortunate development in the bill. It would, in fact, kill the bill. I do not think it was the intention of my good friend, the gentleman from Ohio, but if he did get this amendment adopted, I am sure most people would want to vote against a bill that would apply to voluntary lobbying of this type.

The subcommittee and the committee considered this very carefully. We knew that in order to have a viable effective lobby registration bill with the dollar threshold that you could not include travel expenses for those types of organizations as part of the threshold. If we do, we will be providing coverage for organizations that this body has no intention of covering and would, in fact, make a bill that nobody would be able to support.

Mr. WIGGINS. Mr. Chairman, I move to strike the requisite number of words. I rise in opposition to the amendment.

If the purpose of the amendment is to kill the bill, I commend the gentleman from Ohio for his amendment, but I do not think that it is the gentleman's intention. Adopting this amendment would result in any number of irrational consequences. For example, those in the Chamber representing States as far away as California must realize that your lobbyists may get 3 trips before they cross the threshold, whereas the lobbyists from Virginia could travel 30 times before they cross the threshold. That kind of unequal treatment is offensive to me, but that is one of the consequences of rejecting the exempt travel portion of the bill.

More fundamentally, traveling in an airplane is not in and of itself a political act, any more than eating in a restaurant is a lobbying function. These expenditures probably should not be counted in any event toward a lobby communication, but the committee in its wisdom saw fit to make it absolutely clear they would not be counted, and I agree they should not be counted. The amendment should be defeated.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Ohio (Mr. KINDNESS).

The amendment was rejected.

AMENDMENT OFFERED BY MR. WIGGINS

Mr. WIGGINS. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. WIGGINS: On page 38, line 4, after the word "cost" insert "to the reporting organization".

Mr. WIGGINS. Mr. Chairman, this is to that section of the bill dealing with the content of the report. An organization which must report is required to do those things specified on pages 37, 38, and 39 of the bill. One of the items which must be disclosed in the report is a disclosure of those expenditures for any reception, dinner, or similar event which is paid for in whole or in part by the reporting organization and which is held for the benefit of any Federal officer or employee, regardless of the number of persons invited or in attendance, where the total cost of the event exceeds $500.

Now, Mr. Chairman, I have no quarrel with the idea that the cost to reporting organizations of their participation in an event ought to be reported. The difficulty here is that the reporting organization may be only one of several organizations participating in the event, and yet the duty, subject to criminal penalties on the organization, is to report the total cost of the event.

Now, I am not at all sure that an organization will know, or can know, what the total cost of the event is.

It does know, however, what its cost was, and the purpose of my amendment is merely to require that the reporting organization discloses its cost rather than the cost of the total event.

Mr. DANIELSON. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, I simply wish to point out that the gentleman's amendment is really not difficult to understand. It simply changes the thrust of this part of the bill to provide that the criterion is whether the cost to the reporting organization is $500 rather than whether the cost of the entire event is $500, and the reporting organization may have spent $10, $25, or $100, whatever it may be.

Mr. Chairman, this amendment relates to a portion of the bill that involves a modification of the scope of reporting as to expenditures for certain events, and if the Members understand what it is all about, I certainly will rely upon the wisdom of the Members of the House.

Mr. MOORHEAD of California. Mr. Chairman, I move to strike the last word.

Mr. Chairman, the amendment is acceptable to us on this side.

AMENDMENT OFFERED BY MR. KINDNESS AS A SUBSTITUTE FOR THE AMENDMENT OFFERED BY MR. WIGGINS

Mr. KINDNESS. Mr. Chairman, I offer an amendment as a substitute for the amendment.

The Clerk read as follows:

Amendment offered by Mr. KINDNESS as a substitute for the amendment offered by Mr. WIGGINS: Beginning on page 37 through to page 39, line 7, strike all of section 6 and insert the following new section in lieu thereof:

REPORTS

"SEC. 6. (a)(1) Each organization which engages in the activities described in section 3(a) during a quarterly filing period shall, not later than thirty days after the last day of such period, file a report concerning such activities with the Comptroller General.

(2) Each registered organization which does not engage in the activities in section 3(a) during a quarterly filing period shall file a statement to that effect with the Comptroller General.

(b) Each report required under subsection (a)(1) shall contain the following, which shall be regarded as material for the purposes of this Act:

(1) An identification of the organization filing such report.

(2) The total expenditures which such organization made with respect to activities described in section 3(a) during such period.

(3) An itemized listing of each expenditure in excess of $35 made to or for the benefit of any Federal officer or employee and an identification of such officer or employee.

(4) A disclosure of those expenditures for any reception, dinner, or other similar event which is paid for, in whole or in part, by the reporting organization and which is held for the benefit of any Federal officer or employee, regardless of the number of persons invited or in attendance, where the total cost of the event exceeds $500.

(5) An identification of any retainee of the organization filing such report and of any employee who makes lobbying communications on all or part of each of seven days or more.

(6) A description of the issues concerning which the organization filing such report engaged in lobbying communications and upon which the organization spent a significant amount of its efforts, disclosing with respect to each issue any retainee or employee identified in paragraph (5) of this subsection and the chief executive officer, whether paid or unpaid, who engaged in lobbying communications on behalf of that organization on

that issue: *Provided, however,* That in the event an organization has engaged in lobbying communications on more than fifteen issues, it shall be deemed to have complied with this subsection if it lists the fifteen issues on which it has spent the greatest proportion of its efforts. For purposes of this paragraph the term "chief executive officer" means the individual with primary responsibility for directing the organization's overall policies and activities.

(7) Disclosure of each known direct business relationship between the reporting organization and a Federal officer or employee whom such organization has sought to influence during the quarterly filing period involved.

Mr. KINDNESS (during the reading). Mr. Chairman, I ask unanimous consent that the amendment offered as a substitute for the amendment be considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Ohio?

There was no objection.

Mr. KINDNESS. Mr. Chairman, the amendment that is offered as a substitute regrettably does not incorporate the amendment offered by the gentleman from California (Mr. WIGGINS), and I would certainly welcome the opportunity to amend the substitute for purposes of incorporating that language.

The amendment offered as a substitute is presented really to give an opportunity to the Committee of the Whole to adopt a new section 6 of the act. The Members will recall that the coverage of solicitations of grassroots lobbying was effected by an amendment entered into section 6 of the bill. The Members will recall that the amendment requiring the reporting of contributions of organizations was an amendment to section 6 of the bill.

Neither of those two amendments is included in the section 6 that is proposed at this point by this substitute.

The other features of the amendment that is proposed now as a substitute include striking the language that appears on page 37 relating to the reporting of salaries. One of the requirements of the reporting is the reporting of the total expenditures, excluding salaries, other than those reported under subparagraph (5) of this subsection, which such organization may incur with respect to activities during that period. The language relating to the reporting of salaries in toto is eliminated by this substitute.

I think we have an interest in publicly determining certain information about lobbying, but whether it is necessary for the purposes of this legislation to require the reporting of individual salaries of people and whether they are directly involved in lobbying or not, this, it seems to me, is going too far. It is not indicative of the effectiveness of lobbying either. A very highly paid lobbyist who is ineffective may be competing with a low-paid volunteer lobbyist who is effective.

I think we ought to be considering in this legislation the real need for the disclosure of information before requiring it.

I would urge the support of the substitute section 6. As I say, it would be welcome to have an amendment to the substitute that would include the amendment offered by the gentleman from California. Regrettably, this was prepared before that. I felt it necessary not to lose the opportunity to offer this amendment.

Mr. WIGGINS. Mr. Chairman, will the gentleman yield?

Mr. KINDNESS. I yield to the gentleman from California.

Mr. WIGGINS. Is the substitute offered by the gentleman a comprehensive substitute for section 6 of the bill?

Mr. KINDNESS. Other than the points I have mentioned, which take out the salary reporting and include the rest of section 6 of the bill. And it does include the amendment that was adopted by the House previously on the motion of the gentleman from Illinois (Mr. RAILSBACK), which requires the identification of issues with the people who are doing the lobbying, whether they volunteer or are paid.

Mr. WIGGINS. Does it retain the language of section 6, found on page 38 of the bill, dealing with allocation of expenditures? That is section 6, paragraph (5) (A) and (B).

Mr. KINDNESS. In part. But it strikes a good portion of (5), and the introductory paragraph would read as follows:

(5) An identification of any retainee of the organization filing such report and of any employee who makes lobbying communications on all or part of each of seven days or more.

It ends there and does not include:

. . . and the expenditures made pursuant to such retention or employment, except that in reporting expenditures for the retention or employment of such individuals or organizations . . .

And so on, down through (A) and (B), is being stricken.

Mr. WIGGINS. (B) beginning on line 20 and ending on line 23 is stricken by the substitute?

Mr. KINDNESS. That is all stricken.

Mr. WIGGINS. I thank the gentleman.

Mr. KINDNESS. The purpose, as I say, is to eliminate those parts of the reporting requirements that relate to reporting salaries and expenditures.

Mr. FLOWERS. Mr. Chairman, will the gentleman yield?

Mr. KINDNESS. I yield to the gentleman from Alabama.

Mr. FLOWERS. Mr. Chairman, I am curious to know if the gentleman's amendment is passed, would the gentleman be in strong support of the legislation?

Mr. KINDNESS. I certainly would.

Mr. FLOWERS. I thank the gentleman.

Mr. MAZZOLI. Mr. Chairman, I move to strike the requisite number of words, and I rise in opposition to the amendment.

Mr. Chairman, I thank the gentleman from Ohio for his many contributions both in the subcommittee, the full committee, and in the consideration of this bill here in the Committee of the Whole. But, Mr. Chairman, I have to very vigorously oppose the gentleman's amendment. If I might characterize it succinctly, all the gentleman seeks to do, in my humble judgment, is gut the bill.

I heard a round of applause. That means that there might be some who feel the bill should be gutted. But I think if we want to have any kind of a bill that is a meaningful bill, a bill to make report only those organizations and those people who should report, but to exempt from reporting and coverage all those organizations and those people who should be exempted, then I think we have to keep the present section 6 in the bill.

The gentleman from Alabama (Mr. FLOWERS), the author of the amendment which we called the grassroots lobbying amendment, suggested during his time in the well some very cogent reasons why grassroots lobbying has to be covered.

If I understand the gentleman's substitute, the amendment offered by the gentleman from Alabama would be cleared out from the bill and extinguished.

Furthermore, the gentleman from Illinois (Mr. RAILSBACK) gave, during the consideration of this measure last week, some very strong reasons why his amendment—the contributions disclosure amendment—ought to be included in the bill. If I understand the substitute of the gentleman from Ohio, the amendment offered by the gentleman from Illinois (Mr. RAILSBACK) would be cleared from the bill.

I think those two amendments are core center; and it seems to me, Mr. Chairman, that the House should reject the gentleman's substitute. If it were to approve it, this bill would then, in my judgment, be worthless.

Mr. KINDNESS. Mr. Chairman, will the gentleman yield?

Mr. MAZZOLI. I yield to the gentleman from Ohio.

Mr. KINDNESS. I thank the gentleman for yielding.

I would certainly be very much remiss if I left the gentleman from Kentucky thinking that I was not sincere in the effort that is intended here. I would like to see the bill returned, as close as we can get it, to what was reported by the full Judiciary Committee, which I think was an excellent bill. It contained a delicate balance and had broad support. That delicate balance has been destroyed, and that broad support has been destroyed.

The closer we can get to what the Judiciary Committee, in its wisdom, reported, I think the better the chance of getting a proper lobbying disclosure and reporting law into effect. I sincerely believe that we are going down the path of no final result whatsoever unless we do that.

Mr. MAZZOLI. Let me recapture my time, if I may.

The gentleman is entitled to his view, but my judgment and my view is that the committee should send a bill to conference in a form most nearly like it had at the subcommittee level. At the subcommittee level, we had a grassroots lobbying coverage and we had a contributions coverage I think that is really the ap-

propriate version more so than what was done at the full Judiciary Committee level. That is the bill we should be sending to conference, and I think that would be a meaningful bill.

Mr. KINDNESS. I would remind the gentleman that the dues and contributions portion was not in the bill as reported by the subcommittee either, and that would be a great improvement if we could get it back to the subcommittee version.

Mr. McCLORY. Mr. Chairman, I move to strike the last word, and I rise in support of the amendment.

Mr. Chairman, rising in support of this amendment, it seems to me that we are not in fact gutting the bill. But, we are providing a bill which is going to be palatable to a majority of the Members of the House. It seems to me that the form in which the bill is at the present time, with its chilling effect with respect to so-called grassroots lobbying, and with respect to the demand for disclosure of contributions and the naming of individuals who prefer not to have their names identified by reason of the fact that they are contributors, it seems to me that by eliminating the chilling effects of those two provisions and by restoring the bill to its original purpose of identifying lobbyists and requiring them to file reports and identify them, that by adopting the amendment offered by the gentleman from Ohio we are getting back to the original purpose, and we are eliminating the gutting amendments which are presently in this bill.

I might say that I have been a strong supporter of this legislation. I supported it in the Judiciary Committee, and lent my influence in support of it, but the bill is in a form now which I do not believe I can even support. I question whether a majority of the Members of this House will feel that they can support it. I question the constitutionality of the bill in its present form.

My views coincide pretty much with those of the gentleman from California (Mr. EDWARDS).

We do not want to infringe upon the individual rights of those citizens who want to petition their Government. It seems to me that without the amendment offered by the gentleman from Ohio, without restoring this bill to a semblance of the form in which it came to this body, that we are putting the bill in a form which is going to make it objectionable—objectionable to me and objectionable to others.

It seems to me that what we should do is try to make legislation which is compatible with what the needs of our body are, and what the demands of the American people are with regard to identifying, reporting, and providing accountability with regard to lobbying operations affecting legislative activity in this body.

Mr. FLOWERS. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, it is curious to me that these amendments, to wit, the one I offered and the one the gentleman from Illinois (Mr. RAILSBACK) offered, carried in this body by somewhere between 60 and 100 votes each, which should be some indication—some indication to this Member at least—that they had broad support here on the House floor. I voted for my amendment and I voted against the amendment offered by the gentleman from Illinois, but I am prepared to support the bill with or without either one of the amendments.

I think those who really oppose this bill find it convenient now to latch upon these two amendments as giving them an excuse to vote against the bill. The bill was, is, and will be a very modest approach to solving a problem we have had since the inception of lobby law. That is all it is and all it pretends to be.

I urge Members not to get carried away by the rhetoric about these things going too far, because they absolutely do not. We have a very moderate bill—and all of us moderates in this House, such as I and the gentleman from California (Mr. JOHN L. BURTON), and others—can support it with a great deal of fervor.

Mr. MAZZOLI. Mr. Chairman, will the gentleman yield?

Mr. FLOWERS. I yield to the gentleman from Kentucky.

Mr. MAZZOLI. Mr. Chairman, I thank the gentleman for yielding. I am proud that the gentleman, in the last Congress, was chairman of the committee that brought out the forerunner to the bill before us today. The gentleman showed great stamina in the earlier Congress by staying with the measure on the floor until 3 o'clock in the morning.

Will the gentleman advise me whether this House will have an opportunity under the present parliamentary procedure—to speak to the very points included in the amending before us now?

Mr. FLOWERS. The gentleman makes an excellent point, and I thank him for his generous comments.

The better way to approach this thing—and the gentleman from Ohio will have a perfect right to ask for it—is to ask for a vote in the House on my amendment which carried and on the amendment of the gentleman from Illinois which carried. That would be a better way to approach whether or not we still support these amendments, rather than to come in here and in block form strike them both from the bill plus some other things which are a part of the committee bill which the gentleman from Ohio espouses with such great feeling. So I think the better thing for us to do here is to vote down this gentleman's amendment and have a vote later on on the amendments which have been passed, if the House so desires.

Mr. DANIELSON. Mr. Chairman, I rise in opposition to the substitute amendment.

Mr. Chairman, I urge very strongly that this substitute be rejected. It is a total rewrite of section 6 of the bill. It would strike from the bill the total language of the Railsback amendment of the other day, which passed by a vote of 251 to 135, which is certainly broad support by the House, and it would strike from the bill the Flower amendment, which passed by a vote of 245 to 161, and make numerous other changes in section 6.

Unfortunately I have not had an opportunity to examine this rather extensive amendment before it came up for debate and it took us a few minutes to find out just where we stood on it.

The term "gut" has been used and it is a proper term. This would gut the reporting requirements of the bill. It is extremely far-reaching.

I urge a "no" vote on the substitute.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Ohio (Mr. KINDNESS) as a substitute for the amendment offered by the gentleman from California (Mr. WIGGINS).

The question was taken; and on a division (demanded by Mr. KINDNESS) there were—ayes 6, noes 23.

So the amendment offered as a substitute for the amendment was rejected.

The CHAIRMAN. The question is on the amendment offered by the gentleman from California (Mr. WIGGINS).

The amendment was agreed to.

AMENDMENT OFFERED BY MR. WIGGINS

Mr. WIGGINS. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. WIGGINS: On page 38, line 21, delete the word "law" and insert "this Act".

On page 38, line 21, after the word "expenditures" insert "for the purpose of engaging in the activities in section 3(a)".

Mr. WIGGINS. Mr. Chairman, this amendment also deals with that portion of the bill having to do with the contents of the report which is filed by a covered organization.

On page 38 of the bill, it is contemplated that a retainee or an employee may be involved part time in lobbying communications and part time in other activities. That is a perfectly understandable situation.

It is contemplated in this section of the bill that the organization filing the report may allocate, in a manner acceptable to the Comptroller General, the amounts paid to the individual for that portion of his time which was devoted to lobbying activities, or—or—and now listen to this:

> . . . notwithstanding any other provision of law, disclose the total expenditures paid to any individual or organization retained or employed by the organization. . . .

That clearly cannot mean what it says. If you do not choose to allocate, or if the Comptroller General disagrees with your formula of allocation, you have to disclose the totality you paid for all of your employees on the production line, I presume, or to any other organization, notwithstanding any other provision of law.

My amendment clarifies that apparent error in the bill. It strikes the words "notwithstanding any other provision of law" and adds, instead "notwithstanding any other provision of this Act".

I think that is far safer. I do not have any idea what laws may be repealed by implication as a result of the language

"notwithstanding any other provision of law."

Mr. RAILSBACK. Mr. Chairman, will the gentleman yield?

Mr. WIGGINS. I yield to the gentleman from Illinois.

Mr. RAILSBACK. Mr. Chairman, as I understand the gentleman's amendment, it is to take into account there really is no need as far as a lobbying disclosure act to require the expenditure for any purpose whatsoever that may be made to pay a Washington law firm but only those activities that relate to lobbying, is that correct?

Mr. WIGGINS. Yes. The purpose of my amendment is to save the subcommittee from apparently an error because they do require that the covered organization disclose all of its expenditures, and that is not intended. It is intended only that they disclose only those activities covered under section 3, and my amendment is for that purpose.

Mr. RAILSBACK. Mr. Chairman, will the gentleman yield?

Mr. WIGGINS. I yield to the gentleman from Illinois.

Mr. RAILSBACK. I thank the gentleman for yielding.

It seems to me that the gentleman's amendment is in the nature of a clarification. I really believe that it does no disservice to what I believe is the meritorious thrust of what we are trying to do, so I, for one, have no trouble with the amendment. I hope my colleagues do not.

Mr. WIGGINS. I will be more enthusiastic. Not only does it avoid a disservice, it performs a positive service to the bill.

Mr. DANIELSON. Mr. Chairman, will the gentleman yield?

Mr. WIGGINS. I yield to the gentleman from California.

Mr. DANIELSON. I thank the gentleman for yielding.

As to the first portion of the amendment, I have absolutely no objection. I think it is an improvement.

In the second portion I think I understand what the gentleman is trying to achieve, and if the wording would achieve that end, I would support it, but I am fearful that we have an error here, and I would like to ask a question or two. Is it not the gentleman's intention that in the second portion of the amendment he is only referring to expenditures to persons who make lobbying communications? For example, the Ford Motor Co. has quite a large number of employees, but only a very few realistically would be engaged in making lobbying communications. Does the gentleman wish to separate out from the requirement the expenditures paid to any individual or organization retained or employed, which would be the aggregate of everybody to whom an organization pays something? That obviously is not what any of us have intended. But what the gentleman does wish to include is the compensation paid to persons who engage in the 3(a) activities, the lobbying activities?

Mr. WIGGINS. That is right. Retainees are also covered. Section (a) does provide for an allocation of expenditures to retainees.

Mr. DANIELSON. Yes. I think the gentleman has come upon a good point here, and I would like to support it. I do think we need to be careful about one thing here, however. The way the gentleman's amendment reads, it would insert after the word "expenditures" the words "for the purpose of engaging in the activities in section 3(a)."

The CHAIRMAN. The time of the gentleman has expired.

(At the request of Mr. DANIELSON, and by unanimous consent, Mr. WIGGINS was allowed to proceed for 2 additional minutes.)

Mr. DANIELSON. If the gentleman will yield further, as I read it, if the gentleman will follow me, the language of the amendment would require that the reporting organization allocate the amount of money spent, or the compensation paid to each and every individual who may be engaged in the lobbying activities, which is precisely what is required under the previous subsection of allocating the amount paid to the individuals, and so forth.

Mr. WIGGINS. No. There is an alternative to allocation, and the alternative is to report the total expenditures without allocating—and I am for that—but only the total expenditures that relate to 3(a) activities. One need not carve up the time of individuals, if that is awkward and cumbersome to do.

Mr. DANIELSON. Will the gentleman yield further?

Mr. WIGGINS. Yes.

Mr. DANIELSON. I think we are in common agreement on what we are seeking to achieve here. It is my understanding that the gentleman wishes to limit this reporting to the compensation paid to the employee or retainee who is engaged in lobbying activities.

Mr. WIGGINS. Absolutely.

Mr. DANIELSON. With that I would be in 100 percent accord. I am only concerned that under the language of the amendment the gentleman is limiting that to the expenditures which were paid for the purpose of engaging in such activities. An employee could be engaged 75 percent of the time in nonlobbying activities and 25 percent of the time in lobbying activities and, therefore, an allocation would be required.

When we put in subsection (b) originally, it was done at the request of certain business interests who felt that rather than having to go to the trouble of allocating, why not let them just have an option if they chose to?

Mr. VOLKMER. Mr. Chairman, will the gentleman yield?

Mr. WIGGINS. I yield to the gentleman from Missouri.

Mr. VOLKMER. I thank the gentleman for yielding.

I would like to continue on with the discussion.

The CHAIRMAN. The time of the gentleman has expired.

(At the request of Mr. VOLKMER, and by unanimous consent, Mr. WIGGINS was allowed to proceed for 3 additional minutes.)

Mr. VOLKMER. If the gentleman will yield further, assuming the employer has on his payroll three people who do actual lobbying part time, maybe one full time—it really does not make any difference under the gentleman's amendment, as I understand it. On the report under 5 he has to identify those three, and then instead of allocating so much money paid for this purpose and so much for this, he is going to say a total amount paid; is that correct?

Mr. WIGGINS. He has an option. The reporting organization may allocate a portion of the time.

Mr. VOLKMER. No, forget the allocation. Let us go on the gentleman's amendment, if we decide to go with his amendment.

Mr. WIGGINS. All right. If the reporting organization does not choose to allocate 5 hours a day and 7 hours a day to specific employees he may report the total expenditures for all three employees if they were engaged in lobbying activities.

Mr. VOLKMER. All right, and if they hire two separate law firms to work part time in that quarter, they would have to list those, of course.

But do they just list the total amount or would they have to list the amount paid to each law firm?

Mr. WIGGINS. They would have to list either the amount allocated to each law firm for lobbying activities, or the total amount paid to the organizations that engaged in lobbying activities. That is already in the bill.

Mr. VOLKMER. I am aware of that.

Mr. WIGGINS. The bill does not state it with precision.

Mr. VOLKMER. Mr. Chairman, I agree. I think the amendment does make sense.

Mr. DANIELSON. Mr. Chairman, I move to strike the requisite number of words. I rise in opposition to the amendment.

Mr. Chairman, I would hope the gentleman from California (Mr. WIGGINS) would respond to further colloquy with me on this subject.

Mr. WIGGINS. Certainly.

Mr. DANIELSON. Mr. Chairman, I want the gentleman to know that I understand the thrust and I think it is a good one. I would support it if we can work out language to make that fit. I have just consulted with legislative counsel and the suggestion has been made, which I think would achieve that end, if the gentleman would look at either the amendment or the language in the bill.

On line 22 following the word "employed", so that it would read: "organization retained or employed", to insert the words, "(as described in section 3 (a))."

Then the lobbying activity, which is 3(a), would be the modifier of the "retained or employed" and the only total expenditures that would have to be reported would be those paid to persons retained or employed, as described in section 3(a).

Mr. WIGGINS. Mr. Chairman, will the gentleman yield?

Mr. DANIELSON. Yes, I would yield.

Mr. WIGGINS. The gentleman's purpose is the same as my own.

Mr. DANIELSON. Exactly the same.

Mr. WIGGINS. The gentleman merely selects a different point in the sentence to place the language. I have no objection to that. If the gentleman and the legislative counsel are more comfortable with the language before the gentleman, I will ask that the gentleman's language be substituted.

Mr. DANIELSON. I do yield and I would like to add that it is not my language, nor my counsel's language.

The CHAIRMAN. The Chair would request that the correcting language be submitted in writing.

Mr. DANIELSON. Mr. Chairman, I will do that in a moment; but I wish to conclude this colloquy.

Mr. Chairman, we have asked legislative counsel, who has favored us with one of their members today and we are informed that the purpose we both seek to achieve would be accomplished if we submit that language.

I would like to submit that to the Chair as an amendment to the amendment of the gentleman from California (Mr. WIGGINS).

The CHAIRMAN. The gentleman from California (Mr. DANIELSON) is seeking unanimous consent to amend the amendment offered by the gentleman from California and the Chair will grant or deny that request as soon as it is submitted in writing.

Mr. DANIELSON. Mr. Chairman, I will now make such a unanimous consent request and I will now hand in the amendment in writing.

Mr. WIGGINS. Mr. Chairman, will the gentleman yield?

Mr. DANIELSON. I yield to the gentleman from California.

Mr. WIGGINS. Mr. Chairman, will the gentleman be sure in making the unanimous consent request that we do not delete my amendment to line 21?

Mr. DANIELSON. Yes. As a matter of fact, I am using a copy of the gentleman's total amendment and that is the only change I would make.

AMENDMENT OFFERED BY MR. DANIELSON TO THE AMENDMENT OFFERED BY MR. WIGGINS

Mr. DANIELSON. Mr. Chairman, I offer an amendment to the amendment.

The Clerk read as follows:

Amendment offered by Mr. DANIELSON to the amendment offered by Mr. WIGGINS: On page 38, line 21, delete the word "law" and insert "this Act".

On page 38, line 22, after the word "employed" insert "(as described in section 3(a))".

The CHAIRMAN. The question is on the amendment offered by the gentleman from California (Mr. DANIELSON) to the amendment offered by the gentleman from California (Mr. WIGGINS).

The amendment to the amendment was agreed to.

The CHAIRMAN. The question is on the amendment offered by the gentleman from California (Mr. WIGGINS), as amended.

The amendment, as amended, was agreed to.

AMENDMENT OFFERED BY MR. KINDNESS

Mr. KINDNESS. Mr. Chairman, I offer an amendment.

The Clerk read as folows:

Amendment offered by Mr. KINDNESS: On page 32, line 21, insert the following before the word "organization": "any Indian tribe,".

On page 33, line 1, strike "any Indian tribe."

Mr. KINDNESS. Mr. Chairman, the purpose of this amendment is to treat Indian tribes in the same manner as other organizations. There are certain exemptions that were built into this bill, exemptions that have been in earlier versions for some time. They have been automatically picked up.

There is a very good reason to not make a special case of Indian tribes, because it had been thought at an earlier point that Indian tribes have a certain amount of sovereignty, much as a State does, and it was for that reason that Indian tribes were included in the exclusionary language along with State and local governments.

That not being the case, I think this amendment is very much in order.

Mr. Chairman, I would like at this point to yield to the gentleman from Maine (Mr. COHEN) so he may explain his position on this matter.

Mr. COHEN. Mr. Chairman, I thank the gentleman for yielding.

It is my understanding that the Supreme Court recently held in the case Oliphant against Suquamish Indian Tribe that by virtue of a tribe's dependent status, the tribe's sovereignty is limited and the tribes do not necessarily have the right of jurisdiction over non-Indians on tribal land.

I would agree with the gentleman from Ohio (Mr. KINDNESS) that the Supreme Court makes a distinction between the sovereignty possessed by Indian tribes and the sovereignty possessed by State and local governments. I think the House should carry out the general thrust of this legislation by applying these provisions equally to all groups or organizations.

We have established these provisions for groups who lobby for legislation in Congress, and Indian tribes surely fall in this category. We have many bills that come before the House on Indian affairs. Some of them total up to many millions of dollars, and certainly Indian tribes, like any other group, ought to be covered by the provisions we are applying to so many of these.

Mr. KINDNESS. Mr. Chairman I thank the gentleman for his remarks.

It is clear, of course, that there is a good bit of lobbying done by Indian tribes and in behalf of Indian tribes. I think again we have to remind ourselves we are not talking about prohibiting lobbying, and in a sense we are talking about requiring disclosure of reporting lobbying practices as they are conducted.

Mr. Chairman, I would certainly urge the adoption of the amendment so as to remove one other inequity that does exist, and I think it exists really almost as an oversight.

Mr. DANIELSON. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, I would like to point out that this is not a matter on which I do not have a very profound or heated feeling, one way or another. However, I would like to point out why we have included Indian tribes as among those who are not required to register and report under the bill.

The gentleman from Maine (Mr. COHEN) spoke with me about this matter the other day. He asked, "Why in the world were they not included?" and I truthfully responded and said, "I have no idea." I said that this might be a part of the package we picked up along the way since this bill has been with us for 4 years.

Since then, however, I have taken the time to check the facts, and I find there is a meritorious reason for this which the Members may or may not wish to follow. The reason is simply this:

An Indian tribe, as contemplated by the laws of the United States, is regarded in the nature of a separate government. Most tribes do govern themselves. Tribal authorities are usually considered as local units of government. Tribal authorities have a position which is parallel to local government, and this was recognized in the original drafting of the bill.

Incidentally, H.R. 15 in the last Congress, the bill which passed this House, exempted Indian tribes. H.R. 1180, as introduced by the chairman of the Committee on the Judiciary, the gentleman from New Jersey (Mr. RODINO), in this Congress, also exempted Indian tribes. Furthermore, as contemplated by the laws of the United States, there is an ongoing trust or trustee relationship between the U.S. Government and Indian tribes, and that has been recognized by including Indian tribes in the exemptions to the bill.

The bill simply recognizes that difference. So long as the Members understand why we have exempted them and understand that there is a matter of 200 years of history of treating Indian tribes as though they had the right of self-government, they will know the reason why they have been included in much the same context as have local governments.

Mr. COHEN. If the gentleman will yield, I thank the gentleman for his explanation.

The point I wanted to make is that the Supreme Court recently cut back on that doctrine, as a matter of fact, by holding that they did not have that sovereign status that has been accorded them for over 200 years.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Ohio (Mr. KINDNESS).

The question was taken; and on a division (demanded by Mr. KINDNESS) there were—ayes 10, noes 13.

So the amendment was rejected.

AMENDMENT OFFERED BY MR. KINDNESS

Mr. KINDNESS. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. KINDNESS: On page 32, strike lines 6–17, and insert the fol-

lowing new subsection in lieu thereof: "(D) a communication on any subject directly affecting any organization to a Member of the Senate or of the House of Representatives, or to an individual on the personal staff of such Member, if such organization's principal place of business is located in the State represented by such Member."

Mr. KINDNESS. Mr. Chairman, this amendment is intended to broaden the geographical exemption. The geographical exemption contained in the bill at the present time would tend to make each one of the Members of this body, Representatives in Congress, somewhat second-class citizens, in a sense, because they can be reached by constituents within their district without the chance of that communication being considered a lobbying communication.

However, we do not represent districts; we represent States.

Article 1, section 2, of the Constitution, just by way of a remainder, states:

The House of Representatives shall be composed of Members chosen every second Year by the People of the several States . . .

The 14th amendment, section 2, 100 years later says:

Representatives shall be apportioned among the several States according to their respective numbers, counting the whole number of persons in each State . . .

Regrettably, it went on to say:

excluding Indians not taxed.

The point is that people are not necessarily aware of where congressional district boundaries lie and it seems hardly fair, to me, to draw artificial lines as barriers to free communication between the people at home and the people they think represent them in the Congress. Indeed, we do represent the people from our home State.

There are those who would say making this a statewide exemption and allowing anyone from the whole State of California or the whole State of New York to talk to any of the many representatives in Congress from one of those States is not fair to the States with lower population.

Indeed, it is fair, because there are a lot of people there represented by those numerous Members of the House of Representatives in the populous States.

I would strongly urge that we at least adopt this amendment to broaden the geographical exemption to allow anyone in your State to contact you without it being counted as a lobbying communication.

Mr. JOHN L. BURTON. Mr. Chairman, will the gentleman yield?

Mr. KINDNESS. I yield to the gentleman from California.

Mr. JOHN L. BURTON. I thank the gentleman for yielding.

Under the bill as reported from the committee, how does it work now where people in San Francisco write to PHILLIP BURTON and think he is JOHN L. BURTON, or write to JOHN L. BURTON and think he is PHILLIP BURTON, not knowing whether JOHN L. BURTON or PHILLIP BURTON represents that part of San Francisco?

Mr. KINDNESS. If they are speaking on behalf of an organization, that may be indeed a reportable transaction.

Mr. JOHN L. BURTON. Which one?

Mr. HARRIS. Mr. Chairman, will the gentleman yield?

Mr. KINDNESS. I yield to the gentleman from Virginia.

Mr. HARRIS. The answer is that under the provision of this bill, that would not be a lobbying communication. Under the provision of this bill, as my colleague will recall, the geographic exemption applies to any Congressman in a city in his district, as a part of.

So, under that it would be exempt under existing provisions.

Mr. KINDNESS. The city or county line.

Mr. JOHN L. BURTON. We represent adjoining districts, and we share one county. I have one complete county, and I share another county with Mr. DON CLAUSEN—or is it DEL CLAWSON? It is DON CLAUSEN.

Mr. KINDNESS. The gentleman understands exactly the confusion of the people I am talking about.

Mr. JOHN L. BURTON. The people of the districts who write their Congressmen, may write to Congressman PHILLIP BURTON, but live in Congressman JOHN L. BURTON's district, or write Congressman JOHN L. BURTON and live in Congressman PHILLIP BURTON's district; or if they write me a letter in DON CLAUSEN's district, or DEL CLAWSON's district, under present law as opposed to this amendment, who would have to report or who would have to go to jail?

Mr. KINDNESS. The gentleman has asked a question, and I will respond to it to get this cleaned up.

Mr. JOHN L. BURTON. If the gentleman will yield further, he understands the situation I am trying to address? I share San Francisco with Congressman PHILLIP BURTON. I have one county I represent myself, and another county—albeit a very small part—I share with Mr. DON CLAUSEN. But, the confusion comes when they write PHILLIP BURTON and live in JOHN L. BURTON's district, or vice versa.

Mr. KINDNESS. The point is that under the bill as it now stands, not amended, if they are speaking in behalf of an organization, then it would be a lobbying communication, if they do not live in the county.

The CHAIRMAN. The time of the gentleman from Ohio has expired.

(On request of Mr. JOHN L. BURTON and by unanimous consent Mr. KINDNESS was allowed to proceed for 3 additional minutes.)

Mr. EDWARDS of California. Mr. Chairman, will the gentleman yield?

Mr. KINDNESS. I yield to the gentleman from California.

Mr. EDWARDS of California. I thank the gentleman from Ohio for yielding to me. I wish to address the gentleman from California (Mr. JOHN L. BURTON).

I say this in all sincerity, that if this bill becomes law with the solicitations amendment that was adopted several days ago, I think that the gentleman's mail from constituents, from other people, will be cut in half, because people back home are not going to be very interested in writing their Congressman.

Mr. JOHN L. BURTON. Will the gentleman tell me that if this passes, my mail will be cut in half?

Mr. EDWARDS of California. It would certainly be chilled.

Mr. MAZZOLI. Mr. Chairman, will the gentleman yield?

Mr. KINDNESS. I yield to the gentleman from Kentucky.

Mr. MAZZOLI. I would like to discuss this because I am in the same situation.

Mr. JOHN L. BURTON. Does the gentleman have a brother?

Mr. MAZZOLI. I do not. I would like to engage in a discussion in the sense of my representing a small area in conjunction with my colleague, GENE SNYDER. People do not know what part of town they live in, or whether GENE represents them or whether I do.

I would like to clear the gentleman's mind of one thing. Individuals are not covered by this bill under any circumstances. Individuals never have to be recognized and never have to be covered. The gentleman is very fine, and I would take respectful disagreement with my colleague from California (Mr. EDWARDS), who says that the mail will diminish. It will not.

People are not covered. They do not have to report. Nobody has to report for them, so I think the gentleman will continue to receive mail addressed to Congressman PHILLIP BURTON, and he will continue to receive mail addressed to Congressman JOHN L. BURTON.

Mr. KINDNESS. I would like to reclaim my time for a moment just for the purpose of clarifying a point.

People do not know these differences. Even though they may be speaking on behalf of some organization such as the "Clear the birds out of the air group," or whatever it may be, they are going to be held responsible for speaking on behalf of an organization. That organization is going to be required to report. I think we can clear up a lot of this by allowing people to speak to anyone in their State.

Mr. JOHN L. BURTON. It would not impose a duty on me if a constituent of PHILLIP BURTON wrote me a letter thinking I was his Congressman, and it was a lobbying letter? I guess I respectfully refer it back again to him, and it is his responsibility.

Mr. KINDNESS. The gentleman can still do that.

Mr. JOHN L. BURTON. I thank the gentleman.

Mr. HARRIS. Mr. Chairman, I move to strike the last word and I rise in opposition to the amendment.

Mr. Chairman, I think I can be very brief on this. I think my colleague, the gentleman from California, quite rightly recognizes this as the California amendment. This would permit a complete exemption on any organization with headquarters in California to be exempted from any communication to the 43 Congressmen of California. It might be referred to, as a subparagraph, as the New York amendment too, because it would have a wide application if there

was an organization headquartered in New York.

This bill in no way places a burden on Congressmen with respect to reporting and it places no burden on an individual with respect to reporting. This bill applies only to organizations.

The current geographic application says if one is making a number of contacts with his local Congressman or local Senator, it does not require registering from the threshold standpoint or reporting after the contact.

It does not apply to any city or county that district is a part of. Any district in San Francisco is part of the exemption of a person living in San Francisco, which is a very broad exemption.

What the amendment tries to do is apply that exemption across the State. If this was adopted we would probably try to go across a tri-State area, and if that was adopted we could probably get a motion to recommit passed easily, also.

This would debilitate the bill so it would be completely unenforceable. It is a broadening exemption which would cover the whole State for anyone living in the State with regard to Congressmen with a district in that State. The exemption already applies to Senators, and I just see no merit at all in broadening the exemption and in fact defeating the purpose of the bill.

AMENDMENT OFFERED BY MR. WIGGINS TO THE AMENDMENT OFFERED BY MR. KINDNESS

Mr. WIGGINS. Mr. Chairman, I offer an amendment to the amendment.

The Clerk read as follows:

Amendment offered by Mr. WIGGINS to the amendment offered by Mr. KINDNESS: strike in the amendment "on any subject directly affecting any organization" and insert "by an organization".

Mr. WIGGINS. Mr. Chairman, the debate heretofore has focused upon who an organization can communicate with, whether it is to be his own congressman, a congressman within the county, or within the State.

There is another aspect to the amendment, which tracks the committee bill language, that deals not with whom but with what the organization can talk about. The language in the bill restricts the organization to speaking on only those issues which directly affect it and no other. I believe that is an unnecessary and unwise limitation upon the content of the speech as well as to whom the speech is directed.

The Supreme Court today decided a case styled "First National Bank of Boston against Bellotti," in which it discussed the rights of corporations to participate in political activity. The State of Massachusetts attempted to prohibit a corporation from speaking on any subject which did not directly affect it with respect to certain referenda pending in that State, and on that issue the Supreme Court struck the statute down and said among other things:

In the realm of protected speech—

And incidentally we are in that realm—

the legislature is constitutionally disqualified from dictating the subject about which persons may speak and the speakers who may address the public issues.

The language in the bill and the language repeated in the Kindness amendment unnecessarily restricts the subject matter of the speech to only those issues which directly affect the corporation. I think that a corporation as well as an individual should have a perfect right to discuss matters such as the SALT, and the neutron bomb, and should have a right to discuss any number of great public issues that may not directly affect the organization.

The language in the bill is unduly restrictive and I hope the amendment to the amendment will be adopted and then in turn that we will adopt the Kindness amendment as amended.

Mr. RAILSBACK. Mr. Chairman, I move to strike the last word.

Mr. Chairman, may I ask the author of the amendment to the amendment, the gentleman from California (Mr. WIGGINS) a question that I hope will be in the nature of a clarification? The gentleman's amendment does nothing to affect the thrust of the Kindness amendment except to strike, as I understand it: "* * * on any subject directly affecting any organization.* * *"

And then by inserting for that: "* * * by an organization.* * *"

So the gentleman is not attempting to in any way interfere with the expansion to cover the States rather than just the congressional districts, is that correct?

Mr. WIGGINS. Mr. Chairman, if the gentleman will yield, that is correct. My amendment does not deal with the geographic exemption.

Mr. RAILSBACK. Mr. Chairman, let me just say, in addressing the amendment, that all of the opposition that has been raised to the concept of expanding to cover the entire State should still stand. The amendment would have the effect of giving those organizations that happen to reside in a large State an advantage.

Second, the gentleman from California (Mr. WIGGINS) talks about a decision which has been reported on the wires which dealt with prohibitions of corporations dealing in, I believe, such sensitive things as questions that would appear on a State ballot. Let me mention to the Members that there is a great difference between prohibiting something and in just requiring disclosure. There is no way, in my opinion, that we can make analogous that kind of an activity when what we are talking about here is simple disclosure. We are not talking about prohibiting anything.

Mr. FLOWERS. Mr. Chairman, will the gentleman yield?

Mr. RAILSBACK. I will be happy to yield to the gentleman from Alabama (Mr. FLOWERS).

Mr. FLOWERS. Mr. Chairman, I thank the gentleman for yielding, and I must say that I am a little confused here. I have no objection to the Wiggins language but I do have objection if it merely modifies the Kindness language. I believe the amendment offered by the gentleman from Ohio (Mr. KINDNESS) has the effect of creating a gaping loophole for organizations on the basis of where they are located. I do not like that. I think I would disagree with the gentleman from Ohio (Mr. KINDNESS) in his interpretation of the Constitution. To me it is clear that we here in the House represent the people, and not the States as such. That is the difference between the House of Representatives and the other body, and I find no problem with a congressional district exemption.

If the language of the amendment offered by the gentleman from California (Mr. WIGGINS) merely modifies the language of the Kindness amendment then I still support the Wiggins language but strongly oppose the Kindness amendment, but if it is in lieu of the Kindness amendment I can support it.

Mr. RAILSBACK. It is very important to understand that the Wiggins amendment is simply a modification of the amendment which so many have spoken in opposition to.

Mr. DANIELSON. Mr. Chairman, I move to strike the last word and I rise in opposition to the amendment.

Mr. Chairman, I would support the Wiggins amendment if the Wiggins amendment were made to the main text of the bill. I think it is worthwhile, but I cannot support it as a portion to the Kindness amendment because the Kindness amendment in effect guts the bill. Therefore I urge a no vote.

The CHAIRMAN. The question is on the amendment offered by the gentleman from California (Mr. WIGGINS) to the amendment offered by the gentleman from Ohio (Mr. KINDNESS).

The amendment to the amendment was rejected.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Ohio (Mr. KINDNESS).

The question was taken; and on a division (demanded by Mr. KINDNESS) there were—ayes 13, noes 17.

So the amendment was rejected.

The CHAIRMAN. Are there further amendments to the bill?

AMENDMENT OFFERED BY MR. KINDNESS

Mr. KINDNESS. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. KINDNESS:
On page 30, line 22, strike "or written".
On page 31, line 2, strike "or written".

Mr. KINDNESS. Mr. Chairman, this amendment would confine covered lobbying communications to not written but oral communications. Thus, only direct person-to-person conversations or telephone conversations would be lobbying. What we are really getting at in terms of any conversation about the purpose of this legislation is requiring the disclosure of lobbying activities that somehow seem to have some dark specter or shadow that is over the legislative process. If lobbying is a problem in that respect and we want disclosure of certain information about it, then what kind of lobbying are we really talking about? We are really not talking about somebody who writes us a letter; we are only talking about the elbow-grabbers, that line we have to run coming into the room, for example, on many occasions, or the people who come to our office and talk to us where there is an exchange of information about pending legislation; there is some back and forth discussion of legislative issues. That is the kind of lobbying

that I am suggesting people are talking about when they say we need to have some more reporting and disclosure about what is going on.

Under the present terms of the bill an organization could be required to register and report solely on the basis of written communications. Why do we need that? The letters are there in somebody's files. They are at least in two places in files. In fact, 13 letters or telegrams written on different days in a 3-month period would result in the automatic coverage of an organization under present terms of the bill. Why do we need that? Do we really want an organization to be a lobbyist solely on the basis of writing letters?

We have tried to draft this bill so that communications by constituents would not constitute lobbying. Most constituents communicate by written word, the letters that we receive in our offices. It is my view that a lobbying statute should be limited to direct oral communications. An organization should only be deemed to be across the lobbying threshold through direct contact and conversations with Members of Congress and staff, or committee staff and personnel.

Mr. Chairman, I would strongly urge consideration of this amendment on one additional basis; that is, we have gone so far with amendments to this bill that have been adopted requiring the coverage and reporting of lobbying solicitations, of grassroots indirect lobbying and reporting the contributions of organizations, that I think we need to restrict the definition of lobbying itself to make some sense in terms of what the original purpose was in fostering legislation of this nature. That is the purpose of this amendment, basically to cut back on the scope of what is included within the definition of lobbying.

Mr. Chairman, I think we strongly need that now because of what has happened to the bill since it has been on the floor and managed as it has been with those two very basic amendments having been accepted without any opposition by the manager of the bill, the chairman of the subcommittee. That would suggest that the bill was broadened greatly through predesign, perhaps. I am suggesting we had better draw it back in where it makes some sense. One way to do that is by redefining lobbying to include only oral communications and not written communications involved in the lobbying process.

Mr. Chairman, I urge an "aye" vote for the amendment.

Mr. DANIELSON. Mr. Chairman, I move to strike the requisite number of words. I rise in opposition to the amendment.

Mr. Chairman, this amendment is eminently simple to understand and if the Committee will bear with me about 45 seconds, I hope they will vote the amendment down. What it does, it simply eliminates from lobbying communications any written communications. It would reduce lobbying to oral communications.

I respectfully submit that in the magnitude of lobbying communications, we probably get more written than we do oral. There is no justifiable reason for eliminating written communications.

Mr. Chairman, I very strongly urge we all vote "no" on this amendment.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Ohio (Mr. KINDNESS).

The amendment was rejected.

● Mr. GARCIA. Mr. Chairman, I do not want to oppose the Lobbying Disclosure Act before us. I think that this is a bill that is long overdue, and I am an active advocate of any legislation that will continue to open the Government and strengthen the links between the public and the Government. However, as this bill stands now, I will oppose it. And I will continue to do so as long as restrictive language like the Flowers amendment stays in the legislation.

The Flowers amendment is antiethical to everything I feel should be supported and encouraged through citizen participation in Government. The greatest successes of the last years—civil rights legislation, the end of American involvement in Indochina, the impeachment of President Nixon, all came about because organizations were able to mobilize great constituencies to do that very basic thing—writing letters to their Congressmen, visiting their offices, communicating directly with their representatives on how they felt. We must, if anything, broaden the ability of organizations to reach their members, not to severely restrict their capacity to do so.

This bill, as my colleagues have stated, abrogates the first amendment rights of citizens to petition the Government. The Judiciary Committee, with obvious justification deleted this amendment from their original bill. But my background is not as an attorney, and so I shall leave discussion of the constitutionality of the legislation to others.

What, I can, and must, talk about, however, is the effect this legislation will have on my community. The south Bronx is developing a voice for the first time. Its citizens have learned that they can fight City Hall and the Governor's Office—and even the Congress of the United States. And they are learning that sometimes they can even win those battles. They are doing this with organizations who are helping, through solicitation, to create an awareness not only of what has to be done, but how to go about doing it. And many of those organizations are new, and they certainly do not have the time, the money or the staff to comply with the reporting requirements implicit in this legislation.

The memories of the recent past are all too vivid—the days of witch-hunts and White House "enemies lists." I can only see both the Flowers and Railsback amendments encouraging apathy and fear. There are still too many citizens who will not freely sign their name in public support of issues. Passage of a bill containing these amendments may be of dubious constitutionality, but it is of certain negative impact on the people I would like to see having a greater involvement in Government.

I hope we will have the opportunity to vote on these amendments again, so they can be deleted from an otherwise good bill. But as it stands now, it is harmful, and I cannot support it.●

Mr. DANIELSON. Mr. Chairman, I ask unanimous consent that all debate on this bill and all amendments thereto be concluded at the hour of 7:30 o'clock p.m. tonight. We are now just past 5:30 o'clock p.m. We are making pretty good progress. I think we can wind up by then.

The CHAIRMAN. Is there objection to the request of the gentleman from California?

Mr. KINDNESS. Mr. Chairman, reserving the right to object, I would direct an inquiry to the desk as to how many amendments are pending at the desk.

The CHAIRMAN. The Chair will state that there are approximately 14 amendments pending at the desk, most of which are pending from the gentleman from Ohio (Mr. KINDNESS).

Mr. KINDNESS. Then, obviously, Mr. Chairman, I object.

The CHAIRMAN. Objection is heard.

Mr. DANIELSON. Mr. Chairman, I move that all debate on this bill and all amendments thereto be terminated at the hour of 7:30 o'clock p.m. tonight.

The CHAIRMAN. The question is on the motion offered by the gentleman from California (Mr. DANIELSON).

The question was taken; and the Chairman being in doubt, the Committee divided, and there were—ayes 22, noes 20.

Mr. KINDNESS. Mr. Chairman, I demand a recorded vote, and pending that, I make the point of order that a quorum is not present.

The CHAIRMAN. The Chair will count. Sixty-nine Members are present, not a quorum.

The Chair announces that pursuant to clause 2, rule XXIII, he will vacate proceedings under the call when a quorum of the Committee of the Whole appears.

Members will record their presence by electronic device.

The call was taken by electronic device.

QUORUM CALL VACATED

The CHAIRMAN. One hundred Members have appeared. A quorum of the Committee of the Whole is present. Pursuant to rule XXIII, clause 2, further proceedings under the call shall be considered as vacated.

The Committee will resume its business.

The pending business is the demand of the gentleman from Ohio (Mr. KINDNESS) for a recorded vote.

A recorded vote was refused.

So the motion was agreed to.

AMENDMENT OFFERED BY MR. GARY A. MYERS

Mr. GARY A. MYERS. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. GARY A. MYERS: Page 39, insert the following after line 7:

(8) If any lobbying communication was made on the floor of the House of Representatives or adjoining rooms thereof, or on the floor of the Senate or adjoining rooms thereof, a statement that such lobbying communication was made.

POINT OF ORDER

Mr. DANIELSON. Mr. Chairman, I have a point of order on the amendment.

The CHAIRMAN. The gentleman will state his point of order.

Mr. DANIELSON. Mr. Chairman, I make the point of order that this amendment is not germane to the bill. The bill calls for disclosure of lobbying activities under the terms of expenditure and the like, and related lobbying activities as to influencing the conduct and disposition of legislation. This has to do with activities within the Capitol Building and is not necessarily within the purview of the bill.

The CHAIRMAN. Does the gentleman from Pennsylvania (Mr. GARY A. MYERS) desire to be heard on the point of order?

Mr. GARY A. MYERS. I do, Mr. Chairman. I would like to be heard on the point of order.

The CHAIRMAN. The gentleman may proceed.

Mr. GARY A. MYERS. Mr. Chairman, I would like to point out that the amendment is more narrowly drafted than the amendment which I offered last year. It only requires an item of disclosure by those individuals who otherwise would have to be reporting. This bill does not in any way define the geographical location in which lobbying activity would not be reported. Nowhere in the bill does it say that if the lobbyist speaks to a House Member in the Capitol that that is not a reportable item. The only thing this amendment would do would require the reporting of any specific activity discussed on the floor of the House. In last year's amendment there was a point of order raised about the invasion of the House rules. It would seem to me that artice I, section 5 of the Constitution clearly states that:

> . . . each House may determine the rules of its proceedings.

Numerous precedents have held that the power to make rules is not impaired by rules of previous Congresses or by laws passed by previous Congresses. So that this amendment in no way adds to or impairs the rules of the House.

It has been recognized that a law passed by an existing Congress can bind that Congress in matters of procedure—and I refer to Hinds' Precedents, volume 5, sections 6767 and 6768. However, this amendment does not even go that far since it in no way binds this or any other Congress. It merely makes available information to the Congress and to the general public. If the Congress chooses to act on that information it can do so according to its rules and procedures.

Mr. Chairman, it seems to me the amendment is germane, it is simply another item of reporting.

I also belive it would be inappropriate for this House to object to this type of reporting.

The CHAIRMAN (Mr. MEEDS). The Chair is prepared to rule.

For the reasons stated by the gentleman from Pennsylvania (Mr. GARY A. MYERS), and in addition, since this amendment does not seek to restrain or regulate conduct but only requires disclosure, the Chair will rule that the point of order is not well taken and the amendment is germane as adding a further reporting requirement to those contained in the bill.

The gentleman from Pennsylvania (Mr. GARY A. MYERS) is recognized for 5 minutes in support of his amendment.

Mr. GARY A. MYERS. Mr. Chairman, I will take a brief moment to explain what I have already pointed out during my rebuttal on the point of order and that is that what this amendment does is adds a new section to the reporting requirements. It would simply require any organization, not individual, but any organization, whose representative did any lobbying on the floor of the House or rooms adjacent to it, or the floor of the other body, for them simply to reveal that in their reporting activities.

There could be a question as to what the rooms adjacent means. It seems to me that this could be very clearly defined in the regulations set up. It does not have to be all hindrance to pass this amendment. It seems to me this ought to be part of the bill that would require reporting on lobbying contacts as well as the nature of them.

I honestly believe that this amendment would tend to relieve current Members of Congress of whatever burden they want to attach to the often very embarrassing situation of having former Members who have access to the floor discussing issues which they ought not to be discussing on this floor.

Mr. JOHN L. BURTON. Mr. Chairman, will the gentleman yield?

Mr. GARY A. MYERS. I yield to the gentleman from California.

Mr. JOHN L. BURTON. I thank the gentleman for yielding.

The gentleman from Illinois (Mr. ANDERSON) and I cosponsored an amendment to the rules of the House that prohibits former members from lobbying on the floor of the House, from being on the floor of the House or in the adjoining rooms, which I think is that room and the Rayburn Room over there, when they are engaged in lobbying activity on a piece of legislation pending before Congress. How far beyond that does the gentleman's amendment go? Right now that is prohibited by the House rules.

Mr. GARY A. MYERS. The amendment would only require an organization who had a lobbyist lobbying on their behalf on the floor to report any lobbying activity that took place here. It does not address the issue whether that lobbying activity would be in violation of any other law or any House rule. It seems to me if we would read the regulations which the Speaker promulgated in response to that amendment of the House rules offered by the gentleman from California (Mr. JOHN L. BURTON) and the gentleman from Illinois (Mr. ANDERSON) which I supported, quite frankly it places a burden, I believe, on the Doorkeeper to know whether or not an individual coming in that door has any interest in pending legislation. It seems to me that those regulations do not give sufficient protection that I know the gentleman from California and the gentleman from Illinois (Mr. ANDERSON) wish to have. This amendment would place the burden on any organization who knows that that is going on in its behalf simply to report it, and we would have that revealed to us as well as the general public.

Mr. VOLKMER. Mr. Chairman, will the gentleman yield?

Mr. GARY A. MYERS. I yield to the gentleman from Missouri.

Mr. VOLKMER. I thank the gentleman for yielding.

I would just like to clarify one part of the amendment. If there was any such lobbying done, would the organization for which the person is employed or doing the lobbying have merely to report their lobbyists by name and lobbying either in the halls or the rooms adjacent on such-and-such a day, or how would they report it? They could not report the exact conversation.

Mr. GARY A. MYERS. No. The intent is not to report the conversation. The intent is that the incidents of lobbying would simply be reported. The amendment reads:

> If any lobbying communication was made on the floor of the House of Representatives or adjoining rooms thereof, . . .

There is some latitude for regulations to take care of the number of reports, or for consolidation. Simply a statement that none did or that some did occur could also accommodate the intention of the amendment.

Mr. VOLKMER. I have one other question. The rooms adjacent would not include the hallways; is that correct?

Mr. GARY A. MYERS. It was not my intention to include the hallways.

Mr. VOLKMER. I thank the gentleman.

Mr. GARY A. MYERS. I think there again the regulation could be drafted to recognize the House Rules.

Mr. YOUNG of Florida. Mr. Chairman, will the gentleman yield?

Mr. GARY A. MYERS. I yield to the gentleman from Florida.

Mr. YOUNG of Florida. I thank the gentleman for yielding.

Just a few moments ago we were talking about time limitations and the number of amendments pending. I should like to advise the Chair that I have three amendments that I have published and are at the desk. One of them is addressed in this amendment offered by the gentleman from Pennsylvania. The other was already addressed in an amendment offered by the gentleman from Illinois (Mr. RAILSBACK) and the third I must concede would be a nongermane amendment, and I would be forced to concede a point of order; so Mr. Chairman, you can subtract three from the list of amendments now at the desk.

The CHAIRMAN. Are there any members in the committee who wish to address themselves to the amendment offered by the gentleman from Pennsylvania (Mr. GARY A. MYERS)? If not, the question is on the amendment offered by the gentleman from Pennsylvania (Mr. GARY A. MYERS).

The amendment was agreed to.

The CHAIRMAN. The Chair will notify the members of the committee that time taken from the allotted time for the discussion of the point of order was not

allotted to the gentleman from Pennsylvania but will come out of the general time and will reduce everyone's time to 5 minutes each.

Are there further amendments?

AMENDMENT OFFERED BY MR. KINDNESS

Mr. KINDNESS. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. KINDNESS: On page 31, line 18, insert after the word "public" and before the comma the following language: "or to the membership of an organization".

Mr. KINDNESS. Mr. Chairman, this amendment would exclude from the coverage of H.R. 8494 any communication made through a newspaper, book, periodical, or magazine published for distribution "to the membership of an organization."

Communications made to the membership of an organization, I think, have a status that we have failed to zero in on. We have failed to consider that fully and adequately here.

Two years ago, this phrase was included in the exemption that I seek to amend today. When H.R. 15 came before the House in the 94th Congress, it contained this language. The Committee on the Judiciary incorporated this provision 2 years ago, because it was convinced that there is no constitutional basis for distinguishing between a publication distributed to a segment of the general public which pays a subscription fee, such as Time or Newsweek, and a publication which is sent to individuals by virtue of their paying dues to a membership organization, such as the AFL–CIO Newsletter.

Such publications are not designed to be lobbying materials, per se, but general newsletters which contain information of interest to the members of an organization. Any comments on legislation in these publications are generally incidental to the main purpose of the publication. Constitutionally, they should be treated no differently than a Washington Post editorial which specifically urges its readers to contact Members of Congress in support or in opposition to a pending bill.

This amendment would permit an organization to continue to send its Members a regularly published magazine or newsletter without those publications inadvertently becoming "lobbying solicitations."

Now that we have the coverage of lobbying solicitations in the bill by virtue of the amendment proffered by the gentleman from Alabama (Mr. FLOWERS) it is necessary to make this clarification in the bill.

Many well-known groups, like the Veterans of Foreign Wars, the Sierra Club, and the AFL–CIO regularly send publications of this type to their membership. If this provision is left unchanged, even religious newspapers could become solicitations, as defined in the bill at the present time.

It is my view that the first amendment protects all kinds of printed materials, no matter by whom they are published.

It is important to note that this section does not exclude special mailings or other communications sent by an organization to its members which are specifically designed to solicit action on legislative matters. Such legislative action bulletins are lobbying solicitations and would be subject to the reporting provisions of the bill, as the bill now stands.

I believe that this is a valid distinction which will permit the reporting of carefully orchestrated "grassroots" campaigns without infringing fundamental first amendment freedoms.

Mr. Chairman, I would urge adoption of the amendment for that reason.

The CHAIRMAN. Are there Members on the list that wish to respond to this amendment?

The Chair recognizes the chairman of the committee, the gentleman from California (Mr. DANIELSON).

Mr. DANIELSON. Mr. Chairman, I rise in opposition to the amendment.

The CHAIRMAN. At this time the Chair will advise Members that even if they have 5 minutes, they may address themselves only to one amendment. They will not be able to split their time except by unanimous consent.

Mr. DANIELSON. Between amendments?

The CHAIRMAN. That is correct.

The Chair recognizes the gentleman from California (Mr. DANIELSON).

Mr. DANIELSON. Mr. Chairman, I would like to point out that the language of this amendment is such that it would exempt from lobbying communications any communication made to members of an organization.

The word "organization" is a word of art in this bill. An organization means any corporation, company, foundation, association, labor organization, firm, partnership, society, joint stock company, a State organization with local appointed or elected officials, group of organizations or group of individuals.

If a communication were addressed to the membership of any of those organizations, it would be an exempt communication under this amendment. I submit that it is as broad as the bill itself, and it would exempt far too great a group of people.

Therefore, Mr. Chairman, the amendment is repugnant to the purpose of the bill, and I urge a "no" vote.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Ohio (Mr. KINDNESS).

The question was taken; and on a division (demanded by Mr. KINDNESS) there were—ayes 9, noes 20.

So the amendment was rejected.

The CHAIRMAN. The Chair recognizes the gentleman from Ohio (Mr. KINDNESS) to offer an amendment.

AMENDMENT OFFERED BY MR. KINDNESS

Mr. KINDNESS. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. KINDNESS:

On page 44, line 15, strike "$10,000" and insert "$5,000".

On page 44, line 24, strike "$10,000" and insert "$5,000".

On page 44, lines 24–25, strike "two years" and insert "one year".

On page 45, line 10, strike "$10,000" and insert "$5,000".

On page 45, lines 5–6, strike "two years" and insert "one year".

On page 45, line 10, strike "$10,000" and insert "$5,000".

The CHAIRMAN. Since the amendment offered by the gentleman from Ohio (Mr. KINDNESS) is identical to the amendment printed in the RECORD under the gentleman's name, the gentleman from Ohio (Mr. KINDNESS) is recognized for 5 minutes in support of his amendment.

PARLIAMENTARY INQUIRY

Mr. KINDNESS. Mr. Chairman, I have a parliamentary inquiry.

The CHAIRMAN. The gentleman will state his parliamentary inquiry.

Mr. KINDNESS. Mr. Chairman, I recognize the fact that following the offering of this amendment, I do have other amendments to offer. I also recognize the fact that there are other Members whose amendments are not protected by having received publication in the RECORD. I am, out of curiosity, wondering if there are other amendments pending that are going to be offered.

The CHAIRMAN. The Chair does not have any way of determining that other than by a review of those amendments that might be pending. The Chair's recollection is that since the gentleman from Florida (Mr. YOUNG) has announced that he will not offer his amendments, there may be only one amendment or perhaps none pending at the desk other than those amendments to be offered by the gentleman from Ohio (Mr. KINDNESS).

Mr. KINDNESS. I thank the Chair.

The CHAIRMAN. The gentleman from Ohio (Mr. KINDNESS) is recognized for 5 minutes in support of his amendment.

Mr. KINDNESS. Mr. Chairman, at the present time the law relating to lobbying provides for penalties as follows:

(a) Any person who violates any of the provisions of this chapter, shall, upon conviction, be guilty of a misdemeanor, and shall be punished by a fine of not more than $5,000 or imprisonment for not more than twelve months, or by both such fine and imprisonment.

(b) In addition to the penalties provided for in subsection (a) of this section, any person convicted of the misdemeanor specified therein is prohibited, for a period of three years from the date of such conviction, from attempting to influence, directly or indirectly, the passage or defeat of any proposed legislation or from appearing before a committee of the Congress in support of or opposition to proposed legislation; and any person who violates any provision of this subsection shall, upon conviction thereof, be guilty of a felony, and shall be punished by a fine of not more than $10,000, or imprisonment for not more than five years, or by both such fine and imprisonment.

Mr. Chairman, that is the existing law, the law that we all say now is no good.

The amendment I am offering at this time is for the purpose of bringing the bill somewhat more in line with reality and somewhat more in line with the current law and the penalties to be provided for. That is to say, in the bill as it is

before us we have provision for a felony conviction for willful violations of this law, if it becomes law. That is up to 2 years and a $10,000 fine.

We have a provision for a civil penalty of up to $10,000. This amendment would reduce the civil penalty to $5,000. It would reduce the 2-year felony to a misdemeanor of 1 year and the fine provision from $10,000 to $5,000, providing some consistency with similar sorts of violations of the law.

I think we have a tendency sometimes to get carried away with the desire to assess stiff penalties for white-collar crimes, so to speak, when, indeed, I am not even sure we are talking about something for which we should have criminal penalties at all. But granting the likelihood that there would be an unsuccessful attempt, and beyond the realm of reasonableness, to get the criminal penalties taken out of this bill altogether, I think we should at least get it in some kind of rational order, comparable to other penalties provided for similar violations of law.

What I am urging is to take this amendment and make it a part of the bill to at least reduce the level of fines from $10,000 to $5,000, to reduce the felony to a misdemeanor, and to leave this in some sort of reasonable order that is comparable to the present law. The present law, as we all know, is not ineffective because the penalties are not severe enough. It is ineffective because the law is not written properly so as to be of effect. The Supreme Court has so construed it, in terms of the constitutionality of it. So let us at least be sensible about the criminal and civil penalties included in the bill.

Mr. Chairman, I urge the adoption of the amendment for that purpose.

PARLIAMENTARY INQUIRY

Mr. DANIELSON. Mr. Chairman, I have a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. DANIELSON. Mr. Chairman, do I understand that, inasmuch as the amendment has been printed in the RECORD, even though there is a limitation, I would have a right to speak in opposition?

The CHAIRMAN. The Chair will state that the gentleman states the situation correctly. The gentleman is entitled to 5 minutes.

Mr. DANIELSON. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, the gentleman from Ohio (Mr. KINDNESS) has accurately stated what his amendment would do. It would reduce the civil penalty by 50 percent. It would reduce the criminal penalty by 50 percent. I am talking about the fine, from $10,000 to $5,000. It would also reduce the potential penalty of confinement from 2 years to 1 year, which would have the double effect of reducing the term and also changing it from a felony to a misdemeanor.

I would like to respectfully point out that we have built into this bill the requirement that any criminal offense be a willful offense, which is the highest degree of criminal intent, which means that, in order to have a violation of the law, it must be necessary to satisfy that requirement that the acting person know that his action is in violation of the law.

In adopting the language, the committee invoked the high standard that "willful" refers to an act done with a bad purpose, without justifiable excuse, stubbornly, obstinately, perversely, and with an evil intent. In short, to constitute a criminal offense the actor must have a specific intent to violate the law.

I respectfully submit that if anybody is going to violate the criminal provisions of this law in that manner, knowing that he is doing it, and making a violation for the purpose of violating the law, then at least the court should have the option of imposing a fine of $10,000 and a maximum sentence of 2 years. Nobody is going to run afoul of this law accidentally, innocently or inadvertently. If someone violates this law, he is doing it with the fullest intent to violate the law.

Mr. Chairman, I submit that the penalties are most appropriate, and I urge that the amendment be rejected.

Mr. Chairman, I ask unanimous consent to revise and extend my remarks on the argument just made.

The CHAIRMAN. Is there objection to the request of the gentleman from California?

Mr. KINDNESS. Mr. Chairman, reserving the right to object on the unanimous-consent request, do I understand that there is something in the argument that needs to be changed?

Mr. DANIELSON. If the gentleman will yield, no, nothing needs to be changed. I simply wish to expand upon the significance of the term "willful," so that the legislative record would be clear that this, to be a violation, would have to be the ultimate form of criminal intent.

Mr. KINDNESS. Mr. Chairman, further reserving the right to object, I am correctly concerned.

Mr. DANIELSON. Mr. Chairman, I will withdraw my unanimous-consent request.

The CHAIRMAN. The gentleman from California (Mr. DANIELSON) withdraws his unanimous-consent request.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Ohio (Mr. KINDNESS).

The question was taken; and on a division (demanded by Mr. KINDNESS) there were—ayes 6; noes 16.

So the amendment was rejected.

AMENDMENT OFFERED BY MR. KINDNESS

Mr. KINDNESS. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. KINDNESS: On page 32, following line 16, insert the following new paragraph:

"(F) a communication by, or on behalf of, a candidate, as defined in section 301(b) of the Federal Election Campaign Act of 1971 (2 U.S.C. 431(b)) or by, or on behalf of, a candidate for a State or local office, made in his capacity as a candidate for Federal, State, or local office, including a communication or solicitation by, or on behalf of, an organization in its capacity as a political committee, as defined in section 301(d) of such Act (2 U.S.C. 431(d));".

Mr. KINDNESS. Mr. Chairman, at one time in the consideration of this bill there was language considered identical, I believe, or almost identical, to this amendment. Members will note that on page 34 of the bill there is now language which says:

This Act shall not apply to practices or activities regulated by the Federal Election Campaign Act of 1971.

I think that language was included in the bill in an attempt to take care of what is considered in part by this amendment. But, not all activity that might be called lobbying activity is covered by the Federal Election Campaign Act of 1971. Certainly, in the case of candidates for State or local offices, there is no exemption at the present time for something they might do or that their campaign committee might do in the course of a campaign which says, "What the Congress is doing is wrong. Write your Congressman or write your Senator and tell them that John Doe, who is running for Governor in the State of Missouri, is urging that they write to the Members of Congress," and urge particular action for or against a measure.

Now, this is not something farfetched. We know that the right of free speech is being infringed upon, is being affected, by this bill. We know that lobbying solicitations are now covered by this bill. This is one of the ramifications of including the Flowers amendment in the bill, that it is quite conceivable that we will have a campaign committee of a candidate for Governor or any other office having to register and report under the coverage of this bill.

Mr. HARRIS. Mr. Chairman, will my colleague yield

Mr. KINDNESS. I will yield very briefly.

Mr. HARRIS. I simply ask, my colleague is saying that even if that political committee passes the threshold of spending $2,500 a quarter on lobbying activities and makes 13 days of contacts, then they still do not have to register as a lobbyist?

Mr. KINDNESS. I will not yield any further. Of course, the gentleman understood what question he is asking. One first has to cross the threshold, but the gentleman can well imagine that this occurs in a great many cases. Let us take someone running for Governor in the State of New York, or let us just say for mayor in the city of New York. Does the gentleman not think that he did not contact Members of Congress, at least on 13 days while that period of his candidacy was going on, and he was a Member of this House also at the same time?

I do not know how we overcome these gray areas except by being clear. There cannot be any harm done by being clear in the statutory provisions. I strongly urge that here is another case where stubborn refusal to consider this amendment—and it is certainly possible that Members can take the votes and vote them in blind opposition to something that needs to be taken care of, or they can be reasonable and consider something that needs to be taken care of.

Mr. Chairman, I urge support of the amendment.

The CHAIRMAN. Are there any Members on the list who wish to speak in

opposition to the amendment? Does the chairman of the committee wish to speak in opposition to the amendment?

Mr. DANIELSON. I do not, Mr. Chairman.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Ohio (Mr. KINDNESS).

The question was taken; and on a division (demanded by Mr. KINDNESS) there were—ayes 8, noes 13.

So the amendment was rejected.

AMENDMENT OFFERED BY MR. KINDNESS

Mr. KINDNESS. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. KINDNESS: On page 39, strike lines 11–22, and insert the following new subsection in lieu thereof:

"(1) to develop a filing system to carry out the purposes of this Act;".

Mr. KINDNESS. Mr. Chairman, this amendment would strike language which provides that the Comptroller General will:

. . . develop filing, coding, and cross-indexing systems to carry out the purposes of this Act, including (A) a cross-indexing system which, for any retainee described in section 3(a)(1) who is identified in any registration or report filed under this Act, discloses each organization identifying such retainee in any such registration or report, . . .

It requires the cross-indexing so that those who want to paw through the records have it all done for them at the taxpayers' expense. I was talking to a reporter this afternoon who said:

What do you want to do by this amendment? Make my work harder and my overtime greater?

And I indicated, "No, certainly not," but I do not think the taxpayers are going to be very thrilled about the idea of establishing all the new jobs it is going to take to set up all the cross-indexing systems and all this work to make this information correlate with the other types of filings imposed in these days, and I do not think we ought to be wasting the taxpayers' money in that way.

The bill already provides for their reports to be made public and copies to be made available at cost for people who request copies, but to set up a cost-indexing system in order to make it easy for those who want to get certain information out of the records or make some kind of comparison to write news stories about us, to make that easier I do not see that there is any obligation that rests upon the Congress of the United States to provide that at taxpayers' expense.

I would urge support of the amendment.

Mr. DANIELSON. Mr. Chairman, if under the rule I am permitted, I rise in opposition to the amendment.

The CHAIRMAN. The gentleman is so permitted.

Mr. DANIELSON. Mr. Chairman, I oppose the amendment for the reason stated by the gentleman from Ohio (Mr. KINDNESS), but the rationale behind it I think I should expand upon just a little bit.

The bill was very carefully drawn to prescribe what the Comptroller General should do.

The purpose of disclosing lobbying activities was not simply that these records be filed somewhere and then covered by dust and forgotten but the idea was that the record should have some meanings, some utility, some value to the people. For that reason we require in the bill that the Comptroller General not just receive passively the reports and records of lobbying activities but that he should develop a filing system, which is covered by the gentleman's amendment, a coding system and a cross indexing system to carry out the purposes of the act, to include cross indexing so that any retainee that is identified in a registration report would be identified, and also to cross index with the Federal Election Commission's data so that we can determine whether or not there is an interchange between the records of the Federal Election Commission and those to be disclosed under the lobbying bill.

I respectfully submit that the language referred to is a very important portion of the structure of this bill and should be preserved. We should not restrict this activity of the Comptroller General to the passive act of operating a final resting place for the reports and registrations of lobbyists.

I therefore respectfully urge that the amendment be rejected.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Ohio (Mr. KINDNESS).

The amendment was rejected.

AMENDMENT OFFERED BY MR. KINDNESS

Mr. KINDNESS. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. KINDNESS: On page 40, strike the language beginning on line 16 through line 4 on page 41.

On page 40, line 15, strike the semicolon, insert a comma, and add the following language: "and to permit copying of such information by hand or by copying machine or, at the request of any individual or organization, to furnish a copy of such information upon payment of the cost of making and furnishing such copy; and".

On page 41, line 6, strike "(6)" and insert "(4)".

Mr. KINDNESS. Mr. Chairman, this amendment is really a companion to the one which was just so fully considered, and would strike the language that requires the Comptroller General to compile and summarize, with respect to each quarterly filing period, the information contained in registrations and reports filed during such period in a manner which clearly presents the extent and nature of the activities described in section 3(a) which are engaged in during such period, and to make the information compiled and summarized available to the public within 60 days, and so on.

In other words, we are saying to the Comptroller General by language in the bill as it now stands to make a nice little note and a concise summary each quarter available to the public as to just what lobbying activity is going on. That is to characterize what is going on.

Now, Mr. Chairman, surely the Comptroller General must do this within the regulations, I assume, to which the legislative veto provision would be applicable. But how do you control the way in which the Comptroller General characterizes the extent and nature of the activities described in section 3(a), that is the lobbying activities which are engaged in during such period?

The language in the bill is pernicious.

It is not my intent to convey any misapprehension that the General Accounting Office is likely to use it in such a manner as to cause personal injury to anyone or to create a misconception in the public mind about what is going on in lobbying activities, but why include in the bill such language to begin with?

Here again we are asking for the General Accounting Office, at the expense of the taxpayers, to hire more people to handle this every quarter.

Why do we want to impose that burden?

The amount of money that would be provided in authorizations proposed in the bill really is not going to come close to covering the cost of all of this employment, and activity, and recordkeeping, and compiling, and summarizing, and reporting. I urge that we ought at least to take out that kind of fancy frill and furbelow, and would urge the support of the amendment.

Mr. DANIELSON. Mr. Chairman, I rise in opposition to the amendment. I would like to point out that this present amendment which is offered by the gentleman from Ohio is very similar in nature to the previous amendment which was turned down. Again we are relating to the records that we seek to have prepared and filed in order to disclose lobbying activity. The language in the bill provides that these records shall be filed with the Comptroller General. It also provides that the Comptroller General shall have the obligation to compile and summarize the information contained in those registrations of reports which are engaged in during any one of the quarterly periods, and to make the compiled and summarized information available to the public for copying, et cetera, within 60 days.

The gentleman's amendment eliminates the requirement that the material be compiled and summarized, and what it would result in is simply this, the records that would be made available for people to study and to examine would be the raw records filed by the Comptroller General, the various registration reports, the various reports of lobbying activity, but all filed in raw data without any summarization or compilation whatever. It would become extremely burdensome for any group which wished to look into that, any press representatives or anyone who wished to look into that examination of lobbying activity to find any thread tying them together. The burden of examining those records, from which to draw some useful and intelligent information, would be enough to defeat the bill in the first place. For that reason I would urge likewise that this amendment be rejected.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Ohio (Mr. KINDNESS).

The amendment was rejected.

AMENDMENT OFFERED BY MR. KINDNESS

Mr. KINDNESS. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. KINDNESS: On page 46, strike lines 4–10, and insert the following new section:

"SEC. 15. This Act shall take effect on October 1, 1979."

Mr. KINDNESS. Mr. Chairman, the purpose of this amendment is a sort of last-ditch effort at causing someone to exercise some reasonability. If this bill becomes the law or a part of it after a conference with the Senate, then certainly it is going to be complicated enough, and certainly it is going to have its problems in sufficient numbers to be litigated in the courts, and certainly it is going to require the preparation that would make it very reasonable for us to consider an effective date of October 1, 1979, and not sooner.

A bill such as this will be the subject, I suppose, if it becomes law, of a considerable amount of comment in the news media and otherwise. People will have misunderstandings about what it may require of them. Some of them have been enumerated in the debate on the various parts in the consideration of this bill over the last week or so. There will be the need for some time to prepare, and I would certainly hope that in this instance at least we can consider the interests of the general public, including those people who might somehow or other be involved with organizations that are called lobbying organizations, and provide for an effective date of October 1, 1979.

Not in this connection at all, but for another purpose, I would yield to the gentlewoman from New York (Ms. HOLTZMAN).

Ms. HOLTZMAN. Mr. Chairman, I thank the gentleman for yielding.

Mr. Chairman, I have been gravely concerned about many provisions of this bill which seriously limit our cherished right to petition the Government for redress of grievances.

What concerns me most of all is the adoption of the Flowers amendment. I am profoundly concerned that it will involve the Government in the regulation of speech made on a grass roots level by public interest groups or even by ordinary citizens. This Government has no business being involved in that kind of regulation.

I just spoke with the subcommittee counsel who advised me that the Flowers amendment, which regulates grassroots solicitations, contains serious ambiguities which would expand the scope of the bill enormously. For example, it may well reach a situation in which the president of an organization, such as a special interest group, after making a speech responds to an audience question, "How can I do something about this problem?" If the president says, "I believe that the most effective way would be to write to your Congressman or to your Senator," his statement might have to be reported.

Mr. Chairman, I do not think we should be in the business of asking people to prepare and submit reports on speeches they make or questions they answer or notices they issue in connection with soliciting on the grass roots level.

I think we are trenching seriously on first amendment rights—and we are doing so when there is absolutely no justification for it.

Mr. KINDNESS. Mr. Chairman, I thank the gentlewoman for her very valuable contribution to the debate generally and, really, it does relate to this amendment, too, in the sense that we ought not to have an effective date earlier than October 1, 1979, so that there is a good look by the public at what is affected by this and what needs to be litigated before it goes into effect.

Mr. Chairman, I would urge the adoption of the amendment.

Mr. DANIELSON. Mr. Chairman, I rise in opposition to the amendment.

This amendment appears to be somewhat innocuous, since all it does is extend the effective date from October 1, 1978, to October 1, 1979; but I would like respectfully to point out, this is not at all necessary.

It also repeals subsection (b) of section 15, which I respectfully submit makes the amendment unnecessary.

In the first place, if this bill should pass this body and if this or a similar bill should pass the other body, the chances are almost 100 percent that there would have to be some type of conference to resolve the differences between the two parties. At that time we would have a far better idea where we are on the calendar, whether it would be June, July, August, or September, and if it should be necessary to extend the effective date action could be taken at that time; but what is more important, in section (b) of section 15 we do provide that even though the effective date would be October 1, 1978, that since sections 4, 5, 6, 7, 8, 11, and 12, shall take effect on the 1st day of the 1st calendar quarter beginning after the date on which the first rules and regulations promulgated to carry out the provisions of sections 4, 5, and 6 take effect, in accordance with section 10.

Mr. Chairman, those sections are the sections governing registration, records, and reports. So until regulations and rules have been promulgated and take effect governing registration, records, and reports, in effect nothing takes effect in this bill. We are not going to be pushed up against the calendar, and I would, therefore, urge a "no" vote on the amendment.

Mr. CHARLES H. WILSON of California. Mr. Chairman, will the gentleman yield?

Mr. DANIELSON. I yield to the gentleman from California.

Mr. CHARLES H. WILSON of California. Mr. Chairman, the effective date does not become an issue in Congress, does it, unless there is a difference between the effective date of the Senate bill and the effective date of the House bill?

I do not think the gentleman could say that this could result in bargaining in conference unless there is a difference between the two bills as they relate to the effective date.

Mr. DANIELSON. Perhaps the gentleman is right, but as to subsection (b) of section 15, nothing is done under the bill until the calendar quarter subsequent to the issuing of regulations takes place.

Mr. CHARLES H. WILSON of California. It seems to me, Mr. Chairman, if there is some question about the possibility that our date is not going to be a viable date, perhaps the amendment should be adopted.

Mr. DANIELSON. But suppose the bill were passed as of October 1, 1978. It will still be necessary thereafter for the rules and regulations to be promulgated regulating registration, reports, and records, and then the calendar quarter would go by before the bill would have a direct impact upon anybody. So we are not being pushed into a corner, no matter how we look at it.

Mr. CHARLES H. WILSON of California. It might be that an effective date of 1985 would be better.

Mr. DANIELSON. Mr. Chairman, that depends upon one's point of view, but mine was decided in accordance therewith.

Mr. Chairman, I urge that the amendment be defeated, because if we wait until October of 1979, then the Comptroller could not even issue his regulations until subsequent to October of 1979, and it might well be a year or two later before the bill would have any effect. I urge a no vote on the amendment.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Ohio (Mr. KINDNESS).

The amendment was rejected.

AMENDMENT OFFERED BY MR. KINDNESS

Mr. KINDNESS. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. KINDNESS: On page 32, line 5, strike "or".

On page 32, line 16, insert "or" after the semicolon.

On page 32, after line 16, insert the following additional language:

"(E) a communication which deals only with the existence or status of any issue, or which seeks only to determine the subject matter of an issue."

The CHAIRMAN. The gentleman from Ohio (Mr. KINDNESS) is recognized for 5 minutes in support of his amendment.

Mr. KINDNESS. Mr. Chairman, the purpose of this amendment is to clarify something which is indeed referred to in language contained in the report, and here again there is good reason to make the statutory language clear. The report language occurs on page 20 of the report, and beginning in about the middle of the paragraph numbered (9), it is as follows:

The term "lobbying communication" does not include communications which only seek to determine the existence or status of a legislative matter. Such communications are entirely informational and are not intended to have any influence on the legislative matter involved.

Well, that is fine. We do this sort of thing all the time, relying on language

that is inserted in a report for clarification, instead of having good, clear language in statutory enactment.

Many of the communications we receive from organizations, as well as individuals, but particularly from organizations, are not really lobbying communications. They are trying to find out about the status of a matter, and they are in the category we are talking about here. Therefore, they ought to be excluded from the definition of "lobbying communication."

Mr. Chairman, I would just like to share with the Members a letter I received on April 20, last week, from Dr. John Wasylik, the commander in chief of the Veterans of Foreign Wars of the United States. That letter was written when we were last considering this bill, and Dr. Wasylik wrote as follows:

VETERANS OF FOREIGN WARS
OF THE UNITED STATES,
Washington, D.C., April 20, 1978.

Hon. THOMAS N. KINDNESS,
Member, Committee on the Judiciary, U.S. House of Representatives, Washington, D.C.

DEAR MR. KINDNESS: It is my understanding that the House of Representatives passed an amendment yesterday, April 19, 1978, to the "Public Dislosure of Lobbying Act of 1978," designated as H.R. 8494, which would require expanded public disclosure of "Grass-Roots" lobbying efforts by organizations that must register under that bill.

One of the current priority legislative goals of the Veterans of Foreign Wars of the United States is to "Oppose all lobby reform legislation containing reporting requirements so stringent as to thwart lobbying activities at any level, or which has a chilling effect on first amendment rights to petition the Congress of the United States."

We, of the Veterans of Foreign Wars, support your efforts to seek reconsideration of the Flowers Amendment, so that this legislation does not impede or burden "Grass-Roots" lobbying by interest groups, such as the V.F.W., which act unselfishly in behalf of this nation's veterans. We appreciate the concern of the Congress to enhance public confidence in the legislative process, but not at the expense of our liberties, as enunciated in the first amendment of the U.S. Constitution.

Sincerely,

JOHN WASYLIK,
Commander-in-Chief.

Most of the Members are aware, I am sure, that when they are contacted by or on behalf of the Veterans of Foreign Wars and other organizations and, indeed, many other organizations of a different nature, what they are contacting the Members about is the question about what is the status of a particular bill or is there something pending about a particular matter that is within their area of interest.

We ought to clarify the point that at least when they are only making such an inquiry—although one can often get the significance of what their views would be by reason of their making an inquiry—let us make it clear that that is not a lobbying communication.

It is clear, I think, that that is what is intended by the committee, that is what is intended, I hope, by this Committee of the Whole. But certainly the report indicates that the Committee on the Judiciary felt that status inquiries or inquiries as to the existence of a matter should be exempt and not counted as lobbying communications.

Mr. Chairman, I would certainly urge that we clarify that in the bill itself and not leave it to chance.

Mr. Chairman, I urge the adoption of the amendment.

Mr. DANIELSON. Mr. Chairman, I rise in opposition to the amendment.

Mr. DODD. Mr. Chairman, will the gentleman yield?

Mr. DANIELSON. I yield to the gentleman from Connecticut.

Mr. DODD. Mr. Chairman, whether it is a New Jersey housewife or a businessman's association writing to their respective Representatives, the communication of concerns between a legislator and his or her constituency is what lobbying is all about. Without lobbying, individual as well as group efforts, a Representative would not be able to represent and a voter would be unable to voice his support or objection to legislative issues.

Chief Justice Warren wrote in the 1954 Harriss decision that—

Full realization of the American ideal of goverment by elected representatives depends to no small amount on their ability to properly evaluate such pressures (by lobbyists). Otherwise the voice of the people may all too easily be drowned out by the voice of special interest groups seeking favored treatment while masquerading as proponents of the public weal. This is the evil that the Lobbying Act was designed to prevent.

Unfortunately, the original lobbying law has been shot full of loopholes over the years, and the evil that Chief Justice Warren hoped to prevent is still apparent. H.R. 8494, the Public Disclosure Lobbying Act was a lobbying measure that I could have given my support to. It was drafted with the constitutional right of citizens to exercise their right to free speech in mind, while providing those same citizens with a law that gives them access to the hitherto closed doors to lobbying efforts by large organizations.

H.R. 8494 was a flawed bill, but it was an acceptable solution to the current lack of statutes to enforce more comprehensive registration and reporting of major lobbying organizations. However, since the addition of amendments mandating disclosure of grassroots solicitations and contributions to lobbying groups, the same constitutional rights that H.R. 8494 strove to protect are now in jeopardy.

I can no longer support a bill that would discourage individuals from contacting their representatives in Government. The adoption of the Flowers amendment requiring that registered lobbying organizations report solicitations made to citizens to contact their Congressmen on a particular issue will have a chilling effect on communications between Congressmen and their constituencies. The right to petition the Government is at the root of our democratic system and this amendment will effectively put a damper on indirect petitions made by small, private organizations such as church groups and charitable organizations that will now have to go through the machinations of public disclosure of their activities.

The paperwork alone will be massive, and many private groups will be forced to either cut back on their efforts to solicit their memberships to lobby Congress or centralize in Washington in order to handle the processing of disclosure reports. The eventual effect will be to defeat the purpose of the lobbying act: to allow people to have a part in the congressional decisionmaking process while controlling the lobbying abuses of major organizations that have, up until now, managed to avoid the scrutiny of the American public.

Many of us in Congress complain about the volume of identical mail we often receive on a given subject but, no matter what the format, when people affix their names to a letter they are also registering their belief in and support for an issue. We should not in any way prevent people from voicing their opinions whether or not someone has prodded them into writing in the first place. The views are the same in a sample letter from an organization or one composed by an individual.

I can no longer support a bill that would mandate the disclosure of organizations that contribute $3,000 or more to lobbying groups. The House wisely defeated a similar amendment introduced by Representative RAILSBACK that would have included disclosure of major contributions from individuals: a possible violation of citizens' right to privacy. Passage of the second Railsback amendment that excludes individuals' disclosure will have a harmful effect on those organizations that lobby for unpopular causes.

The same arguments that applied to violation of individual rights in the first Railsback amendment can be applied to organizations as well. It is true that the right of privacy does not extend to organizations, but organizations are made up of people and people who belong to religious, charitable, or business organizations that contribute to controversial causes can be hurt in the process. A person who belongs to a particular organization may not support all of that group's opinions and will still be subject to reprisals if he or she is identified with an unpopular stand taken by that group.

If you look up the word in Webster's Dictionary you will find that "lobbying" is: "the process by which people attempt to influence public officials and legislators." It is this process of influence peddling that has made the public wary of activities conducted by lobbyists.

The secrecy that cloaks the wheelings and dealings of many lobbying groups, the lavish parties and lunches, and the free gifts are all proof of the dismal failure of the present lobbying disclosure laws to make registered lobbyists accountable for the way in which they conduct their work.

To the public, still feeling the aftershocks of Watergate immorality coupled with the new Koreagate bribes, the aura of corruption that surrounds lobbyists who ply their trade in Washington is damning evidence that politicians are

for sale to the highest bidder. We must work to dispel the negative image of lobbying that has been shaped by abuses connected with these extravagant outpourings of money to influence the congressional decisionmaking process. The average voter can no longer see past the scandals to that dictionary definition that describes lobbying as the means by which information is passed on from individuals and groups to Members of Congress.

Right now I am lobbying against H.R. 8494 as amended, and no one here could deny me that right, but the average American needs every opportunity and impetus to lobby the government. A new law needs to be passed. The public should be made aware of the lobbying activities of major organizations that have been making legal mincemeat out of the original lobby disclosure law. However, as it is now, the lobby disclosure bill would seriously detract from the crucial exchange of information between Congressmen and their electorate. Without those cards and letters coming in the Federal Government that is based on a democracy "of the people, by the people, and for the people" will suffer a major setback.

Mr. DANIELSON. Mr. Chairman, I would like to state that one of these days I am going to miss the opportunity to have a continuing colloquy with the gentleman from Ohio (Mr. KINDNESS). It has been most enjoyable.

Mr. KINDNESS. Mr. Chairman, will the gentleman yield?

Mr. DANIELSON. I yield to the gentleman from Ohio.

Mr. KINDNESS. Mr. Chairman, I would like to understand how that is going to occur. Am I going to be leaving?

Mr. DANIELSON. I plan to retire in about 1985.

Mr. Chairman, I would like to oppose this amendment, and I will point out the reason why.

There is no need to put this exemption into the bill. The communications exemptions put into this amendment are not lobbying communications. They need never be reported. They could not count under the threshold and they are not lobbying communications even. Lobbying communications, as defined in the bill, are communications directed to certain people to influence the content or disposition of any bill, and so forth.

The language of the amendment refers to communications which deal only with the existence or status of an issue, or which seeks only to determine the subject matter of an issue.

Mr. Chairman, I submit that language is not language which seeks to influence the content of or disposition of a bill.

We recognized, in preparing the committee report, that this could possibly come up as a question. And on page 20 of the committee report, at lines 10 through 15, we have stated as follows:

> The term "lobbying communication" does not include communications which only seek to determine the existence or status of a legislative matter. Such communications are entirely informational and are not intended to have any influence on the legislative matter involved.

Again, I submit that these are not lobbying communications. The amendment is redundant. It does nothing, and it therefore should be rejected.

I am pleased and I thank the gentleman from Ohio for bringing this up on the floor, because we have been able to have a rather complete legislative history which eliminates that type of communication from the category of a lobbying communication.

Mr. Chairman, I urge a no vote.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Ohio (Mr. KINDNESS).

The question was taken; and on a division (demanded by Mr. KINDNESS) there were—ayes 16, noes 22.

Mr. KINDNESS. Mr. Chairman, I demand a recorded vote, and pending that.

The CHAIRMAN. The Chair will count.

Mr. KINDNESS. Mr. Chairman, I withdraw my point of order of no quorum.

RECORDED VOTE

I make the point of order that a quorum is not present.

Mr. KINDNESS. Mr. Chairman, I demand a recorded vote.

A recorded vote was ordered.

The vote was taken by electronic device, and there were—ayes 207, noes 188, not voting 39, as follows:

[Roll No. 256]

NOT VOTING—39

Annunzio	Goodling	Sawyer
Baucus	Gudger	Sisk
Beard, R.I.	Howard	Stark
Burton, Phillip	Jones, N.C.	Stokes
Cochran	Krueger	Teague
Conyers	Luken	Thornton

Derrick	Moss	Tucker
Eilberg	Nix	Ullman
Ford, Tenn.	Poage	Waxman
Fountain	Roberts	Whitley
Frey	Rodino	Young, Alaska
Gammage	Runnels	Young, Tex.

The Clerk announced the following pairs:

On this vote:

Mr. Gammage for, with Mr. Eilberg against.
Mr. Teague for, with Mr. Dent against.
Mr. Derrick for, with Mr. Waxman against.

Mrs. FENWICK, Mr. LONG of Maryland, and Mr. BARNARD changed their vote from "no" to "aye."

So the amendment was agreed to.

The result of the vote was announced as above recorded.

The CHAIRMAN. The Chair will state that under the motion setting a limitation of time previously entered into, all debate will terminate in 10 minutes.

The parliamentary situation is that there are nine Members remaining to be recognized, and there are approximately 9 minutes left. Each Member listed will be recognized for approximately 1 minute.

The Chair will first ask if there are Members on the list who have amendments to be offered.

If not, the Chair will first recognize the gentleman from Illinois (Mr. McCLORY).

Mr. McCLORY. Mr. Chairman, I will be offering a motion to recommit with instructions which would put this bill back in the form in which it was brought to the floor by the committee. At one time this was a good bill.

This bill was a good one when we worked on it in the Committee on the Judiciary. It was voted out almost unanimously. However by virtue of certain amendments that have been put in the bill, many of those groups who supported this legislation before are now opposed to it, including business groups, environmental groups, and others.

I urge the Members to give careful and thoughtful consideration to the motion to recommit, which I will explain during my 5-minute interlude. The Members can then make up their minds.

Mr. Chairman, I suggest that the Members support the motion to recommit and then support the bill after it comes back to us in its original form which was acceptable to us.

The CHAIRMAN. The Chair recognizes the gentleman from Missouri (Mr. VOLKMER).

Mr. VOLKMER. Mr. Chairman, I would like to state briefly that I supported this bill as it came out of the committee. I did oppose the Flowers amendment when it was agreed to by the House, but I will support the bill and oppose the motion to recommit because I believe the will of the House should prevail.

I would like to say very briefly, if I may, that as to the question of constitutionality of both the Railsback amendment and the Flowers amendment, the Department of Justice has recently said in a letter opinion that both of those amendments are in their opinion constitutional.

Mr. MAZZOLI. Mr. Chairman, will the gentleman yield?

Mr. VOLKMER, I yield to the gentleman from Kentucky.

Mr. MAZZOLI. Mr. Chairman, I join the gentleman from Missouri (Mr. VOLKMER) in support of the bill in its present state, and I urge the House to defeat the motion to recommit with instructions.

The CHAIRMAN. The Chair recognizes the gentleman from Virginia (Mr. HARRIS).

Mr. HARRIS. Mr. Chairman, this is a good, tough piece of legislation. I have enjoyed working with my colleagues on the other side of the aisle as we considered the number of amendments that have been offered by them. I think we have done the work of the House in good fashion in our consideration of those amendments.

I urge my colleagues to adopt this bill on which the committee has worked so hard and to reject the motion to recommit, which would have the effect of returning the bill to the state it was in before the House worked its will.

I think the amendments offered by my colleagues, the gentleman from Illinois (Mr. RAILSBACK) and the gentleman from Alabama (Mr. FLOWERS), have improved the bill, and, Mr. Chairman, I think the bill could probably be improved further. I believe the bill should be passed in its present form, and I urge my colleagues to vote against the motion to recommit.

The CHAIRMAN. The Chair recognizes the gentleman from California (Mr. MOORHEAD).

Mr. MOORHEAD of California. Mr. Chairman, I believe that as this piece of legislation came from the committee it was a good piece of legislation. I believe that the amendment which was adopted which requires that communications between private individuals be reported is a bad amendment. It violates the constitutional rights of our citizens. For that reason, I will support the motion to recommit with instructions.

The CHAIRMAN. The Chair recognizes the gentleman from California (Mr. EDWARDS).

Mr. EDWARDS of California. Mr. Chairman, I am going to urge my colleagues to support the motion to recommit. The motion to recommit will be explained by the gentleman from Illinois (Mr. McCLORY) and by me when we go back into the House. The motion to recommit takes the bill back to where the Committee on the Judiciary supported it overwhelmingly. It was so enthusiastically supported by the Committee on the Judiciary that it was reported out on a voice vote.

Mr. Chairman, I urge the Members to support the motion to recommit to be offered by the gentleman from Illinois (Mr. McCLORY).

The CHAIRMAN. The Chair recognizes the gentlewoman from Texas (Miss JORDAN).

Miss JORDAN. Mr. Chairman I rise to advise the House that I agree with the gentleman from California (Mr. EDWARDS).

This bill is not worth this House passing. It is not a product of which we can be proud.

Mr. Chairman I would urge my colleagues to support the motion to recommit and in the event that that motion fails to vote against final passage of this bill.

The CHAIRMAN. The Chair recognizes the gentleman from Illinois (Mr. RAILSBACK).

Mr. RAILSBACK. Mr. Chairman, the bill that passed about 1 year ago, as the Members will recall, I think about 3 o'clock in the morning, was much, much tougher than the bill that we have before us now.

The gentleman from California and the gentlewoman from Texas have opposed the bill. They were opposed to my amendment that passed by something like 251 to 135. The effect of the motion to recommit would be to eliminate virtually every single amendment that has been adopted by the Members of the House.

In the last year there were 17 States that enacted or modified their lobbying disclosure laws. We are not talking about prohibiting. We are talking about disclosure only. When one hears some of the debates, one would think that we were doing something very new and very innovative. The truth is that every single State has some kind of a regulatory law.

The CHAIRMAN. The question is on the committee amendment in the nature of a substitute, as amended.

The committee amendment in the nature of a substitute, as amended, was agreed to.

The CHAIRMAN. Under the rule, the Committee rises.

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. MEEDS, Chairman of the Committee of the Whole House on the State of the Union, reported that the Committee, having had under consideration the bill (H.R. 8494) to regulate lobbying and related activities, pursuant to House Resolution 1139, he reported the bill back to the House with an amendment adopted by the Committee of the Whole.

The SPEAKER. Under the rule, the previous question is ordered.

Is a separate vote demanded on any amendment to the committee amendment in the nature of a substitute adopted by the Committee of the Whole? If not, the question is on the amendment.

The amendment was agreed to.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

MOTION TO RECOMMIT OFFERED BY MR. M'CLORY

Mr. McCLORY. Mr. Speaker, I offer a motion to recommit.

The SPEAKER. Is the gentleman opposed to the bill?

Mr. McCLORY. I am, in its present form, Mr. Speaker.

The SPEAKER. The Clerk will report the motion to recommit.

The Clerk read as follows:

Mr. McCLORY of Illinois moves to recommit the bill, H.R. 8494, to the Committee on the Judiciary with instructions to report it back forthwith with the following amendment: Strike all after the enacting clause and insert the following:

That this Act may be cited as the "Public Disclosure of Lobbying Act of 1978".

DEFINITIONS

SEC. 2. As used in this Act—

(1) the term "affiliate" means—

(A) an organization which is associated with another organization through a formal relationship based upon ownership or an agreement (including a charter, franchise agreement, or bylaws) under which one of the organizations maintains actual control or has the right of potential control of all or a part of the activities of the other organization;

(B) a unit of a particular denomination of a church or of a convention or association of churches; and

(C) a national membership organization and any of its State or local membership organizations or units, a national trade association and any of its State or local trade associations, a national business league and any of its State or local business leagues, a national federation of labor organizations and any of its State or local federations, and a national labor organization and any of its State or local labor organizations;

(2) the term "Comptroller General" means the Comptroller General of the United States;

(3) the term "direct business relationship" means the relationship between an organization and any Federal officer or employee in which—

(A) such Federal officer or employee is a partner in such organization;

(B) such Federal officer or employee is a member of the board of directors or similar governing body of such organization, or is an officer or employee of such organization; or

(C) such organization and such Federal officer or employee each hold a legal or beneficial interest (excluding stock holdings in publicly traded corporations, policies of insurance, and commercially reasonable leases made in the ordinary course of business) in the same business or joint venture, and the value of each such interest exceeds $1,000;

(4) the term "employ" means the utilization of the services of an individual or organization in consideration of the payment of money or other thing of value, but does not include the utilization of the services of a volunteer;

(5) the term "exempt travel expenses" means any sum expended by any organization in payment or reimbursement of the cost of any transportation for any agent, employee, or other person (but not including a Federal officer or employee) engaging in activities described in section 3(a), plus such amount of any sum received by such agent, employee, or other person as a per diem allowance for each such day as is not in excess of the maximum applicable allowance payable under section 5702(a) of title 5, United States Code, to Federal employees subject to such section;

(6) the term "expenditure" means—

(A) a payment, distribution (other than normal dividends and interest), salary, loan (if made on terms or conditions that are more favorable than those available to the general public), advance, deposit, or gift of money or other thing of value, other than exempt travel expenses, made—

(i) to or for the benefit of a Federal officer or employee;

(ii) for mailing, printing, advertising, telephones, consultant fees, or the like which are attributable to activities described in section 3(a), and for costs attributable partly to activities described in section 3(a) where such costs, with reasonable preciseness and ease, may be directly allocated to those activities; or

(iii) for the retention or employment of an individual or organization who makes lobbying communications on behalf of the organization; or

(B) a contract, promise, or agreement, whether or not legally enforceable, to make, disburse, or furnish any item referred to in subparagraph (A);

(7) the term "Federal officer or employee" means—

(A) any Member of the Senate or the House of Representatives, any Delegate to the House of Representatives, and the Resident Commissioner in the House of Representatives;

(B) any officer or employee of the Senate or the House of Representatives or any employee of any Member, committee, or officer of the Congress;

(C) any officer of the executive branch of the Government listed in sections 5312 through 5316 of title 5, United States Code; and

(D) the Comptroller General, Deputy Comptroller General, General Counsel of the United States General Accounting Office, and any officer or employee of the United States General Accounting Office whose compensation is fixed by the Comptroller General in accordance with section 203(1) of the Federal Legislative Salary Act of 1964 (31 U.S.C. 52b);

(8) the term "identification" means—

(A) in the case of an individual, the name, occupation, and business address of the individual and the position held in such business; and

(B) in the case of an organization, the name and address of the organization, the principal place of business of the organization, the nature of its business or activities, and the names of the executive officers and the directors of the organization, regardless of whether such officers or directors are paid;

(9) the term "lobbying communication" means, with respect to a Federal officer or employee described in section 2(7)(A) or (B), an oral or written communication directed to such Federal officer or employee to influence the content or disposition of any bill, resolution, treaty, nomination, hearing, report, or investigation, and, with respect to a Federal officer or employee described in section 2(7)(C) or (D), an oral or written communication directed to such Federal officer or employee to influence the content or disposition of any bill, resolution, or treaty which has been transmitted to or introduced in either House of Congress or any report thereon of a committee of Congress, any nomination to be submitted or submitted to the Senate, or any hearing or investigation being conducted by the Congress or any committee or subcommittee thereof, but does not include—

(A) a communication made at the request of Federal officer or employee, or submitted for inclusion in a report of a hearing or in the record or public file of a hearing;

(B) a communication made through a speech or address, through a newspaper, book, periodical, or magazine published for distribution to the general public, or through a radio or television transmission, or through a regular publication of an organization published in substantial part for purposes unrelated to engaging in activities described in section 3(a): *Provided*, That this exception shall not apply to an organization responsible for the purchase of a paid advertisement in a newspaper, magazine, book, periodical, or other publication distributed to the general public, or of a paid radio or television advisement;

(C) a communication by an individual for a redress of grievances, or to express his personal opinion; or

(D) a communication on any subject directly affecting an organization to (i) a Senator, or to an individual on his personal staff, if such organization's principal place of business is located in the State represented by such Senator, or (ii) a Member of the House of Representatives, or to an individual on his personal staff, if such organization's principal place of business is located in a county including a city, city-and-county, parish, and the State of Alaska within which all or part of such Member's congressional district is located;

(10) the term "organization" means—

(A) any corporation (excluding a Government corporation), company, foundation, association, labor organization, firm, partnership, society, joint stock company, organization of State or local elected or appointed officials (excluding any Federal, State, or local unit of government other than a State college or university as described in section 511(a)(2)(B) of the Internal Revenue Code of 1954, and excluding any Indian tribe, any national or State political party and any organizational unit thereof, and any association comprised solely of Members of Congress or Members of Congress and congressional employees), group of organizations, or group of individuals; and

(B) any agent of a foreign principal as defined in section 1 of the Foreign Agents Registration Act of 1938, as amended (22 U.S.C. 611);

(11) the term "quarterly filing period" means any calendar quarter beginning on January 1, April 1, July 1, or October 1; and

(12) the term "State" means any of the several States, the District of Columbia, the Commonwealth of Puerto Rico, the Virgin Islands, Guam, American Samoa, and the Trust Territory of the Pacific Islands.

APPLICABILITY OF ACT

SEC. 3. (a) The provisions of this Act shall apply to—

(1) any organization which makes an expenditure in excess of $2,500 in any quarterly filing period for the retention of an individual or another organization to make lobbying communications, or for the express purpose of preparing or drafting any such lobbying communication; or

(2) any organization which (A) employs at least one individual who, on all or any part of each of thirteen days or more in any quarterly filing period, or at least two individuals each of whom on all or any part of each of seven days or more in any quarterly filing period, makes lobbying communications on behalf of that organization, and (B) makes an expenditure in excess of $2,500 in such quarterly filing period on making lobbying communications,

except that the provisions of section 4 and section 6 of this Act shall not apply to an affiliate of a registered organization if such affiliate engages in activities described in paragraphs (1) and (2) of this subsection and such activities are reported by the registered organization.

(b) This Act shall not apply to practices or activities regulated by the Federal Election Campaign Act of 1971.

REGISTRATION

SEC. 4. (a) Each organization shall register with the Comptroller General not later than fifteen days after engaging in activities described in section 3(a).

(b) The registration shall contain the following, which shall be regarded as material for the purposes of this Act:

(1) An identification of the organization, except that nothing in this paragraph shall be construed to require the disclosure of the identity of the members of an organization.

(2) An identification of any retainee described in section 3(a)(1) and of any employee described in section 3(a)(2).

(c) A registration filed under subsection (a) in any calendar year shall be effective until January 15 of the succeeding calendar year. Each organization required to register under subsection (a) shall file a new registration under such subsection within fifteen days after the expiration of the previous

registration, unless such organization notifies the Comptroller General, under subsection (d), with respect to terminating the registration of the organization.

(d) Any registered organization which determines that it will no longer engage in activities described in section 3(a) shall so notify the Comptroller General. Such organization shall submit with such notification either (1) a final report, containing the information specified in section 6(b), concerning any activities described in section 3(a) which the organization has not previously reported or (2) a statement, pursuant to section 6(a)(2), as the case may be. When the Comptroller General receives such notification and report or statement, the registration of such organization shall cease to be effective.

RECORDS

SEC. 5. (a) Each organization required to be registered and each retainee of such organization shall maintain for each quarterly filing period such records as may be necessary to enable such organization to file the registrations and reports required to be filed under this Act, except that, in those situations where a registered organization elects to report as to the lobbying activities of its affiliates pursuant to section 3(a), such affiliates shall be responsible for maintaining such records as are necessary to enable the registered organization to fully discharge its reporting obligations as they pertain to such affiliates. The Comptroller General may not by rule or regulation require an organization to maintain or establish records (other than those records normally maintained by the organizations) for the purpose of enabling him to determine whether such organization is required to register.

(b) Any officer, director, employee, or retainee of any organization shall provide to such organization such information as may be necessary to enable such organization to comply with the recordkeeping and reporting requirements of this Act. Any organization which shall rely in good faith on the information provided by any such officer, director, employee, or retainee shall be deemed to have complied with subsection (a) with respect to that information.

(c) The records required by subsection (a) shall be preserved for a period of not less than five years after the close of the quarterly filing period to which such records relate.

REPORTS

SEC. 6. (a)(1) Each organization which engages in the activities described in section 3(a) during a quarterly filing period shall, not later than thirty days after the last day of such period, file a report concerning such activities with the Comptroller General.

(2) Each registered organization which does not engage in the activities described in section 3(a) during a quarterly filing period shall file a statement to that effect with the Comptroller General.

(b) Each report required under subsection (a)(1) shall contain the following, which shall be regarded as material for the purposes of this Act:

(1) An identification of the organization filing such report.

(2) The total expenditures (excluding salaries other than those reported under paragraph (5) of this subsection) which such organization made with respect to activities described in section 3(a) during such period.

(3) An itemized listing of each expenditure in excess of $35 made to or for the benefit of any Federal officer or employee and an identification of such officer or employee.

(4) A disclosure of those expenditures for any reception, dinner, or other similar event which is paid for, in whole or in part, by the reporting organization and which is held for the benefit of any Federal officer or employee, regardless of the number of persons invited or in attendance, where the total cost of the event exceeds $500.

(5) An identification of any retainee of the organization filing such report and of any employee who makes lobbying communications on all or part of each of seven days or more, and the expenditures made pursuant to such retention or employment, except that in reporting expenditures for the retention or employment of such individuals or organizations, the organization filing such report shall—

(A) allocate, in a manner acceptable to the Comptroller General, and disclose the amount which is paid to the individual or organization retained or employed by the reporting organization and which is attributable to engaging in such activities for the organization filing such report; or

(B) notwithstanding any other provision of law, disclose the total expenditures paid to any individual or organization retained or employed by the organization filing such report.

(6) A description of the issues concerning which the organization filing such report engaged in activities described in section 3(a) and upon which the organization spent a significant amount of its efforts.

(7) Disclosure of each known direct business relationship between the reporting organization and a Federal officer or employee whom such organization has sought to influence during the quarterly filing period involved.

DUTIES OF THE COMPTROLLER GENERAL

SEC. 7. (a) It shall be the duty of the Comptroller General—

(1) to develop filing, coding, and cross-indexing systems to carry out the purposes of this Act, including (A) a cross-indexing system which, for any retainee described in section 3(a)(1) who is identified in any registration or report filed under this Act, discloses each organization identifying such retainee in any such registration or report, and (B) a cross-indexing system, to be developed in cooperation with the Federal Election Commission, which discloses for any such retainee each identification of such retainee in any report filed under section 304 of the Federal Election Campaign Act of 1971 (2 U.S.C. 434);

(2) to make copies of each registration and report filed with him under this Act available for public inspection and copying, commencing as soon as practicable after the date on which the registration or report involved is received but not later than the end of the fifth working day following the date, and to permit copying of such registration or report by hand or by copying machine or, at the request of any individual or organization, to furnish a copy of any such registration or report upon payment of the cost of making and furnishing such copy; but no information contained in any such registration or report shall be sold or utilized by any individual or organization for the purpose of soliciting contributions or business;

(3) to preserve the originals or accurate reproductions of such registrations and reports for a period of not less than five years from the date on which the registration or report is received;

(4) to compile and summarize, with respect to each quarterly filing period, the information contained in registrations and reports filed during such period in a manner which clearly presents the extent and nature of the activities described in section 3(a) which are engaged in during such period;

(5) to make the information compiled and summarized under paragraph (4) available to the public within sixty days after the close of each quarterly filing period, and to permit copying of such information by hand or by copying machine or, at the request of any individual or organization, to furnish a copy of such information upon payment of the cost of making and furnishing such copy; and

(6) to prescribe such rules and regulations and such forms as may be necessary to carry out the provisions of this Act in an effective and efficient manner.

(b) The duties of the Comptroller General described in subsection (a)(6) of this section shall be carried out in conformity with chapter 5 of title 5, United States Code, and any records maintained by the Comptroller General under this Act shall be subject to the provisions of sections 552 and 552a of such chapter.

ENFORCEMENT

SEC. 8. (a) It shall be the duty of the Attorney General to investigate alleged violations of any provision of this Act, or any rule or regulation promulgated in accordance therewith. The Attorney General shall notify the alleged violator of such alleged violation, unless the Attorney General determines that such notice would interfere with the effective enforcement of this Act, and shall make such investigation of such alleged violation as the Attorney General considers appropriate. Any such investigation shall be conducted expeditiously, and with due regard for the rights and privacy of the individual or organization involved.

(b) If the Attorney General determines, after any investigation under subsection (a), that there is reason to believe that any individual or organization has engaged in any act or practice which constitutes a civil violation of this Act as described in section 11(a), he shall endeavor to correct such violation by informal methods of conference or conciliation.

(c) If the informal methods described in subsection (b) fail, the Attorney General may institute a civil action, including an action for a permanent or temporary injunction, restraining order, or any other appropriate relief, in the United States district court for the judicial district in which such individual or organization is found, resides, or transacts business.

(d) If the Attorney General determines, after any investigation under subsection (a), that there is reason to believe that any individual or organization has engaged in any act or practice which constitutes a criminal violation of this Act as described in section 11(b) or 11(c), the Attorney General may institute criminal proceedings in a United States district court in accordance with the provisions of chapter 211 of title 18, United States Code.

(e) The United States district courts shall have jurisdiction of actions brought under this Act.

(f) In any civil action brought pursuant to subsection (c), the court may award to the prevailing party (other than the United States or an agency or official thereof) reasonable attorney fees and expenses if the court determines that the action was brought without foundation, vexatiously, frivolously, or in bad faith.

REPORTS BY THE COMPTROLLER GENERAL

SEC. 9. The Comptroller General shall transmit reports to the President of the United States and to each House of the Congress no later than March 31 of each year. Each such report shall contain a detailed statement with respect to the activities of the Comptroller General in carrying out his duties and functions under this Act, together with recommendations for such legislative or other action as the Comptroller General considers appropriate.

CONGRESSIONAL DISAPPROVAL OF RULES OR REGULATIONS

SEC. 10. (a) Upon promulgation of any rule or regulation to carry out the provisions of section 4, 5, or 6 under the authority given him in section 7(a)(6) of this Act, the Comptroller General shall transmit notice of such rule or regulation to the Congress. The Comptroller General may place such rule or regulation in effect as proposed at any time after the expiration of ninety calendar days of continuous session after the date on which such notice is transmitted to the Congress unless, before the expiration of such ninety days, either House of Congress adopts a resolution disapproving such rule or regulation.

(b) For purposes of this section—

(1) continuity of session of the Congress is broken only by an adjournment sine die; and

(2) the days on which either House is not in session because of an adjournment of more than three days to a day certain shall be excluded in the computation of the ninety calendar days referred to in subsection (a).

SANCTIONS

SEC. 11. (a) Any individual or organization knowingly violating section 4, 5, or 6 of this Act, or any rule or regulation promulgated in accordance therewith, shall be subject to a civil penalty of not more than $10,000 for each such violation.

(b) Any individual or organization who knowingly and willfully violates section 4, 5, or 6 of this Act, or who, in any statement required to be filed, furnished, or maintained pursuant to this Act, knowingly and willfully makes any false statement of a material fact, omits any material fact required to be disclosed, or omits any material fact necessary to make statements made not misleading, shall be fined not more than $10,000 or imprisoned for not more than two years, or both, for each such violation.

(c) Any individual or organization knowingly and willfully failing to provide or falsifying all or part of any records required to be furnished to an employing or retaining organization in violation of section 5(b) shall be fined not more than $10,000, or imprisoned for not more than two years, or both.

(d) Any individual or organization selling or utilizing information contained in any registration or report in violation of section 7(a)(2) of this Act shall be subject to a civil penalty of not more than $10,000.

REPEAL OF THE FEDERAL REGULATION OF LOBBYING ACT

SEC. 12. The Federal Regulation of Lobbying Act (2 U.S.C. 261 et seq.), and that part of the table of contents of the Legislative Reorganization Act of 1946 which pertains to title III thereof, are repealed.

SEPARABILITY

SEC. 13. If any provision of this Act, or the application thereof, is held invalid, the validity of the remainder of this Act and the application of such provision to other persons and circumstances shall not be affected thereby.

AUTHORIZATION OF APPROPRIATIONS

SEC. 14. There are authorized to be appropriated to carry out this Act $1,600,000 for the fiscal year beginning on October 1, 1978; $1,600,000 for the fiscal year beginning on October 1, 1979; and $1,600,000 for the fiscal year beginning on October 1, 1980.

EFFECTIVE DATES

SEC. 15. (a) Except as provided in subsection (b), the provisions of this Act shall take effect on October 1, 1978.

(b) Sections 4, 5, 6, 8, 11, and 12 shall take effect on the first day of the first calendar quarter beginning after the date on which the first rules and regulations promulgated to carry out the provisions of sections 4, 5, and 6 take effect, in accordance with section 10.

Mr. McCLORY (during the reading). Mr. Speaker, I ask unanimous consent that the motion to recommit be considered as read and printed in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

Mr. BAUMAN. Mr. Speaker, reserving the right to object, I wonder if the gentleman, in the time allotted, is going to give a description of what his motion to recommit does. As I recall, it rejects amendments offered by Mr. FLOWERS, Mr. RAILSBACK, and Mr. KINDNESS, all amendments which the House voted by a large majority to adopt. I think perhaps we ought to hear the entire motion if that is what it does.

Mr. McCLORY. If the gentleman will yield, what the motion to recommit does is to restore the bill to its original form. It is true that there were two amendments adopted, one offered by my colleague from California (Mr. WIGGINS), and one by the gentleman from Ohio (Mr. KINDNESS). However, the two main amendments adopted which are significant are the Railsback and Flowers amendments, both of which the committee disapproved and which I think should be rejected and which, if eliminated, will make this a good bill.

Mr. BAUMAN. Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

There was no objection.

Mr. McCLORY. Mr. Speaker, the committee has sent to the floor a good lobbying bill, and one which should enable us to revise the 1946 act. Now, in the committee we considered the so-called Flowers amendment, or the grassroots type of petitioning the Congress.

What is done is that a great many business concerns request their employees to write to Members of Congress where the companies' interests are concerned. Some companies advertise on TV or in newspapers urging petitioning to the Congress and communications to the Congress. This would require a full reporting of that type of invitation of communications to the Congress. It would either put a damper on it and kill it, or prevent it. If a company did not comply with this provision of the law, it would be subjected to the penalties of the law, which include fines and imprisonment.

I do not think we want to deny people the constitutional right to petition their Government or petition the Congress. So, it is primarily that amendment, which was rejected by the Judiciary Committee overwhelmingly, but which inadvertently was accepted by this House, that should be rejected. I think in its good judgment the House should now want to reject that by voting for my motion to recommit.

Also the House accepted or adopted an amendment which would require the listing of contributions of $3,000 or more by organizations, those organizations engaged in lobbying, a kind of disclosure which we do not want to have and do not want to compel. It would even require disclosure of contributions to religious organizations, something which is highly undesirable, which is required in this amendment.

So those primarily are the two amendments which are rejected by the motion to recommit with instructions, and the bill would be reported back here forthwith, and we could support a good lobby bill.

Mr. EDWARDS of California. Mr. Chairman, will the gentleman yield?

Mr. McCLORY. I yield to the gentleman from California (Mr. EDWARDS).

Mr. EDWARDS of California. Mr. Chairman, I thank the gentleman for yielding.

I supported the bill in the committee, and the committee voted the bill out in an excellent form, and that is what this motion to recommit does: It reverts the bill back to the excellent committee bill reported out by the Judiciary Committee.

I assure the House that the amendments that have been adopted in the Committee of the Whole make the bill not only undesirable but also unconstitutional. The solicitation grassroots amendment offered by the gentleman from Alabama (Mr. FLOWERS) and the contributors amendment offered by the gentleman from Illinois (Mr. RAILSBACK) are totally unacceptable.

This is what has happened. All of these organizations supported it. The ACLU supported the bill and practically all the members of the committee supported the bill, but, after the amendments were adopted, we immediately lost these groups all over the country. For example, just in the last couple of days these organizations that previously supported the bill as reported by the full Judiciary Committee have come out against the bill. They include: The Sierra Club, the National Audubon Society, the National Wildlife Federation, the Environmental Defense Fund, the Wilderness Society, the Izaak Walton League of America, the Defenders of Wildlife, the Fund for Animals, Inc., the National Parks and Conservation Association, the Wildlife Society, the Friends of the Earth, the International Association of Fish and Wildlife Agencies, and I could go on.

Mr. McCLORY. Let me just add in addition to the ACLU and the environmental groups, that the U.S. Chamber of Commerce takes precisely the same position, as do other business groups.

I might call attention to an editorial in the Washington Post on this subject.

Mr. EDWARDS of California. Mr. Chairman, will the gentleman yield?

Mr. McCLORY. I yield to the gentleman from California.

Mr. EDWARDS of California. I suggest we support the motion to recommit, and if it fails then to vote against the bill.

Mr. McCLORY. I thank the gentleman, and the gentleman has spoken very wisely. I think we do want a good lobby bill. We had a good lobby bill before we got these amendments, and if the motion to recommit is agreed to we will have a good bill.

The SPEAKER. The gentleman from

California (Mr. DANIELSON) is recognized for 5 minutes.

Mr. DANIELSON. Mr. Speaker, I am here in the well in opposition to the motion offered by the gentleman from Illinois (Mr. MCCLORY) to recommit the bill. I want to start off by telling the Members that I opposed and I voted against the soliciting amendment offered by the gentleman from Illinois (Mr. RAILSBACK) and the contributions amendment offered by my good friend, the gentleman from Alabama (Mr. FLOWERS).

Over the weekend, as we pulled back to regroup when I heard all of the sad stories to the effect that these amendments are unconstitutional, it occurred to me that we have a perfecly good law office downtown, so I got in touch with the Attorney General's office and said: How about it? Can you give me something as to whether or not these amendments are unconstitutional?

On the desk of each and every Member this morning there appeared a letter from the Department of Justice pointing out they have studied these amendments and they have concluded that they are indeed constitutional and that the unconstitutional argument does not apply.

A copy of that letter, and of the one-page summary which accompanied it, reads as follows:

SUMMARY OF DEPARTMENT OF JUSTICE LETTER OF APRIL 25, 1978, ON CONSTITUTIONALITY OF AMENDMENTS TO LOBBY REFORM BILL

General: The Department believes that the amendments to H.R. 8494 on both "lobbying solicitations" and disclosure of contributions to lobbying organizations are constitutional.

"Lobbying Solicitations": The Department believes that this amendment is constitutional for the following reasons:

The Supreme Court recognized in United States v. Harriss, 347 U.S. 612 (1954) that Members of Congress have an interest in knowing the sources of pressure on Congress.

The amendment is narrowly drawn and does not require disclosure of the identities of those who act in response to solicitations.

The facts in Harriss involved lobbying solicitations yet disclosure of such solicitations was not struck down by the Court.

Contributor Disclosure: The Department believes that this amendment is constitutional for the following reasons:

It serves Congress' legitimate interest in learning the nature of the pressures on it.

It may deter actual or potential corruption.

Disclosure is limited to contributions by organizations to other organizations, thereby avoiding any deterrence to the exercise of individual rights or impairment of individual privacy. Disclosure is also only required where 1% of the receiving organization's budget is devoted to lobbying.

WASHINGTON, D.C.,
April 25, 1978.

Hon. GEORGE E. DANIELSON,
Chairman, Subcommittee on Administrative Law and Governmental Relations, U.S. House of Representatives, Washington, D.C.

DEAR MR. CHAIRMAN: This is in response to your request for the views of the Department of Justice regarding the constitutionality of two amendments to H.R. 8494, the Public Disclosure of Lobbying Act, now pending before the House of Representatives. We believe both amendments to be constitutional.

The first of the two amendments would require an organization otherwise required to file a quarterly report to furnish information about the cost and manner of its "lobbying solicitations"—i.e., requests to contact Members of Congress—directed to 500 or more persons or a lesser number of the organization's own employees, officers, directors, or affiliates. Organizations which only engage in lobbying solicitations but do not pass the bill's registration thresholds for direct lobbying would not be required to disclose their activities. It remains the Department of Justice's conclusion, as expressed in then-Deputy Attorney General Flaherty's April 21, 1977, testimony before the House Judiciary Subcommittee on Administrative Law and Governmental Relations that such a requirement is constitutional.

As the Supreme Court observed in United States v. Harriss, 347 U.S. 612 (1954), in which it upheld the constitutionality of the 1946 Federal Regulation of Lobbying Act, "full realization of the American ideal of government by elected representatives depends to no small extent on their ability to properly evaluate [the pressures to which they are regularly subjected]. Otherwise the voice of the people may all too easily be drowned out by the voice of special interest groups seeking favored treatment while masquerading as proponents of the public weal." 347 U.S. at 625.

Toward that end, the amendment adopted by the House does not prohibit lobbying solicitations or even require the disclosure of the identities of those who respond to solicitations by contacting their elected representatives. It merely requires sufficient information from the soliciting organization itself to enable the public and the Congress to determine what special interest is behind what may on the surface appear to be a spontaneous groundswell of public interest in a legislative issue. Id; compare Buckley v. Valeo, 424 U.S. 1, 68 (1976).

It is important to note that Harriss itself involved the alleged failure to report, among other things, "the costs of a campaign to induce various interested groups and individuals to communicate by letter with members of Congress" on pending legislation. 347 U.S. at 615. It is true that the Court held the 1946 Act constitutional after construing it narrowly to cover only what is termed "direct" communication with the Congress, but the Court expressly defined such pressures to include those "exerted by the lobbyists themselves or through their hirelings *or through an artificially stimulated letter campaign.*" 347 U.S. at 620 (emphasis added).

The amendment is narrowly drawn to cover only those mass communications actually intended or carrying the evident potential to generate letters or other contacts with Congress, not the general discussion of political issues by the organization to which members of the public may independently respond by contacting Members of Congress. It covers, in short, the "artificially stimulated letter campaign" discussed in Harriss. Where the nexus to the legislative process is this direct, we believe Congress may constitutionally require disclosure. Cf. Buckley v. Valeo, 424 U.S. 1, 79–80 (19763.

We have also concluded that the amendment requiring disclosure of the identity of any organization that has paid more than $3,000 during the year in dues or contributions to the lobbying organization, and the category of amount of the payments is constitutional. The Court in Harriss emphasized the importance in the lobbying context of disclosing "who is being hired, *who is putting up the money*, and how much." 347 U.S. at 625 (emphasis added). Even though the contributor may not be able to control the lobbying organization's activities in all respects, this disclosure serves the important governmental interests of enabling the public and a Member of Congress to evaluate the pressures exerted by the organization more precisely than may be possible if the lobbying report only revealed the name of the organization actually doing the lobbying. Id.; cf. Buckley v. Valeo, 424 U.S. at 67. It may also deter actual corruption and avoid the appearance of corruption by exposing to the light of publicity large contributions to organizations engaging in significant lobbying activity. Id.

The $3,000 minimum is itself designed to ensure that only significant contributions will be reported. Moreover, disclosure is limited to contributions by other organizations only if it spends at least 1% of its with the entire structure of the bill, which addresses itself to lobbying activities by or on behalf of corporations, unions, associations, and other organizations, but imposes no reporting requirements with respect to lobbying by individuals. The amendment merely recognizes that an organization, instead of hiring its own lobbyists, will often join an association or coalition group with the full expectation that the association or group will represent its interests before the Congress. It therefore serves to close a possible loophole in the bill by requiring reporting of this type of indirect lobbying by reliance on associations of organizations. Even where the lobbying entity performs other services for its member organizations, Congress might reasonably conclude that an organization would not pay $3,000 a year to support the lobbying entity unless it generally embraced the latter's legislative goals.

By limiting reporting to organizations, the amendment also avoids any deterrent to the enjoyment of privacy or the exercise of the First Amendment freedom of association by individuals as a result of public disclosure of members or contributions, with which the Court was concerned in *NAACP* v. *Alabama*, 357 U.S. 449 (1958), and related cases.

We note, finally, that a lobbying organization must report its organizational contributions only if it spends at least 1% of its budget on lobbying and if the contributor's funds are spent in whole or in part on lobbying. The former excludes from coverage contributions to those organizations that only engage in a relatively incidental amount of lobbying activities, *United States* v. *Harriss*, 347 U.S. at 622, and the latter permits a contributor to earmark its funds for other purposes, to avoid unnecessary disclosure where the contribution has no relation to the lobbying activities intended to be reported. So limited, we believe that at least in the context of disclosure of major organizational contributions, the amendment provides for a constitutionally sufficient nexus between the contributions and the government's legitimate interest in disclosure of lobbying activities.

In summary, we believe that H.R. 8494, as amended to date, is drafted in accordance with constitutional requirements. The Department continues to urge its early passage by the House.

Sincerely,

PATRICIA M. WALD,
Assistant Attorney General,
Office of Legislative Affairs.

The unconstitutional argument does not apply, because they point out that as to the solicitations, in the Harris case, the Supreme Court of the United States pointed out that not only is it necessary and important for Members of Congress to have some idea about direct communications but the Court expressly included pressures exerted by the lobbyists themselves or through their hirelings an artifically stimulated lobby campaign.

That is the Supreme Court of the United States telling you that.

Let us get around to the contribution argument. In contributions bear in mind

that in the amendment offered by our friend the gentleman from Alabama (Mr. FLOWERS) the contributions are required to be identified and reported only if they are by one organization to a registered organization. Contributions from individuals are totally exempt. And the threshold has been raised to $3,000 so that a contribution of less than $3,000 should not be reported.

I respectfully submit that the motion to recommit should be rejected.

I now yield to the former chairman of the subcommittee, the gentleman from Alabama (Mr. FLOWERS).

Mr. FLOWERS. Mr. Speaker, I thank the gentleman for yielding to me. I feel like saving a word now that my amendment has been castigated by my friend the gentleman from Illinois (Mr. MCCLORY) the so-called Flowers amendment, that inadvertently carried in the House—inadvertently, I might add to my friend by about 80 votes the other day.

You know, it is curious about all of these organizations that are now opposed to the bill, because of two relatively small amendments. That is correct, relatively small amendments.

All the amendment that I offered does is cover a large part of the lobbying activity that is otherwise not covered by the bill. It does not require anybody else to register or come under the coverage of the bill but only would require a little bit of reporting by these organizations only that conduct large scale grassroots lobbying campaigns.

I submit to every Member of this House whether you come at it from that side of the aisle or this side of the aisle, we ought to have this in this legislation. It is not complete without it.

The other amendment offered by the gentleman from Illinois (Mr. RAILSBACK), which actually I voted against, I am prepared to support as part of this bill. It does not do any damage to the bill in its broad sense.

I urge a negative vote on the motion to recommit.

Mr. DANIELSON. I now yield to the gentleman from Illinois (Mr. MIKVA).

Mr. MIKVA. Mr. Speaker, I thank the gentleman for yielding. I too, oppose the motion to recommit. It seems to me that all of the distinguished organizations that our colleague the gentleman from California (Mr. EDWARDS) read off, the ACLU and the environmental groups, if they did not do all the lobbying they do we would not need the bill. But I think the very fact that they are against it is one more suggestion of proof that we do, in fact, need this kind of legislation.

Mr. DANIELSON. Mr. Speaker, I wish that they were for it.

I yield now to the gentleman from Wisconsin (Mr. KASTENMEIER).

Mr. KASTENMEIER. Mr. Speaker, I would make the same point and that is that we have received communications from the lobbying groups that they approved the bill passed by the House Committee on the Judiciary, but that should not be the test for us. The test should be is it an effective bill? The gentleman from Illinois is correct, this bill is not quite as strong as this House passed by a margin of 7 to 1 in October 1976.

The SPEAKER. All time has expired.

Without objection, the previous question is ordered on the motion to recommit.

There was no objection.

The SPEAKER. The question is on the motion to recommit.

The question was taken; and the Speaker announced that the noes appeared to have it.

Mr. MCCLORY. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were refused.

So the motion to recommit was rejected.

The SPEAKER. The question is on the passage of the bill.

The question was taken; and the Speaker announced that the ayes appeared to have it.

Mr. BAUMAN. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The vote was taken by electronic device, and there were—yeas 259, nays 140, not voting 35, as follows:

[Roll No. 257]

NOT VOTING—35

Annunzio	Goodling	Runnels
Baucus	Gudger	Sawyer
Beard, R.I.	Howard	Sisk
Cochran	Jones, N.C.	Teague
Conyers	Krueger	Thornton
Dent	Luken	Tsongas
Derrick	Mann	Tucker
Eilberg	Moss	Waxman
Ford, Tenn.	Nix	Whitley
Fountain	Poage	Young, Alaska
Frey	Roberts	Young, Tex.
Gammage	Rodino	

The Clerk announced the following pairs:

On this vote:

Mr. Annunzio for, with Mr. Teague against.

Mr. Gammage for, with Mr. Conyers against.

Until further notice:

Mr. Fountain with Mr. Cochran of Mississippi.

Mr. Krueger with Mr. Goodling.

Mr. Eilberg with Mr. Gudger.

Mr. Waxman with Mr. Tsongas.

Mr. Derrick with Mr. Young of Alaska.

Mr. Luken with Mr. Moss.
Mr. Baucus with Mr. Sawyer.
Mr. Rodino with Mr. Jones of North Carolina.
Mr. Roberts with Mr. Whitley.
Mr. Nix with Mr. Mann.
Mr. Beard of Rhode Island with Mr. Sisk.
Mr. Dent with Mr. Thornton.
Mr. Howard with Mr. Tucker.
Mr. Ford of Tennessee with Mr. Runnels.

Mr. ENGLISH changed his vote from "nay" to "yea."

So the bill was passed.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

GENERAL LEAVE

Mr. DANIELSON. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days within which to revise and extend their remarks and to include extraneous material, with respect to the bill just passed.

The SPEAKER. Is there objection to the request of the gentleman from California?

There was no objection.

SELECT COMMITTEE ON ASSASSINATIONS—POWELL CONTEMPT

(Mr. STOKES asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. STOKES. Mr. Speaker, early next week, I shall call up the privileged report I submitted on Monday, April 24, on the contempt of Mr. Claude Powell, Jr., in failing to honor a subpena of the Select Committee on Assassinations. That report has been printed for your review and consideration. I first alerted the House to the facts of the case in February. The CONGRESSIONAL RECORD of February 28, 1978 at H1596, details Mr. Powell's refusal to honor the committee subpena, and the lengths the committee has gone to, to attempt to secure his compliance without recourse to the contempt process.

Essentially, Mr. Speaker, the case concerns a witness who was subpenaed to appear before the Subcommittee on the Assassination of Dr. Martin Luther King, Jr., of the Select Committee on Assassinations and refused to appear pursuant to the supena. Such refusal to honor the subpena of a duly authorized committee of this House is, of course, an affront to the dignity and integrity of the House. No committee of the House will be able to conduct a thorough investigation of any subject if supenaed witnesses believe they may, with impunity, refuse to appear, despite a congressional subpena. Obviously, for the Select Committee on Assassinations, which is investigating the facts and circumstances surrounding two of the most significant murders in our Nation's history, the ability to enforce its process is crucial.

No witness should be able to delude himself or herself into thinking that our committee will fail to take all lawful actions and remedies to obtain their testimony. Our pledge to the House to conduct a full and complete investigation requires of us no less.

The privileged report I am submitting, Mr. Speaker, is the method that Congress has statutorily provided to be followed when a witness refuses to honor a subpena, and a committee decides to seek to enforce it's process through statutory contempt. It is provided for in title 2, section 194 of the United States Code. Historically, Congress has freqently invoked this process. In the recent past, nevertheless, there have been few such actions, because witnesses have been complying, fortunately, with Congressional subpenas and have testified. A recent example of a witness who did not, however, was G. Gordon Liddy. Accordingly, Mr. Liddy was certified for contempt of Congress by the House.

After this House votes to certify Mr. Powell's case, the U.S. attorney's office will be in charge of bringing the actual criminal case against Mr. Powell.

Mr. Speaker, I fully expect the House to pass the Select Committee's report and resolution and demonstrate its commitment to the Select Committee's investigation, as well as the integrity and dignity of the House.

PERSONAL EXPLANATION

Mr. GILMAN. Mr. Speaker, on Monday, April 24, 1978, I was on official leave of absence in order to help effect a multinational prisoner exchange in South Africa. I thus missed Monday's legislative session.

Had I been present, I would have voted in the following manner: H.R. 11504, Agricultural Credit Act of 1978, roll call No. 246: "yes"; an amendment to H.R. 11504, providing guaranteed "bridge" loans for farmers to meet payments on certain existing loans that come due, roll call No. 245: "yes".

THE LATE IVAN A. NESTINGEN

(Mr. KASTENMEIER asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. KASTENMEIER. Mr. Speaker, I would like to take a moment today to pay my respects to Ivan A. Nestingen, a longtime personal friend and Under Secretary of Health, Education, and Welfare in the administrations of the late Presidents John F. Kennedy and Lyndon Baines Johnson, who passed away suddenly Monday after collapsing in his law office here in the Nation's Capital.

In 1959, while mayor of the city of Madison, Wis., Mr. Nestingen accepted the chairmanship of the Kennedy for President Club of Wisconsin and played a major role in the late President's successful 1960 Wisconsin Presidential primary campaign. It was this victory, followed by another win in the West Virginia primary, that is generally credited with providing the impetus that led to then Senator Kennedy's nomination as the Democratic candidate and to his victory in November, 1960.

The late President Kennedy appointed Mr. Nestingen Under Secretary of Health, Education, and Welfare, a position which he held for 4 years. In that capacity, he played a major role in the legislative battles for medicare, expanded aid to education and medical research. After his resignation in 1965, he practiced law in Washington, D.C., until his death.

I know that many of my colleagues, as well as Ivan's many friends from his home State of Wisconsin, and those who knew him through his years in Washington join me in extending their sympathy to his widow, Geraldine, his daughters, and his brothers.

ARMS CONTROL AND DISARMAMENT AGENCY AUTHORIZATION, FISCAL YEAR 1979

Mr. DERWINSKI asked and was given permission to address the House for 1 minute and to revise and extend his remarks).

Mr. DERWINSKI. Mr. Speaker, earlier this afternoon, I was pleased to support the legislation authorizing fiscal year 1979 appropriations for the Arms Control and Disarmament Agency (ACDA). I have always believed that ACDA is a necessary organization with a laudable purpose. Consequently, I have consistently voted for its annual authorization requests.

I would be remiss, however, if I did not call the Members' attention to some of my concerns about the performance of ACDA's current leadership at the ongoing SALT II talks in Geneva. All of the evidence I have seen to date indicates that the negotiating philosophy of this administration implicitly assumes that because both the United States and the Soviet Union have large inventories of nuclear weapons and would both suffer serious damage in a nuclear exchange, the Soviets would not dare launch an attack against this country. I have discerned nothing to warrant that kind of optimism. Such thinking not only endangers American security but also leads to unreciprocated concessions to the Soviets and a further bargaining away of our strategic position. The key question, therefore, remains unanswered: Is the administration determined to reach an arms control agreement purely for its own sake, even if that requires one-sided concessions and an unearned trust in Soviet good intentions?

Although the text of the proposed new SALT agreement has not yet been made available, enough of its contents are known to raise grave doubts about the wisdom of its implementation at this time, with the U.S.S.R. making alarming advances in both its offensive and defensive capabilities. Many experts have noted (including former SALT negotiator, Mr. Paul Nitze) that the treaty in its present language contains very serious problems in the area of verification. As the author of section 37 of the Arms Control and Disarmament Act (which requires the executive branch to report to Congress on a timely basis as to the verifiability of any arms control proposals made to or accepted by the United States), I have maintained an abiding

interest in this whole question of verification. I invite the Members' attention, therefore, to my supplementary views to this bill's committee report where I point out that significant elements of the emerging agreement cannot be verified. This includes, inter alia, range limits on cruise missiles, limits on the upgrading of ICBM's, the strategic potential of the Backfire bomber, the deployment of mobile ICBM's, and the conversion of medium mobile missiles to mobile ICBM's.

Equally disturbing are the major concessions the treaty in its present form makes to the Soviets on the range limitations of cruise missiles as well as on the number of cruise missile launchers. In view of the President's decision to scrap the B–1 bomber in favor of the cruise missile (a determination which I believe critically weakens our defenses and our SALT bargaining position), these are giveaways we can ill-afford. Even more importantly, the administration has retreated from its initial position calling for restrictions on Soviet deployment of the SS–18 blockbuster missile. This prodigious weapon is potentially capable of destroying hardened U.S. Minuteman silos, and, consequently, poses a threat to the strategic reliability and credibility of our land-based missile force. Yet this point has been conceded by the administration's negotiators. Many similar examples could be cited in such areas as missile testing and Soviet bomber production.

In short, Mr. Speaker, the pattern of concessions emerging from these SALT negotiations is abundantly clear. I am baffled as to why the administration fails to recognize that such a negotiating posture seriously jeopardizes U.S. security. So much is being put on the line in these negotiations. I have the distinct impression, however, that neither the President nor his SALT advisers appreciate just how high the stakes really are. Therefore, I feel obliged to persist in my efforts to stimulate Members' concern.

Mr. RUDD. Mr. Speaker, will the gentleman yield?

Mr. DERWINSKI. I yield to the gentleman from Arizona.

Mr. RUDD. Mr. Speaker, I thank the distinguished gentleman from Illinois for yielding to me.

I would like to support the gentleman's statement in regard to SALT II talks. I would also like to point out the comparable armament situation between the Soviet Union and the United States, which gives the Soviets an edge in every category.

Within the next month or so, the Carter administration is expected to send Congress a proposed arms control treaty between the United States and the Soviet Union.

The treaty is the result of many months of strategic arms limitation talks (SALT II) between the two countries in Geneva, and will probably be the most complex and important document to come before Congress in recent years. The chief U.S. negotiator has been Paul C. Warnke, Director of the U.S. Arms Control and Disarmament Agency.

While the administration has released some general details of the forthcoming treaty terms, it has refused to honor a request from the chairman of the House Armed Services Committee to provide Congress and the public with an advance copy of the draft treaty terms. As with the Panama Canal treaties, the President is expected to keep the full document under wraps and present it to Congress as a fait accompli following a big summit meeting public relations extravaganza between himself and Soviet leader Leonid Brezhnev.

After talking with Representative CHARLES H. WILSON of California, a member of the Armed Services Committee who has learned independently many of the draft treaty provisions, and has strongly criticized them, I can understand why the public is being kept in the dark. The people would rise up in rightful indignation and undermine the campaign to get the arms control treaty approved, because its terms will guarantee the Soviet Union indisputable strategic supremacy over the United States—and a first-strike hard kill capability.

These are some of the treaty provisions that have been discovered so far:

SUPERSONIC BOMBERS

SALT II will in no way limit the Soviet's supersonic Backfire bomber, which is capable of making nuclear missile and bomb strikes against American cities and industry. The President and the majority in Congress have killed the only U.S. equivalent—the B–1 bomber.

HEAVY MISSILES

The Soviets will be able to deploy the 308 extremely heavy throw-weight intercontinental ballistic missiles (ICBM's) that they now have. Each missile can deliver eight independently targeted (MIRVed) nuclear warheads with several times the explosive power of our Minuteman III missile. The United States now has none of these very heavy missiles, and under SALT II would not be allowed to develop any.

MULTIPLE WARHEADS

The treaty would guarantee the Soviets more than twice the number of ICBM warheads that the United States may have. This is because of the Soviet Union's large number of heavy missiles, which the United States does not have, and the fact that the United States is being asked under the treaty to count each one of our B–52 bombers in the same category as a MIRVed Soviet ICBM. This makes no sense at all, since a 19-year-old B–52—even equipped with cruise missiles—would take 8 to 10 hours to hit a target, compared with 25 to 30 minutes for a MIRV'ed Soviet ICBM.

MISSILE THROW-WEIGHT

No limit will be placed on the maximum weight that can be lifted by a Soviet missile. Soviet missile throw-weight is currently almost three times that of the United States, meaning that they can deliver three times the destructive power against our cities and defense installations. This will enable the Soviets to attain a nuclear war fighting posture, where their first strike could destroy all our missiles before launching, thus preventing U.S. defense or retaliation.

CRUISE MISSILES

SALT II will ban development, testing, and deployment of cruise missiles with a range of more than 1,300 nautical miles, if launched from a B–52, or more than 312 nautical miles if launched from a ship. Since the B–52 is slow and vulnerable to being shot down, it must remain several hundred miles from enemy borders. The Soviets know, of course, that this range limitation for cruise missiles sharply reduces, if not eliminates altogether, their usefulness to the United States. The limitation allows the Soviets to train their 6,000 radars, their 2,600 fighter interceptors, and their 12,000 surface-to-air missiles right where the B–52's will be in order to destroy them before cruise missiles can be launched against Soviet military installations.

Any way we look at it, the impending SALT II treaty is a bad deal for the United States. It will guarantee Soviet strategic supremacy. This is a high price, indeed, to pay for a political symbol—a so-called arms control agreement between the world's two major superpowers.

The main obstacle to making any meaningful arms control agreement now with the Soviets, which protects our national security interests, is that for the first time we are negotiating from a position of relative weakness, and the Soviets are negotiating from a position of relative strength. The Soviets know the trend lines, which show as Joint Chiefs of Staff Chairman Gen. George Brown recently testified, "that in nearly every area of military strength there has been a relative decline over the years in relation to the Soviet Union, our principal adversary."

The facts are plain—

The Soviets are building supersonic backfire bombers and developing a new heavy bomber—we killed the B–1 program.

The Soviets are producing and deploying a fourth generation of heavy ICBM's, with twice the throw-weight of any missiles we have, and developing a fifth generation—we have no plans.

The Soviets have developed a land-mobile ICBM—the administration and Congress continue to stall on our MX missile.

The Soviets are putting several new ballistic missile submarines to sea each year—the administration and Congress have cut back on our vital Trident submarine construction.

The Soviets maintain an air defense system—we have abandoned ours.

The Soviets have a civil defense program—we abandoned any such effort years ago.

The Soviets now hope for a SALT II treaty permitting them to modernize and expand their strategic arms, but requiring us at best to maintain the status quo, or at worst to destroy B-52s or missiles and stifle any real U.S. ICBM improvement. I believe our foreign policy should be turned around so that the Soviets stop having such grandiose

thoughts, and meaningful arms reduction and control starts with them.

This will only happen if the U.S. strategic position is once again better than that of the Soviet Union, and we can bargain from strength rather than inferiority. I will continue to work and vote in Congress for that eventuality.

Chart of comparison of United States and Soviet military power published by Council for InterAmerican Security:

A COMPARISON OF UNITED STATES-SOVIET MILITARY POWER

STRATEGIC FORCES	
ICBM's:	
U.S.	1,054
U.S.S.R.	1,549
SLBM's:	
U.S.	656
U.S.S.R.	842
Heavy bombers:

U.S.S.R.	4,030

THE FEASIBILITY OF FAITH, HOPE, AND CHARITY ALONE AS FOUNDATION STONES FOR UNILATERAL DISARMAMENT

(Mr. STRATTON asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. STRATTON. Mr. Speaker, I am sure we would all admit that faith, hope, and charity are excellent cornerstones for the establishment of an altruistic organization dedicated to the welfare of mankind. But, I think most of us also recognize that these three qualities all by themselves would provide a rather slender and unreliable reed on which to construct a national position for negotiating arms control agreements.

Recently, the Union of Concerned Scientists issued a "Declaration on the Nuclear Arms Race," whose major thesis is that if the United States would unilaterally agree to stop all our efforts to develop and improve nuclear weaponry, the Soviets might be shamed into doing the same. This is a point of view frequently expounded in the past by Mr. Paul Warnke, presently the chief U.S. negotiator at our SALT arms negotiations in Geneva.

To take this kind of naively trusting approach, however, with a competitor who outnumbers and outmans us in almost every military department—the Soviet Union—is to perpetuate and even dangerously to increase the nuclear imbalance which already exists.

We placed a substantial amount of faith in the Soviets, Mr. Speaker, back in 1972 when we approved the SALT I agreement. We had high hopes then that the Soviets would not try to obtain a unilateral strategic advantages from that agreement, in spite of its omissions and ambiguities. But it turned out we were wrong. We left too many major loopholes in that agreement. And as a result, as one might expect, the Soviets have taken the fullest possible advantage of these gaps to achieve substantial performance superiority over us in the nuclear weapons field within the framework of strict numerical "equality." So, Mr. Speaker, we were charitable to a fault, it would appear, and we are beginning now to recognize it.

The distinguished chairman of the House Armed Services Committee, the gentleman from Illinois (Mr. MELVIN PRICE) was recently asked by the Union of Concerned Scientists to endorse their concept of a unilateral weapons standdown. His cogent and highly relevant response to their request deserves to be read carefully by every Member, and I am glad to commend it to their attention.

The exchange of letters on this point between the Union of Concerned Scientists and the gentleman from Illinois (Mr. PRICE) follows:

COMMITTEE ON ARMED SERVICES,
Washington, D.C., January 30, 1978.

Mr. HENRY W KENDALL,
Union of Concerned Scientists,
Cambridge, Mass.

DEAR MR. KENDALL: Thank you for your letter of January 13, 1978 and the attached "Declaration on the Nuclear Arms Race." The measures enumerated by the Declaration are of the highest moral purpose, but each one requires unilateral action on the part of the United States with fervent hope that the Soviet Union might reciprocate openly in a manner conducive to some sort of verification.

I am not certain that the United States can afford to forego the minor technological improvements programmed for our Armed Forces, while the Soviets absolutely refuse to discuss their existing systems' capabilities and planned improvements. The Congressional Committees on Foreign Relations (Senate) and International Relations (House) annually publish an analysis of arms control impact statements submitted by the National Security Council and the Armed Forces in connection with the fiscal year budget submissions for certain programs. This document leaves very little to the imagination concerning anticipated improvements to many U.S. nuclear weapon systems and nuclear weapon delivery systems. I presume that you are aware that Moscow refuses to furnish any information on their nuclear weapon system—i.e., numbers, accuracy, throw weight—for SALT purposes. Therefore, all statistics and operating characteristics used by U.S. negotiators concerning Soviet systems are U.S. intelligence estimates. I am seriously concerned that our SALT negotiators are making decisions without the basic facts necessary for realistic compromise.

The Declaration calls for unilateral U.S. action to suspend or withhold technological improvements to existing U.S. systems. I do not consider it in the best interests of the United States to further compound existing uncertainties of increasing Soviet superiority in their new systems being installed vis a vis existing U.S. ICBM systems, improved or unimproved.

A race generally connotes at least two competitors. I am convinced that if there is an ongoing nuclear arms race, it is basically a unilateral action by the Soviet Union.

I appreciate your courtesy in sending me the Declaration and allowing me to comment on it.

Sincerely yours,

MELVIN PRICE,
Chairman.

UNION OF CONCERNED SCIENTISTS,
January 13, 1978.

Hon. MELVIN PRICE,
Rayburn House Office Building,
Washington, D.C.

DEAR CONGRESSMAN PRICE: Over 12,000 scientists, engineers and other professionals, including many of the finest in the country, have signed a statement urging the United States—the Administration and the Congress—to take some bold steps toward controlling the nuclear arms race. We are deeply concerned over the race and especially the increased risk of nuclear war that will accompany the planned next round of advances in nuclear weaponry.

Recommendations are set out in our Declaration On The Nuclear Arms Race which has already been sent to the President. On behalf of the sponsors and signers, I am pleased to enclose a copy. We hope you will find it possible to join us in supporting moves to control this deadly race, "increasingly a mortal threat to all mankind."

Sincerely yours,

HENRY W. KENDALL.

DECLARATION

I. THE ARMS RACE

The nuclear arms race, a grim feature of modern life, has been with us since the devastation of Hiroshima and Nagasaki. Driven by a futile search for security through nuclear "superiority," this vastly expensive competition is increasingly a mortal threat to all humanity. Control of the arms race is one of mankind's most urgent needs.

The inventories of nuclear warheads are coupled with accurate, long range and relatively invulnerable delivery systems. Together their destructive capacity is immense. If used in war they would kill hundreds of millions of persons, carry radioactive injury and death to many of the world's nations, profoundly damage the environment of the Earth we live and depend on, and unhinge and devastate the target nations so effectively that they would no longer function as modern industrial states. Indeed, the superpowers' inventories are so great that even small fractions of them could produce damage far beyond any past experience.

Neither superpower could now launch a counterforce surprise nuclear attack to disarm the other. Enough of each side's forces will survive or are invulnerable that the return blow would still produce prodigious damage, so shattering that no first strike is remotely rewarding. Thus, a relatively stable but uneasy balance has resulted in the recent past, the state of Mutually Assured Destruction. This balance of terror, while morally repugnant to many, is a fact of modern life. The superpowers have recognized that the populations of the United States and the Soviet Union have become unavoidably hostage because of the ineffectiveness of defenses against nuclear-armed strategic weapons systems—and so their 1972 agreement, and treaty, in effect terminated efforts at active anti-missile defenses.

The security of the United States and the Soviet Union, and the other nations across the globe, is only as high as the expectation that the nuclear arsenals will never be used.

Strategic nuclear arsenals could be drastically reduced while still retaining ample deterrent forces in a world devoid of real peace. However, the superpowers—while professing commitment to the principle of nuclear parity—continue to reach for nuclear superiority or at least for unilateral advantage through the development and deployment of new weapons and weapons systems. By and large the U.S. has been ahead in the superpowers' arms technology race: the first in nuclear and thermonuclear weapons, nuclear submarines, solid fuel missiles, and many other developments. The U.S. continues to forge ahead: developing MX—an advanced, perhaps mobile, land-based intercontinental missile and multiple independently-targetable reentry vehicles (MIRV) of extreme accuracy, the neutron bomb, the air- and sea-launched strategic range cruise missiles.

Many of these innovations have been stimulated by uncertainty about what the Soviet Union was deploying. Soviet responses are clouded in secrecy and are possibly highly threatening. They have forced the U.S. to proceed. In general, the Soviet Union has responded to U.S. technological innovations but with a lag—averaging over 4 years—in reaching U.S. levels. Their deployments then continue exceeding the United States' and so raising fears of their gaining "superiority." The Soviet Union is developing and deploying MIRV'ed missiles of every greater range, accuracy, and explosive power, perhaps greatly intensifying the civil defense of its population, and continuing other developments. The Soviet Union now has more strategic missiles and a greater nuclear throw-weight, while the United States exceeds in the accuracy of delivery systems as well as in numbers of nuclear warheads. The Soviets continue also to increase their conventional forces raising fears of aggression aimed at Western Europe. This has stimulated responses in conventional arms, and, especially grave, in dependence on nuclear weapons among the NATO nations. The United States and the Soviet Union both are engaged in vigorous underground nuclear warhead test programs. The responsibility for the race is unmistakably shared.

The arms race is in full swing! The roughly twelve thousand strategic warheads of today are likely to become thirty thousand long before the end of the century and the tens of thousands of tactical weapons augmented also. These increases and the improvements in missile accuracy, retargeting capability and invulnerability lead to greater "flexibility"—and so to the greater likelihood of starting nuclear weapons' use. What results is the undermining of the balance of terror. New weapons now in sight will further decrease the stability of this delicate balance and will make the monitoring of future arms agreements more difficult, if not impossible, without gaining decisive military superiority for either side.

The superpowers' belief that security rests with potent nuclear armaments is more and more shared by other nations. The strategic arms race stimulates the proliferation of nuclear weapons among nations some of which may be weak or irresponsible, and thus more likely to resort to the use of nuclear weapons in a local war. Such wars could easily widen, thus adding to the likelihood of a final immense nuclear holocaust between the superpowers.

More than ever it is urgent now to slow down and ultimately to stop the nuclear arms race, thus improving the stability of the nuclear stand off and setting the stage for reduction of the great inventories of weapons.

II. CONTROLLING THE ARMS RACE

Several attempts have been made to bring the nuclear arms race under control but none has been successful in the face of the pressures that drive the competition. The 1960 treaty to demilitarize the Antarctic continent, the partial nuclear test ban of 1963 and the later treaties not to deploy nuclear warheads on the ocean bottoms and in outer space are but peripheral to the nuclear arms race. The Non-Proliferation Treaty of 1968 has not gained universal adherence and the superpowers have not carried out their implicit commitments in the treaty to seek nuclear disarmament. The U.S. and Soviet Union have negotiated bilaterally in the Strategic Arms Limitations Talks, or SALT, with some yield: they have agreed not to interfere with their non-intrusive means of vertification of missile launch inventories, to minimize the installation of anti-ballistic missiles systems, and they have placed ceilings, albeit very high ceilings, on the numbers of deployed strategic missiles. The talks have provided a forum for continuing negotiations, but they have not stopped the qualitative arms race, and they have not reduced the huge inventories of strategic delivery weapon systems. While negotiations advance slowly, hindered by mistrust and endless maneuver for advantage, virtually unlimited competition for "strategic advantage" through new and more deadly delivery systems—continues unhindered.

We believe that the key to a safer future lies in the control of strategic weapons technology. To protect the world from the disaster of a nuclear war the superpowers must halt the development of new weapons which frustrate attempts to curb the arms race. Because there is essential equality in U.S. and Soviet Union forces the superpowers can still take effective steps to stop the nuclear arms race. This must be done both through mutually agreed on, and through unilateral initiative actions.

III. RECOMMENDATIONS

We hereby recommend that:

1. The United States announces that it will halt underground testing of nuclear explosives provided that the Soviet Union follow suit within a reasonable time.

2. The United States announces that it will not field test or deploy new strategic nuclear weapons, nuclear weapons systems, or missile defense systems for a period of 2 to 3 years provided the Soviet Union demonstrably does likewise.

These measures, carried out with due care, do not jeopardize our security. The recommendations do not stem from blind faith in the good intentions of the Soviet Union. We already can detect Soviet tests of nuclear weapons smaller than the Hiroshima bomb with existing seismic sensors and clearly distinguish them from earthquakes. Hence underground tests of strategic warheads cannot escape detection. Our satellites already inspect Soviet missile launches, missile site construction, and submarine arrivals and departures; thus we would know if the Soviet Union were not following our lead. Should the recommended initatives not bear fruit, the interruption in testing would hardly degrade our security. It takes many years to develop and deploy strategic weapons systems and our strength is such that a short delay of the sort we recommend cannot put the U.S. at risk.

These measures, carried out with due care, can restrain the technological arms race. Without underground tests there is not enough confidence in the new warhead designs to allow deployment. New missiles also depend on more accurate guidance systems, and these can only be tried and perfected in repeated test firings. By reducing the number of missile test firings to those needed for maintenance a major hurdle to new deployments would be created.

This is the moment for such moves.—We are, once again, at a turning point in the nuclear arms race. Because SALT I succeeded in placing ceilings on the number of missile launchers, it stimulated an intense race towards more accurate and powerful missiles, and more warheads per launcher, the development of new and more potent bombers and submarines to replace existing fleets. Most importantly President Carter has displayed a more penetrating understanding of the dangers of the arms race than the previous leaders of the U.S. and U.S.S.R., and has indicated a readiness to consider imaginative policies. Our recommendations do not only meet a current need—they come at a propitious moment.

The United States should take the initiative.—The U.S. lead in new weapons technology in the nuclear era is a reflection of our overall superiority in creating new technologies and sophisticated industries. Under these circumstances, we cannot expect the U.S.S.R. to take the initative.

Our proposals would be an important step toward the controls of strategic weapons technology which are so essential to our short term security. They would thereby create that base of confidence and stability which is a prerequisite to overall reductions of the nuclear arsenals.

We urge the government of the United States to demonstrate its dedication to arms control by initiating the unilateral, reciprocal steps we have recommended, that represent the first steps leading to gradual disarmament. These actions, if carried out by the United States, would represent a policy of restraint of the greatest political significance and yet, for an interim period, be devoid of military risk. Should the Soviet Union reciprocate—and they, like the United States, have much to gain in so doing—a great step forward would be taken to diminish the threat of nuclear war.

RE-REFERRAL OF EXECUTIVE COMMUNICATION 3638, AUDIT AND EVALUATION REPORTS FOR INTERNATIONAL BANK FOR RECONSTRUCTION AND DEVELOPMENT FROM COMMITTEE ON BANKING, FINANCE AND URBAN AFFAIRS TO COMMITTEE ON INTERNATIONAL RELATIONS

Mr. GONZALEZ. Mr. Speaker, I ask unanimous consent that the Committee on Banking, Finance, and Urban Affairs be discharged from further consideration of Executive Communication 3638, transmitting audit and evaluation reports for the International Bank for Reconstruction and Development, and that the communication be re-referred to the Committee on International Relations.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

PRAY FOR ALDO MORO

(Mr. KEMP asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. KEMP. Mr. Speaker, I do not know if former Prime Minister Aldo Moro is still alive, but it seems to me now that there is no obvious action that

the government can take, given its responsibility to the general electorate, that can induce the Red Brigades to free him. To free the 13 prisoners demanded as ransom would be an act of anarchy in itself.

Mr. Speaker, the solution, I believe, lies in prayer, and the entire world must focus prayer on the kidnapers, in the way that Pope Paul VI began to do on Saturday, when he said:

> I beg you on my knees, free the Honorable Aldo Moro, simply, without any conditions, not so much because of my humble and loving intercession, as by virtue of his dignity as a common brother of humanity, and for the sake, which I want to hope has a stronghold on your consciences of real social programs that must not be soiled with innocent blood nor tormented by superfluous pain.

Because we must assume that the kidnapers are genuinely radical political philosophers, with an oblique perspective which we do not understand on how to cure Italy's economic and social ills, this statement by the Pope was the only one that could be made, an appeal to the kidnappers' sense of common brotherhood.

And it seemed to work, to cause a cracking in the resolve of the Brigades. A statement they released was almost soft, and it said:

> Some personalities from the bourgeois world and also some religious authorities have addressed so-called humanitarian appeals to us for the release of Aldo Moro. We take account of them, but we cannot help nurturing some doubts." . . .

Mr. Speaker, had the Pope waited for this reply, he could have renewed the appeal with more elaboration, attempting to quench those doubts. But before it arrived, the Pope was pressed to become firmer. No longer was the Pontiff on his knees, but rather "trembling" at the expiration of the deadline set by the anonymous people who have proclaimed themselves one-sided butchers and executioners.

It is possible that this crossing of statements was all it took to lose an opportunity, for the second statement may have fed the doubts of the kidnapers by strengthening the hand of those who had first resisted the brotherhood appeal.

In 1962, during the Cuban missile crisis, a similar crossing of telegrams between President Kennedy and Nikita Khrushchev almost caused disaster, but Bobby Kennedy was in the right place at the right time, and advised his brother, the President, to answer the first, soft cable from Khrushchev, instead of the second, harsh one. When everyone is shouting, it is often the person who speaks most softly who is finally heard, as everyone must become silent to hear his whispers.

The rest of us must join the Pope, it seems, in returning to the first, softer appeal. After all these kidnapers, like Mr. Moro, are also our brothers. I sense they could not resist and Mr. Moro would be freed.

Then and only then could we turn our prayers with the Pope to the 13 political prisoners of Italy's desperate government, in an appeal that they too be treated like brothers.

UPDATE ON PACIFIC/ASIAN AMERICAN HERITAGE WEEK—HOUSE JOINT RESOLUTION 540

(Mr. HORTON asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. HORTON. Mr. Speaker, I would like to report the progress that has been made in acquiring the necessary cosponsors for House Joint Resolution 540 calling upon the President of the United States to proclaim a Pacific/Asian American Heritage Week during the first 10 days in May. As of today, 145 Members of Congress from 26 States, the Commonwealth of Puerto Rico, the District of Columbia, Guam, and the Virgin Islands, have agreed to cosponsor the resolution.

Under new rules of the Post Office and Civil Service Committee, 218 Members are required to cosponsor a resolution before it will be acted upon. We have not introduced a new resolution each time an additional 25 Members have agreed to cosponsor the resolution because of the high cost of printing each new resolution.

In addition, national organizations such as the National Association of Counties are supporting the resolution and have urged Members of Congress to sponsor the resolution.

In the near future, Members who have not yet joined us on this resolution, will be receiving a letter requesting their support. Rep. NORMAN MINETA and I urge them to join with us.

Because of the interest that has been shown in this resolution, Rep. NORMAN MINETA and I thought it would be appropriate to list the names of the cosponsors in the RECORD. The following is the list of cosponsors of House Joint Resolution 540:

COSPONSORS (PACIFIC/ASIAN AMERICAN HERITAGE WEEK JOINT RESOLUTION—(AS OF APRIL 21, 1978)

Frank Horton, (R-NY)
Norman Y. Mineta, (D-Calif.)

ALABAMA

Tom Bevill.

RESOLUTION OF DISAPPROVAL OF MIDDLE EAST ARMS PACKAGE TO BE INTRODUCED

(Mr. WHALEN asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. WHALEN. Mr. Speaker, later this week President Carter is expected to submit to the Congress the so-called Middle East "arms package." Upon receipt by the House of Representatives of this proposal, I shall introduce a Resolution of Disapproval applicable to all of its elements.

The important issue, in my opinion, is whether the proposed aircraft sales, as Secretary of State Cyrus Vance argues, will contribute to peace in that troubled area of the world. I contend that they will not. Introducing sophisticated weaponry in a hostile environment, rather than enhancing prospects for peace, makes armed conflict more likely. Events of the past several weeks—the massive transfer of arms; the invasion and occupation of Lebanon—enforce this conclusion.

Much of the discussion relative to this arms package has centered on the question of whether or not it upsets the military balance in the Middle East. From my own analyses I am convinced that it will not. Indeed, as the London Economist observes: "Israel's present overwhelming superiority in the Middle East will, if anything, be increased by the planned sales."

But "balance" and "superiority" are not the issues. By providing Israel, Egypt, and Saudi Arabia with additional military equipment the United States is enlarging their capacity to wage war, regardless of their relative strengths.

Two arguments, I feel certain, will be advanced in opposition to my Resolution of Disapproval.

First, it will be suggested that there is a Presidential commitment to supply aircraft to Israel, Egypt, and Saudi Arabia. Under American law, however, such commitments are contingent ones—contingent, that is, upon subsequent approval by the Congress. In this instance I believe that the proposed sales should be deferred by Congress at least until there is further progress toward a Middle East peace settlement.

Second, advocates of the arms package will advance the age-old defense: "If we don't sell the aircraft, they can be purchased elsewhere." Unfortunately, at least in the case of Egypt and Saudi Arabia, this is true. Transcending this issue, however, is the question of national conscience.

Perhaps I take my job as a Member of Congress too personally, as I did during the Vietnam war. But the American people have vested tremendous responsibility in the 535 Members of the House of Representatives and the Senate—indeed, the power of life or death. I am very troubled by the fact that scores of innocent civilians were killed, and thousands more made homeless, by arms which were made available as a result of my votes in the International Relations Committee and the Congress. Perhaps I cannot keep my friends from killing each other. But if they must, let it be with another's weapons.

"LET'S FIGHT FOR FREE ENTERPRISE"—SPEECH OF HONORABLE MICKEY EDWARDS

(Mr. ASHBROOK asked and was given permission to address the House for 1 minute and to revise and extend his remarks).

Mr. ASHBROOK. Mr. Speaker, as the ranking Republican on the labor-management subcommittee, I have observed first-hand the tremendous influence organized labor has in the Congress—an influence that is surprising in light of a growing disenchantment with the labor movement and many of its social programs.

One of my colleagues on the labor-management subcommittee, an outspoken advocate of the free enterprise system, captured the essence of the problem in a recent speech before the Rotary Club of Charleston, W. Va., In that speech, MICKEY EDWARDS clearly pointed out the extent to which labor's political influence outweighs its popular support. Congressman EDWARDS is to be commended for his call to the business community to join in the political fight for its own survival.

His speech follows:

LET'S FIGHT FOR FREE ENTERPRISE

(By Congressman MICKEY EDWARDS)

More than half of the 95th Congress is already history and so far, I have to say, it hasn't been quite as bad as I thought it would be.

When we started out, the agenda for this Congress looked like a labor Christmas list. It included everything George Meany wanted.

But along the way there were a few surprises. Instead of being an unmitigated disaster, a few good things happened; a few not so good things happened and some atrocious things happened. But of course that was the surprise: We hadn't expected the good and the not so good, only the atrocious.

It was a pleasant surprise. Businessmen got out from behind their desks and came to Washington.

Last year's defeat of the common situs picketing bill is probably the day business came of age politically. That was the day business proved it could stand toe to toe with organized labor and beat labor on its own playground—in the Congress.

The defeat of common situs may have been one of the greatest lobbying efforts ever seen in Washington. It was a great victory. But it was a passing victory.

The significance of common situs last year—and of the defeat of the Consumer Protection Agency this year—is that there is a change in the trends of government—and that business took advantage of those trends.

These victories hold no lasting significance at all unless they serve as an inspiration to show what business *can* do when business gets business into government. The small businessman is an endangered species and businessmen are going to have to get *into* politics or they're going to be out of business. And it's just that simple.

And I don't mean getting into politics for a fifty yard dash, I mean a marathon.

You stopped common situs. You stopped the repeal of section 14(b) of the Taft-Hartley Act. You stopped the Consumer Protection Agency.

But, labor won all five major labor votes in the Senate. And it won most of its voices in the House. This was business's best year ever—as far as lobbying goes, as far as political activity goes—and labor still got most of what it wanted.

The past 15 months in Congress hold some very important lessons for the business community.

Business *can* have an impact on the legislative process but only when businessmen are united and when they're organized and when they pull out all the stops.

Lobbying is not enough. After the most effective lobbying effort business has ever mounted—with practically every segment of the business community united behind a single purpose—common situs was stopped by only 12 votes.

Lobbying is quite clearly not enough!

I have been told that dinosaurs used to roam this planet at will. They did so for many years—and they had a pretty good time of it. Life was easy for them because the climate suited them—the conditions were just right.

But then the climate changed—the conditions changed—and the largest, most powerful creatures the world has ever known, disappeared.

And for business, too, the climate has changed. Conditions have changed.

You can see it in the eleven *billion* forms businessmen sent to the federal government last year. You can see it in the OSHA inspectors when they descend on you to make sure the portable potties are close enough. You can see it in taxes that cripple initiative, in inflation, in the disappearance of private investment capital.

The climate *has* changed. It's pretty chilly. We're at the edge of an economic ice age.

The question is—will business adapt? The dinosaur had a small brain. The business community *has* brainpower. It's a question of *will*. Will business commit itself to the protection of free enterprise? or—will it sit complacently munching on lily pads until the climate is so cold it cannot survive?

Ironically, while the climate in government is chilly toward free enterprise, the *public* climate is chilling toward organized labor. Membership is sliding. Unions have ¾ of a million fewer members today than they did three years ago.

In 1975–76, 125,000 more secret ballots were cast against union representation than for it. In 1976, the unions lost more representation elections than they won.

Big labor is losing both members and prestige. But it's doing something about it. The labor reform bill is designed to make it almost impossible for a small businessman—or any businessman—to prevent the unionization of his plant or company.

Labor is reacting to the new anti-labor climate by trying to change the climate back again through political action.

Listen to George Meany—and I quote—"The American trade union movement is more deeply involved in politics than its most politically oriented critics could have believed possible a few decades ago. Our Committee On Political Education is the single most effective political machine in the country." Unquote.

Big labor knows that political involvement is the key to climate control.

And involvement is something they understand—something they're very good at.

In 1976, COPE endorsed a presidential candidate—He won. COPE endorsed 28 Senate candidates—19 of them won. It endorsed 365 House candidates—and 262 of them won.

71.5 percent of the candidates COPE endorsed and supported—won their elections.

71.5 might not be a great score on a spelling test. It woud be a miserable score on an IQ test—but it is a good enough score to run the country.

If business could match that record—free enterprise would be in safe hands.

But to do it—business is going to have to take a lesson from labor—a lesson in involvement.

When you think about political action you normally start with money, and organized labor did start with money—8.2 million dollars in Congressional campaigns in 1976. But there is more to winning elections than direct contributions.

And there, too, labor got involved—20,000 phones in thousands of phone banks; more than 10 million phone calls by 120,000 labor union volunteers.

80 million pieces of political mail. The AFL–CIO sent out 25 million pieces of mail in one month—the month before the 1976 election.

Year round computer services worth two million dollars—with the names of 12.5 million votes in 45 states—pumping out precinct working lists and mailing lists.

COPE and UAW alone spent more on get-out-the-vote-drives than the Democratic and Republican National Committees combined.

And you can imagine the kinds of candidates those voters voted for.

But still, they didn't stop. Tens of thousands of precinct workers, doorbell ringers, car poolers, babysitters.

And they didn't hedge their bets!

Labor supports candidates who favor labor. Business plays games. It supports incumbents—even if they don't support business! Or it fails to support challengers who *do* support business. Or it splits its contributions between opposing candidates so they'll have a tie to whoever wins.

The General Telephone Political Action Committee in California gave 2,000 dollars to Ronald Reagan—and two thousand dollars to Gerald Ford, *and* 2,000 dollars to Jimmy Carter.

Business gave four times as much money to incumbent Congressmen as it did to challengers. Instead of trying to change the Congress, business supported the Congressional majority that is doing business in.

This is one of those years when business can do something about the climate. About its survival.

It's an "off-year" election—but its an "on-year" for political action. If business doesn't get involved this year, then free enterprise and dinosaurs will both become fading footnotes of the future.

It boils down to one choice for business—a choice between two roads—the road to commitment, political involvement and controlling the climate to create a healthy environment for free enterprise.

Or the other road—the road of checkbook politics and no more; the road of playing both sides; the road of complacency and business as usual. It is a well marked road—the dinosaurs used it several million years ago.

HIGH SCHOOL STUDENTS AID ELDERLY

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York (Mr. CAPUTO) is recognized for 5 minutes.

● Mr. CAPUTO. Mr. Speaker, I would like to take time this afternoon to direct the attention of this House to a highly successful senior citizens program operating in my district, the 23d District of New York.

For over a year now students at the John F. Kennedy High School in the Bronx have been volunteering their time and efforts to a program designed to provide aid to the elderly in more than a dozen nursing homes and senior citizens centers in the Kingsbridge, Riverdale, Washington Heights, Marble Hill, and Inwood communities. This program, the Kennedy elderly aid program (KEAP), developed in response to increasing crimes against senior citizens in New York City. At the suggestion of Mr. Joseph F. Limongelli, coordinator of student affairs at JFK, and with the support of Mr. Robert R. Mastruzzi, principal of the school, students have been providing a variety of services to elderly residents of these homes and centers.

Some volunteers, working in teams of two or three, escort senior citizens to shopping areas, parks, doctors' offices and medical centers, neighbors' and relatives' homes, or while they stroll along the streets for exercise and fresh air. Others, working at the centers, may write letters for, read to, or simply converse with elderly residents. Some of the talented students have been teaching seniors to sing, play games, and dance. KEAP volunteers have been involved in clerical work as well as nursing and therapeutic programs.

KEAP has done much to reduce the fears of senior citizens in our area and increase the level of trust and understanding between our older and younger generations. Resolutions commending the efforts of JFK students and faculty working in the program have been passed by the New York City council and the New York State assembly.

I am personally gratified to see our young people take such an active and responsible role in dealing with community problems. I want to take this opportunity to applaud KEAP volunteers for their initiative and dedication and wish them every possible future success.●

LIFE IN THE SOVIET UNION

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Oklahoma (Mr. EDWARDS) is recognized for 5 minutes.

● Mr. EDWARDS of Oklahoma. Mr. Speaker, in the April 23 edition of the Washington Star, Mr. Gerald Nadler, a reporter for United Press International, writes of his fascinating but tragic conversation with a Soviet war hero, Gen. Pyotr Grigorenko.

The Soviets stripped the general of his citizenship while he was recently visiting in the United States. The Soviets accused the general of, as they put it, "behavior damaging the prestige of the Soviet Union."

Years ago, General Grigorenko made the mistake of believing that the guarantees of freedom spelled out in the Soviet constitution were to be taken seriously. Despite the resulting 6 years of constant mental and physical torture in Soviet prisons and psychiatric hospitals, General Grigorenko has emerged with his will strong and his mind clear.

The stories he has to tell are not pleasant. But they have a special meaning, Mr. Speaker, after the presentation of that incredible television documentary, "Holocaust."

General Grigorenko has great faith in the wonder that America has created from its commitment to individual freedom and opportunity. But he is gravely worried that Americans have become complacent in the face of the Soviets' undeniable repression of the most basic human rights. He fears that we are no longer willing to defend our own values, to speak out against these gross Soviet abuses of human rights. He fears, I believe with justification, that we are a nation in retreat.

Mr. Speaker, I urge my colleagues to read General Grigorenko's own words, his own account of the reality of life today in the Soviet Union.

The article follows:

[From the Washington Star, Apr. 23, 1978]

A GRIM PICTURE OF RUSSIA EMERGES

(By Gerald Nadler)

NEW YORK.—Soviet war hero-turned dissident Gen. Pyotr Grigorenko, stripped of his citizenship while visiting America, paints a grim picture of his homeland as a nation of shortages and regulations.

"We plan and we plan, but in America there is no plan but a mass of goods," said the 70-year-old former Red Army major general. "Russia, with its plan, is a nation of shortages.

"Your roads and buildings are things of wonder. Russia virtually has no roads in comparison.

"In construction, the Soviet Union is not 10 years behind, not 100 years behind, but an epoch behind," Grigorenko said in an interview.

"I have stood for hours admiring American bridges and the skyscrapers."

While here on a six-month visa to visit his son, Andrei, 33, and undergo a prostrate gland operation, Gregorenko was stripped of his citizenship "for behavior damaging the prestige of the Soviet Union."

He was granted asylum in the United States a few days ago.

Surrounded by his wife, Zinaida, 68, and two sons, Oleg, 44, and Andrei, an electrical engineer and also a former dissident, he warned of American complacency in the Soviet civil rights struggle, adding that American policy is tricked by "Soviet duplicity."

"The more they (the Soviets) lie, the more they are believed," Grigorenko said.

He said the Soviet Union wants Americans to believe the human rights movement in Russia is dead, and "some people say so, playing into the Soviets' hands, but the movement is growing all the time.

"In Russia not a day went by without 10 to 20 and sometimes 50 persons coming to me for advice on human rights."

Grigorenko, who spent six years in prisons and psychiatric hospitals for demanding that Soviet authorities observe the nation's constitution, said President Carter's decision to stress human rights in foreign policy "was genius-like in its conception.

"But the Belgrade conference (which investigated compliance with the Helsinki Agreement and its human rights provisions) was a full retreat."

Grigorenko, who was busted to private and had to work as a hauler in a factory, noted the decree signed by Soviet President Leonid

Brezhnev taking away his citizenship was made public March 10, two days after the end of the Belgrade Conference.

"The Helsinki agreement," he said pointedly, "provided for the free movement of persons and information across borders."

He said if he had thought the Soviets would strip him of his citizenship, he would not have come to the United States. The Soviet action, he said, violated international law.

"It was vile," he added.

Despite his training in engineering and cybernetics which he taught at the Soviet Pentagon—Frunze Academy—Grigorenko said he found America startling.

"The key," he said, "is organization—of trade, industry, road and building construction."

"Here the stores are full, and I see no plan," Grigorenko said, contrasting it to the Soviet system where the entire economy is planned and regulated by the five-year plans.

Grigorenko said he had made visits to Philadelphia, Baltimore, Washington, Boston, San Francisco and Los Angeles.

"Every city has its theaters, its huge stores, museums" he said, explaining that these things in any abundance in Russia were confined to the largest cities like Moscow, Leningrad and Kiev.

Americans, Grigorenko said, can never imagine what the Soviet Union is like with its system of documents and internal passports.

"Here, he said, "if I want to go to Philadelphia, then please, go ahead."

Grigorenko was arrested once in Soviet Central Asia for illegally being in Central Asia where he went to plead the cause of the Crimean Tartars who were banished from their homeland by Soviet dictator Josef Stalin.

"In Washington, I went to Congress," said Grigorenko. "I listened, I watched. I did not understand (the language).

"But if I were to ask to attend a session of the Supreme Soviet (the nominal parliament), I would be looked upon as if I were mad.

"And writing a congressman who will write back!" Grigorenko said, shaking his head in disbelief.●

ARBOR DAY PROGRAM HIGHLIGHTS — CONTRIBUTIONS OF JOHN A. NOBLE

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Pennsylvania (Mr. McDADE) is recognized for 5 minutes.

● Mr. McDADE. Mr. Speaker, this Friday, in the city of Scranton, many of our civic and business leaders will join hands with citizens from throughout the community in a very special Arbor Day ceremony that will highlight the contributions of one of our region's first citizens, John A. Noble. For this year will mark the dual anniversary of the 100th anniversary of the Globe store, of which Mr. Noble serves as president, and the planting of the one millionth tree in what has become a multiyear effort sponsored by Mr. Noble and the Globe aimed at beautifying our environment.

The Arbor Day program, which is held each year in Scranton, is an outstanding event. It has become a tradition begun 16 years ago when John Noble decided to use Arbor Day as a vehicle to instill concern about our environment to the school children of northeastern Pennsylvania. So each year for the past 16 years, the Globe store has delivered an average of 60,000 seedlings of different varieties to area schools for planting.

This year, the one millionth seedling will be planted at ceremonies being held at Nay Aug Park in Scranton. At this time, the contributions of John Noble to the greening of northeastern Pennsylvania, making the area a more attractive place to live, will be recognized.

John Noble has long been a pioneer in the business community, but he has also been a pioneer in the drive for local beautification. He holds the "Conservationist of the Year Award" from the Pennsylvania Forestry Association in recognition of the Arbor Day program which he founded.

The Bible tells us it is better to light one little candle than to curse the darkness. In Scranton, it has been better to plant a tree than to curse the ugliness of a scarred environment. Generations to come will enjoy many touches of green because one man, John Noble, had a beautiful idea.●

THE SUPREME COURT HAS RULED TODAY THAT ATTEMPTS BY GOVERNMENT TO RESTRICT THE MARKETPLACE OF IDEAS ARE UNCONSTITUTIONAL

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York (Mr. KEMP) is recognized for 5 minutes.

● Mr. KEMP. Mr. Speaker, on April 13, I addressed the House on attempts being made by Federal agencies and commissions to restrict the exercise of free speech and free press and to rig thereby the marketplace of ideas. That rigging takes place each time a rule or regulation is promulgated which gives an advantage to one group or creates a disadvantage to another with respect to those group's attempts to influence public policymaking.

In describing these attempts—and actions of the Internal Revenue Service, the Federal Trade Commission and the Federal Communications Commissions—I pointed out why these attempts must be repelled:

Ideas have consequences. For better or for worse, ideas rule the world. The recognition of that by our forebears lays at the very foundation of our history and traditions. It is reflected throughout the bill of rights and our legal framework.

It is the competition of ideas which brings forth public opinions. And, as a product of the force of ideas, those opinions are in a state of change, some gaining and others losing ground.

But now a move is afoot to rig the marketplace of ideas, to weigh one set of ideas against another, to give one set an unfair advantage over the other.

And who is at the heart of this attempt to rig that marketplace of ideas? Agencies of the Federal Government.

Mr. Justice Hugh Black, commenting on what freedom of speech really means, said:

My view is, without deviation, without exception, without any ifs, buts, or whereases, that freedom of speech means that you shall not do something to people either for the views they have or the views they express or the words they speak or write.

Yet, these Federal agencies are attempting to "do something" against a major segment of American life. Why? Who really knows, but from everything I can gather, because the free speech the segment which is to be restrained is exercising is critical of Government or the policies it seeks to make dominant. In other words, free speech as an abstraction might be all good and fine to those within these Federal agencies, but the specific exercise of free speech in the form of criticism of Federal policies and programs or in the offering of alternatives to reliance upon the Federal Government is quite another matter.

The classical notion of government within a democratic society is that the government is made up of the people themselves, that it is an embodiment of those people. Yet what the recent actions of the Federal Government to rig the marketplace of ideas reflect is that those who would rig that marketplace see government as an entity unto itself, as a structure set off and distinct from the people. I abhor that kind of vision of government; it is exactly the kind of perspective which can bring forth despotic government.

* * * * *

All of this is bound to have a "chilling effect" on all issue and image advertising, that "telltale chilling effect" which the Supreme Court of the United States has told us to watch for as a sign of abridgment of a freedom.

* * * * *

This is really an attempt to restrain the role of the private sector in the formulation of policy, a restraint initiated by its competitor quite frequently in that formulation, the public sector. Thus, Government has become both player and umpire, and that is not fair. I cannot find any footnote in the Constitution which says that the right of free speech is protected only for those promoting the public interest.

* * * * *

In order to comprehend truth, we must first hear all forms of speech, and the offering of those forms of speech must be on an equal footing. It is morally unfair, financially inequitable, and of questionable constitutionality to do otherwise.

TODAY'S SUPREME COURT DECISION

Mr. Speaker, this afternoon's newspaper carries the headlined story that the Supreme Court of the United States has struck down as unconstitutional just such an attempt, one by a State government, to rig the marketplace of ideas in the formulation of public policy. In a 5 to 4 decision, delivered by Mr. Justice Powell, the court has made it very clear—much to the chagrin I am sure of those forces in Government which are seeking to rig the marketplace—that nothing in the Constitution or in prior court decisions supports the idea that political expression loses its first amendment protection "simply because its source is a corporation," in this instance because the attempt to rig was to limit the role of corporations. The court's decision struck down a Massachusetts law barring any corporation from spending money to influence the outcome of elections on referendum questions.

The Court said today:

If a legislature may direct business corporations to "stick to business," it may also limit other corporations—religious, charitable or civic—to their respective "business" when addressing the public.

Such power in government to channel the expression of views is unacceptable under the first amendment.

The court rejected the argument made by Massachusetts that corporations would use their influence and money to dominate political campaigns, by stating what ought to be obvious to anyone: That in a free society, it is up to the people to decide who to believe in a political campaign. That is a major point.

Mr. Speaker, this is a significant victory for free speech and a free press. If a legislature, a Congress, an agency, a commission can direct corporations to "stick to business," it certainly could limit churches to stick to their business—and make no comment upon public policy questions, limit charitable organizations—foundations, etc.—to do the same, limit civic organizations to do the same. This is not a matter which applies, therefore, only to corporate points of view; it applies to all. That is why I got deeply involved in the issue.

FEDERAL ATTEMPTS TO RIG MARKETPLACE PROBABLY UNCONSTITUTIONAL

It is clear to me, from today's decision, that rules and regulations of Government agencies and commissions, as well as statutes enacted by the legislatures and Congress, are in trouble if they rig the marketplace of ideas in the formulation of public policy. They run the now obvious risk of being unconstitutional.

The first amendment to the Constitution is very clear on this kind of freedom of speech issue. It says, "Congress shall make no law . . . abridging the freedom of speech, or of the press." It stands to reason that if Congress can make no such law, neither can the executive departments and agencies to which Congress has delegated part of its authority. Congress cannot give a right that it does not itself have.

I know the executive departments and agencies will argue that they are not infringing upon either freedom of speech or freedom of the press, because there has been no Government restraint upon speech or press. I don't agree with that, for at least two reasons. First, there are no differing levels of free speech or free press known at constitutional law. That is, someone doesn't have more free speech than another. Second, an infringement is constituted by these actions, because while not prohibiting the speech or press, that same Government has treated the relationship of that speech or press differently in the conferring of benefits or the taking of them. These two points come together this way: The Federal Government now recognizes freedom of speech or press on both sides of an issue but it only confers a benefit—the tax deductibility of fund given or expended—for one side of that issue.

Yet Government ought to be the dispassionate referee, the unbiased umpire, among competing ideas in our society. Government should be responsive to the will of the people by accurately perceiving that will without trying to control it. Shades of authoritarianism or totalitarianism enter the mind of any student of history, law, or political science when facts start emerging that government is controlling the shaping of the people's will. When government uses its tax laws, its trade and communications regulations, to indirectly shape the will of the people, by giving unfair anticompetitive advantages to one form of expression over another, we move definitely in that direction. The only question then is how far. Social unrest is a direct product of segments of society feeling that government is rigging life against them. It is what Harvard's Crane Brinton said in "Anatomy of Revolution" is the beginning of that unrest which can lead to a total disruption of society. We obviously are not there at this point, but why go in that direction? Why not go in the direction the framers of the Constitution intended: Toward greater freedom of speech and press.

WHY WE MUST BE CONCERNED

There is another thing that troubles me deeply about this development, and it is a point which Mr. Justice Brandeis addressed in Whitney against California, a landmark 1927 case on free speech. Brandeis said, "It is the function of speech to free men from the bondage of irrational fears." Yet irrational fear, at least in the opinion of many, has been the product of one of the sides in many of these public policy and legislative questions. It is irrational to say we are going to run out of fuel in the next 20 years; that we may freeze in the dark unless such and such is done. That generates fear among people not thoroughly informed. The other side of that argument would, in giving its side of the story, bring back balance to the consideration of the question, and in so doing it would alleviate those irrational fears. This is but one of many examples that any of us could come up with; there are probably hundreds. Thus, by favoring one expression, one form of expression, over another, the Government agencies are restricting the entry of those ideas which would bring about a greater balance in policy considerations and the elimination of those irrational fears to which Brandeis referred.

This country is beset with economic problems. Taxes are strangling the productivity of the people. Inflation is moving toward double digits again. Unemployment remains at totally unacceptably high levels. Our balance of payments not only continues negative but at billions each quarter. The value of the dollar, at home and abroad, continues to shrink. These are the questions central to the well-being of the American people. Their resolution is central to the economic recovery we must have.

Yet where is the policymaking machinery of the Federal departments and agencies and the independent agencies dealing with economic questions today? It is standing on its head. What ought to be the top priorities—the issues I just outlined—are at the bottom and the esoteric, tangential issues which ought to be at the bottom on the agenda are at its top. Instead of dealing with taxes, inflation, unemployment, competition, and so forth, we pick up the morning paper to find the FTC is going to conduct a major investigation of comic books, that breakfast cereals are a commission's focus instead of making sure enough children have breakfast, et cetera. The examples are almost endless. It is a world—a Government—turned upside down, with its priorities upside down, and the taxpayers, the economy, and even the commission's and agencies, whose respect the people is at rock bottom, are the real losers.

Attempts to rig the marketplace are part and parcel of priorities turned upside down. Government is so unsure of its substantive positions, apparently, that it has to rig the marketplace, to give advantage to those who support the Government's position and to create disadvantage to those who oppose it, in order to "win."

It has to be made very clear that my interest here is not in representing the corporate point of view. Quite to the contrary, I do not agree with the corporate point of view on many of the issues dealt with in public policy advertising. My record is clear on that. I would be just as irritated—and concerned—if for-profit advertisers had an advantage over nonprofit advertisers, if the corporate point of view had an advantage over any other point of view. My concern here is with the libertarian question involved—balance among competing points of view and absolute rights of freedom of speech or press for both.

WHAT MUST BE DONE

We cannot stand idly by and watch a continuation of these attempts to rig the marketplace of ideas, and should that continuation be unopposed to watch the pattern mushroom. Nor can we wait for the Supreme Court to act on each of these attempted infringements. It could take years for the cases to work their way through the court system. Now is the time to begin this process of returning balance to the deliberation of public policy questions by segments of our society and economy other than Government, to require Government to treat all points of view in an evenhanded manner.

There are several ways to go about this. The first is to get the agencies and Commissions which promulgated the rules and regulations which are rigging the marketplace to rescind those rules. The second is to have Congress enact laws rescinding those rules by rewriting the statutes on which they are based. The third, and more long-range way, is to enact a law which would require all substantive rules and regulations of the departments, agencies, and Commissions come to Congress for its action prior to having the force of law.

The first would be the easiest mechanically. It would take Congress out of it. But how realistic can we be about agencies and officials undoing what they have done—with egos, reputations, etc., on the line? In some instances, such rescissions would be opposed by the agencies because they see either a statute or a congressional intent behind what they did. This would probably be the case with respect to the IRS rulings against the deductibility of public policy question advertising, etc., based as it seems to be on section 162 of the Internal Revenue Code.

The second is probably the cleanest

way because clear language and clear intent on the part of Congress would prohibit the agencies and commissions from doing what they are doing here. That is a laborious task, and we should recognize it as such. It requires, first, the cataloging of all the regulations and instances rigging the ideas marketplace. It then requires drafting legislation with respect to each—a separate bill for almost everyone since they would be going to different committees for consideration. Then, it requires getting them passed, with the probably opposition of those who issued the regulations or rulings, and then signed by a President who is becoming more and more a captive of the bureaucracy.

I do not think Congress is ready for the third approach yet, although if its Members keep hearing of these kinds of regulation "horror stories," it may soon be.

All of this cannot be done alone. It will take a concerted effort among Members of Congress, Democrats and Republicans, liberals and conservatives. I do not think this issue has a partisan or liberal/conservative slant. But because it is a fundamental question—a deeply rooted one—it will be harder to bring Members' focus onto it, it being the flashy, news-itemy issues that get most of the attention.

It will also require a great deal of help from the national community. There is no way that I can ascertain every regulation, decision, ruling that rigs the marketplace of ideas. We need people to come forth who have direct knowledge of this kind of information. I dealt with the IRS, the FTC, and the FCC in my floor remarks, but I cannot help but believe there are many, many more examples of which I am unaware. People should send them to me, directly at my House of Representatives office, with as much background information and material on each infringement as possible. From this, we can build the entire catalogue of what has to be done.●

LEGISLATION RECOGNIZING IMPORTANCE OF INTERNATIONAL COOPERATION IN THE WORLD ECONOMY

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Ohio (Mr. WHALEN) is recognized for 5 minutes.

● Mr. WHALEN. Mr. Speaker, today, I am introducing along with Congressman PAUL SIMON two House concurrent resolutions recognizing the importance of international cooperation in developing a concerted, multilateral approach to the growth, stability and development of the world economy. These resolutions were initiated by Senator JACOB JAVITS who is introducing them in the other body today.

It is essential that we recognize that our economic survival depends on the free flow of goods and services to and from every corner of the Earth. Yet, the trend toward protectionism is growing, as demonstrated in the recent "Buy American" measures considered by the House. I have consistently opposed such measures, stating that they only could invite retaliation from other nations, and I consistently have opposed barriers to free trade.

We must develop solutions to the problems facing the international monetary system. Any short-term ill effects caused by a comprehensive plan to stabilize the international monetary system can be minimized by a truly multinational approach toward mutual assistance.

While I was a member of the U.S. delegation to the 32d United Nations General Assembly, I noted that the U.S. posture there often is a timid one, in which we rarely take aggressive and imaginative initiatives. The announcement of the economic summit conference to be held in Bonn on July 16 and 17—in continuation of the Tokyo round—provides the United States with an unique opportunity to take a bold intitiative toward a multinational, long-term alleviation of the problems.

The first concurrent resolution which Mr. SIMON and I are introducing, along with Senator JAVITS in the other body, directs the President to undertake discussions with the industrialized nations leaders in developing a multinational, concerted approach in recognizing the interdependence of all nations in the world economy.

The second concurrent resolution directs the President to initiate a dialog with the member nations of the Organization of Petroleum Exporting Countries (OPEC) to establish a major capital pool of $50 to $100 billion to target to developing countries for productive investment purposes.

Under a stable international monetary system, investments could be targeted to stimulate economic growth in developing nations. Not only would standards of living be raised in these developing countries, but global demand would increase, thereby stimulating growth of the entire world economy.

I believe that the time for alleviating the problems of the international economy is now. Moreover, I believe that the Bonn summit provides the United States with the opportunity to take bold new initiatives toward the long-term solution of these problems.●

INTEREST RATES SHOULD GO DOWN

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Texas (Mr. GONZALEZ) is recognized for 5 minutes.

Mr. GONZALEZ. Mr. Speaker, sooner or later, and the sooner the better, interest rates should go down for the benefit of the country.

High interest costs squeeze millions of people out of housing, at a time when housing is in short supply. High interest costs deprive millions of people of goods that they need and often are in desperate need of. High interest costs slow down economic activity, which is the opposite of what the country really needs.

The phenomenon of high interest has forced the Federal Government to create interest subsidies and other forms of subsidies, so that housing could be brought within range of the income afforded to ordinary working people. And even at that, only a small minority of our citizens can today afford to think about buying a new home. And high interest likewise has forced the Congress to endorse a subterfuge for housing—by creating financing mechanisms for mobile homes, which will serve as housing, but not for very long.

Millions of people who could think about buying a home at interest rates of 3 or 4 percent simply cannot come near the expense of a home at interest rates that are three and four times that high.

High money costs hurt everybody. The problem is endemic, it is fundamental, and it cannot be forgotten.

If we think of inflation as being inevitable, then the battle is lost, because there is no way that interest rates can come down in the face of inflation. No one can lend money at a diminishing rate of return.

There are no easy solutions.

We can drive interest rates down temporarily if the Federal Reserve expands the money supply. But that would be only temporary, because inevitably the rate of interest catches up with the rate of inflation.

We can legislate interest rate ceilings, but that is chimerical in the most important commercial arena. If the real price of money is above the allowable interest rate, loans will either become unavailable, or the lenders will demand equity kickers, higher cash down or any other of a number of devices, to bring their rate of return to the market level.

In economic policy, even the most elaborate gimmick is shortlived. Reality cannot be avoided.

Economic policy must be grounded in firm principle, and that principle must be followed with faithful determination.

President Nixon tried to avoid reality with his freeze-thaw-devaluation-tariff barrier and desperation games, and the price was a greater problem than the country started with.

President Ford had not the political base nor will to establish a policy of his own.

Thus far, the current administration has followed no discernible policy at all, simply wavering one way or another in tune with opinion polls. It gives the impression of maladroitness, and the result has been a long slide in the value of our currency, a sluggish rate of economic recovery, and confusion on all sides.

Right now, interest rates are not headed down; they are headed up. Last week the Federal Reserve allowed the Fed funds rate to move from 6¾ to 7 percent—a clear warning to the President that the Fed wants inflation to come down, starting with the Federal deficit.

The simple truth is that as long as our Government follows an indiscernible and uncertain course in economic policy, we are going to have high interest rates. We

need to have a goal that is clearly enunciated, and one that the administration is clearly striving toward—not one in which directions change from day to day, and not one in which actions belie stated intentions.

If the administration, with clear eye, firm hand and determined heart sets a steady economic course we can sooner or later expect uncertainty to decline. We can expect a decline in feverish speculations, and a return to more productive investment.

A steady policy would prevent the Fed from ratcheting the money supply and interest rates first one way and then another. We would have a steady policy that would allow interest rates to drop.

And if that were to happen, we could expect to have a happier and more prosperous country.

Our greatest economic progress has come during times of low interest rates—and low inflation. Our greatest growth in real wealth has come during times when interest has been at a reasonable level. We housed more people, built more roads, schools, highways, and factories in those times than at any other. Our unemployment has been lower in such times than at any other. Our sense of national well-being has been higher in such times. Low interest rates allowed people to have what they needed, without subsidy and without incurring an impossible load of debt service.

For the last 8 years, our economic policy has followed a zig-zag course, with sudden and even radical changes in direction, as if the economy were a rudderless sailing boat, to be blown about by whatever political wind or economic storm that might pass by.

A sailor may tack this way or that, but if he has skill he will reach port. Our problem is that the country has not been on a set course, and the zigs and zags have brought us only increasing confusion and unhappiness.

I believe that we can have a healthy national economy. It can happen only if the administration has a firm economic policy—one that is grounded in principles that the people believe in and will accept. That will not be easy, for our problems are great, being as they are the product of a decade of confusion.

But a clear course will bring about prosperity without inflation, a prosperity that will be marked by reduced interest costs.

I am not cheered by what I see. The Fed, in the only way it can, is saying that unless our basic policy does better, interest rates will only go up, to the detriment of everybody.

I offer for the RECORD an item from today's New York Times, describing the action of the Fed:

FED EXPECTS INFLATION SURGE, LETS INTEREST RATES RISE

(By Clyde H. Farnsworth)

WASHINGTON, April 25.—G. William Miller, chairman of the Federal Reserve Board, said today that the board allowed interest rates to rise last week because of expectations of greater inflation. He served notice that easier money depended on the Federal Government's ability to reduce the fiscal deficit.

Testifying before the Senate Banking Committee, Mr. Miller said that a $25 billion reduction in the deficit could result in an "important" lowering of rates. But any reduction of the deficit below the $53 billion anticipated for fiscal 1978, he emphasized, would permit less restrictive policies.

He renewed his call for President Carter to postpone for three months—from Oct. 1 to Jan. 1—the effective date of a proposed tax cut of $25 billion.

PRESIDENT DEFENDS PROPOSAL

At his news conference later today, President Carter defended both the size and timing of his tax proposal while reiterating his desire to see that interest rates remain as low as possible.

President Carter proposed a $60 billion deficit for fiscal year 1979, beginning next Oct. 1. A three-month postponement of the tax cut, Mr. Miller said, would save about $8 billion from next year's deficit, getting the figure under this year's $53 billion.

"If we send out a signal loud and clear that we are reducing the deficit," said Mr. Miller, "everything else will fall into place."

Mr. Miller's plea for greater fiscal restraint was made in tones that were softer but no less assertive than those of his predecessor, Arthur F. Burns, who left at the end of last month after eight years on the board.

As Dr. Burns had done repeatedly, Mr. Miller insisted that inflation was the country's number one problem and that much of the nation's economic ills could be relieved if greater heed were paid to increasing business investment.

Much of what he said came out in a dialogue with the committee chairman, William Proxmire, Democrat of Wisconsin. They had tangled during confirmation hearings when questions were raised about business activities in Iran by Textron Inc., the company Mr. Miller headed before President Carter's call to Washington.

SENATOR PRAISES CHAIRMAN

The two made light of their earlier disagreements, and Senator Proxmire who had once referred to Mr. Miller as a "rookie" in monetary matters, congratulated him for his "excellent" testimony.

Mr. Miller reported on an economy that he described as "rebounding" from the winter slack, with further gains expected in employment, consumption and business spending.

Even with the recent tightening of interest rates, he said, residential construction should show sizable increases in the next few months before tapering off gradually in the second half of this year.

And the foreign trade deficit, while remaining large, should moderate from the very high first-qurater rate, he observed.

While prospects for economic activity were favorable, he noted that inflation had worsened, not only because of a substantial spurt in volatile food prices, but also because of the brisk pace set by prices of industrial commodities and services.

He issued a new projection that inflation this year, as measured by the broadest gauge—the so-called deflator of the gross national product statistics measuring price changes of all good and services—would be 6¾ to 7¼ percent.

REQUEST FOR WITHDRAWAL OF COSPONSORSHIP OF H.R. 9332, TUITION TAX CREDIT

The SPEAKER pro tempore. Under a previous order of the House, the gentlewoman from Illinois (Mrs. COLLINS) is recognized for 5 minutes.

Mrs. COLLINS of Illinois. Mr. Speaker, I take this opportunty to advise my colleagues of my request today to Representative FRENZEL to have my name withdrawn from cosponsorship of H.R. 9332, Tuition Tax Credit Act.

In February, when the gentleman from Minnesota (Mr. FRENZEL) first circulated H.R. 9332, I was impressed that an effort was being made to assist economically strapped middle-income families who are faced with the rising costs of educating their children; and consequently, decided to be listed as a consponsor. After giving the matter further consideration, however, I have concluded that most residents of my district will be best assisted by enactment of legislation that would expand the student grant and student loan programs that are already in existence.

Without any doubt, there is a need for an assessment of the equity and effectiveness of all measures bearing directly upon our educational system as a whole. Mr. FRENZEL is to be applauded for his work in this area—without which the administration might not have been stimulated to devise its own legislative approach.

Education is crucially important to the lives of disadvantaged persons. In many instances, it is the only vehicle which will help them up the ladder of economic self-improvement. Because I am so deeply troubled over the quality as well as equality of public education in this country, I cannot support any legislation that could conceivably be used as a means of providing more favorable treatment of the more affluent in our society. To provide them with tuition tax credits, of which those who need relief from taxes the most cannot avail themselves, would not be in keeping with our sense of fairness.

Not only does the tuition tax credit proposal throw a little money at everybody who pays tuition whether they need it or not, but could result in a marked rise in the number of private schools which could close their doors to minorities. In light of this very real possibility, I cannot in good conscience cosponsor this legislation.

TRIBUTE TO PROMINENT ARKANSAS AGRICULTURIST HUDSON WREN

The SPEAKER. Under a previous order of the House, the gentleman from Arkansas (Mr. ALEXANDER) is recognized for 30 minutes.

● Mr. ALEXANDER. Mr. Speaker, Arkansas has lost one of its most dedicated agriculturists, Hudson Wren of Wilson, Mississippi County, Ark.

Wren, mayor of Marie, Ark., and retired vice president and general manager of the Lee Wilson Co. agricultural holdings, died last week at age 71. His career in agriculture spanned 51 years and led him from high school agriculture teacher to regional director of farm programs.

In the 50 years since he graduated from the University of Arkansas (where

he was a member of the varsity football team for 2 years) in 1928, Wren served in a number of local, State, and regional positions promoting agricultural and rural interests.

Although his career took him to Raleigh, N.C., and Atlanta as regional director of farm programs for the U.S. Department of Agriculture, he returned to Mississippi County in 1945 where he remained until his death. He was born in Prescott, Ark., in 1907.

Wren came to Wilson in 1932 as an avocational agriculture instructor at Wilson High School. His career in government started in 1934 when he was named county agent for the Arkansas Extension Service in Mississippi County.

In 1936, Wren served as farm management specialist for USDA and in 1938 was named State director of the Farm Security Administration (FSA) in Little Rock.

In 1945, Wren was named manager of Lee Wilson & Co.'s 12,000-acre farm unit near Marie. He became vice president of the company in 1951 and executive vice president in 1974.

Hudson helped incorporate the Mississippi County Conservation District, serving as president for 2 years and as a member of its board of directors until his death. He played a prominent role in organizing the Arkansas Soybean Association and served as its president in 1972 and 1973.

Mr. Speaker, Hudson Wren devoted his entire life to the promotion of agriculture. He was a credit to his community, State, and Nation. We will all miss him.●

SHARING THE WEALTH OF THE OCEAN FLOOR

The SPEAKER. Under a previous order of the House, the gentleman from New York (Mr. BINGHAM) is recognized for 10 minutes.

● Mr. BINGHAM. Mr. Speaker, the Committee on Ways and Means is considering a measure which would require U.S. firms which harvest hard minerals from the ocean floor to share some of the proceeds from the sale of those minerals with the international community. H.R. 3350, the Deep Seabed Hard Mineral Resources Act, has been reported out of three committees, including the Committee on International Relations on which I serve. The bill as it stands contains strong provisions in favor of revenue sharing principle, but no detailed revenue-sharing plan. It is my hope that the Ways and Means Committee will be able to produce an actual revenue-sharing formula for inclusion in the bill in the form of an amendment on the floor.

The United Nations, with U.S. support, has declared that the resources of the deep seabed, beyond the limits of national jurisdiction, are the common heritage of mankind. The United States has been engaged for several years in negotiations for a Law of the Sea Treaty which would, among other things, create an international authority with certain powers to regulate deep seabed mining by individual nations or mining companies, and to require payment of some form of royalties and profit sharing.

As we proceed in H.R. 3350 to provide for unilateral regulation by the United States of deep seabed mining by U.S. firms pending the conclusion of a Law of the Sea Treaty, it is essential that we preserve the principle that what we are mining is the property of mankind, and that those who reap the profits must share those profits. That is why it is so important that the Ways and Means Committee produce a fair revenue-sharing formula which will put to rest any notion that the United States is seeking to preempt the Law of the Sea Conference and gain exclusive benefits from deep seabed mining.

Our colleague, Mr. FRASER, has a longstanding interest in Law of the Sea. On April 13, he testified eloquently before the Ways and Means Committee on behalf of a meaningful revenue-sharing provision. His statement, which follows, deserves serious consideration by all of us:

STATEMENT BY HON. DONALD M. FRASER

Mr. Chairman: I am grateful for this opportunity to testify before the Committee on Ways and Means on the proposed provision on international revenue sharing. This principle is an essential component of the proposed deep seabed mining legislation. I strongly support the inclusion of the provision on revenue sharing in the legislation for important foreign policy reasons.

The Committee on International Relations believes that a comprehensive agreement on the Law of the Sea which includes provisions on deep seabed mining and revenue sharing is in the interest of the United States. In the past, my colleagues and I have been concerned that US legislation on deep seabed mining could impair the successful conclusion of an international agreement. Legislation that allowed mining companies to go and mine the seabed before a Treaty was in place would sanction the largest and wealthiest nation in the world to unilaterally take minerals from the seabed before the Conference could reach agreement on the proposed Seabed Authority to govern the exploitation of minerals and on the conditions under which all states or entities could participate in exploitation. Such an action would run counter to our support for the principle of the common heritage of mankind.

The Committee believes, however, that interim legislation on seabed mining could be useful. My colleagues and I have been impressed by the broad support for interim legislation that witnesses from the Congress, the administration, the ocean mining industry, academia and nongovernmental organizations expressed in the joint hearings held last January by the Subcommittees on International Organizations and on International Economic Policy and Trade. We concur with the administration that the failure of last summer's session of the Conference to reach agreement on the proposed seabed authority makes it necessary for Congress to set up an interim framework in which companies can develop deep seabed mining technology to recover from the seabed copper, cobalt, nickel and manganese—minerals that are important to the United States.

The need for some domestic legislation is apparent. However, it is most important that any interim legislation accord with US foreign policy, with US commitments at the United Nations and with US objectives at the UN Third Law of the Sea Conference. The principle of international revenue sharing significantly upholds these US foreign policy interests. In 1970, the US supported along with over 100 other countries in the UN General Assembly the Declaration of Principles on the Exploration and Exploitation of the Seabed Beyond the Limits of National Jurisdiction. This Declaration provided, among other things, that the mineral resources beyond national jurisdiction in the international zone constituted the common heritage of mankind. It also states that benefits derived from exploiting the international zone should be shared with the international community, particularly the developing countries. In the same year, the US tabled a draft treaty at the UN Seabeds Committee which provided for sharing a portion of the revenues from seabed exploration with the developing countries.

The US has continued to support the principle of revenue sharing during the several sessions of the Third UN Conference on the Law of the Sea. Amb. Richardson, the US Representative to the Conference, considers revenue sharing critical to reaching international agreement. Only a handful of industrial states have the technological capacity to mine the minerals of the international zone. Developing states—the have nots—the majority in the Conference of over 150 states naturally want to share the benefits of seabed mineral exploitation. The US aims to ensure that a Law of the Sea Treaty contains provisions on revenue sharing whereby those that mine pay a portion of their profits to an International Fund to be shared with the developing states.

If the US enacts domestic legislation that permits mining companies to mine the common heritage before a treaty enters into force, those companies must shoulder international responsibility by making payments into a domestic fund which in turn can be the source of payments to the International Fund under an international agreement. Indeed no permit to recover minerals commercially should be granted to any company until provision for revenue sharing is firmly in place. I am very glad that the Committee on International Relations strongly supported this idea when it discussed and reported H.R. 3350.

In regard to the issue before the Committee on Ways and Means, I have had the opportunity to review the Administration's proposal and the discussion draft of House Legislative Counsel. I endorse these efforts and would make several comments.

First, I believe that companies should make payments to the Fund to be established in the Treasury without undue delay so that if and when an internationl agreement enters into force, these payments could be transferred to the Seabed Authority to help get it operating right away.

Second, the administration and the House legislative counsel's draft propose that the payment to the Fund be 3.75% of 1/5 of the proceeds of the sale of minerals from the hard minerals in the most basic form in which these minerals are traded. As I understand it, the payment would amount to 3/4 of 1% of the proceeds of arms length sales. This percent strikes me as being too low a percent.

Third, the reference to international agreement on page 5 of the legislative counsel's draft should conform to the language of the Administration's proposal and of the existing version of HR 3350. (Substitute international agreement for international deep seabed agreement).

Fourth, in regard to the disposition of moneys in the Fund if no treaty comes into force, I endorse the Administration's pro-

posal that the Congress rather than the Treasury be authorized to determine the disposition of the moneys. Important foreign policy considerations figure in the proposed creation of this Fund; foreign policy interests may be important even if an international agreement does not enter into force. It seems to me that Congress should be able to determine the disposition of such funds should no treaty enter into force.

Thank you, Mr. Chairman.●

"THE $45 BILLION CONNECTION"

The SPEAKER. Under a previous order of the House, the gentleman from Ohio (Mr. ASHLEY) is recognized for 5 minutes.

● Mr. ASHLEY. Mr. Speaker, on Thursday night of this week, April 27, television viewers in most of the cities of our Nation will have the opportunity to gain greater understanding of the need for the United States to adopt a national energy policy without further delay.

On that night, a program called "The $45 Billion Connection" will be shown, through an independent network put together for this occasion by Capital Cities Communications, which produced the program.

"The $45 Billion Connection" examines the impact on world trade and on our own economy of the debilitating drain of $45 billion annually for imported petroleum. That was, as my colleagues well know, our current outlay for foreign oil in 1977.

The problem is that our fellow citizens do not seem to fully appreciate this simple, devastating statistic. Two separate and prestigious polling organizations, CBS News/New York Times and Louis Harris, discovered identical and discouraging intelligence: Only 52 percent of the American people, according to their sampling methodology, know that we import any oil at all. And of those who know that we do depend to some extent on imported energy, only a very small percentage come within hailing distance of the correct percentage. Which, as I hardly need to remind this body, now approaches 50 percent. Nearly half of all the oil we use comes from abroad. We no longer control our own destiny, because energy is the lifeblood of that destiny.

This television program examines just a few of the consequences of this $45 billion annual drain on the United States. Some of its hypotheses and some of its claims are controversial. The narrator is a well-known author and economist who uses the pseudonym Adam Smith. Among the authorities seen on the program are our colleague Congressman CHARLES VANIK and Treasury Secretary Blumenthal.

They have different viewpoints on different issues raised in the program, but they agree that the United States must move toward a comprehensive and vigorous energy policy.

That is what the conferees on the National Energy Act have been struggling with since last October. We believe, and we fervently hope, that we can reach agreement on the issues that have divided us. Now we need the understanding and support of our colleagues in this body and in the Senate. Otherwise, the closing words of Adam Smith on the TV program should chill all of us:

You remember the old sign, "The Buck Stops Here"? Well, it belongs in front of Congress as well as on the President's desk because Congress and the President have to do something very drastic about breaking that $45 billion connection. And, right now, you and I have to insist that something gets done. You have seen what other countries are doing. They are exporting everything that isn't nailed down to pay for their oil bill. They are enforcing conservation. Scrambling around, trying to cope because they have to. But, so far we haven't and consequently, our demand for imported oil has promoted inflation, devalued the dollar, angered our allies, disrupted international trade and even threatened our national security. It doesn't have to be that way. We know what we have to do. We have to conserve oil. We have to produce more domestic oil and we have to switch to coal and alternate forms of energy. Right now we have to begin to break that $45 Billion Dollar Connection. If we don't, not only do we all face more inflation, but in the years to come, whoever is in power in Iran and Saudi Arabia and the other oil producing states will have an astonishing degree of control over the way we live. And that's frightening.

I urge all of my colleagues and their staff members to watch "The $45 Billion Dollar Connection," on Thursday. It treats a critical issue.●

CURBING UNEMPLOYMENT—"THE NATIONAL COMMUNITY BASED ORGANIZATIONS YOUTH JOB CREATION AND TRAINING ACT OF 1978"

The SPEAKER. Under a previous order of the House, the gentleman from Ohio (Mr. STOKES) is recognized for 15 minutes.

● Mr. STOKES. Mr. Speaker, on March 14, 1978, I introduced H.R. 11540, the National Community Based Organization Youth Job Creation and Training Act of 1978. The bill will provide a special program for financial assistance to national community-based organizations of demonstrated effectiveness, in order to provide 1 million new jobs and job training opportunities.

In 1977, the American population as a whole averaged an unemployment rate of 7 percent. However, the black unemployment rate was double the overall rate and averaged more than 14 percent. Yet as outrageous as these figures are they do not approach the dismal unemployment trends evidenced by America's youth. The unemployment rate for youth is tremendously high in the cities, and in poverty pockets is even higher. Among minority youth, unemployment reached the chronic level of 40.3 percent. In my city of Cleveland, black youth were unemployed in excess of 55 percent. And unfortunately these youth percentages do not represent an aberration from the norm. The youth unemployment rate has all the characteristics of irreversibility and consistency necessary to make it a permanent feature of the American economic picture. The most illustrative indication of this alarming condition has been the constant widening gap between minority youth and white youth unemployment.

For example in 1954, when white teenage unemployment was 12.1 percent, black teenage unemployment was 16.5 percent—a 4-percent gap. In 1975, when white teenage unemployment increased to 16.8 percent, black teenage unemployment soared to 38.2 percent—an astounding 21 percent gap. With the 1977 minority youth unemployment and with more youth workers being laid off because of the increase in the minimum wage, levels exceeding 40.3 percent, there is no indication that the unemployment differentials will narrow.

It is clear to me that the increase and gap in the unemployment rates of black and white teens indicate a structural inefficiency in the economic system. Moreover, black youth unemployment has the potential of becoming a human catastrophe in which millions of black youth reach adulthood without the skills, the training, and the work experience necessary to occupy a productive, independent role in our society and with no hope of ever finding employment. It is time for Congress to recognize the deleterious social and economic effects of relegating our unemployed black and white teenagers to city streets and crime.

It is time for Congress to initiate a national youth policy that would be in effect regardless of political party or climate. It is time for Congress to do more than maintain the status quo. Congress must lend its support to efforts to train and prepare our youth for a place in this society. The National Community Based Organizations Youth Job and Training Act of 1978 represents such a commitment to the unemployed youth of America.

MAJOR PROVISIONS OF THE NATIONAL COMMUNITY BASED ORGANIZATIONS YOUTH JOB CREATION AND TRAINING ACT OF 1978

The National Community Based Organizations Youth Job Creation and Training Act of 1978 follows a nine-point approach in an effort to curb youth unemployment. The following discussion of sections 2 through 9 will serve to highlight the salient features of this important job-creating and training legislation.

SETION 2—DECLARATION OF POLICY AND PURPOSE

This section is a statement of the achievements of national community-based organizations (NCBO's) and a congressional commitment to assist them in their efforts to train and provide jobs for 1 million Americans in 1978 and the 3 succeeding years. Section 2 also addresses the employment problems of those who are neither highly skilled nor so readily employable; namely, inhabitants of depressed urban and rural areas and unemployed youth. Section 2 recognizes the value in utilizing young people in work study projects. Such projects could include community improvement and development; including housing rehabilitation, neighbor-

hood improvement, removal of urban blight and the revitalization of areas of rural poverty. These efforts would serve the dual function of beautifying our neighborhoods and busying idle hands.

Another important part of section 2 is part 7 which establishes the Urban Career Education Center (UCEC). The UCEC is a prototype youth dropout career opportunity center which provides education, career exploration, and training for young high school dropouts. The initial UCEC was designed as an experimental project in Philadelphia in conjunction with the National Institute of Education, funded by the Department of Health, Ehucation, and Welfare. The Philadelphia experiment is regarded as one of the most successful alternative education plans in the Nation. Working with high school dropouts and near dropouts from Philadelphia's disadvantaged community, the UCEC has recorded an 80-percent success rate in graduating students from the local school system and placing them in jobs or advanced training.

Vital to the success and replication of future UCEC is the close cooperation between local and State boards of education, industry, and community-based groups. My legislation recognizes that the UCEC is indispensable in efforts to train the 3,302,740 elementary and high school dropouts.

SECTIONS 3 AND 4—PROGRAM AUTHORIZATION; CONTRACT PROVISION; TARGETED GROUPS

Under sections 3 and 4 of my bill, the Secretary of Labor is authorized and directed to enter into a contract with any community-based organization of demonstrated effectiveness. The inclusion of any other community-based organization is an important provision for it gives recognition to the fact that unemployment is a national crisis which cannot wait for startup projects. Immediate relief must be made available through community-based organizations already funded by the Federal Government. Though this provision has no exclusiveness in reference to OIC, other community-based organizations should attempt to follow the innovative structure and process of OIC.

It is noteworthy that by mandating that the Secretary of Labor enter a contract with a NCBO that it would be eligible to participate in Federal jobs programs under revenue sharing, railroad revitalization, rural and urban economic development projects under the Departments of Commerce, Agriculture, Transportation, as well as the Department of Labor. They would also be eligible to participate in public works projects. Section 3 also has a special stipulation for career education and counseling services for secondary school students. Section 4 is designed to insure that the jobs created are not only meaningful but lead to permanent positions. "Special efforts" should be made to acquaint Vietnam veterans, the handicapped, ex-offenders and youth to programs and jobs available to them.

In further reference to the employment problems of veterans, section 4 (b) (4) provides that special consideration in filling jobs should be given to veterans who served in the Armed Forces in Indochina or Korea on or after August 5, 1964. My bill would apply to all veterans regardless of type of discharge received. Thus, the 446,000 enlisted personnel who received less than fully honorable discharges from 1965 through 1973 would be given consideration. I have included this provision for I have long realized that veterans receiving less-than-honorable discharges are the most unemployable segment of our population. I also realize that most of these individuals did not receive bad papers as a consequence of committing serious crimes. Most simply reacted adversely to discrimination or combat stress. Others merely exercised poor judgment. Often these were the very young and immature. As a result of their less-than-honorable discharges, they are now stigmatized and unable to secure employment. This act would give all veterans a fighting chance.

Consistent with the philosophy of maximum utilization of resources, my bill indicates that unemployed teachers should be given special consideration in filling teaching positions in OIC education and training centers. When it is considered that yearly less than 40 percent of the 255,899 trained teachers secure employment, special consideration should be given to this teacher reserve.

SECTION 5—CIVIL RIGHTS COMPLIANCE

Unlike some Government funded private nonprofit corporations, the NCBO's believe that they have an absolute duty to guarantee that there is no discrimination in its program administration.

SECTIONS 6 AND 7—COOPERATION WITH STATE AND LOCAL GOVERNMENT AND PRIVATE ENTERPRISE

Section 6 encourages cooperation with State and local governments and private enterprise. Section 7 provides for administration of the program.

SECTION 8—YOUTH PROGRAMS

The National Community Based Organization Youth Job Creation and Training Act of 1978 would amend section 304(a)(3) of CETA to create a year-round employment program. Currently, the youth employment program is a summer program. However, youth employment statistics document a pressing need for the continuation of these same or equivalent jobs on a permanent basis.

SECTION 9—TAX CREDIT FOR HIRING UNEMPLOYED PERSONS

The final section is section 9.

Under this provision any employer may receive a tax credit equal to the first 12 months of salary he pays to an unemployed person; provided this employee does not displace other workers and is an individual without a job. This provision would assure continued success in efforts to maximize and mobilize employment opportunities within the private sector.

Mr. Speaker, the "National Community Based Organizations Youth Jobs Creation and Training Act of 1978" is a nonpartisan measure designed to curb the problem of unemployment. By utilizing such job training and placement expertise my bill has focused on the major problem of youth unemployment.

Mr. Speaker, I encourage my colleagues to move quickly to enact this legislation. We must avoid the temptation of waiting until after the election in November or until enactment of the Full Employment and Balanced Growth Act of 1978. Community organizations are running out of funds and Americans are running out of time. When it is considered that 7,426,000 Americans are unemployed; 5,800,000 Americans receive $19 billion annually in unemployment compensation benefits, 18 million Americans are dependent on food stamps and the U.S. prison population has pinnacled to a quarter-million persons, the time to aid these organizations is now. They have demonstrated effectiveness and cost efficiency. Now let us demonstrate our support. I urge you to endorse the "National Community Based Organization—Youth Jobs Creation and Training Act of 1978."●

RETREAT ON ETHICS REFORM

The SPEAKER. Under a previous order of the House, the gentleman from California (Mr. PANETTA) is recognized for 5 minutes.

Mr. PANETTA. Mr. Speaker, a little more than a year ago the House adopted House Resolution 287, the so-called Obey resolution that provided for a wide range of ethics reforms in the House, by an overwhelming vote of 402 to 22.

Despite that solid mandate for change, we have seen in the past few weeks a deliberate effort to kill or weaken the bill H.R. 1, which would codify these reforms in law. At the same time, proposals to delay filing of the financial disclosure forms required by the Obey resolution have been circulated, while H.R. 1 has been pulled from the floor indefinitely.

Mr. Speaker, the margin by which the Obey resolution passed the House should be more than enough to insure the passage of H.R. 1, but apparently it is not. The efforts at retreat from the commitment of the Congress to ethics reforms are ignoring why Congress made that commitment to begin with. So let us look back at that resolution and what it meant.

House Resolution 287 included sections on financial disclosure, limitations on the acceptance of gifts, abolition of slush funds, curbs on abuse of the frank, controls on foreign travel at taxpayer expense, and limits on outside earned income. Aside from some disagreement within the House itself, the public strongly supported the passage of this resolution. Letters from constituents and newspaper editorials overwhelmingly applauded the House for its new ethics code.

House Resolution 287 was the first comprehensive reform adopted by the House since 1968. Since that time, the American public has been barraged by a series of revelations and criticisms and investigations that have undermined the integrity not only of the House but of every branch of Government.

Whether founded or unfounded, whether we like it or not, there is no question that the public today feels a deep distrust of Government, and this attitude weighs heavily against the House as a whole.

The simple fact is that in 1968, no one dreamed that a Vice President would be indicted and punished for official crimes or that a committee of this House would vote two articles of impeachment against a sitting President of the United States. No one dreamed that a Member of this House would leave office after being charged with keeping a mistress on his office payroll. No one dreamed that, as happened a few days ago, a former Member would plead guilty in the Korean influence-buying scandal and be sentenced to jail for 6 to 30 months.

The simple fact is that the ethics standards of 1968 do not meet the needs of 1978. Americans are demanding a higher standard of conduct from their elected and appointed officials and they are entitled to it. H.R. 1 will establish and codify that standard, and will expand the standard we have agreed upon for ourselves to others in the Federal Government.

We have already agreed to abide by these restrictions on our own activities when we adopted House Resolution 287. While the resolution does not have the force of law, I cannot believe that it was adopted in hypocrisy, that this House had no intention of obeying it.

Even if we do not pass H.R. 1, we will have to abide by limits on outside earned income, we will have to disclose our personal financial status, we will have to live with the other reforms enacted in House Resolution 287. The only thing we will gain by killing or weakening H.R. 1 is a public perception that we are not serious or do not care about how we are judged by the public. And that, Mr. Speaker, is no gain at all, even though it may accord with the mood of cynicism that has apparently overcome so many Members of this House today.

Those who argue against H.R. 1 on specific grounds cite the limit on outside income as unacceptable. Who are we kidding? How can we seriously tell the public that we needed a pay raise to $57,000 while also implying that we have so little to do here in Congress that we have time to maintain law offices, travel the lecture circuit, and so on? Do we forget that in 435 congressional districts there are scores of individuals ready and eager to run for our seats, if we decide we cannot live on $57,000 plus a modest sum of outside income?

Others oppose the criminal sanctions in the bill for willful and knowing violations of the ethics code. I can certainly understand the concern about unsubstantiated charges being made against Members and about adverse publicity generated by the conducting of audits of these disclosure returns, but once again the term "willful and knowing" is the thing to keep in mind. The only individuals with anything to fear are those who deliberately set out to violate the law, and this includes our electoral opponents, I might add.

These are not persuasive reasons to vote against H.R. 1, to prevent it from coming before the Congress, or to weaken it. They are arguments of fear or of motion, not of reason or justice.

Mr. Speaker, the test of the strength of law is not in its passage but in its enforcement. When laws enacted out of apparent conviction are ignored, then the entire credibility of our governing capacity is called into question. We are not simply a nation of laws—we are a nation of people who must determine whether we will be a nation of laws and whether our laws will be upheld in practice. The reform resolution passed Congress by a vote of 402 to 22. By our decision on the enforcement legislation, H.R. 1, we will tell this country whether we have the courage to stand by that vote or whether we will retreat from the commitment this Congress made to real ethics reform.

INTRODUCTION OF INDEPENDENT NEWSPAPER ACT OF 1978

The SPEAKER. Under a previous order of the House, the gentleman from Arizona (Mr. UDALL) is recognized for 5 minutes.

● Mr. UDALL. Mr. Speaker, On October 6, 1977, I introduced H.R. 9484, a bill to provide estate tax relief for the owners of local independent newspapers. About a month later, on November 3, 1977, I was joined by 34 Members of this House in sponsoring identical legislation.

The introduction of these bills has evoked lively comment, not only by individual newspapers, and in the newspaper trade press, but also in Time magazine and television coverage on the McNeill-Lehrer report.

The public is slowly awakening to the fact that the independent local newspaper is becoming an endangered species. This applies to daily as well as weekly newspapers, which are being bought up at an ever increasing pace by newspaper chains, communications conglomerates, and public corporations. Each year for the past several years, 40 to 60 daily newspapers leave the ranks of the independents and are merged into faceless giants with their corporate headquarters hundreds or thousands of miles away. At the present rate, in another few years, there will virtually be no independents left remaining. At this time, there are just over 600 independent dailies, but each week, another one or two are bought by the chains.

In the past few months, I have received much correspondence from weekly and daily newspapers all over these United States, commenting on my proposed bill. In addition, I have met with publishers at seminars, and on an individual basis, to discuss this proposal. The vast majority of these publishers have applauded the purposes of the bill, and they have also offered comment and criticism intended to improve the legislation. Their suggestions have been fully considered, and we have attempted to fine-tune and improve the bill, in order to best meet the needs of a truly independent press.

Today, joined by some 65 cosponsors, I am reintroducing the Independent Local Newspaper Act of 1978. I believe this to be a better bill than its predecessor, and more worthy of consideration by this House.

While a number of the provisions of the earlier bill have been tightened up, the basic import of this legislation is still to provide a reasonable means for the owners of local newspapers to arrange for the payment of their estate taxes while passing on their interests in the newspapers to their heirs. The legislation still allows the newspaper owners to set aside sums during their lives exclusively for payment of estate taxes, and also provides for deferred payments of estate taxes for reasonable periods.

One significant change is that the definition of a local independent newspaper has been amended to include those publications which as of October 31, 1977, had all of their publishing offices within one State or territory of the United States. There are 66 of such groups of dailies, each of which is located within one State, and these 66 groups include 178 newspapers—approximately 10 percent of the number of daily newspapers in the United States.

Within the last few years there have been a number of purchase of local chains by larger chains, and even of medium size chains by larger chains. For example, in the last year the Chew newspapers of Ohio were purchased by a larger chain. A group of four Massachusetts newspapers, all in the 10,000 daily circulation range, have recently been purchased by Ottaway Newspapers, a division of Dow Jones. Last year, Newhouse Newspapers purchased all of the newspapers owned by Booth Newspapers. Shortly before that, Gannett Newspapers purchased Speidel Newspapers. Thus, it is apparent that the local newspaper groups, those within one State, will continue to attract offers of purchase from the major chains.

If a judgment must be made, there is greater protection of the public interest in having a locally owned and operated chain, that is, a group of newspapers solely within one State, in that they have a commonality of interest. That is, they are interested in the same State government, legislature, court system, as well as the tax problems, education problems and related matters which occur within such a geographical grouping.

They also have like or similar interests in election campaigns, in consideration of legislation before both the State and Federal legislatures, and in regional problems such as agriculture, manufacturing, labor relations, and the like. Given a choice between having a three-paper chain in a State, or having that same group of three papers owned by a large multi-State chain, it is my opinion that there is a public interest in maintaining the local ownership, and that the ownership of such intrastate and locally oriented groups should be preserved.

The bill allows the owners of an independent local newspaper to establish an advance estate tax payments trust, to be funded by corporate earnings with not more than 50 percent of pretax income of the newspaper in any year. The contributions to and income of the trust may be invested solely in obligation of the United States. Excess funding of the trust is expressly prohibited. The funds accumulated in the trust may be used

only to pay the estate taxes of the owners of the newspaper.

This advance estate tax payment trust offers major tax benefits to owners of independent local newspaper. The funding is with pretax income of the newspaper, and sums in the trust are not a part of the owner's estate for tax purposes. If, however, owners of the newspapers having established such a trust sell their newspaper, the bill provides for penalties which would amount to some 118 percent of the moneys in the trust. Thus, there is a "carrot" to induce maintaining independent local newspapers, and there is also a "stick" to preclude an attempt to take advantage of this proposal.

In addition, the bill provides for an extension of the time for payment of estate tax where the estate includes the interests in an independent local newspaper. Such extensions would be subject to payment of interest as now provided under the tax laws.

Mr. Speaker, with such a large number of cosponsors from all across the Nation representing a deepening concern about the survival of the independent local daily and weekly newspaper, I am most hopeful that we will have hearings this session of Congress to study the status of America's local newspapers and to take remedial action to preserve those remaining papers as locally owned and published.●

INAUGURATION OF THE NEW INTERNATIONAL COMMUNICATION AGENCY

(Mr. FASCELL asked and was given permission to extend his remarks at this point in the RECORD, and to include extraneous matter.)

● Mr. FASCELL. Mr. Speaker, on April 3, Vice President MONDALE presided at the inauguration ceremonies of the International Communications Agency and swore in as its first director, John Reinhardt, a talented career officer and distinguished Ambassador. I know that all my colleagues who worked closely with the administration over the past year on the President's reorganization of our international communications organizations will join in wishing this new agency well. Mr. Speaker, I am including for the information of my colleagues, Vice President MONDALE's opening remarks at the inaugural ceremonies and President Carter's memorandum on the purpose and functions of this new agency.

REMARKS OF VICE PRESIDENT WALTER MONDALE

Ambassador Reinhardt, Mrs. Reinhardt, Members of the Family, Deputy Secretary of State Warren Christopher, Distinguished Guests and Friends:

Today marks the first full working day for the newly created International Communication Agency, so-called ICA, which officially came into being on April 1, 1978 as mandated by the President and the Congress. It is my great pleasure to be here this morning to swear in Ambassador Reinhardt as the first Director of the ICA. The President, as you know, returns this evening from Liberia and a week-long journey which has taken him to Venezuela, Brazil, Nigeria and Liberia. Just before he left, I asked him if he wanted me to be at the Oval Office while he was gone: He said No. I asked him if he wanted me to bring some leaders of Congress down to the White House to discuss important business while he was gone. He said no, but he did want me to be in the center of power. So I decided to come over here this morning to swear in John Reinhardt. On his departure last week the President said: "I set out on this journey to explain our own American values proudly and clearly to our friends and to understand their opinions and their concerns"—words which are directly applicable to all of you serving in the ICA as you set out on your journey today. In submitting the Reorganization Plan to the Congress last year, the President summarized the two distinct but related goals of the ICA as follows: One, to tell the world about our society and policies, in particular our commitment to cultural diversity and individual liberty. Secondly, to tell ourselves about the world, so as to enrich our own culture as well as to give us the understanding to deal effectively with problems among nations.

To meet these goals, the ICA brings the capabilities, the skills, the talents and the dedication to service of those who formerly served in the USIA and its Voice of America and the Department of State's Bureau of Educational and Cultural Affairs. The ICA brings to its tasks the proud tradition of accomplishment reflected in the words of Edward R. Murrow 17 years ago when he said: "What we endeavor is to reflect with fidelity to our allies, to the uncommitted nations and even to those who are hostile to us, not only our policy but our ideals. We not only seek to show people who we are and how we live: we must also engage others in the delicate, difficult art of human persuasion, to explain why we do what we do."

Finally, and of central importance, the entire nation is privileged to have as its first Director of the ICA Ambassador John E. Reinhardt, one of the nation's most skilled, talented and dedicated diplomats. Ambassador Reinhardt was formerly Director of the USIA and the first Director to rise to that position of leadership through the career ranks. For more than 20 years he has served throughout the world. He has distinguished himself as well as Ambasador to Nigeria. His awards include the Edward R. Murrow Award For Excellence in Public Diplomacy.

On behalf of the President, I am delighted to say to you, Ambassador Reinhardt, how very privileged and honored we are to have you as the first Director. Your knowledge of people and world affairs and your proven leadership speak well for the future of the Agency.

Now it is my pleasure to administer the Oath of Office.

THE WHITE HOUSE.
Washington, D.C., March 13, 1978.

MEMORANDUM FOR DIRECTOR, INTERNATIONAL COMMUNICATION AGENCY

As you and the International Communication Agency embark upon your new mission, I want to outline my views of the purposes and functions of the Agency, and the manner in which it should conduct its affairs.

In transmitting Reorganization Plan No. 2 of 1977 to the Congress, I said that the principal function of the Agency should be to reduce the degree to which misperceptions and misunderstandings complicate relations between the United States and other nations. In international affairs, as in our personal lives, the starting point for dealing effectively with others is the clearest possible understanding of differing points of view. The fundamental premise of the International Communication Agency is that it is in our national interest to encourage the sharing of ideas and cultural activities among the people of the United States and the people of other nations.

It is in the general interest of the community of nations, as well as in our own interest, that other nations and other peoples know where this great country stands, and why. We want them to understand our values, our institutions—the vitality of our culture—and how these relate to their own experience. We must share our successes, and look for help in learning from our failures. We must make available to people of other nations facts they would not otherwise learn about ourselves and our views.

It is also in our interest—and in the interest of other nations—that Americans have the opportunity to understand the histories, cultures and problems of others, so that we can come to understand their hopes, perceptions and aspirations. In so doing, the Agency will contribute to our capacity as a people and as a government to manage our foreign affairs with sensitivity, in an effective and responsible way.

You and your colleagues have five main tasks:

1. To encourage, aid and sponsor the broadest possible exchange of people and ideas between our country and other nations. It will be your job to:

Continue successful government-sponsored exchange programs that now come under your Agency, and improve them wherever possible;

Encourage private institutions in this country to develop their own forms of exchange and aid those that are in the broadest national interest; and

Provide counsel and information on our international exchange program as a whole, and assist in maintaining broad participation in the international exchange programs conducted by government departments and agencies, including those administered by the International Communication Agency.

2. To give foreign peoples the best possible understanding of our policies and our intentions, and sufficient information about American society and culture to comprehend why we have chosen certain policies over others. In so doing, you will wish to draw upon thoughtful and representative Americans, through the use of radio and television, magazines and other printed materials, and through seminars, personal contacts, the presentation of American art and culture, and the teaching of the English language where necessary and appropriate.

3. To help insure that our government adequately understands foreign public opinion and culture for policy-making purposes, and to assist individual Americans and institutions in learning about other nations and their cultures.

4. To assist in the development and execution of a comprehensive national policy on international communications, designed to allow and encourage the maximum flow of information and ideas among the peoples of the world. Such a policy must take into consideration the needs and sensitivities of others, as well as our own needs.

5. To prepare for and conduct negotiations on cultural exchanges with other governments, aware always that the most effective sharing of culture, ideas and information comes between individual people rather than through formal acts of governments.

In discharging these responsibilities, you must keep these goals in mind:

Since all the Agency's activities bear a relationship to our foreign policies and interests, you will seek guidance on those policies and interests from the Secretary of State.

You will be responsible for maintaining the scholarly integrity and nonpolitical character of the exchange programs within your agency, and for maintaining the independence of the Voice of America news broadcasts. You will wish to assure that they reflect the broad interests of the United States and of the people served by these programs.

I look forward to your periodic accounting of your undertakings and your recommendations on the conduct of public diplomacy.

Finally, the Agency will undertake no activities which are covert, manipulative or

propagandistic. The Agency can assume—as our founding fathers did—that a great and free society is its own best witness, and can put its faith in the power of ideas.

I'm sure the Congress and the American people join with me in wishing you every success in these important endeavors.

JIMMY CARTER.●

FAILURE TO WORKOUT A SALT II AGREEMENT WOULD BE AN UNQUALIFIED DISASTER

(Mr. SEIBERLING asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

● Mr. SEIBERLING. Mr. Speaker, yesterday's Washington Post contained an excellent column by Marquis Childs concerning the very high stakes involved in SALT II negotiations. Of course, we do not yet know whether a successful agreement can be reached. Obviously, such an agreement will require a degree of trust and some concessions by both sides.

It will be a true tragedy if, in their zeal to advance their positions, those having differing points of view on the substance of a SALT agreement should, by exaggerated rhetoric and one-sided statements of the facts, create an atmosphere in which a calm and objective appraisal by the public and the Congress became very difficult. I am sorry to say that recent articles in the Reader's Digest fall into that category.

As Mr. Childs points out, without an agreement and with an all-out arms race, both the United States and Russia will end up spending an additional $20 billion apiece over a 10-year period for nuclear weaponry without changing the basic balance over what it is today, with each side still capable of wiping out the other.

He also notes a second aspect that cannot be ignored; namely, the reaction of America's allies if an agreement should fail a ratification by the Senate. He quotes Mr. Horst Ehmke, deputy chairman of the Social Democratic Group in the West German Bundestag, who stated that to the Europeans a failure on SALT "would be an unqualified disaster. It would mean a resumption of the cold war and the end of hopes for a peaceful world for the foreseeable future."

Certainly we do not want a SALT agreement for its own sake. We must carefully examine the terms to make sure that the vital interests of the United States are adequately protected. On the other hand, the mere fact that an agreement may involve risks should not be a basis for rejecting it. It is impossible to live in a risk-free world, either with or without a new SALT agreement. The greatest risk of all, however, would be to allow the nuclear arms race to continue indefinitely, with new weapons piled on new weapons and country after country developing its own nuclear capability.

The full text of Mr. Childs' article follows these remarks:

HIGH STAKES OF SALT

(By Marquis Childs)

The negotiation between the two superpowers for a new agreement putting a brake on the development of nuclear missiles looks to the outsider like a prolonged and secret chess game. If it ends in a stalemate with no agreement, so what? We will hear dire predictions, but we've heard dire predictions before.

Two hard facts get in the way of that easy brush-off of the game being played in Moscow with Secretary of State Cyrus Vance as U.S. team captain. The first is money.

Without an agreement and with an all-out arms race, the United States would have to spend an additional $20 billion over a 10-year period for nuclear weaponry. And while the two players would be sitting on much more massive mountain of sudden death, they would be in precisely the same position as to total strength.

That $20 billion would be added on to the defense bill and it would proportionately swell the total budget. The nation's defense today takes 23 percent of that budget. It would take proportionately more if that monstrous chess game ends in stalemate.

Failure to point up these figures has been a weakness of those working for a SALT II agreement. One of the few who has added up the figures as they come from the Pentagon is Rep. Les Aspin (D-Wis.). They have received too little attention and particularly from those absorbed in abstruse arguments over the relative capacities of weapons that are an outgrowth of technological genius and understood only by their makers.

At the end of the 10-year period the United States would have an estimated 2,300 missile launchers and the Soviet Union 3,100. But what with differences in targeting, duality of warheads and other factors, that would be rough equivalence. Essentially nothing would have been changed in the 10-year period despite the spending by both sides of something more than $40 billion.

Except for those who want to put out the darkest possible case, no official concerned with the negotiation has ever doubted American capability to respond to a Soviet first strike. Capability to respond to such a strike, if it should ever come, is part of the deterrent power in the delicate balance between the two giants.

The second fact that cannot be ignored is the reaction among America's allies if a SALT II agreement should be reached, looking into the future for a more substantial SALT III, and then the agreement should fail of ratification by the Senate. As now contemplated by Vance and arms negotiator Paul Warnke, the sequence will be as follows.

An agreement embodied in a treaty will be reached toward the end of June. Requiring careful study and inevitably long debate, it will not be submitted to the Senate with the congressional election coming on.

Will it be ratified by the requisite two-thirds vote? One measure is of the opinion that Horst Ehmke took back to Bonn with him after a mission to Washington, sampling opinion in both the executive branch and Congress.

Ehmke, who is deputy chairman of the Social Democratic faction in the Bundestag and former chief of staff to Chancellor Helmut Schmidt, came here as the result of a telephone conversation between Schmidt and President Carter. They had agreed that it was time to try to iron out some of the differences that had grown up with increasing acerbity between the two capitals.

In his soundings on Capitol Hill, Ehmke found considerable pessimism about ratification of an arms-limitation treaty. That was confirmed by opinion he heard in the State Department and the White House. Just before he returned to Bonn he left no uncertainty about what failure on SALLT would mean in Europe:

"It would be an unqualified disaster. It would mean a resumption of the cold war and the end of hopes for a peaceful world for the foreseeable future."

We are not alone. Our European allies are already deeply troubled by the administration's inability to restrain oil consumption and stop the downward spin of the dollar. A start has been made with the sale of Fort Knox gold, but there is still a long way to go, and Europe is deeply concerned over the outcome.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to:

Mr. FOUNTAIN (at the request of Mr. WRIGHT), for after 6 p.m. today, on account of official business.

Mr. RODINO (at the request of Mr. WRIGHT), for today, on account of illness in the family.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

(The following Members (at the request of Mr. WALKER) and to revise and extend their remarks and include extraneous matter:)

Mr. CAPUTO, for 5 minutes, on April 26.

Mr. EDWARDS of Oklahoma, for 5 minutes, today.

Mr. MCDADE, for 5 minutes, today.

Mr. KEMP, for 5 minutes, today.

Mr. WHALEN, for 5 minutes, today.

(The following Members (at the request of Mr. PANETTA) to revise and extend their remarks and include extraneous material:)

Mr. ANNUNZIO, for 5 minutes, today.

Mr. GONZALEZ, for 5 minutes, today.

Ms. COLLINS of Illinois, for 5 minutes, today.

Mr. ALEXANDER, for 30 minutes, today.

Mr. BINGHAM, for 10 minutes, today.

Mr. ASHLEY, for 5 minutes, today.

Mr. STOKES, for 15 minutes, today.

Mr. PANETTA, for 5 minutes, today.

Mr. UDALL, for 5 minutes, today.

Mr. HARRINGTON, for 15 minutes, April 27, 1978.

EXTENSION OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

Mr. BROOMFIELD, and to include extraneous matter, during general debate today on H.R. 11832, Arms Control and Disarmament Agency authorizations.

(The following Members (at the request of Mr. WALKER), and to include extraneous matter:)

Mr. VANDER JAGT.

Mr. LENT.

Mr. CRANE.

Mr. BOB WILSON in two instances.

Mr. GILMAN in three instances.

Mr. PURSELL.

Mr. MICHEL.

Mr. DERWINSKI in three instances.

Mr. ROUSSELOT in two instances.

Mr. LAGOMARSINO in two instances.

Mr. LEACH.

Mr. MOORE.

Mr. CAPUTO.

Mr. FRENZEL.

Mr. GRASSLEY.

(The following Members (at the re-

quest of Mr. PANETTA) and to include extraneous matter:)

Mr. ANDERSON of California in three instances.
Mr. GONZALEZ in three instances.
Mr. HOWARD.
Mr. GAYDOS in three instances.
Mr. O'NEILL.
Mr. KILDEE.
Mr. WIRTH.
Mr. HAMILTON.
Mr. TEAGUE.
Ms. OAKAR in two instances.
Mr. DRINAN.
Mr. EDGAR.
Mr. BRODHEAD.
Mr. OBERSTAR.
Mr. VANIK.
Mr. SIMON.
Mr. JENRETTE.
Mr. PATTEN.
Mr. GINN.
Mr. HAWKINS.
Mr. CHARLES H. WILSON of California.
Mr. BENJAMIN in five instances.

SENATE BILLS REFERRED

A bill of the Senate of the following title was taken from the Speaker's table and, under the rule, referred as follows:

S. 2552. An act to amend the Act of July 19, 1940, relating to travel in the United States, to authorize additional appropriations; to the Committee on Interstate and Foreign Commerce.

SENATE ENROLLED BILL SIGNED

The SPEAKER announced his signature to an enrolled bill of the Senate of the following title:

S. 2597. An act to amend title 28, United States Code, to move the place for holding court for the district court of the eastern district of New York to Brooklyn and Hempstead, and for other purposes.

ADJOURNMENT

Mr. PANETTA. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 8 o'clock and 9 minutes p.m.), the House adjourned until tomorrow, Thursday, April 27, 1978, at 11 o'clock a.m.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

3967. A letter from the General Counsel of the Department of Defense, transmitting a draft of proposed legislation to amend the Aviation Career Incentive Act of 1974 (88 Stat. 177) to make certain technical amendments for purposes of clarification and for other purposes; to the Committee on Armed Services.

3968. A letter from the Assistant Secretary of Defense (Comptroller), transmitting notice of the omission of a clause authorizing the examination of records by the Comptroller General in agreements with the Governments of the United Kingdom and the Federal Republic of Germany, pursuant to 10 U.S.C. 2313(c); to the Committee on Armed Services.

3969. A letter from the Acting Assistant Secretary of the Army (Manpower and Reserve Affairs), transmitting a draft of proposed legislation to amend section 4346(d) of title 10, United States Code, to permit the Secretary of the Army to prescribe the oath to be taken by appointees to the U.S. Military Academy; to the Committee on Armed Services.

3970. A letter from the Acting Director, Defense Security Assistance Agency, transmitting a report on the impact on U.S. readiness of the Air Force's proposed sale of certain defense equipment to Sudan (transmittal No. 78-37), pursuant to section 813 of Public Law 94-106; to the Committee on Armed Services.

By Mr. RISENHOOVER:

H.R. 12406. A bill to amend title XIV of the Public Health Service Act to provide Federal grants for small public water systems to meet national primary drinking water regulations; to the Committee on Interstate and Foreign Commerce.

By Mr. MAHON:

H.J. Res. 873. Joint resolution making an urgent supplemental appropriation for the disaster loan program of the Small Business Administration for the fiscal year ending September 30, 1978; to the Committee on Appropriations.

By Mr. ANNUNZIO:

H.J. Res. 874. Joint resolution to declare June 4 through 10, 1978, to be National Neighborhood Week; to the Committee on Post Office and Civil Service.

By Mr. KEMP:

H.J. Res. 875. Joint resolution requesting the President to issue a proclamation designating the last schoolday in April as National Pledge Allegiance to Our Flag Day; to the Committee on Post Office and Civil Service.

By Mr. THONE:

H.J. Res. 876. Joint resolution to authorize the President to proclaim the last Friday of April each year as National Arbor Day; to the Committee on Post Office and Civil Service.

By Mr. GILMAN:

H. Con. Res. 579. Concurrent resolution expressing the sense of Congress that the President should express to the Government of the Soviet Union the disapproval of the American people concerning that Government's systematic nondelivery of international mail addressed to certain persons residing within the Soviet Union and that the United States should bring to the attention of the next Congress of the Universal Postal Union the failure of the Soviet Union to comply with certain articles of the Universal Postal Union; jointly, to the Committees on International Relations, and Post Office and Civil Service.

By Mr. MILFORD:

H. Con. Res. 580. Concurrent resolution disapproving proposed regulations of the Treasury Department requiring centralized registration of firearms and other matters; jointly, to the Committees on the Judiciary, and Ways and Means.

By Mr. WHALEN (for himself and Mr. SIMON):

H. Con. Res. 581. Concurrent resolution expressing the sense of the House that the President undertake discussions with the other industrialized countries with a view toward establishing, in cooperation with the member countries of the Organization of Petroleum Exporting Countries (OPEC) which are in current account surplus, a major capital pool for productive investment in the developing countries; to the Committee on International Relations.

H. Con. Res. 582. Concurrent resolution expressing the sense of the House that the President undertake discussion with the industrialized countries with a view toward developing a common approach to the grave problems facing today's international monetary system; to the Committee on International Relations.

By Mr. WOLFF (for himself, Mr. GILMAN, Mr. BAUCUS, Mr. BONIOR, Mr. BRODHEAD, Mr. BROOMFIELD, Mr. CAPUTO, Mr. COHEN, Mr. FRENZEL, Mr. FREY, Mr. GOODLING, Mr. GUYER, Mr. KEMP, Mr. KINDNESS, Mr. KRUEGER, Mr. MITCHELL of New York, Mr. MURPHY of Pennsylvania, Ms. OAKAR, Mr. O'BRIEN, Mr. ROE, Mr. VENTO, Mr. WALSH, Mr WAXMAN, Mr. CHARLES H. WILSON of California, and Mr. WINN):

H. Con. Res. 583. Concurrent resolution relating to Americans missing in action; to the Committee on International Relations.

MEMORIALS

Under clause 4 of rule XXII, memorials were presented and referred as follows:

386. By the SPEAKER: Memorial of the Legislature of the State of California, relative to National Forgotten Victims Week; to the Committee on Post Office and Civil Service.

387. Also, memorial of the Senate of the Commonwealth of Massachusetts, relative to tuition tax credits; to the Committee on Ways and Means.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. JOHN L. BURTON:

H.R. 12407. A bill for the relief of Capt. John W. Leadbetter, Jr.; to the Committee on the Judiciary.

By Mr. McKAY:

H.R. 12408. A bill for the relief of Ricardo Rosas Salazar; to the Committee on the Judiciary.

By Mr. REUSS:

H.R. 12409. A bill for the relief of Eugenie Moya; to the Committee on the Judiciary.

By Mr. WINN:

H.R. 12410. A bill for the relief of Clara Aberbach de Nazario; to the Committee on the Judiciary.

PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

453. By the SPEAKER: Petition of the Governor of the Commonwealth of Pennsylvania, Harrisburg, relative to his veto of a bill of the Pennsylvania General Assembly requesting that Congress call a convention for the purpose of proposing an amendment to the Constitution of the United States concerning the right to life (Memorial No. 377); to the Committee on the Judiciary.

454. Also, petition of the city council, Palm Bay, Fla., relative to medical services for veterans in the Brevard County, Fla., area; to the Committee on Veterans' Affairs.

455. Also, petition of the city council, Titusville, Fla., relative to medical services for veterans in the Brevard County, Fla., area; to the Committee on Veterans' Affairs.

AMENDMENTS

Under clause 6 of rule XXIII, proposed amendments were submitted as follows:

H.R. 11302

By Mr. FISH:

On page 4 after line 4 add:

"(23) Noise control activities in the Industrial Processes program, $1,000,000".

H.R. 11941

By Mr. FRENZEL:

Strike "candidates for Congress," in the title of H.R. 11941.

On page 2 lines 3-4 strike "and any individual who becomes a candidate in any election for the office of Member".

On page 2 strike line 25 and on page 3 strike lines 1-25.

On page 4 lines 1-2 strike "or an individual who is a candidate for the office of Member"

On page 14 strike lines 21-25 and on page 15 strike lines 1-6. On page 15 strike lines 14-17.

On page 15 line 7 redesignate 2 as 1 on line 9, 3 as 2, on line 18 (5) as (3) ,on line 21 (6) as (4), on line 23 (7) as (5), and on page 16 line 10 redesignate (8) as (6), on line 11 (9) as (7), on line 14 (10) as (8), and on page 17 line 11 redesignate (11) as (9).

H.R. 12050

By Mr. VANIK:

Page 2, line 5, strike out "25 percent" and insert in lieu thereof "50 percent".

Page 8, strike out lines 9 through 13 and insert in lieu thereof the following: "taxable year."

Page 2, strike out the table following line 12 and insert in lieu thereof the following:

	Applicable amount in case of—	
	Student at elementary or secondary school	Student at post-secondary institution
"Calendar year:		
1978	$50	$100
1979	100	150
1980	100	250

Page 3, strike out line 20 and all that follows down through line 4 on page 4 and insert in lieu thereof the following:

"(B) GENERAL COURSE OF INSTRUCTION DEFINED.—For purposes of subparagraph (A), the term 'general course of instruction' means a course of instruction—

"(i) which is offered by an elementary or secondary school, or

"(ii) for which credit is allowable toward a baccalaureate or associate degree by an institution of higher education or toward a certificate of required course work at a vocational school but does not include any course of instruction which is part of the graduate program of the individual.

Page 4, after line 25, insert the following:

"(C) INDIVIDUAL WHO ATTENDS BOTH SECONDARY SCHOOL AND POSTSECONDARY INSTITUTION DURING SAME CALENDAR YEAR.—In the case of an individual who is a full-time student or a qualified part-time student at an eligible educational institution for any calendar year, for purposes of this section—

"(i) if such individual is a full-time student or a qualified part-time student for such year determined by taking into account only his status as a student at a postsecondary institution, he shall be treated as a full-time student or a qualified part-time student (as the case may be) at such an institution, or

"(ii) if clause (i) does not apply, he shall be treated as a full-time student or a qualified part-time student (as the case may be) at an elementary or secondary school for such calendar year.

Page 5, strike out lines 10 through 12 and insert in lieu thereof the following: "courses of instruction,

"(B) meals, lodging, transportation, or similar personal, living, or family expenses, or

"(C) education below the first-grade level, or for attendance at a kindergarten or nursery.

Page 5, line 15, strike out "subparagraph (A) or (B)" and insert in lieu thereof "subparagraph (A), (B), or (C)".

Page 5, strike out lines 23 and 24 and insert in lieu thereof the following:

"(A) an institution of higher education,

"(B) a postsecondary vocational school,

"(C) a secondary school, or

"(D) an elementary school.

Page 6, after line 11, insert the following:

"(4) ELEMENTARY AND SECONDARY SCHOOLS.—The terms 'elementary school' and 'secondary school' mean, respectively, any elementary or secondary school (as defined in subsections (c) and (h) of section 801 of the Elementary and Secondary Education Act of 1965 as in effect on January 1, 1978) which is privately operated but only if it is—

"(A) accredited or approved under State law (or, in the case of a school in a State which has no procedure for the accreditation or approval of privately operated schools, which meets the requirements of State law relating to compulsory school attendance), and

"(B) exempt from taxation under section 501(a) as an organization described in section 501(c)(3).

The terms 'elementary school' and "secondary school' include facilities which offer education for individuals who are physically or mentally handicapped as a substitute for public elementary or secondary education.

"(5) POSTSECONDARY INSTITUTION.—The term 'postsecondary institution' means an institution of higher education or a postsecondary vocational school.

Page 6, line 12, strike out "(4)" and insert in lieu thereof "(6)".

EXTENSIONS OF REMARKS

HAMILTON FISH, SR., ON TERRORISM

HON. BENJAMIN A. GILMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1978

● Mr. GILMAN. Mr. Speaker, I would like to share with my colleagues the remarks of one of my distinguished constituents, on the question of Arab terrorism. Ham Fish, Sr., the father of our colleague, the gentleman from New York, HAMILTON FISH, JR., served with distinction for 25 years in the House and was chairman of the first congressional committee to investigate Communist ideology and objectives in 1930. Since that time, communism has insidiously infiltrated the ways of life of millions of unwilling individuals and the sovereignty of many unwilling nations.

Terrorism is indeed an evil which must be checked and eradicated. Wreaking havoc and destruction upon our lives, terrorism has unfortunately, become one of the hallmarks of life in the 1970's. It is important for us to heed the lessons of an experienced legislator. Accordingly, I am setting forth Ham Fish, Sr.'s, comments for my colleagues:

THERE IS NO COMPROMISE WITH ARAB TERRORISM BACKED BY COMMUNISM

The attempt of President Carter to coerce Israel to provide a PLO homeland west of the Jordan River, within sight of Jersualem, is like placing a Communist rattlesnake in your own backyard. That is precisely what President Carter is trying to do in Panama.

Israel would be blind to establish an avowed and mortal enemy equipped with modern Communist arms within a short distance of Jerusalem, the traditional capital of Israel, and a holy or sacred city of the Moslems. This would create such a hornet's nest of dedicated terrorism, hatred and murder, causing crisis upon crisis until it eventuated in deadly terrorism and a religious war. It would inevitably be aided and abetted by every category of arms and munitions from the Soviet Union and military forces from some of the more militant and revolutionary Arab nations, and PLO terrorists. They would try to turn Israel into a slaughterhouse, similar to what was done in Germany and Poland on orders of the racist megalomaniac, Hitler. But the Israel leaders are far too intelligent and will not be a party to their own destruction.

President Carter is urging the surrender of the American canal to a Communist dictator, virtually inviting the Soviet Union with its 400 nuclear submarines, and Cuba to encircle and destroy the United States. Israel's Prime Minister Menachem Begin, an old freedom fighter, does not propose to be encircled and destroyed and will not enter President Carter's peace conference with both hands or even one, tied behind his back. He naturally refuses to lead his people down a blind alley of appeasement and ruin.

The people of Israel want peace, tranquility and friendship with their Arab neighbors. Israel is willing to provide homes for refugees west of the Jordan River on the same terms that half a million Arabs now live peacefully there, owning their own homes, property and business. They have all civil and human rights, and enjoy security, peace and tranquility under their own vines and fig trees except for the right to bear arms. They have the right to elect their own mayors and local officials. Anything beyond that would be suicidal under prevailing conditions.

The PLO, backed by the Soviet Union, is a persistent and constant obstacle to any constructive peace in the Near East. There can be no worthwhile peace until the Arab nations; Egypt, Syria, Saudi Arabia and Jordan, agree to curb and control the terrorists.

I assume I have the right to express my views as author of the Fish-Palestine Resolution in 1922, which helped to create the State of Israel and was adopted by Congress, signed by the President and still is the basic foreign policy of the United States.

If the Arab nations fail to curb the PLO, the United States should provide Israel with all the modern, conventional arms they need to adequately defend their own security. The Arabs and the Jews worship the same God and belong to the same race. Both would prefer peace and friendship to another disastrous war. They should be encouraged to meet and discuss their difficulties in an open conference without coercion or intervention by either the United States or the Soviet Union. It must be self-evident that no conference would serve any useful purpose unless it was based upon mutual concession for the purpose of establishing a permanent peace. Actually, the existence of Israel as a free, democratic nation, is not only of great importance to the United States, but likewise to Saudi Arabia, Egypt and Jordan against Communist subversion and armed domination.●

AMERICAN ATTITUDES TOWARD GOVERNMENT

HON. LEE H. HAMILTON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1978

● Mr. HAMILTON. Mr. Speaker, I would like to insert my Washington Report for

April 26, 1978, into the CONGRESSIONAL RECORD:

AMERICAN ATTITUDES TOWARD GOVERNMENT

Bewildering problems have landed on the desks of President Carter and other policymakers in recent months, making an already uneasy public more somber and apprehensive.

Among the reasons for this mood of unease are rising inflation, a tight job market, the energy crisis and slower economic growth on the domestic side, and the Panama Canal treaties, the tense situation in the Middle East, the SALT negotiations and Soviet adventures in the Horn of Africa on the international side. All these things have sent the government into a flurry of activity intended to calm growing fears that worse troubles lie ahead.

As the problems mount, there is a feeling among people that government just does not work very well. Everywhere I go I hear people talk about the ineptitude of government seems incapable of solving the problems that concern them most, such as the relentless increase in taxes and inflation.

Many people believe that these unresolved problems are grinding down the American dream and that the old ingredients of that dream—a home in the green suburbs, a college education for the children, a good job, a comfortable retirement—are more elusive and uncertain than ever. To these people, the government does not seem to have its priorities straight. I have often heard the complaint that government supports the poor, protects the rich and taxes the middle class.

A Congressman frequently wonders what can be done to make government work better. For one thing, it is getting harder to know what to do. The number and complexity of issues on the national agenda are appalling. Getting a consensus in support of a policy and then implementing that policy have become immeasurably complicated tasks. Partisan majorities in Congress—even a Congress and a President of the same party—do not assure that these tasks can be accomplished. The job of heading the nation today approaches the impossible for even the strongest leaders. They may seem to have the right solutions, but in the absence of majority support the solutions go nowhere. In a democracy, a solution must be politically feasible or else it is no solution at all. Many people do not understand the complications of our decision-making processes.

The temper of the times also makes it difficult to govern. For understandable reasons, people are skeptical and cynical about government and its leadership, as, indeed, they are about most other institutions. They cannot be inspired to follow a leader.

The rise of the special interest group is a further difficulty facing government today. On the important issues, powerful political forces are arrayed on opposite sides. The hundreds of groups clamoring for attention to their specific concerns shatter the sense of common purpose and unity. What is new in politics is not the existence of such groups, but their number, diversity and intensity. There are, for example, over 1,000 lobbying groups at work in Washington, most of which are well-staffed and have a lot of money to spend.

People know that government has a major role to play in addressing national problems, but they want government to work better. They want a ruthless examination of government programs and regular checks on how effectively a job is being done and what improvements can be made. They want the government to show a sensitivity to their needs. In spite of their bad feelings toward government, Americans will forgive its honest failings if they believe that it cares about their problems and does what it can to meet their needs.

In these circumstances, it seems to me that several things should be emphasized. First, the most important task before us is to make government work better. Government need not be gargantuan, complex, extravagant and high-handed. Its size can be reduced and it is possible for it to be efficient, compassionate and honest.

Second, we need to focus more closely on the national interest rather than on special interests. We rightfully pride ourselves in this country on a sense of diversity and pluralism, but within our differences we must concentrate on our common purpose and unity. We should cultivate the disposition to compromise. We must be made to see that the democratic system simply does not work unless all of us are willing to make adjustments for the good of the nation.

Finally, we should learn to become less dependent on government and more aware of its limitations. We cannot ask government to do everything right now. There are bounds to what government can do and there are problems that government cannot solve. There are many problems that government can help solve, but only gradually.

An appreciation of the complex features of our political structure helps us to see why government is not performing well today. It also suggests the corrective steps we must take.●

ROBERT L. SCHNEIDER, CWV "GOOD FELLOW"

HON. JOSEPH M. GAYDOS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1978

● Mr. GAYDOS. Mr. Speaker, once again Holy Trinity Post 1559, Catholic War Veterans, has selected an outstanding community leader for its annual "Good Fellow" Award.

This year's recipient is Robert L. Schneider, general superintendent of National-Duquense Works, U.S. Steel Corp. He will be formally recognized at a public testimonial dinner on Sunday, May 7.

Mr. Schneider, who holds bachelor degrees in electrical engineering and nuclear physics and a masters degree in business administration, has become involved in the McKeesport area since assuming his present position in April, 1976.

He is a member of the board of directors for the McKeesport YMCA and serves on the advisory board for the McKeesport Campus of Pennsylvania State University. He also is affiliated with the Mon-Yough Chamber of Commerce, the East Valley Area Boy Scout Council and the Mon-Yough United Way.

His career in steelmaking began in 1949 when he joined U.S. Steel Corp.'s Homestead Works as a process engineer. Later he worked in the metallurgical and Maintenance Units and the Power and Fuel Division. In 1964 he was transferred to the Slab and Plate Division and within 2 years was appointed division superintendent.

Mr. Schneider's ability continued to be recognized and in 1968 he was promoted to assistant general superintendent of Homestead Works, a post he held until 1974 when he was named general superintendent of the corporation's Fairless Works.

The honoree is a member of the Association of Iron and Steel Engineers, the American Iron and Steel Institute, and the Pennsylvania Society of Professional Engineers.

A World War II veteran, having served with the U.S. Air Force, Mr. Schneider is married to the former Mary Lee Feeney and the couple are the parents of four children.

Mr. Speaker, on behalf of my colleagues in the Congress of the United States I extend our congratulations to Mr. Schneider upon his selection as "Good Fellow of the Year" and commend Holy Trinity Post for saluting a man who has contributed so much to his country, his community and his country.●

WORLD REFUGEE REPORT SURVEYS REFUGEE SITUATION IN LATIN AMERICA

HON. ROBERT F. DRINAN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1978

● Mr. DRINAN. Mr. Speaker, in 1976 it was my privilege to serve with the Amnesty International Mission to Argentina. In that Latin American nation alone, the United Nations High Commission on Refugees estimates that a minimum of 3,000 refugees are in urgent need of resettlement. As in other nations ruled by military regimes, many innocent people have been victims of fighting between leftist and rightist terrorist groups.

The United States has been appropriately emphatic in condemnation of human rights violations in Latin America. Yet, our immigration laws limit recognition of a refugee to one who is fleeing a Communist-dominated country, leaving only limited, ad hoc parole programs as a way of addressing the plight of refugees from most Latin American nations.

The 1978 World Refugee Report notes both improvements and setbacks in human rights issues throughout Latin America which will play a crucial role in the shape of refugee problems on that continent. Following is the section of the 1978 World Refugee Report which deals with the countries of Latin America.

The report follows:

THE AMERICAS

Latin America has undergone some improvements as well as some setbacks in human rights during the past year—developments which play a crucial role in the shape of refugee problems in that continent.

According to Amnesty International, about 80% of the Latin American population is living under military rule. A common feature of military regimes is the declaration of a "state of emergency" under which civil and political liberties are suspended for security reasons. The resulting crackdown on political opposition has caused the flight of large numbers of refugees.

Several military governments have promised to hold elections and transfer political power to a civilian government. President Hugo Banzer of Bolivia has announced that the armed forces will relinquish control of the country to a civilian government through elections in the summer of 1978. The governments of Guatemala, Peru, and Uruguay have also announced intentions to hold elections. Brazilian President Ernesto Geisel has named General Joao Baptista de Oliverira

Figueiredo as the official candidate for Presidential elections to be held later this year. Figueiredo is considered to be a moderate and hard-line factions of the military have voiced strong opposition to his candidacy.

The Pinochet government in Chile had planned to move toward civilian rule in the 1980's but because a January plebiscite showed 75% of the electorate in favor of the present government, Pinochet has announced that elections will not be held for another ten years. This declaration has sparked international protests against Pinochet. The United States had denounced the Chilean vote as "unfair." One positive development in the Chilean government has been the disbanding of DINA, the terrorist security organization and its replacement by a less draconian agency. Although persons continue to be arrested for political reasons, frequent disappearances and brutal torture reportedly have diminished.

Argentina was once a safe haven for thousands of refugees from neighboring dictatorships but since a state of siege was declared in 1974 alien refugees as well as Argentine nationals have been victims of the fighting between leftist and rightist terrorist groups. In 1977 the Argentine Government announced the release of 342 political prisoners and the visit of a United States Congressional delegation noted a slight improvement in human rights. Nevertheless, human rights violations continue under the state of siege. While the Argentine military is reportedly beginning a National Reorganization plan aimed at restoring civilian rule sometime in 1980, unexplained disappearances have continued and political parties and labor unions are prohibited from organizing.

Concerning other parts of Latin America, serious deterioration of human rights, violence, and terrorism in two Central American countries, El Salvador and Nicaragua, have caused great concern abroad. In the Caribbean area, there have been some slight improvements in rights conditions in Haiti, a country which has generated a large number of exiles, and steps toward improvement in American relations with Cuba have sparked hope of hundreds of thousands of Cuban exiles in the U.S. who still have family in Cuba.

THE SOUTHERN CONE

Until September of 1973, Chile, under the government of Salvador Allende, was a safe haven for refugees from rightist military dictatorships. Among these refugees were Paraguayans who had fled the military government of General Stroessner, Brazilians who had fled the 1964 military coup in their country, Bolivians opposed to President Hugo Banzer, whose military government seized power in 1971 and Uruguayans who had fled the June 1973 military coup in Uruguay one of Latin America's oldest democracies.

Then Allende's government itself was overthrown by the military and in the ensuing crack-down, these refugees plus thousands more from Chile sought asylum in foreign embassies or fled to Argentina where the government of Juan Peron was sympathetic to their plight.

After the death of Juan Peron, the government of his wife, Isabel, faced severe economic difficulties and factional fighting among Peronist elements. A state of siege was declared in 1974 under which the government was granted broad emergency powers to eliminate opposition. Immediately following the State of Siege declaration, some 3,000 persons suspected of subversive activity were placed in "preventive detention," and during the 18-month period following Juan Peron's death, some 1500 persons were assassinated by death squads, some of which, according to sworn testimony, were financed by the Ministry of Social Welfare. Among the victims were persons active in politics, members of trade or teachers unions, clerics and political refugees.

In March of 1976, Isabel Peron was deposed by the military and General Jorge Videla became head of State. The Minister of Foreign Affairs, Cesar Guzzetti, gave public assurances that refugees would not be repatriated against their will. However, the Security Act and the State of Seige Decree were kept in force and human rights violations continued. In May of 1976, three prominent Uruguayan parliamentarians were killed in Buenos Aires. Former Bolivian President Torres disappeared on May 26 and on May 27 was found dead. Files on some 2,000 refugees were stolen from major voluntary agencies working with refugees. Following the break-in, twenty-four refugees, mostly Chileans but including some Bolivians and Uruguayans, were abducted and severely tortured prior to their release.

Persistent human rights violations in the Southern Cone have heightened the need for the resettlement of refugees and detainees. In 1974 an agreement was signed between the Chilean Government, the Chilean National Commission for refugees (COMAR) the International Committee of the Red Cross (ICRC) and the Intergovernmental Committee for European Migration (ICEM) for release of persons held in detention under the State of Seige Law pending offers of asylum by foreign governments. According to ICEM, this program was discontinued at the end of 1976 because the Chilean Government had released all persons in this category.

But a second Prison Release program, established under a bilateral agreement between the Chilean Government and ICEM is still operating. Included in this program are persons who have been tried and condemned under the security law and have requested that their sentences be commuted to exile. ICEM estimates that a total of 400 cases plus about 1,000 family members will require resettlement opportunities in 1978.

The danger of reprisals from terrorists faced by thousands of refugees in Argentina remains the chief concern of the United Nations High Commissioner for Refugees (UNHCR). The UNHCR estimates that of the 10,000 Latin American refugees presently in Argentina, about 5,000 will require resettlement opportunities in 1978. Amnesty International believes that there are thousands of refugees in Argentina who fail to register for fear of reprisals from terrorists. Eventually these people do come forth and the resettlement caseload remains fairly stable because departures are virtually offset by new registrations.

In October of 1977, the Argentina government reinstated the "Right of Option"—a constitutional right of an Argentine citizen who had been arrested for a political offense and who wishes to go into exile rather than remain in prison. It has been reported, however, that a number of restrictions have been imposed on this right. Amnesty International and other human rights groups have appealed to various governments for resettlement opportunities.

CENTRAL AMERICA

El Salvador

In 1972, Napoleon Duarte won the general elections for President in El Salvador with the backing of a coalition of parties opposed to military dictatorship. Three weeks later, Duarte was deposed and forced into exile by a military coup headed by Colonel Artero Molina.

General Carlos Humberto Romero, the official government candidate was made President in elections held on February 20, 1977. Following government claims of victory for General Romero, members of the opposition party, Union Nacional Oppositora (UNO) protested the arrests of hundreds of its supporters before the elections. UNO supporters, led by their Presidential candidate, Colonel Ernesto Claramont, occupied the main plaza of the capital, San Salvador, and demanded an examination of election results.

To curb resulting civil unrest, General Romero declared a state of seige throughout the country in February, 1977. The terrorism and unrest in El Salvador come from two fronts—right-wing para-military groups and left-wing guerrillas. Victims of the violence include government officials, such as Foreign Minister Mauricio Boronovo, Jesuit priests working for land reform and large numbers of peasants, including 100 killed in a demonstration protesting the February 1977 elections.

The combination of unrest, terrorism and strong government reaction to the violence has led to the exile of two Salvadoran groups—reform-minded clergy who have been harassed by para-military organizations, backed by large landowners and members of the political opposition to the government.

Since 1968, the Church has been actively pushing for land reform, promoting the breakup of enormous tracts of land and the distribution of smaller land parcels among the campesinos. The reform movement has been vigorously opposed by the large landowners. In July of 1977 Salvadoran priests testified before the U.S. Congress on the threats and tactics employed by right-wing groups to block the land reform movement among the clergy and the campesinos.

Opposition candidates in both the 1972 and 1977 elections have been forced out of the country by violent incidents and death threats.

Upon his inauguration in July of 1977, General Romero lifted the state of seige and invited all persons in exile to return. The UNO issued a statement in September asking all exiles to return as a test of Romero's intentions.

Following the lifting of the state of seige, Romero publicly condemned all violence from any political sector. As a result of international pressure, U.S. Congressional hearings and press coverage, some improvements have come about: a significant decrease in press censorship, a lower profile for the military and a decline in repression against the church leadership. While these changes appear significant relative to the severe repression that reigned from Romero's disputed election in February of 1977 to his inauguration in July of that year, the question remains how Romero will proceed with the socio-economic problems deeply rooted in El Salvador's feudal agrarian system.

Nicaragua

In Nicaragua, thousands of peasants have been uprooted from what they thought was public land given to them under an abortive land reform program begun twenty years ago. These peasants have reportedly been evicted by the National Guard, Nicaragua's military and police force, on orders from a handful of large landlords who own more than 50 percent of the country's cultivated land.

Soldiers have allegedly arrived in villages without prior warning and loaded peasants into trucks with just a few possessions, leaving behind homes, fishing boats, schools and crops.

The Nicaraguan Government maintains that the land is private and that the landlords' ownership papers are registered with the local authorities. It is believed that behind the uprooting is the desire of the large landlords for still more acreage in order to increase plantings of high priced, long-fiber cotton which is the country's chief export.

Julio Molina, an opposition member of the Nicaraguan House of Deputies, is trying to organize the displaced farmers and fishermen into acts of "passive resistance" to the policies of the Nicaraguan Government, such as refusing to pay taxes and not picking cotton. He has traveled to the U.S. to discuss the plight of the peasants with American civil rights activists.

In the meantime, the political scene in Nicaragua is rapidly deteriorating. The

Somoza family, which has ruled the country for forty-four years by severe repression and elimination of opponents is meeting with serious open opposition. Following the assassination of newspaper editor Pedro Joachin Chamorro, a well known critic of the Somoza government, widespread anti-government rioting ensued.

Chamorro's murder has set off an unprecedented anti-government campaign. Leftist guerrillas, who had previously staged only isolated attacks, have reportedly gained widespread support because they have declared restoration of democracy to be their goal rather than the achievement of socialism. The two most powerful political opposition groups, the Conservative Party, the only legally recognized opposition, and the Democratic Liberation Union, have demanded Somoza's resignation. The Conservative Party, has also called for an emergency session of the national legislature to designate a successor to Somoza and the Democratic Liberation Union has said that Somoza's resignation would lead to the formation of a democratic government. Many elements of the conservative business community and of the upper income families have joined in the call for Somoza's resignation or removal.

THE CARIBBEAN

Haiti

On September 21, 1977, the Haitian Government released what it called the last of its political prisoners. Although welcome, this action seemed to be mainly a symbolic gesture toward the Carter Administration's human rights policy.

Reportedly, members of the Ton-Ton Macoutes the terrorist security organization, have been removed from the government payroll. The Duvalier regime has also tolerated some anti-government activity and press coverage but the Inter-American Press Association still lists Haiti among countries that repress freedom of the press. Labor activity is no longer meeting with brutal repression although strikes and unions are still illegal. In the political realm, the government is considering a plan to have mayors elected though it is not clear whether these will be free elections or whether the candidates will be chosen by the ruling Duvalierist Party.

These liberalizations have improved the image of the "Baby Doc" Duvalier regime as visibly less repressive than the former "Papa Doc" regime. But Haiti still remains the poorest nation in the Western Hemisphere—its illiteracy is over 90% and its per capita income is $120.

Political and economic repression have caused the flight of thousands of refugees to all parts of the Caribbean and to the United States. During the past four years, more than 2,000 refugees have made the hazardous voyage to the U.S. in small boats, often leaky and unseaworthy. To date only about 240 have been granted asylum and a number have been deported. The rest of the cases are on appeal in U.S. courts.

The U.S. grants refugee status only to those persons who can substantiate a valid fear of persecution upon return to their homeland; many of the refugees have been viewed as economic migrants rather than political refugees. But in Haiti, where severe economic deprivation so closely parallels political repression, this distinction often seems problematical.

Last November, a change in U.S. refugee policy was announced which would allow refugees picked up off the U.S. coast full hearings on their political asylum claims. Previously, the U.S. Immigration and Naturalization Service (INS) had maintained that these refugees had technically never entered the U.S. and therefore had no right to such hearings.

The flight of Haitians to the U.S. has posed a delicate problem for the American Government: while the government does not want to impose undue hardship on the refugees it feels that a liberal immigration policy could generate a still larger exodus of Haitians to the U.S. Fearing a recurrence of severe repression the American Government hesitates to criticize the present Duvalier government too strongly for the institution of "Presidency for Life" and for violations of civil, economic and political rights. In the meantime, Haitians continue to flee to the U.S. and other countries.

Cuba

The lifting of U.S. travel restrictions to Cuba in March of 1977 prompted a large number of Cubans living in the U.S. to apply for visas to visit family members in Cuba. Fidel Castro subsequently announced, however, that no Cuban refugees would be granted visas except on a limited case by case basis until full diplomatic relations are restored between Cuba and the U.S.

For many years Cuban exile leaders have been vehemently opposed to restoration of diplomatic relations with Cuba, though many are coming to realize that only if some form of relations exists between the U.S. and Cuba, is there ay hope of returning to their homeland to visit their family members.

But the reunification of divided families on a large scale is bound to meet with serious obstacles even after diplomatic relations are restored. The problem is extremely delicate for Cuba because of the security risks involved in allowing large numbers of Cuban exiles into the country, given the high level of anti-Castro activity among the exile community. There are bound to be many rejections of visa applicants. There are close to 700,000 Cuban exiles in the U.S. and nearly all of them have family members in Cuba.

The status of human rights in Cuba will undoubtedly have great bearing on the restoration of full diplomatic relations with the U.S.

It is generally agreed that a large number of Cubans today enjoy better social and economic living conditions than under any previous Cuban government although political and civil liberties are severely restricted.

Organizations that document consistent human rights violations in Cuba usually do not focus on the general human rights conditions of the country but on the controversial issue of political prisoners.

There is great variance in the estimates of political prisoners currently held in Cuba. Some claim the number to be as high as 20,000 to 100,000 while most U.S. government officials and human rights organizations, such as Amnesty International, cite a figure of 4,000 to 5,000. In June of 1977, Fidel Castro told journalist Barbara Walters that there were close to 3,000 prisoners.

Although the Cuban Government has prohibited the physical torture of political prisoners, exile groups have reported allegations of torture to the Organization of American States, Amnesty International and the International League for Human Rights.

Amnesty International's 1977 annual report states that it has received "no information to indicate that prisoners have been tortured during the period covered by this report." But according to the most recent information available, no human rights organization has been allowed to make on the scene inspections.●

CONGRESSIONAL STAFF—THE CREAM OF THE CROP

HON. NORMAN F. LENT

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1978

● Mr. LENT. Mr. Speaker, we are now in the midst of National Secretaries' Week. Major television talk shows are marking the occasion by interviewing secretaries of famous bosses—newspapers are editorializing to salute long-suffering secretaries both real and fictional. I think it is only fitting that the Congress recognize the occasion as well.

The word "secretary" sometimes evokes thoughts of beady-eyed matrons with crossed arms and firmly planted feet throwing up a petticoat wall around a boss who wants his privacy—or of curly blonde hair cascading around the shoulders of a generously endowed but fatuous office decoration. Happily, it more often causes one to think of a competent, level-headed and mature counselor who offers an executive the welcome combination of good advice and fierce loyalty—someone who is supportive but not slavish—who provides stability in a hectic environment—who is resourceful and efficient—and especially on Capitol Hill, someone who swallows pride whole and lets the boss take all the credit!

So it is with congressional staffers, male and female. Some of them are secretaries press or personal—some of them legislative aides who know more about legislation than any Congressman ever will—but all of them are high level, hard working, professional people who do as much as anyone to help keep this country moving ahead and on an even keel. They are dependable, tenacious, thorough and thoughtful. They are often underpaid when compared with workers in the private sector who have similar levels of responsibility. They know the meaning of overtime but not of overtime pay! They have heard of coffee breaks and some day they hope to try one to see what it is like.

Almost without exception, congressional staffers are "in it" for the contribution they can make to the future of this country. As much as any other citizen, they believe in America and want to help her keep her place in the world. I believe they are owed a debt of gratitude and I hope my colleagues will take a moment to give a pat on the back and a "well done" to their staffs. I intend to do so in my offices for those in whose honor I am unilaterally declaring April 23–29 to be "Congressional Staff Week."

(By the way, this is one Extension of Remarks I wrote myself.)●

SECRETARY CALIFANO LAUDED

HON. WILLIAM M. BRODHEAD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1978

● Mr. BRODHEAD. Mr. Speaker, the Secretary of Health, Education, and Welfare, Mr. Califano, today announced several steps that HEW is taking to help address the possible adverse health problems faced by the estimated 8 to 11 million asbestos workers in this country.

Recent studies show that asbestos workers are from three to four times more likely to develop lung cancer than other people. I wish to commend Secretary Califano for taking concerted action to address this massive health problem.

The shocking statistics cited today by Secretary Califano document both a national tragedy and a national disgrace. No product is so important that it should be produced at the expense of the health and lives of those manufacturing it, and certainly no one would argue that exposure to toxic and hazardous substances should be a condition of employment in this country. Yet it is estimated by the National Institute on Occupational Safety and Health that one out of four Americans is exposed to hazardous substances at the workplace. The disaster in the asbestos industry—the dimensions of which are only now coming to light—was a predictable disaster. It will likely be repeated in other industries until we require production and handling safeguards that are justified by our present knowledge about toxic substances and conduct more research about the risks to public health caused by toxic and hazardous materials.●

THE HAZARDS OF ASBESTOS

HON. CARL D. PERKINS

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1978

● Mr. PERKINS. Mr. Speaker, yesterday Secretary Califano of the Department of Health, Education, and Welfare released a statement concerning the health problems associated with heavy exposure to asbestos. He notes that since the beginning of World War II, an estimated 8 to 11 million workers were employed in environments with significant asbestos exposure. Now, studies by the Department have indicated that exposure to asbestos in settings such as the workplace, where it is concentrated, significantly increases the risk of incurring four serious lung diseases: Lung cancer, asbestosis (a lung disease that impairs breathing and increases the risk of serious illness or death from respiratory infections like pneumonia), mesothelioma (a cancer of the chest and abdominal cavities), and certain gastrointestinal cancers.

The Secretary announced in his statement new steps to help inform doctors, workers, and others about the increased health risks of asbestos exposure. This is the first time that a Federal agency has attempted a systematic effort to notify those who received excessive exposure to asbestos before the Government began to regulate asbestos in the workplace in the late 1960's and early 1970's. This is significant, since the HEW studies show that these diseases take from 15 to 35 years to develop, and hence that there are a substantial number of Americans who are unaware of the serious risks involved. The seriousness of this is underscored by HEW's estimates that 20 to 25 percent of workers exposed to asbestos before the era of Government regulation who die, die of lung cancer.

As one who represents a constituency with many people whose economic survival depends on the mining of coal, I am all too familiar with the seriousness of lung disorders and the risks taken in letting them go unchecked. We all remember when black lung disease first manifested itself in America's coal country and showed us the urgent need to control excess levels of dangerous substances in the workplace. I congratulate Secretary Califano and HEW for recognizing the perilous situation of those who were exposed to excessive levels of asbestos before regulations existed, and suggest that we do all we can to help notify those affected of the hazards involved.●

COMMON HUMANITY AND THE BOAT PEOPLE'S PLIGHT

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1978

● Mr. BOB WILSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

[From the Washington Post, Apr. 24, 1978]

"COMMON HUMANITY" AND THE BOAT PEOPLE'S PLIGHT

(By Ted Jacqueney)

I returned from Southeast Asia profoundly moved by the plight of the refugees with whom I helped members of the Citizens' Commission on Indochinese Refugees (CCIR) communicate. As Americans, and as human beings, we must take positive actions to reflect our common humanity with the Vietnamese "boat people," Cambodians and Laotians and help mitigate their suffering. Members of the CCIR have concluded that U.S. policy opening America's doors to the refugees must reflect the urgency of the problem. I heartily concur.

More than 100,000 people may be scattered in camps all over Southeast Asia. Those who flee to Thailand face the real possibility of being forced back to their native country (there to face certain death) or of being forced back to sea. Still, an estimated 1,200 to 1,300 Vietnamese escape by boat every month.

Governments throughout Southeast Asia perceive that the United States is not committed to a long-term solution to a problem that the war in Indochina created. They perceive that they cannot afford large-scale intrusion of Indochinese aliens, that they cannot afford to care for them financially, and that they cannot afford to strain relations with the new communist powers in Indochina by overly hospitable treatment of refugees. Thailand, to which most refugees have come, has adopted particularly harsh measures in response to its perception of lack of U.S. interest. We were told, for example, of instances in which Thai officials sent back to Cambodia Cambodians who were promptly shot in view of the Thais. Other refugees have been forced back to Laos.

The new government of Thailand, led by Gen. Driangsak Chamanan, indicated to the commission that he would take a more generous attitude toward refugees. But at the local level of border policemen and provincial governors, who make the decisions that affect the lives of refugees, nothing has changed.

Many Thai officials fear that the new refugees may be pro-communist security risks, a counterpart of the Vietnamese who left their country in 1954 to form in Thailand a community that in many instances has provided a base for antigovernment insurgents. Paradoxically, having lived under communist rule, the Vietnamese refugees with whom I spoke may be the least pro-comunist people in the world. For example, in three camps of Vietnamese I heard from teenage boys that under no condition would they go to France. They knew that the Communist Party there had a chance of coming to power, and they wanted nothing to do with a country that might go communist.

Thai officials now ignore their society's Buddhist values of compassion and are reduced to publicly dismissing Cambodia's barbarity even as it shocks, disgusts and frightens them privately. The Thai government feels abandoned by the United States on this issue. The U.S. embassy in Bangkok had not been directed to implement a long-term refugee policy. Our officials there have made no effort to take advantage of popular Thai attitudes toward refugees, such as those exhibited by the Thai Red Cross, to influence a more humane policy by the Thai Government.

The lack of an American policy has also shaped the attitude of Singapore toward the Vietnamese "boat people." Singapore will not accept refugees without guarantees they will be resettled elsewhere within 90 days. Prime Minister Lee Kwan Yew's policy is to offer the Americans a carrot and a stick to prod us into adopting the kind of generous approach we are urging on him as the Thais. The carrot is the offer of a small island to serve as a transit camp for all boat people coming to Singapore or picked up at sea. The stick is a refusal to let boat people ashore, coupled with a demand that ships arriving with boat people picked up at sea post a bond if they want to transact business in Singapore.

Another reason for urgency is that ships transiting the South China Sea now commonly ignore boat people, and some lines have rerouted their ships to avoid areas where the boat people are likely to be found drifting. That occurs because ships find it difficult to obtain permission to disembark the refugees and must assume financial responsibility for them.

The solution to this problem lies more within the province of the United Nations High Commission on Refugees than with American initiatives. Transit camps—one near Singapore within easy reach of southbound ships, and one near Macao or Hong Kong along the line of passage of northbound vessels—need to be established. If ship masters know that the boat people they rescue will have nearby havens, they will be more willing to obey the law of the sea with respect to the succor of people in distress.

The number of Indochinese refugees that the United States accepted each year as part of a long-term international project would be modest—less than the 20–30,000 immigrants per country we already receive annually from East and Southeast Asia.

Upon its return from Southeast Asia the CCIR called on presidential assistant Zbigniew Brzezinski. He remarked that if America does not now help those refugees, then it would no longer be "America." I agree.●

WALT GRANGER

HON. GUNN McKAY

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1978

● Mr. McKAY. Mr. Speaker, I am saddened to report to my colleagues the recent death of a former Member of this body, Walter Keil Granger of Cedar City, Utah.

"Walt" Granger, who was 89 at the time of his passing, served with great distinction through six successive Con-

gresses, commencing with the 77th, in 1941.

Those who knew him here and we in Utah associate with Walt Granger the highest sense of integrity and ability. An associate of his on the Committee on Ways and Means once told me what a loss he and the committee felt when Walt left the House to seek another elective office.

Walt Granger set an example of public service which is truly outstanding. He fought with the Marines in France in the First World War. He served in our State house of representatives for three terms of superb leadership, one term as speaker. The people of southern Utah remember him fondly as three-time mayor of Cedar City.

We can rejoice to have had among us a man such as Walt Granger, who can leave behind, as legacy to family, friends, and Nation, a life led so selflessly and so purposefully.●

SALT AGREEMENT AND MILITARY BALANCE

HON. ROBERT J. LAGOMARSINO

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1978

● Mr. LAGOMARSINO. Mr. Speaker, I would like to bring to the attention of my colleagues the following editorial which discusses the potential impact a future SALT agreement might have on the military balance of power in Europe.

The editorial follows:

SALT SPICES UP EUROPE'S "OTHER" NUCLEAR ARMS RACE

(By Don Cook)

FREDERICKSHAVEN, DENMARK.—The closer the United States moves to a hair-line strategic nuclear balance with the Soviet Union through its SALT agreements, the greater the importance and emphasis that must be placed on the tactical nuclear forces and the local military balance in Europe.

This simple and self-evident fact lies behind all of the debate and discussion over the cruise missile and behind all of the Soviet propaganda against deployment in Europe of the neutron bomb. In both cases, however, there is little in the Carter Administration's decisions or long-term policies to give the Europeans much assurance that that central fact has been fully grasped.

Of course, the need to maintain and improve the tactical nuclear balance in Europe gets lip-service recognition every time a meeting of the North Atlantic Treaty Organization takes place. Moreover, the immediate short-term outlook, for the NATO balance is not bad at all. When, however, the NATO allies try to determine where the Carter Administration is heading, beyond the obvious short-term measures of nuclear modernization, invariably confusion and uncertainty arise, pointing up such future dangers as lack of inner confidence, substantive strength and cohesion in the alliance.

All such dangers were again on display last week at one of the regular meetings of the seven-nation NATO Nuclear Planning Group (NPG), the inner-circle body that works on nuclear-policy questions at the defense ministers' level with four permanent and three rotating members. Although the neutron bomb had been summarily removed from the NPG's nuclear-planning papers by President Carter two weeks earlier, it pervaded the two-day meeting as though it were a Freudian symbol of the subconscious.

The NPG first began discussing plans for deployment of the neutron bomb in 1974, before Carter was even heard of as a potential President. The NPG is, of course, a planning group—not a political decision-making body. But on the basis of nuclear modernization of NATO forces, the planning discussions for the neutron bomb have moved steadily along from one NPG meeting to the next for the past four years.

There were, of course, political problems, as always. But nobody at the NPG level, including the U.S. Secretary of Defense Harold Brown, really thought that at the end of the line the American President would pull the rug out from under everything for political reasons.

The damage to NATO of the President's decision is—for the moment at least—a great deal more psychological and political than military. Not everybody in NATO was prepared to throw his hat in the air and cheer if the President decided to go ahead with the neutron bomb. But everybody in NATO now does have questions about the President's own process of decision-making and the President's own fundamental concepts of what makes a strong NATO and how the alliance should be led. In NATO, a little less confidence exists today than two weeks ago.

Accordingly, a lot of the discussion here in the NPG meeting took the form of a kind of damage-control action by other ministers pointedly directing polite questions to Brown—questions he could hardly answer. What kind of restraint do you expect the Soviet Union to show in return? Not yet determined, Brown replied. What time period are you allowing for a Soviet response? Not determined, said Brown. When do you expect to be ready with your other efforts at nuclear modernization and adaptations? Not determined.

And so the Europeans sat down and drafted a communique on the meeting which pointedly avoided any welcome or praise for President Carter and did its indirect best to stiffen the situation as far as the Soviets are concerned. The communique emphasized even more than Carter has done that the neutron-bomb option remains open for NATO; it also called somewhat forlornly on the Soviet Union to show restraint "in its conventional and theater nuclear arms deployment affecting the security of NATO."

But when NATO Secretary General Joseph Luns said that NATO ought to have a "positive response" from the Soviets "within a couple of months," Brown quickly interjected that "there is no deadline."

Now all of this may be marginally unimportant and readily brushed aside by Defense Department officials who do not always seem to understand the thrust of what Europeans are saying or why they are saying it. Yet this is simply not the kind of American leadership and American attitude which build much confidence in the future. After four years of planning discussions, the neutron bomb suddenly disappears from the NPG agenda and the secretary of defense cannot offer the slightest explanation or any idea at all of what might be sought or expected from the Soviet Union in return.

As for the cruise missile project, observers are wondering if that will constitute a repeat of the neutron bomb experience. Already, inevitably, more than a shadow of doubt exists, particularly in light of what the Americans are already negotiating with the Soviet Union in the way of a cruise missile protocol to the SALT II agreement. Although the protocol will not limit the testing or development of cruise missiles, it will limit the deployment in Europe of either a land-based or sea-based version of the cruise with a range greater than 600 kilometers—in other words, a missile which could reach Soviet territory from Western Europe.

As presently drafted, this limit on cruise missile deployment is for three years only. Yet, as often as possible, Brown repeats that while protocol limits deployment, nothing prevents the United States from developing the missile or from giving technical assistance to U.S. allies if they want to develop the cruise on their own.

It is, however, far from clear if the United States will develop a longer-range cruise suitable for European deployment or whether it will be prepared to help the Europeans if Europe wants to go ahead on its own. For the last 30 years, Europe could happily afford to be relatively unconcerned about nuclear problems, and the United States could go on happily telling Europeans that they need not be concerned, since big brother had strategic superiority and the rest would take care of itself. But no longer will the rest take care of itself.

The irony of Carter's neutron bomb decision is that the United States will now end up bringing in a new generation of nuclear shells for 8-inch artillery and 155-millimeter howitzers and Lance missiles of far greater blast effect and radiation potency than the low-yield limited-blast neutron warheads would had been. Carter has saved nothing toward containing the nuclear holocaust, but he has lost his credibility with his allies, as well as their confidence in him.

The President could restore a lot at the NATO summit meeting in Washington at the end of May if he invited the British, the Germans and even the French to join the United States now in a joint high-level military staff study of a European cruise missile program to be followed by a joint development and production effort in which the United States would fully share.●

CARTER ADMINISTRATION'S POSITION ON ARMS SALES SABOTAGES ISRAEL'S DEFENSE CAPABILITY

HON. JACK F. KEMP

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1978

● Mr. KEMP. Mr. Speaker, the Carter administration's proposal to extend military aid, particularly advanced aircraft to Egypt and Saudi Arabia as a condition for the shipment of similarly advanced aircraft to Israel endangers Israel's security. I am appalled to learn that the notion of giving something to both sides in the absence of a peace agreement has been adopted by longtime friends of Israel.

The commitment to sell advanced aircraft to Israel was a component of our 1975 agreement to modernize the Israeli Air Force; there was never any linkage to arms sales to the Arab States. To link these sales as a package will only undermine Israel's defense capability by providing her main adversaries with the most advanced weapons. This has, of course, been recognized in Israel. Israel's Foreign Minister, Moshe Dyan, has stated that if the sales were to be linked, Israel would prefer to renounce acquisition of the advanced aircraft if it would prevent the arming of Israel's historic enemies.

Mr. Speaker, the United States has a strong interest in arriving at a settlement

in the Middle East, but such a settlement will not be reached if the complex issue of arms sales is thrown into these delicate negotiations. The arms sales to Egypt and Saudi Arabia should be deferred until a formal agreement providing for a permanent peace in the region is reached.●

SENIOR CITIZEN INTERN PROGRAM

HON. BENJAMIN A. GILMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1978

● Mr. GILMAN. Mr. Speaker, today I presented testimony before the Subcommittee on Accounts of the Committee of House Administration, in support of House Resolution 673—of which I am a cosponsor—establishing the current senior citizen intern program as an official congressional program.

For the past 5 years, my efforts to deal with those problems encountered by senior citizens have been greatly enhanced by those senior citizen interns we have selected to assist us.

In order that my colleagues can more fully appreciate the merits of utilizing a senior citizen intern and thus, the need to establish this program as a congressionally supported program, I request that the full text of my testimony—outlining how my office has benefited from the help of those senior citizens serving in my office—be printed at this point in the RECORD:

STATEMENT OF CONGRESSMAN BENJAMIN A. GILMAN BEFORE THE SUBCOMMITTEE ON ACCOUNTS, COMMITTEE ON HOUSE ADMINISTRATION, APRIL 26, 1978

Mr. Chairman, I am pleased to have this opportunity to lend my support to H. Res. 673, 674, 675, and 734, the Congressional Senior Citizen Intern Program, which has been most beneficial to the 26th Congressional District of New York. I am proud to be a cosponsor, with my colleague, the Gentleman from Indiana, Bud Hillis, of the Senior Citizen Intern Program and this Resolution making this program an official Congressional program for Senior Citizen Interns.

For the past five years I have had a Senior Citizen Intern who has come to Washington to learn and who has returned to the 26th Congressional District as my Senior Citizen Consultant to work with my office and our Senior Citizen Advisory Committee on Senior Citizens related problems.

Once a year our Advisory Committee selects a Senior Citizen Consultant, who serves on my staff as a spokesman and liaison to the Senior Citizens in my District. To qualify, our Consultant must be a retired Senior Citizen, 62 years or older, and a resident of the 26th Congressional District.

The Senior Citizen Intern Program is invaluable in the opportunity it affords to our consultant to visit Washington and to personally confer with Government officials and agencies involved in the special problems of Senior Citizens, and to have the experience of working with our staff, learning our office routines and the legislative process.

Rep. Hillis is to be commended for his work in coordinating the efforts of the Members of Congress to make this a successful program. The entire Congress should have the opportunity and should be encouraged to become a part of this vital program which offers the intern the opportunity of personally visiting Washington and meeting with the staffs of Congressional Committees, Federal Agencies and private organizations. Thereafter, they are able to return to their Districts with an awareness and first-hand knowledge of the availability of funds and pending legislation and how to work in resolving problems unique to our elderly concerning Social Security, Railroad Retirement, nutrition, housing, health, and transportation.

With such a meaningful, aggressive approach, it is no longer necessary for the Senior Citizens to feel that they are left out by Government.

In the 26th Congressional District of New York our Senior Citizen Consultant welcomes the opportunity to meet with Senior Citizen groups or individuals in an attempt to work on their problems and to formulate successful programs for resolving their needs.

It is important for this liaison to continue in order to enhance problem solving for our Senior Citizens.

My present Senior Citizen Consultant, Ethel Gage, of Middletown, New York, has been so successful in her work in dealing with Senior Citizen problems that she has received the regional commissioner's Certificate of Appreciation from the Department of Health, Education, and Welfare, "because of (her) efforts in helping people to become aware of their rights and responsibilities under the Social Security Program."

In working on legislation affecting our Senior Citizens, it is essential that each Member of Congress know what is happening at the local level and that we remain in constant communication with this segment of our community.

The funding of future intern programs is essential to permit us to fully carry on this worthy program for this vital segment of our society.

It should also be noted that this program places a substantial burden upon those staff members responsible for making it successful. Accordingly, it is requested that a small staff be authorized to administer the program and to enhance a continued, expanding program.

I urge the Committee's favorable consideration of H. Res. 673 so that the Congress will be assured of having the benefit of a worthy Senior Citizen Intern Program.●

A TRIBUTE TO BILL COX, GARDENA CITY COUNCILMAN

HON. CHARLES H. WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1978

● Mr. CHARLES H. WILSON of California. Mr. Speaker, over the past 16 years that I have been the Representative for California's 31st District, I have had the pleasure to know and work with some very outstanding local officials. By and large, the 31st District can take pride in the quality of its local representation—Bill Cox of Gardena is no exception to that tradition.

For the past 31 years, Bill and his wife, Loreeta, have lived in Gardena where Bill has been employed for most of that time with the Northrop Corp. At Northrop, he has been instrumental in helping to develop the design of automated systems, an important technological improvement in this country.

Before being elected to serve on the Gardena City Council, Mr. Cox worked on a wide variety of projects in several organizations. He has been a member of the Art Association, a life member of the PTA, the Gardena Optimist Club which seeks to promote positive activities in the community and honor outstanding residents, the Veterans of Foreign Wars, and the parks and recreation commission for the area.

Obviously, this list indicates that Bill Cox is someone who has a varied background—someone who enjoys a good many activities—and someone who brought that interest and enthusiasm to his job on the city council.

Bill Cox was first elected to the city council in 1971 and has been reelected to that position until he just recently announced his retirement. In 1974, he served as mayor pro tempore. On the council, he served on the committees of finance, rubbish, school liaison and affirmative action.

In each of these assignments he performed his duties with dedication and excellence. He has devoted a great deal of time and effort to his job and his work has helped make Gardena one of the best places to live in the Los Angeles area.

I would like to join with the many coworkers and friends of Bill Cox who have had the opportunity to know firsthand the type of person he is and his outstanding record of achievement on the Gardena City Council. I am sure all would agree that he is a dedicated public servant, and a good neighbor to all who have the opportunity to know him.

It is my pleasure to add my best wishes to Bill and his family upon his retirement. I know his presence on the council will be missed.●

WOODBRIDGE, N.J.—AMERICA'S SAFEST LARGE MUNICIPALITY

HON. EDWARD J. PATTEN

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1978

● Mr. PATTEN. Mr. Speaker, I would like to take this opportunity to note that Woodbridge, N.J., has been recognized by the Federal Bureau of Investigation as the safest large municipality in the United States.

The determination is based on statistics from a national survey of municipalities with populations in excess of 100,000 people.

The residents of Woodbridge should be proud of themselves and proud of the administration and leadership within the police department. I know the policemen, from officers to the patrolmen, strive to not only control crime, but to also stay in touch with the residents there.

It was aptly put by the News Tribune, a daily newspaper in Woodbridge, in an editorial on April 11:

The Woodbridge example stands as an excellent tribute to efficient police work and to the awareness and cooperation of the citizenry in taking an active role in assisting in the campaign against crime.●

EXCEPTION TO AMBASSADOR STRAUSS' LETTER

HON. MARY ROSE OAKAR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1978

● Ms. OAKAR. Mr. Speaker, because the Hon. Robert S. Strauss is the Special Representative for Trade Negotiations to the President, I feel it is important to take exception with the rationale expressed by Ambassador Strauss in his letter of April 10 to me. His was a response to my original correspondence to the President, wherein I attempted to convince the administration that aid must be given to our import-plagued domestic metal fastener industry.

In my congressional pursuit to turn around the President's decision to reject the U.S. International Trade Commission's recommendation for tariff relief, I feel it is important to share my observations on this recent communication with my colleagues because the House Ways and Means Committee will be addressing itself to this vital issue tomorrow.

(The comments follow:)

COMMENTS ON AMBASSADOR STRAUSS' APRIL 10, 1978 LETTER TO CONGRESSWOMAN OAKAR

Mr. Strauss' letter repeats the refrain he first presented during the Feberuary 27 hearing before the House Trade Subcommittee that the economic condition of the fastener industry is improving and therefore, that import relief is not needed. It seems to me that it is absurd for the Administration to cling to a position that flies in the face of the facts. According to the International Trade Commission's April 1978 update of industry data:

Domestic fastener production dropped by 13.4% between the first half and the second half of 1977.

The industry's profits dropped by almost 70% in the second half of 1977.

Imports increased their share of the U.S. market from 43% in the first half of 1977 to 44% in the second half.

Employment continued to decline in the second half of 1977.

In addition Commerce Department figures show that there was a 35% increase in fastener imports in the first two months of 1978 over the corresponding period in 1977.

Even before the ITC update report, the Federal Preparedness Agency warned that the industry was "deteriorating rapidly" on the basis of its 2-year study of the matter. The ITC, after a 6-month investigation, found that rising imports were the cause of serious injury, or the imminent threat thereof, to our fastener industry.

Thus, despite overwhelming evidence to the contrary, the Administration persists in the fiction that the fastener situation has stabilized. (Mr. Strauss' letter states, "The figures just released by the USITC do not affect our assessment of the fastener situation.")

One can appreciate that Mr. Strauss is in the difficult position of supporting the President after the President rejected his own advice to provide import relief. But, this cannot justify providing misinformation to any member of Congress as this letter does. Referring to the ITC update report, the letter asserts, "Profits have remained at or above the average for all manufacturing . . ." The fact of the matter is that fastener profits in 1977 were well below profits for all manufacturing. The Federal Trade Commission's Quarterly Financial Report series for 1977 shows that the pre-tax profit on sales for all manufacturing was 8.7%. The 1977 pre-tax profit for the highly capital-intensive fastener industry was 7.6%. The pre-tax profit on all manufacturing for the second half of 1977 was 8.4%, whereas the pre-tax profit for the fastener industry was only about 4.8%.

Congress is called upon to decide the fastener case on the merits within the framework established by the Trade Act of 1974. When erroneous information is presented to Congress in connection with the resolutions of disapproval pending before it (H. Con. Res. 483 and 485; S. Con. Res. 66), the Administration can only damage its credibility with the Congress and the American people.

Other statements in the letter are equally disturbing. For example, the letter claims, "The Japanese have unilaterally acted to stabilize their exports and encourage export price increases and there is evidence that substantial price rises are already occurring." If the statement is valid, one would expect the unit value of such imports to rise, since Japan accounts for about 75% of U.S. fastener imports. But in fact, the unit value of these imports has declined as revealed in the letter itself: "In value terms, imports have lost market share . . ." If the import market share is declining in value terms, but is not declining in quantity, this can only mean that the unit value of these imports is dropping, thereby putting additional pressure on the domestic industry.

This letter makes it clear that the Administration's position in this case is untenable according to the merits and according to the policy established by Congress in the Trade Act of 1974. Administration officials privately concede that a mistake was made in denying relief to this defense-essential industry. In that regard Mr. Strauss correctly observed in his letter, "Even if the President wished to do so, he could not reverse himself under the escape clause authority." However, Congress has the authority to correct the President's mistake by adopting the resolutions in question. It would be a welcome and refreshing change from the norm if the Administration would "own up" to this mistake and support the override resolution now pending before Congress.

IMPORTS OF NUTS, BOLTS AND LARGE SCREWS

	Pounds	Dollars
1977:		
Jan.-Feb.	122,106,138	$43,396,482
1978:		
Jan.-Feb.	165,697,922	58,138,396

Pounds imported in the period Jan.-Feb. 1978 were 35.7% above the pounds imported in the corresponding period in 1977.

Dollar value imported in the period Jan.-Feb. 1978 was 33.9% above the dollar value imported in the corresponding period in 1977.

BATTLE OVER THE BREEDER RAGES ON—BUT WHY?

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1978

● Mr. TEAGUE. Mr. Speaker, in my opinion, Richard Myers of the publication Energy Daily has written an exceptionally responsible and significant commentary concerning our present stalemated efforts to achieve a productive breeder reactor program.

It is very important that all Members of the House know the facts of our situation as assessed in the April 14 issue of that publication. This continues to be an issue of crucial importance for our Nation's future.

I consider this article accurate and full of insight.

BATTLE OVER THE BREEDER RAGES ON—BUT WHY?

(Commentary by Richard Myers)

Throughout the continuing war of words over the breeder reactor program, easily the most interesting item of speculation has very little to do with whether the Clinch River plant will, or will not, be built. Granted, this appears to be the issue around which the whole, apparently interminable debate revolves. Clinch River lingers on like an undigested meal; it steals the headlines and masquerades as news, when in fact the debate has degenerated into terminal haggling.

Olin Teague, Mike McCormack, Walter Flowers, Marilyn Lloyd and the other members of the House Science and Technology Committee made their collective peace with the issue of Clinch River on Wednesday morning. Soon the names will change—to Henry Jackson, Frank Church, James McClure—and the haggling will start again. The House Science Committee, it should be noted, reached no compromise with the President; in the end there was no deal.

The President remains the most curious of the principals. For Jimmy Carter the breeder is a true test of his nuclear sensibilities and it is not transparently clear what motivates him.

Olin Teague, chairman of the House Science Committee, has spoken to Carter about the breeder. Teague said that he is not wedded to the Clinch River project, but he is wedded to breeder technology. The President, says Teague, agreed: Yes, described his views too.

Or we can believe what we hear from senior executives in the electric utility industry, for whom Energy Secretary James Schlesinger has painted an altogether different picture of the President. Schlesinger made two points: 1) as long as Carter is President there will be no approval for any advanced reactor program which would, could or might lead to construction of a reactor; and 2) no matter what nuclear technology, science and engineering can devise in the way of a foolproof, diversion-proof, terrorist-proof nuclear fuel cycle, it will never be good enough, because technology is never a sufficient answer.

This is a rather more alarming portrait. The first item implies a visceral, undisciplined reaction to a particular type of technology; and visceral reactions tend to be lacking in simple reason and common sense and least amenable to their sanguine influence. The second item implies that the International Nuclear Fuel Cycle Evaluation, which Carter inaugurated last fall, is fundamentally a ceremonial exercise in which the results are not to be taken seriously—certainly not seriously enough to be acted on—and in which the real action is accomplished with mirrors or some similar trick device.

This is where we are hung, with a President of whom it is possible to assume either the very best or the very worst. We may take him for a reasonable man, conscious of his place in history, who realizes that in some distant future it may be necessary to build some commercial breeder reactors—yes, even in America—and that the means to do so must be prepared in advance. A man so thoroughly steeped in the King James Version cannot escape the analogy with the parable of the maidens, who were unprepared with oil for their lamps and thus missed the wedding.

Or we can believe that, on this issue, the President's viscera rule his reason, that he approaches the breeder and recoils instinctively, that something in his mind crowds out common sense. Perhaps it is a large fear of annihilation; perhaps many lesser fears—of plutonium seeping into rivers and waterways, slowly and subtly poisoning people and land and air. Perhaps it is the last vestige of the farmer, the man with his roots in the soil, in Jimmy Carter; for there is something terribly alien about breeder technology and plutonium in the organic, natural cycle of things.

This is not to say that Jimmy Carter is wrong about Clinch River. Soon after he arrived at the Department of Energy, Undersecretary Dale Myers was asked his opinion of the Clinch River project. Here was a man who should recognize the sensitivity of the issue: he was fresh from Rockwell, which had just lost the B–1 bomber project. Myers replied that he knew little at that point about the fine points of the U.S. breeder program. But he did know that carrying forward a major industrial project like CRBR was difficult enough at the best of times; and that when projects get too controversial, burdened with too many external influences, then they are best left to die. Clinch River has reached that point.

So it dies; then what? Design a couple of other breeder reactors, double or triple the size of the luckless CRBR, employing variations of the standard uranium/plutonium fuel cycle. But if you're Jimmy Carter, you only design; you do not build a reactor. You do not even say that, at some indeterminate time, you will build a reactor. You simply design. Why?

The well practiced response is that such a commitment would prejudice the outcome of the International Nuclear Fuel Cycle Evaluation, that demonstrating breeder technology might cast doubt globally on the President's nonproliferation policy.

There are two things wrong with that argument: the doubt already is there, in plenty, around the world; and construction of a reactor would follow the outcome of INFCE, not precede it.

In fact, it is not possible to have a program to develop a new kind of power plant without building one of them. This was the great lesson of the late 1960s and early 1970s. The first pilot-scale breeder reactor (EBR–2) had been built at Idaho and placed in service in July 1964. Everyone, particularly the project team at EBR–2, waited for the next step, which was to be construction of a demonstration plant.

At the time, Milton Shaw was director of reactor research development at the Atomic Energy Commission. Shaw was passionate in his conviction that a sound engineering base was essential to successful reactor development; that broad industrial participation was a *sine qua non*; that rigorous testing and evaluation of components and fuels were a prerequisite to further development (hence such facilities as the Fast Flux Test Facility and the Liquid Metal Engineering Center). In short, it was Shaw's view then that the adolescent breeder program must pass through the learning phase associated with young adulthood if it was ever to enjoy the benefits appropriate to maturity and old age. Shaw was in it for the long haul and he was not universally loved for his approach.

In particular, out in Idaho at EBR–2, the project team fretted and grumbled. Ask those men. They will tell you that during those years the breeder program suffered from the lack of a mission; that there was a lot of peripheral fiddling but no target, no plant, toward which the program as a whole was moving. They will tell you how the French spent a lot of time at EBR–2, assessing its design and operation, and that they went home and built Rhapsodie (their first breeder) and then Phenix.

But there is a lesson in the grumbling: you can design and develop and build pumps and valves and steam generators and specialty steels for piping—you can do all that and what you end up with is an impressive collection of pumps, valves, steam generators et cetera and not a breeder reactor at all. Nothing that someone in 2006 could call on if it's needed.

So it is true that Shaw's influence probably slowed the breeder program long enough for Jimmy Carter to catch up with Clinch River; but it is equally true that Shaw's passion for painstaking reactor engineering now puts the U.S. in the happy circumstance of not having to build CRBR, of being able to extrapolate to a larger size, say 650 megawatts, with considerably less technical risk than might otherwise be the case.

It would even be possible to structure such a project so that it offends only a limited number of the political constituencies with an interest in the outcome. Clinch River, in fact, provides the model for what not to do. Do not, for example, invite electric utility participation in a successor to CRBR; with Clinch River that financial presence makes it difficult to view the project as anything but an attempt to advance commercialization of the technology. So also with licensing; it conveys the same sense of a drive toward commercial application.

Any successor to CRBR would be best left as a government project, if it's commercialization that Carter fears, as he says. Utility participation could be excluded and licensing foregone for that one plant, in the recognition that both represent institutional obstacles of considerable size, which will tend to inhibit commercial application in the future.

In fact, the path of preference for the breeder at this time should take it in the opposite direction from every other technology the Department of Energy is developing. Every other technology must justify its present funding allotment on the basis of its future commercial potential; the only hope for the breeder is to strip it of its commercial pretensions, for the moment at least. What is important is having a reactor project as the apex of the program; commercial introduction and institutional constraints like utility confidence and licensing can be dealt with, as they should be, sometime in the future.

It is possible to redirect the breeder program absent CRBR, so that it is truly a demonstration, which does not violate the criteria Carter has established against commercial introduction. What is it then, which makes the President so reluctant to make the commitment to build another demonstration plant? What is the source of his fear that this one plant would represent a sort of magic threshold? Cross it, build one demonstration reactor, and you've built a commercial industry?

Which brings us back to Idaho. What used to be called the National Reactor Testing Station (now the Idaho National Engineering Lab) is home to much of the nuclear industry's past. The hundreds of square miles of government reservation outside Idaho Falls is littered with projects and reactors and machines—early prototypes, a giant hangar for a nuclear airplane that was never built and which now houses the support facilities for the Loss of Fluid Test facility. There were over 51 reactors built at Idaho; only 16 of them are still operable and at least two were built and never operated.

If they serve as a testimony to anything, all those machines attest to the number of times things have been built and never deployed on a wide scale—just as a demonstration breeder reactor might be built and the technology never deployed commercially. Perhaps there is a salutary lesson for Jimmy Carter out in the Idaho desert. Perhaps he could spend a little time among the ghosts out there; perhaps it would even help him to exorcise whatever troubles him now about building just one reactor.●

INTRODUCTION OF INVESTMENT TAX CREDIT

HON. JIM LEACH

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1978

● Mr. LEACH. Mr. Speaker, yesterday I introduced legislation which amends the Internal Revenue Code of 1954 to provide that certain farm buildings shall be eligible for investment tax credit. This legislation is being introduced in an attempt to clarify existing tax laws which are often not uniformly interpreted and enforced.

Taxpayers are presently entitled to a credit against their tax liability equal, in general, to 10 percent of their investment in certain qualified productive assets. The rate of this investment credit was temporarily increased to 10 percent from 7 percent as of January 25, 1975, and is scheduled to revert to 7 percent on January 1, 1981. President Carter has recommended as part of his tax reform program the 10 percent level be retained.

Property eligible for the investment credit consists of depreciable property having an estimated useful life of 3 or more years which is either tangible personal property or other tangible property (such as removable equipment, fixtures, and heavy machinery) that is used as an integral part of the productive process. Buildings currently do not qualify for the credit.

This interpretation is not in keeping with modern agricultural production methods. Currently equipment used in raising hogs or milking cows qualifies but the structures in which this takes place do not. The hog house is just as much an integral part of the productive process as the farrowing crates, the watering devices, feeding, ventilation, and cleaning equipment used within the hog house.

The combination of the equipment and the building comprise a production unit whether the item produced is meat, milk, wool or grain being held for later sale when more advantageous to the farmer and the taxpaying public.

My bill strives for equity and for removing the shadow of doubt which currently hangs over our farming community.

Some farmers are filing for the investment credit for the entire production unit—the building and the equipment within it. Many of those who file in this manner are receiving the credit but many others are being denied the credit for a substantial portion of their investment. Thus we have an unfortunate situation where an inequitable rule is being inequitably applied.

As evidence of growing concern among hog producers alone, the National Pork Producers Council receives from 8 to 10

calls each week from farmers who have been denied the investment credit by the Internal Revenue Service. We are seeing many cases where one farmer is allowed an investment tax credit for a newly-built hog house while another farmer is only allowed credit for the new equipment within the building. This inequitable treatment of farmers making major investments in the future of their families and in the future of the Nation's food supply must be corrected. My bill is designed to do just that.

As the House Committee on Ways and Means continues working toward completion of an overhaul of the Nation's tax laws, this would be an opportune time to include the legislative language I am introducing today. I hope the committee will seriously consider this simple approach to clearing up a question of growing concern to our farmers.

The President has recommended the investment credit be made available whenever industrial buildings are constructed. As his tax package is considered, the needs of farmers should be considered along with industrial investment. The investment credit, originally proposed in 1961 to stimulate the lagging modernization of the country's productive facilities, has proven to be an effective incentive for capital investment. Farmers are willing and, in many cases, anxious to make such investments on their farms but should receive tax treatment equal to that of the nonagricultural business sector.●

ARMS CONTROL AND DISARMAMENT AGENCY

HON. W. HENSON MOORE

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1978

● Mr. MOORE. Mr. Speaker, my vote today against the fiscal year 1979 authorization for the Arms Control and Disarmament Agency—H.R. 11832—was given to protest the administration's negotiating toward Soviet defense supremacy at SALT II negotiations. I find the President and his negotiator, Paul Warnke, persist in unilaterally abandoning development of weapons while asking for little, if any, concession in return from the Soviets.

The bargaining table can be used as an instrument of peace, but lasting peace cannot be achieved without a reduction of military and nuclear stockpiles as well as technology achieved on a mutual basis. History records Soviets respond to our arms limitation advances only through hard bargaining supported by firm development commitments. Weakness is easily detected and exploited by the Soviets and I find the Kremlin is now taking every advantage of the President's direction of those negotiations.

The Soviets have little use for a neutron bomb. We need one for NATO and may have to depend on France to provide it. Rather than our unilateral rejection and subsequent attempt to resurrect the neutron bomb, it could have served as a means to reduce Soviet nuclear technology advances in space or missile deployment right from the start. Unilateral cancellation of the B–1 Bomber, delays in MX missile development, and cruise missile production and launch limitations also make the U.S. posture vulnerable without any arms limitations on the part of the Soviets.

I support a commitment to use the Arms Control and Disarmament Agency as a means to achieve mutual reductions in nuclear capability and have voted for authorization bills such as this for ACDA in the past. Without an assurance that this goal will be achieved or that the President will get tough at the bargaining table, I could not give my support to H.R. 11832.●

LEGAL AID IN TEXAS

HON. J. J. PICKLE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1978

● Mr. PICKLE. Mr. Speaker, the Congress, on December 15 of last year, completed action on a bill to extend the life of the Legal Services Corp. through September 1980. Legal services for indigent citizens who could not afford an attorney was an outgrowth of President Lyndon Johnson's war on poverty and the Economic Opportunity Act of 1964. I thought my colleagues would be interested in an article that appeared in the Texas Observor by Marshall J. Breger, a member of the law faculty at the University of Texas in Austin, and formerly a member of the board of directors of the Legal Service Corp. It reviews the considerable progress made these past years in providing legal representation to indigent Texans. The article follows:

[From The Texas Observer, Feb. 17, 1978]

LEGAL AID IN TEXAS: MORE MONEY, MORE SERVICES

(By Marshall Jordan Breger)

Since 1924, when the state's first volunteer legal aid society was founded in Dallas, legal aid for the poor in Texas has been a service in short supply. Nominally supported by the organized bar (if only to head off government meddling in the profession), legal assistance has been continually underfunded although never in want of clients.

Through the first half of this century, voluntary legal aid efforts in Texas were organized by local bar associations and law schools. This work, however, was but a poultice. The total legal aid budget for Texas in 1961 was less than $70,000. In 1964, only seven cities in the state had even one full-time legal aid attorney on call. Lawyers tended to argue complacently that "No legal aid system is needed in our town."

During the late 1960s, many members of the Texas Bar opposed the legal services program funded by the federal government through the Office of Economic Opportunity. When the director of OEO's office of legal services tried to sell his agency's program at a 1967 Austin conclave, bar leaders roasted him mercilessly. In 1976, however, when the new federal funding vehicle for legal aid, the Legal Services Corporation, held a meeting of its board of directors at the University of Texas Law School in Austin, State Bar president Gibson Gayle gave the welcoming address. In the last decade, State Bar leadership, if not local bar associations, has moved solidly behind federal subventions for legal aid. A similar shift has occurred in the Texas congressional delegation. In 1966, Sargent Shriver felt obliged to assure George Mahon that legal aid lawyers were not and would not act as social revoluntionaries. Today, Mahon presses for legal aid in Lubbock.

Money for legal aid efforts has always been hard to come by. However, the South and Southwest bore the brunt of fund shortages in the days before LSC's creation, when OEO parceled out the available money. Southern politicians and bar leaders feared that federal subsidies for legal aid would bring government interference, if not racial integration. By the time they reluctantly got in line, the spigot had run dry. Thus, while the South and Southwest were home to almost 38 percent of the nation's poor, the two regions received only 15 percent of the federal legal services dollar.

When the LSC took over national legal aid functions in 1975, Texas' federal allocation was about $1 per poor person for legal aid. In contrast, New York and California claimed over $4 per poor person for their legal efforts. Three years ago, only 20 of Texas' 254 counties had any legal aid scheme at all. The rural poor were largely ignored. Less than 50 percent of the state's indigent were even nominally served by OEO legal aid, and even these were covered largely on paper. A system with less than one lawyer for every 10,000 poor people can't be expected to do much.

Recent appropriations have raised the national legal services budget from $70 million in 1970 to $205 million for fiscal 1978. Some of the new money has been used to repair inflation-related damage done to programs which were originally funded at subsistence levels. But the need to play catch-up ball has not forestalled efforts to extend services to uncovered areas and steer new funds into ongoing programs in areas long underfunded. The object has been to equalize funding levels nationally. Such a policy bows to pressures for equity and to political considerations, and Texas has profited on both counts.

Local programs in Texas should benefit from the push for equalization. Expansion aside, Texas funding increased by more than $700,000 in 1977 to $4,933,182. This is an impressive sum for a program which ran on just over $2 million in pre-LSC 1975. Beginning this month, almost 1.8 million of Texas' poor—65 percent of the state's poverty population—will be brought under what is at least theoretical legal service coverage.

Expansion plans originally called for existing legal aid programs to tack on unserved contiguous areas. In keeping with these plans, the Houston program, now called the Gulf Coast Legal Foundation, increased its budget to cover as yet unserved Galveston and Texas City. In early 1977, the Tarrant County program expanded to set up offices in Amarillo and Lubbock. In 1978, Tarrant County reached out and encapsulated an ailing non-LSC program based in Abilene. Ultimately, the Panhandle may have its own program running down to Midland and Odessa.

Nor has the Rio Grande Valley been forgotten. Texas Rural Legal Aid, based in Weslaco, has expanded into the "Winter Garden" region. A branch office serves Crystal City and satellite offices have been opened in such towns as Del Rio, Eagle Pass and Uvalde. In all, TRLA now serves some 24 counties in South Texas, an area with an average per capita income of $1,000 and a 44 percent share of its population living below the poverty line.

The legal aid attorneys in the Valley concentrate their efforts on voting rights litigation and employment discrimination cases.

The very existence of legal aid in these critical counties can be expected to alter power relationships between government and the poor and may serve as a check on bureaucratic arbitrariness. Access to the courts could provide a vital end-run around governmental intransigence and impropriety for inhabitants of such places as Crystal City and Uvalde.

The litigation docket of TRLA reflects the program's existing emphasis on curbing official misconduct. Last March, in *Castanada v. Partida*, the U.S. Supreme Court found a marked underrepresentation of chicanos on Hidalgo County grand juries to be unconstitutional discrimination. The previous November, in *Barrera v. Zapata Independent School District*, a federal district judge reinstated with back pay several teacher aides who had been refused reemployment because they had in some fashion breached their area's political patronage system. Other TRLA lawsuits are in progress against state education authorities, local welfare officials, and water board districts.

In December of 1976, TRLA opened a farmworker division to serve the special needs of migrant laborers. While still underfunded, the directors of the project hope to focus legal attention on issues of particular importance to migrant and seasonal farmworkers—administration of the Farm Labor Crewleader Registration Act, the Fair Labor Standards Act, and civil rights questions bearing on farmworker unemployment.

For too long legal aid administrators have neglected the rural poor. When Washington bureaucrats thought "poverty" they perceived, in their minds' eye, rioting ghetto youth. Rural poverty was invisible to urban social engineers. The Valley effort, coupled with substantial budget increases for TRLA's migrant labor division, will go far to repair the neglect of the rural poor on the part of the legal services community.

Perhaps the major development in the delivery of Texas legal services, however, may prove to be the recent creation of an East Texas Legal Services Corporation. This new unit covers a swath of East Texas that includes Smith, Harrison, Gregg, Rusk, Nacogdoches, San Augustine, Angelina, Carolina, Jefferson and Orange counties—a rural area that is among the state's most politically conservative regions. A rag-tag group of poverty lawyers had already hung up shingles but they can be counted on the fingers of one hand. Except for these few, and a small volunteer office staffed by students from UT Law School that provided services in Tyler some years ago, there has been no locally sponsored legal aid effort to speak of. (In Beaumont, a two-lawyer Jefferson County Legal Aid office was operated for many years by a local board of directors with private funding. That office closed its doors on Dec. 31, after its directors balked at association with the larger East Texas scheme. Its staff has since been hired *in toto* to serve in the new Beaumont office of East Texas Legal Services, so no loss of local expertise or lapse in service has ensued.)

The LSC is putting $541,558 a year into the new East Texas operation, enough money to keep some 18 to 20 poverty lawyers and supporting staff at work. The corporation sought at first to expand the Dallas program's catchment area to include Beaumont, Tyler and Nacogdoches. The Dallas board eventually demurred, recognizing that its interests and concerns differed significantly from those of its rural neighbors to the east. The LCS's attempt to centralize operations in Texas yielded to geopolitical realities.

The locally controlled program will have offices in Beaumont, Tyler, Longview and Nacogdoches and send out circuit-riding attorneys to towns in surrounding counties. Already, its presence has been endorsed by the Beaumont and Orange county bar associations. A number of chicano groups had objected that the program was attorney-dominated, but their complaints were settled when representatives of the League of United Latin American Citizens were placed on the board of directors.

A further development in the growth of Texas legal aid is centered in Austin. The Travis County Legal Aid and Defender Society serves as a conduit for federal funds used to establish the Texas Legal Services Center. The center holds a watching brief for the state's legal services community in the Legislature, coordinates litigation, and reduces duplicate effort among legal aid organizations. While it is still a nascent organization, the center could prove a powerful force in Texas legal aid development.

Access to justice costs money. LSC planners figure on an annual cost of $7 per poor person to provide one lawyer for every 5,000 clients. Given a national average of one lawyer per 580 persons, the LSC goal is extremely modest.

There has, however, been considerable progress. In 1975, many legal aid devotees feared that congressional enactment of the Legal Services Corporation Act was the final step in the dismantling of the most successful and efficient program spawned by Lyndon Johnson's "war on poverty." Such access to justice as is enjoyed by the poor is still severely limited, but the earlier fears at least have subsided. While disagreement exists over questions of client confidentiality, wage structure, and unionization of LSC attorneys and staff aides, field and corporation attorneys now work in comparative harmony. Provided that congressional budgetary largesse and local bar support are forthcoming, access to justice may yet become more of a reality and less of a distant hope for indigent Texans.

(Observer contributor Marshall Breger, a member of the law school faculty at the University of Texas at Austin, is spending the 1977–78 academic year at a former member of the board of directors of the Legal Services Corporation.) ●

A GREAT SUCCESS STORY

HON. GUY VANDER JAGT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1978

● Mr. VANDER JAGT. Mr. Speaker, in recent years it has been my privilege and great experience to meet and become acquainted with Kemmons Wilson, chairman of the board of Holiday Inns International. What a remarkable gentleman and what a remarkable career. Mr. Wilson epitomizes precisely what our country is all about—permitting a free people to do for themselves what they desire in reaching for success and happiness.

In recent days, a very special feature story on Mr. Wilson appeared in the Detroit News magazine edition of April 16. Permit me to stress one particular quote. I think it says a great deal about this outstandnig man. Mr. Wilson commented:

When you get an idea, you've got to think of a reason for doing it, not a reason for not doing it.

The entire article, entitled "If You Haven't Slept in His Bed, You Must Have Tasted His Tabasco" follows:

IF YOU HAVEN'T SLEPT IN HIS BED, YOU MUST HAVE TASTED HIS TABASCO

(By John F. Mariani)

(Kemmons Wilson invented Holiday Inns not for rich people, but for the rest . . . "'cause the good Lord made so many of them.")

Although you've probably never heard of Kemmons Wilson, chances are you've slept in his bed. You've probably also eaten more of his food than anyone else's except your mom's and McDonald's.

This year his company will gross a billion dollars, and the London Times has called him "one of the thousand makers of the twentieth century."

Not bad for a Depression-born Arkansas boy who never finished high school; but then, as Wilson is fond of saying, "When you ain't got no education, you jes' got to use yo' brains."

Maybe so, but it takes more than simple self-effacement to come up with an idea like Holiday Inns.

The man who invented the Holiday Inn has just turned 65 and offers no indication that he intends to relinquish the reins—despite pressure from younger (better educated) executives who would love to see him take it easier and lapse into retirement. But it's going to take more than Kemmons Wilson's country charm to keep him on as Chairman of the Board of Holiday Inns International 25 years after opening his first motel in Memphis, Tennessee, where his corporate headquarters now sprawl over several hundred acres.

When I first contacted his office for a meeting, I was told Wilson was flying around the Orient on business and would return in ten days, at which time he'd be happy to see me whenever I saw fit.

Wilson's office was far from opulent—panelling galore, a clutter of work, mementos, and family photos. There was a giant "Texas Fly Swatter" complete with a six-inch plastic fly. There were models of airplanes he'd flown himself and of a Delta steamship owned by the corporation.

There was book bound in fake leather lying on a desk. The title read "All I Know About the Hotel Business by Kemmons Wilson". I picked it up and fell right in: 150 blank pages. Wilson put out his hand and chirped a friendly "Har'y doin'?"

He is a stout man with large hands and clean fingernails. His face is ruddy and open, the eyes size you up while the eyebrows move up and down amicably. The hair is a very curious pumpkin color, combed into corporate propriety. For a man who still puts in more than a few 18-hour days, Kemmons Wilson looks like a surprisingly good candidate for the company softball team.

He asked if I'd like to have lunch. I had hoped he would take me to his favorite Memphis barbeque pit, but, since he had just flown in from somewhere, he asked if we couldn't just eat downstairs.

The Holiday Inn buffet was very decorated with plants and bright colors. Everyone said hello to Mr. Wilson and welcomed him back from the Far East. A black cook behind the counter offered him some chicken and dumplings but Wilson patted his stomach and asked for a very small charred piece of roast beef. Then he inquired if the chef had any of them barbequed ribs he'd ordered. "Coming right up, Mr. Wilson. I'll bring them over."

At the table, Wilson started pouring tabasco sauce over everything he ate. "I attribute my long life and health to tabasco sauce," he said, wiping his mouth. "It kills all germs."

The chef brought the ribs and Wilson passed judgment: not bad, but not as great

as the ones in downtown Memphis. Then, sheepish as a pudgy child with a sweet tooth, Wilson ordered a big bowl of soft ice cream, his second most indulged passion. Every Holiday Inn must have a soft ice cream machine and lots of tabasco sauce—in case the boss drops in.

All around us sat younger executives who paid their respects to Wilson as they filed by. Wilson loves playing Big Daddy to these college boys, and there was an obvious air of earned familiarity in the restaurant.

As we chatted, I realized that much of the Kemmons Wilson story had been told and retold by the subject, so many times that he delivered it with all the timing and pacing of a Grand Ole Opry comic. He had prepared lines that worked beautifully in context: "I never wanted to own a million dollars. I wanted to owe a million dollars."

Wilson is generous with the aphorisms: "A man can never be successful until he teaches his wife not to expect him home to dinner."

And he enjoys telling you how he got the Holiday Inn idea in the first place.

Novelist Sinclair Lewis, back in the 1920's, forecast that, "Somewhere in these states there is a young man who is going to become rich. He may be washing bottles in a dairy lunch. He is going to start a chain of small, clean, pleasant hotels, standardized and nationally advertised, along every important motor route in the country. He is not going to waste money on gilt and onyx, but he is going to have agreeable clerks, good coffee, endurable mattresses and good lighting; and in every hotel he will have at least one suite as good as the average room in a modern city hotel. He will invade every town that doesn't have a good hotel already. When he has completed his work, he will be in the market for European chatteaus as fast as retiring royalties have to give them up."

No one took notice of Lewis' advice until one day in 1951 when Kemmons Wilson took a vacation with his wife and five kids in a station wagon.

"It didn't take us long to find out that most motels had cramped, uncomfortable rooms," he says, "and that they charged extra for the children. Few had adequate restaurants and fewer still were air-conditioned. In short, it was a miserable trip."

Wilson had been in building construction for some time and was a wealthy man after years of fiscal ups and downs. Born in 1913 in Osceola, Arkansas, he was raised by his mother, "Doll" Wilson, who lost her job in the Depression, forcing her son to drop out of school and go to work.

His first business venture was selling popcorn on his own inside a movie theater, causing him to be ejected as soon as his profits exceeded the theater manager's. Wilson then bought five pinball machines, built himself a house with the proceeds, and, by the late 1930's, began building houses for other people.

When World War II came, Wilson sold off his business for a quarter of a million dollars to join the Air Transport Command. After the war he was involved with an Orange Crush distributorship, which went bankrupt. He returned to building and, by 1951, was a millionaire.

So, after that miserable station wagon vacation in 1951, Wilson thought there might be a profit in standard motels, the first of which he built on Sumner Avenue in Memphis, where he then lived. It is still standing, although owned by someone else, and is marked with an historical plaque erected by the state. The furniture for that first motel came from a hospital supply company and has been preserved at the corporate headquarters as museum pieces.

"Doll" Wilson did all the interiors for the first and the next 50 inns. The original motel had 120 rooms, all more or less the same. It had a swimming pool, air-conditioning, a restaurant on the premises, a telephone in every room, free ice, dog kennels, free parking, and babysitting available. Later, televisions would be installed. A doctor was on constant call, as was a chaplain.

These amenities are still to be found in every Holiday Inn in the world. And as long as Kemmons Wilson is around, they will continue to be there.

Wilson wanted a distinctive sign, his only requirement being a height of 50 feet. An artist drafted a sketch for what has remained one of the most immediately recognized neon signs of our time—the garish green and yellow standard with a gold directional arrow and a throbbing star perched atop its buzzing pylon. There is one in the Smithsonian Institution.

For a long time Wilson steered clear of the more luxurious style of hotel, living by one of his favorite homilies: "You can cater to rich people, and I'll take the rest. The Good Lord made so many more of them." Wilson still insists that every Holiday Inn room has a fly swatter in it, no matter what the climate.

This is a man in the public eye who refuses to take his name out of the phone book because he wants to hear his customer's complaints directly.

Within a year and a half of the opening of his first inn, Wilson had built three more. He then called on Wallace E. Johnson, a well-known home builder with strong business connections all over the country, to help him plan for expansion to 400 motels nationwide. By the end of the decade, there was a Holiday Inn in Montreal, Canada, and, by 1964, the 500th link in the chain was completed.

Wilson and Johnson used to joke that, given the impetus of the federally financed interstate highway system, begun in the late fifties, they could fly across America dropping sacks of flour at every point where an interstate crossed a major road and put a Holiday Inn there. When a rival motel chain owner was once asked how he decided to acquire property for a new motel, he answered, "I just put one up on the corner opposite a Holiday Inn."

Wilson's kind of optimistic expansion had been the result of franchising the operation, and, Wilson now admits, the company did not keep a careful eye on its franchise owners. For although Wilson would send around inspectors regularly to check up on standards, there was a great deal of difference from one motel to the next. And, generally speaking, Holiday Inns were almost synonymous with mundane, often tasteless lodgings.

Usually they were squat, one or two-story buildings that looked as though they'd been designed by a bricklayer. And, the interiors ran to bargain basement eclat.

Nevertheless, profits soared until all the other motel chains burgeoned in the late sixties. By 1973, Holiday Inns had expanded to more than 1,500 locations internationally—though the market had been saturated since 1970. Then the energy crisis of the mid-seventies drove prices up and profits down.

After some rough years, the company retrenched, actively seeking to retire some of the older, substandard inns and to get into a more luxurious class of hotels. New management was brought in to head a Hospitality Group. Still, although Wallace Johnson retired and Wilson no longer was majority stockholder, no one would dare suggest voting their founder out of the board chairmanship. And Wilson has no intention of resigning.

He refuses to worry about past mistakes, but he admits that his biggest misjudgment involved his refusal to buy into the contract of a young rock star named Elvis Presley back in the fifties.

I was taken on a tour of the facilities there at the headquarters called Holiday Inn City. In one building, dozens of young women sit at Holidex communications consoles taking reservations from around the world, handling up to 750,000 messages in one day. The system can tell a caller from Ohio what rooms are available in Kuching, Malaysia, how many miles the Kuching Holiday Inn is from the airport, what kind of food is served, what the convention facilities are, and so on.

Later, I visited the Holiday Inn University—88 acres at Olive Branch, Mississippi—whose technical facilities might be the envy of Harvard Business School. There are videotapes on every imaginable innkeeping subject—including a ten-minute reel showing how a bartender can tell if a beer glass is really clean or not from seeing how the foam clings to the sides.

As the traditional luxury hotel suffers from low occupancy, Holiday Inns International is now entering into the construction of hotels far more ambitious architecturally than anything Wilson dreamed of back in 1952. The prestigious journal *Interiors* recently called the new Holiday Inn in Chicago "smashing—superbly professional, subtly satisfactory, and surprisingly sophisticated."

Back at his office, Kemmons Wilson continued to hold forth on the common man's approach to big business: "When you get an idea, you've got to think of a reason for *doing* it, not a reason for not *doing* it."

He sure had done it. More than anyone else, it was Wilson who had radically changed the travel habits of America and of the world. He'd standardized the room at the end of the road so successfully that hotels in Kalamazoo, Michigan, now look exactly like those in Katmandhu, Nepal.

I asked if I could get some photos of him with the Texas Fly Swatter, and he happily obliged by sitting at his desk and whacking the hell out of the plastic insect sitting on his annual stockholders' report. He then gathered up some old volumes of Holiday Inn publicity stories and began to pore over them with the delight of a grandfather reviewing his progeny's growth. He'd point to some particular, favorite photo, a shot taken with some bigwig like Prince Rainier perhaps. Or a picture of his late mother, "Doll", dancing with him at a Christmas party.

Not once did Wilson indicate that time was running short for the interview, but, after he'd shaken my hand and we'd said goodbye, I lingered for a moment at the door, a last question popping to mind. But, when I looked at Wilson, he was already at his desk and picking up the phone. Business is business.

When I got to my motel, I sifted through the press material Wilson's secretary had given me. I noticed that Holiday Inns International is currently involved in building a motel in South America. The release said that the building would be constructed in the U.S., broken up into modules, shipped down the Mississippi to the Gulf of Mexico, into the Atlantic and up the Amazon, where it would be re-assembled.

I tried to envision this massive undertaking, but all I could see was Kemmons Wilson sitting on the lead barge, tempting the piranhas with his dangling toes and tossing off sacks of flour—staking out the choicest locations at every bend of the river.

He may not wear the white suit and bow tie of Colonel Sanders, but Kemmons Wilson knows how to work the heart of the common man—it doesn't matter where.●

TRIBUTE TO MR. JOHN STALKER

HON. THOMAS P. O'NEILL, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1978

● Mr. O'NEILL. Mr. Speaker, when the history of American child nutrition programs is written, one name will appear prominently among those leaders who pioneered excellence and personified commitment. That name is Mr. John Stalker of Massachusetts.

It was nearly four decades ago that John Stalker assumed leadership of a fledgling program that was to set the standards for child nutrition programs across this country. Few could visualize that those programs would eventually provide sound nutrition for more than 26,000,000 students each school day.

The National School Lunch Act of 1946 was but 5 years old when John Stalker achieved a major breakthrough—the first State legislation which subsidized costs per meal for student meals.

That precedent for excellence was the first of a legion of others:

For the national association which he helped establish, John Stalker was a leader in designing its emblem, an extended open hand supporting a sheaf of wheat, and including the Latin phrase "Finis Coronat Opus" (The End Crowns the Work.")

For the 1965 Massachusetts legislation which established nutrition education as an integral part of all child nutrition programs.

For the 1971 Massachusetts legislation requiring lunch service to all eligible children; breakfast availability to the same population; State and local subsidies to Federal appropriations to local school districts to insure that students would have nutritious meals.

John Stalker is the dean of State directors of school food service programs. However, school food service is an inadequate phrase to describe the scope and the depth of Mr. Stalker's involvement.

How many can appreciate John Stalker's involvement over four decades in influencing the legislative processes of the Commonwealth of Massachusetts?

How many can appreciate John Stalker's influence upon the U.S. Congress as they have deliberated on the future of national child nutrition programs?

How many can appreciate John Stalker's wise contributions to the national legislative efforts of American School Food Service Association—a professional organization that John Stalker has served without remuneration for more than three decades?

How many can appreciate John Stalker's participation in Massachusetts School Food Service Association for three decades and more?

Many.

Like those who appreciate the heritage of accomplishment. Like those who understand that in the accomplishment of others is the promise of our future. Like those who realize tomorrow's reality is today's efforts.

John Stalker is our today in his accomplishment and his commitment. John Stalker is our tomorrow in his promise and his legacy. No more could be asked of any person.

John Stalker epitomizes leadership.

No more—except to accept our gratitude.

Without objection, I ask Congress to join in saluting John Stalker for dedicated devotion to the children of Massachusetts and the Nation.●

REWRITE OF THE COMMUNICATIONS ACT

HON. TIMOTHY E. WIRTH

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1978

● Mr. WIRTH. Mr. Speaker, one of the major issues to be debated in the Subcommittee on Communications relates to cable television. I recommend that my colleagues review the attached, which is a good description of the great promise of cable.

WELCOME TO THE WORLD OF CABLE TELEVISION

(By Larry Kramer)

Beginning in June, if you live in a certain part of Arlington, you will be able to turn on your television and see any of the following programs:

Continual stock market quotations with added financial news.

Twenty-four-hour audio news accompanied by newsphotos.

Full-length, feature motion pictures—"Annie Hall," for example.

Comparative shopping guides showing the day's prices of the same products at three dozen Arlington drugstores.

Adult education classes at an Arlington school.

Continuously updated satellite weather photo of the area.

Local news from a San Francisco independent television station.

An Atlanta Braves baseball game.

And more, including perfect reception of all Washington and Baltimore commercial television stations and four area educational stations.

Welcome to the world of cable television, an institution that is searing the ratings off of those in the government who worry about how to regulate this 20-year-old communications force.

The Arlington Telecommunications Corp. expects to start serving its first homes in June with a cable system that it hopes will reach about 72,000 homes in Arlington County by 1980.

There is one word to describe the state of the art in the cable television industry—confusion. One only has to read the federal cable regulations to realize just how confusing the subject has become.

Meanwhile cable television companies are popping up around the country with the approval of local governmental bodies charged with awarding franchises. There are approximately 3,700 cable TV systems in the United States, serving 8,000 communities and 12.5 million homes.

Estimated annual revenues of the cable industry are $900 million and profits are better than they have ever been.

By the end of this year, according to the National Cable Television Association, an estimated 14 million homes will be wired to cable—nearly one-fifth of all the homes in the U.S. with television.

A recent sudy by the Department of Commerce projects that cable subscribers will be added at a rate of 9 percent annually to a total of about 25 million in 1985.

With an apparent move toward deregulation in the offing from congressional staffers who are rewriting the Communications Act of 1934—which made no mention of cable—there is a chance that growth could even be faster.

Just what is cable television, and why is the government having so much trouble trying to figure out what to do with it?

Community Antenna Television (CATV), often referred to as cable television, was created in the early 1950s to bring distant television signals to isolated communities. The idea was to erect one huge antenna in an area that because of local terrain or distance from transmitters had little or no television reception, and then, for a fee, string wires from that antenna to a subscriber's home to improve reception.

But in the late 1960s, cable TV evolved into its own entertainment medium, offering not only improved reception of existing television signals, but programming from distant cities and—generally for an added charge—additional forms of entertainment. First-run movies, for example, could be run on special channels with no commercial interruption.

But as the cable industry grew into a major entertainment force, the broadcasting industry began to worry that it would have a serious effect on traditional broadcast business.

"The Federal Communications Commission backed into regulation of cable television because of its potential negative impact on conventional broadcasting," according to a report issued in January 1976 by the House Communications Subcommittee of the Interstate and Foreign Commerce Committee.

The FCC began to regulate cable in the 1960s, "because it concluded that broadcasting, and thus the public interest would be adversely affected by cable's unregulated growth," the report said.

In a far-reaching decision in 1972, the Supreme Court—in the case of U.S. vs. Midwest Video Corp.—ruled that cable operators must originate their own programming, affirming a rule set by the FCC. That decision also affirmed the FCC's authority to regulate cable.

In that five-to-four opinion, Chief Justice Warren Burger wrote a separate affirmative opinion. He indicated his support of the government's stand in that case, but cautioned that the FCC's action "strains the outer limits" of its jurisdiction. Burger cited "the need of a comprehensive reexamination of the statutory scheme as it relates to (cable), so that the basic policies are considered by Congress and not left entirely to the commission and the courts."

Basically, the problem was that Congress had never considered the role of cable systems in the communications spectrum, because cable did not exist in 1934 when the Communications Act was written.

Since 1972, there has been little activity in cable regulation as the FCC moved on more pressing, and less confusing, issues. But the House Communications Subcommittee held hearings last year on the entire Communications Act as the basis of a complete rewrite of that legislation.

"The FCC promulgated its rules backwards," says subcommittee staffer Chip Shooshan, "protecting the major markets and not the smaller markets. We want to know just what local programming is being

protected by FCC regulations restricting cable operations."

Karen Possner, another subcommittee aide who is drafting the cable section of the new act, says Congress first must decide just what cable TV is.

"What is the nature of cable television?" she asks in a subcommittee option paper. "Is it a distribution service, a programming service, or both? What is its relationship to other communication media that provide similar services?"

And, she asks, what degree of regulation should be imposed on cable, and by whom?

At present the FCC regulates the kinds and numbers of television signals that can be carri d on a cable system. For example, the commission will not allow certain programming to be brought into an area if it is an economic threat to an existing broadcaster.

In the top 50 markets in this country, a cable television operator is limited to at most three distant signals, that is, signals from other cities. And those must be independent stations that do not threaten the economic base of local network affiliates. But if there already is at least one local independent station, the cable license limit is cut to two signals.

In the next 50 markets, there are a maximum of two outside stations allowed. In all but the top 100 markets, only one outside signal is allowed, presumably because a larger number of stations would have a drastic effect on the existing one or two on-the-air stations in that market. Cable systems presumably do not pose an economic threat in a large market with many stations.

From that point on, the regulation is basically unintelligible.

Cable television poses other difficult questions.

One issue is royalties. How much should be paid for programming relayed over cable systems?

Right now, for example, an Atlanta station that will be viewed in Arlington via cable—WTCG, Channel 17—receives no money for its programming. Instead, an independent common carrier pulls in WTCG's signal from microwave transmissions and relays it by satellite to an estimated 170 cable systems around the country. The common carrier—Southern Satellite Systems—receives whatever royalties are paid by the cable systems using the channel.

The motion picture industry claims it is not being paid nearly enough for selling its movies to common carriers for resale to cable.

Motion Picture Association President Jack Valente recently complained to the Justice Department that Home Box Office, which is owned by Time Inc., had an unfair grip on the pay-TV business—that part of the cable industry which sells motion pictures to individual cable firms. HBO controls about 80 percent of the market.

At least one of HBO's competitors is owned by member film companies of the MPA, but Valente still complained that HBO was able to pay just about what it wanted to for films.

Since "80 percent of the people going to the movies are under 30," according to Henry Geller, head of the Office of Telecommunications (which has just moved from the White House into the Commerce Department), then cable is one of the most attractive growth areas—if not the only growth area—open to the movie industry. "Filmmakers love it," Geller adds.

Arlington Telecommunications Corp. (Artec) is bringing cable television to the Washington area for the first time. Artec offers 36 channels of programming, including 23 that are exclusive to its system. By nature it is more of an entertainment medium than anything else, the 24-hour news service is little more than all-news-radio accompanied by still photos.

To reach its estimated audience of 72,000 homes, Artec is running 360 miles of cable on existing Virginia Electric Power Co. power poles (for a fee of $4 a pole a year) and into apartment houses and private homes throughout Arlington. For obvious reasons, Artec will be available in the more densely populated sections of Arlington first.

Artec charges a one-time installation fee of $25 for each television set attached to its system. After that, subscribers will be charged $7.95 a month (for one set—each additional set is an extra $2 a month) for a basic service, which promises perfect reception of all local and Baltimore stations, automated news, weather and feature channels, and two out-of-town independent stations (from Atlanta and either San Francisco or Chicago).

For a total of $16.90 a month, however, the premium programming package is included. That premium programming is independently fed to Artec by Home Box Office. It includes such fringes as first-run movies, and most of the other features listed at the beginning of this article.

That Artec has been able to get off the ground at all is a tribute to the improved economics in the cable industry, which many bankers looked upon as a high-risk venture only five years ago. Artec is being financed by $2 million in venture capital from Business Development Services Inc. of Connecticut, a division of General Electric, and a $4.7 million line of credit from the American Security Bank here.

The cable television business is not a guaranteed gold mine. Already there have been failures and bankruptcies, although most can be traced to inadequate funding or mismanagement rather than difficulties in selling the system. The cable business is extremely capital intensive, requiring huge capital outlays initially to install the costly coaxial cable which must be in place before the first subscribers are signed up.

According to Artec President John Evans, "For every $1 we take in, we spent $3.10 on our capital plant. That compares to $2.25 spent for plant by the telephone company and about $1 by the broadcasting industry."

To be sure, the future of cable is bright. There are entire areas of potential revenue that only now are being cultivated. Both WTCG in Atlanta and WGN in Chicago, independent stations that are fed to many cable systems around the country, are exploring the possibility of selling advertising time based on the number of cable homes they reach—which would be the first time any on-the-air station made money off of cable.

"I believe when the numbers get big enough, when we reach 25 million homes on cable for instance, that we will attract advertisers and somebody will build a network to service cable systems," says Don Anderson, vice president for cable relations for Turner Communications Corp., owner of the Atlanta station.

That station has become sort of a mainstay in the South. The closest independent stations to Atlanta are in New Orleans and St. Petersburg, Fla. There are none in Mississippi, Alabama, Arkansas and South Carolina. So WTCG has become a force in those southern states which get it by cable. It is a heavily sports-oriented channel, carrying all the games of the professional baseball, basketball and hockey teams in Atlanta as well as the exhibition games of the city's football team. Ted Turner, who owns the basketball Hawks, baseball Braves and hockey Flames, also owns the television station.

In addition, WTCG is a 24-hour station, bringing all-night television to many markets for the first time.

One experiment being watched by everyone involved in the cable business is QUBE, a Columbus, Ohio, cable system owned by Warner Communications Inc.

Warner has spent an estimated $12 million starting up QUBE, which is a 2-way system that charges customers on a per-show basis. In other words, you watch what you pay for. Viewers use a selector to pick the programs they want from a program guide. A Frank Sinatra concert tape costs $2, while movie prices range from $1 for classics, like the Marx Brothers, to $3.50 for recent releases, like "Network" or "Rocky." A high school football game might cost about $2.50.

"Warner is betting millions that the public will spend a significant part of their entertainment dollar on this," Geller says.

In fact, according to the most recent issue of TV Digest, a trade publication, Warner can't even predict when QUBE will break even.

"We had start up costs last year, and we had them in 1975 and 1976. We're doing something that's never been done before, so there's no way to predict," said Warner Cable Chairman Gustave Hauser in TV Digest. QUBE's pre-tax losses for 1977 were $7.8 million.

Cable's attractiveness is evidenced by the fact that most cable firms are owned by other communications firms—interests that are acutely aware of its eventual marketability.

A third of the existing cable companies are owned by broadcasters, newspapers own about 13 percent of the systems, and other publishers own another 13.2 percent.

Down the road is the possibility of attaching home fire or burglar alarms to the system. Since Artec is wiring its entire system with what could be used as a two-way cable, at some future date a cable viewer may be able to press a button at home and set off a firm alarm at a central station.

How about a dating service, Artec president Evans is asked? A photo could appear on the screen with a phone number below.

"If it makes economic sense, we'll look at it," Evans says.●

CONTRIBUTIONS OF JIM HENSEVELT

HON. IKE SKELTON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1978

● Mr. SKELTON. Mr. Speaker, those of us who are involved in the business of the Federal Government here in Washington know full well the importance of having dedicated and competent officials hard at work in local communities. Many of the most creative pieces of legislation coming out of Washington have their origins in the experiences of smalltown mayors, city councils, and city managers. We depend on input from these officials in order to identify the needs and desires of the people in their communities.

I mention this today because I would like to single out one outstanding official from my hometown of Lexington, Mo., who has recently retired from public life. Jim Hensevelt has just completed his second term as mayor of Lexington. Prior to that, he was a city councilman for 6 years. But cold numbers like that cannot begin to tell the story of what he has done for the community. In 1974, Jim retired at the end of his first term as mayor. However, he had done

such a good job that the people just would not let him go. He was reelected in 1975 by a write-in ballot.

Jim Hensevelt is a lifelong resident of Lexington. His father, Ben, still lives in Lexington. In 1946, Jim married Betty Robertson. They have two children, Carol Hensevelt, of Victoria, Tex., and Steven Hensevelt, of Lee's Summit, Mo.

Jim served with the Air Force in World War II as a ball turret gunner in Italy. He answered the call to colors again in the Korean conflict, serving on the island of Okinawa.

As a citizen, Jim Hensevelt has served the community in many capacities. He served on the State Finance and Revenue Commission for the Missouri Municipal League. Recently he was appointed to the Missouri Housing and Development Commission by Gov. Joseph Teasdale.

This month, Jim Hensevelt stepped down as mayor of Lexington. I am sure that history will prove that he was one of the best mayors Lexington ever had.●

WHOSE JOB?

HON. BO GINN

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1978

● Mr. GINN. Mr. Speaker, one of the most important legislative proposals pending before Congress is H.R. 959, the Administrative Rulemaking Control Act. the central objective of this legislation, of which I am a cosponsor, is to give the Congress the opportunity to review and approve or reject Federal regulations prior to implementation. This would eliminate the extremely serious problem in which agency regulations sometimes distort or contradict programs and laws established by Congress.

My distinguished colleague, the Honorable ELLIOTT LEVITAS, is the author of this legislation and is its most effective advocate.

An editorial in The Atlanta Journal of April 24 gives another compelling illustration of the need for enactment of Mr. LEVITAS' bill. I include the editorial in the RECORD at this point:

[From the Atlanta Journal, Apr. 24, 1978]

WHOSE JOB?

A Federal judge in Maine has struck down an HEW regulation requiring schools receiving federal funds to give paid sick leave to pregnant teachers.

In the opinion of Judge Edward Gignoux, Title IX of the U.S. Education Law of 1972 on which the HEW regulation was based bans sex discrimination as far as programs for students are concerned but does not apply to teachers.

This decision will be appealed, along with similar ones by other judges, and in any event it's not the issue itself which attracts our attention at this stage, for there are other laws dealing with sex discrimination in employment—and if none of them apply after appeal, Congress could consider a new law.

What is significant about this case is that it is one more lawsuit revolving entirely around bureaucratic interpretation of the intent of Congress—and a judge having to pass upon the bureaucratic interpretation.

Obviously, if Congress itself had passed on the regulations, its approval would indicate the interpretation of its intent to be correct. A number of congressmen led by Rep. Elliott Levitas of Georgia have been struggling for some time to get Congress to fulfill its responsibility over the law of the land by taking on the duty to review this mass of administrative interpretation having the force of law. Success has been achieved in amending some recent laws to provide for review of the regulations enacted under them, but it has not been accepted as standard procedure in all cases.

This approach would mean more work for Congress, but less for the courts—and if Congress isn't ready to say what it meant when it passed a law, the courts can only guess. Somewhere down the road, we fear, lies the end of representative government.●

UNIVERSITY OF MICHIGAN PROFESSOR: TESTIMONY

HON. CARL D. PURSELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1978

● Mr. PURSELL. Mr. Speaker, I would like to present the third and final item of testimony submitted by three University of Michigan professors on April 12 before the Public Works Appropriations Subcommittee.

Dr. Terry Kammash, a professor of nuclear engineering at the university, spoke to the subcommittee regarding magnetic fusion energy research. The following is his testimony:

My name is Terry Kammash. I am Stephen S. Attwood Professor of Nuclear Engineering at the University of Michigan, and I am pleased to have the opportunity to testify on magnetic fusion energy research.

I believe that I reflect the feeling of many in the scientific community both here and abroad when I say that in controlled fusion power is the ultimate answer to man's energy problem. In addition to the many attractive environmental qualities they will possess, fusion power reactors will be fueled by Deuterium (mixed with Tritium) which exists to an almost inexhaustible limit in the ocean waters.

The road to commercial utilization of fusion power consists of two major milestones: a demonstration of the scientific feasibility of the fusion process, and a demonstration that the engineering and technological problems associated with building an economically viable power producing reactor can be satisfactorily solved.

The first requirement, generally referred to as the "break-even condition", implies that the energy produced by the fusion reaction of the Deuterium (D) and Tritium (T) nuclei is just equal to the energy needed to heat the reacting plasma to thermonuclear temperatures. For a 50% – 50% D–T mixture contained in a magnetic bottle, the above conditions means that a confinement quality nt (consisting of the product of density and confinement time) of 10^{14} cm^{-3} sec must be achieved at a plasma temperature of about 100 million degrees centigrade (or 10,000 electron volts).

This combined requirement has not yet been achieved although each of the constituent parameters has been reached or exceeded in several U.S. and foreign experiments. As a measure of the progress made toward this goal in recent years let me point out that an nt value of $5x10^{12}$ was reached in 1975 in the Alcator A device of MIT and a value of 10^{13} was achieved in the same device a year later. Within the past few months, Alcator A has improved its confinement quality to a new record of $3x10^{13}$, while in the most recent months the Princeton Large Torus (PLT) reached a value of 10^{13} in a much larger device with about half the magnetic field of that of Alcator A. Another Tokamak device designed to test the effect on the confinement quality of plasma cross-section shaping is being constructed at the General Atomic Company in California and will commence operation soon. It is expected to reach a value of $8x10^{13}$ by the end of the year, while a second generation Alcator called Alcator C is confidently expected to reach a value of 10^{14} sometime next year.

In addition to the confinement quality, a measure of how close fusion research is to achieving breakeven is the ion temperature. The rate of fusion energy production is proportional to this quantity and powerful heating sources are being employed to raise the ion temperature to ignition values. Plasma heating by Neutral Beams, when applied a year or so ago to a mirror device at the Lawrence Livermore Laboratory in California, resulted in ion temperatures that well exceed thermonuclear temperatures, while upon its utilization recently in the Princeton PLT it resulted in an ion temperature of about 2.2 KeV at the impressive confinement quality referred to earlier.

Perhaps the most indicative measure of the potential power production of a particular fusion device is its so-called "Q" value, or figure of merit. This is a measure of the energy gain, and it represents the ratio of the fusion energy produced to the energy invested in heating the plasma. A "Q" value of one clearly represents breakeven and a significantly larger value indicates how attractive a fusion machine is as a power producer. The recent impressive results from PLT have yielded an equivalent Q value of one half of one percent which, though admittedly modest, is 50 times larger than any value reached in fusion research thus far. The Toroidal Fusion Test Reactor (TFTR) currently under construction is expected to reach breakeven or Q of one in the not too distant future.

A successful demonstration of the breakeven condition may permit and pave the way to the construction of a fusion power reactor but it cannot guarantee it. Only a demonstration of engineering feasibility can do the latter and this may turn out to be a more difficult task than demonstrating scientific feasibility. Preliminary investigations consisting primarily of paper designs have led to the identification of many of the engineering and technological problems that may stand in the way of fusion as an economically viable source of power. Some of these problems are indeed formidable and will require a national commitment on a scale larger than any we have seen with other energy sources if they are to be solved.

The progress that I have briefly sketched is truly impressive, and although it cannot be portrayed to the citizenry with visible spectaculars (as was possible in the case of space research), it represents a giant and dramatic step towards solving one of man's most difficult and elusive scientific challenges. It is no longer a question of "if" but of "how soon"! The U.S. effort in this field of research, once dominant in the international arena, is now overshadowed by other nations. With the energy problem becoming more acute, our almost total dependence on our ability to generate usable forms of energy has never before been as critical as it is now. In controlled fusion, we see an inexhaustible, environmentally attractive source that we can almost tap. It is imperative, therefore, that our national effort, both public and private, be brought to new levels of vigor and support in order to achieve this highly coveted objective.

The year 1984 has been targeted as the year

of decision for laying out the foundation for the ways and means by which fusion could most readily impact the energy program of the nation. We could at that time opt for a purely research mode of operation similar to the one currently followed in the pursuit of breakeven demonstration, but that, in my judgment, would be unfortunate. Instead, we should consult with every segment of the fusion community including university and industry representatives to single out the approach that will achieve this objective in the shortest possible time.

This approach may not take the form of constructing a pure fusion reactor; rather it may be associated with other applications of fusion, such as a hybrid system where power production may be secondary to the production of fissile material needed for fueling fission reactors. Such a decision would not be entirely unwise since it would not seriously detract from our effort to continue to develop the environmentally attractive pure fusion recator.

To effect such a decision at the prescribed time, however, requires that we take action now as in the very near future on the steps necessary to implement this decision, particularly those pertaining to the federal budget. It seems to me that the fusion budget for the intervening (and certainly subsequent) years should reflect a steady and considerable increase that will allow private industry (which ultimately will build these devices) to participate meaningfully in the research and development (R. and D.) of fusion power. Failure to bring industry (and, for that matter, its clients, the utilities, who are the ultimate users of this energy) into meaningful participation in the decision-making process and the R. and D. phase could lead to serious delay in the utilization of controlled fusion as a major national energy source.●

RHODESIA

HON. ROBERT J. LAGOMARSINO

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1978

● Mr. LAGOMARSINO. Mr. Speaker, I would like to bring to the attention of my colleagues the following articles on the situation in Rhodesia.

The editorials follow:

THAT RHODESIAN SELLOUT

(By Robin Moore and Neville Roman)

The visit by Secretary of State Cyrus Vance to Rhodesia on Monday was even more of a disaster than routine reporting would indicate. The schism between U.S. ambassador to the United Nations, Andrew Young, and British Foreign Secretary David Owen took on Grand Canyon-like proportions before the Americans and British took off in their respective Air Force planes from Salisbury after a day of talks.

There is virtually no accurate intelligence from within Rhodesia at the disposal of the British and American diplomats. They don't recognize the existence of Rhodesia, and therefore no official reports reach them. The unofficial reports they listen to appear to be inaccurate and biased.

For instance, they allude to about 20,000 armed guerrillas on Rhodesia's borders. A more accurate count would be 10,000, mostly between 14 and 20 years old and the majority untrained, although there are highly efficient Communist-trained terrorist cadres among them. Thus the Anglo-American proposals are drafted in the blind.

The prelude to the Vance debacle was played out two weeks earlier during President Carter's trip to Nigeria and Liberia. The president said in Lagos, Nigeria, that "African problems should be settled by Africans without interference from outside sources." The next day at Monrovia, Liberia, the president called for "an Africa free from military intervention by foreigners * * *"

Demonstrating his regard for his president's pronouncements Young followed up Carter's speech by referring to the Ethiopia-Somali struggle. "One cannot raise serious objections to the Cubans or the Russians answering the call for aid from a country whose sovereign territory has been invaded by aggressive external forces," Young stated. Young was reported to have arrived in Lagos with the two Rhodesian exile terrorist leaders, Joshua Nkomo and Robert Mugabe in tow. Whether he actually succeeded in having President Carter meet these two has never been revealed.

The only guideline that the U.S. Department of State seems to operate on is Andy Young's total emotional involvement with Nkomo and Mugabe. Both leaders openly state that they are backed by Russia and China, respectively. Mugabe announced the day before Vance left Tanzania for Rhodesia that he would demand that power be turned over to his "Patriotic Front" so he could form a one-party Marxist state. Yet Young still insisted in Salisbury that Mugabe and Nkomo be given at least half the political power and allowed to bring their armed terrorists to Rhodesia.

When the black moderates reiterated that Mugabe means what he says and intends to form a Marxist dictatorship, Andrew Young's reply was that Mugabe was not a Communist but a good Catholic. Even before the Mugabe-initiated massacre of the seven Catholic priests and nuns at St. Paul's mission, last year, there was considerable doubt that he is any part of being a good Catholic.

The 17th of April mission to Rhodesia was mounted by the Vance party only after two days of patronizing the "patriotic Front" leaders and their backers, the so-called Front-Line-State presidents, none of whom allow elections or a two-party system in their own countries. Certainly they have no stomach for a democratic state on their borders.

There was a touch of the ludicrous in the arrival of the American and British negotiating teams. The American Air Force 707 with United States of America emblazoned along its side appeared over Salisbury simultaneously with the British Royal Air Force VC 10. Both the American and British aircraft requested immediate clearance to land. Considerable haggling on protocol erupted over the radio frequencies. The joke around Salisbury tells of the Rhodesian air controller always ready to accommodate all concerned, who suggested the two planes should land simultaneously from opposite ends of the runway.

After a scuffle at the airport as to whether the Americans should leave first in their bullet-proof vehicle driven up from the U.S. embassy in Pretoria or Owen should lead the caravan in the Cortina the British embassy sent up from South Africa, the Brits made their getaway ahead of the Yanks.

The talks got under way late in the morning in a conference room at the civil service training center and the rest of the day was spent by the Anglo-American team in an effort to pressure the moderate blacks now in control of the Rhodesian government into allowing Nkomo and his Zapu terrorist force, back into the country, stating that this would end the war.

Politely the black moderates pointed out that all this would accomplish would be to bring a Soviet-armed and equipped enemy into their homeland, killing any chance of the newly formed representative government surviving.

Vance offered U.S. guarantees. The black leaders obliquely referred to the American performance or lack of same in Vietnam, Angola, and Somalia.

Andy Young once again insisted that Joshua Nkomo and Robert Mugabe be immediately given power in the new government and the terrorist army become a dominant part of the Rhodesian security forces. It was to no avail that the three black leaders, the Rev. Ndabaningi Sithole, Bishop Abel Muzorewa and Chief Jeremiah Chirau, aided by the huge throngs on the scene to demonstrate their confidence in the new leadership, claimed that they had the support of 90 percent of the Rhodesian population.

Using the old blackmail tactic of continuing to regard Rhodesia as an illegitimate state and withhold recognition and free trade, Andy Young continued to bludgeon Sithole, Chirau and Muzorewa into turning at least half the power over to Mugabe and Nkomo. These valiant black moderates would not be coerced. That they had done more in two years to achieve a racially harmonious state than Young and his civil-rights movement had done in two decades in the South was the subtle innuendo.

In the spirit of compromise the black moderates asked if the United States and Britain would recognize a referendum from the majority of all Rhodesians black and white, and on that basis support the new government.

The answer was a curt "no." So much for President Carter's statement about African problems being settled by Africans without outside interference.

At 6:03 that evening after restraining Young from firing off a burst from the hip at the assembled press and hustling him back on the U.S. Air Force 707, a clearly shaken Vance took off, leaving behind an atmosphere of uncertainty tinged with derision for another inept demonstration of Anglo-American solution to the Southern Africa problems. The British stayed on another hour and 45 minutes, presumably to tidy up as much as possible the mess left in the wake of the Young-Vance foray.

U.S., BRITAIN SHOULD KEEP AWAY FROM RHODESIA

(By William Randolph Hearst Jr.)

NEW YORK.—As you regulars know, I recently spent several days in Rhodesia interviewing both its black and white leaders and observing at first hand the trials and tribulations they are having in turning their white minority government into a black-majority ruled government.

As a globe-trotting reporter, I developed a keen interest in Rhodesia, as it is making the first sincere (and so far successful) effort to form a truly integrated bi-racial, representative, democratic form of government in Africa—and maybe in the whole world—ever.

Moreover, there are some kindred souls in that lovely country. Ian D. Smith, the prime minister, with his fellow British citizens in Rhodesia, seceded from the British Commonwealth in 1965.

For this sin they have been branded by the United Nations, at the behest of great Britain and with our connivance, as an illegal country.

Actually they are no more illegal than the United States of America which some 200 years ago did almost exactly the same thing.

The "mission of the mediators" this past week, consisting of U.S. Secretary of State Cyrus Vance, British Foreign Minister David Owen and American Ambassador to the United Nations Andrew Young was totally non-productive.

To review the situation as it stands.

1. Prime Minister Ian D. Smith and three politically moderate blacks, Bishop Abel Muzorewa, the Rev. Ndabaningi Sithole and Senator Jeremiah Chirau, are co-leaders of a transitional government that will exist until

Dec. 31 when an elected government will take over.

2. Meanwhile, a committee of 18, evenly divided between blacks and whites, will rule the country until the end of the year.

3. At the beginning of next year, a representative form of government will be instituted and dominated, of course, by the black majority.

Meanwhile, outside the borders of Rhodesia are the armed forces of the two guerilla leaders, Mugabe and Nkomo. These troops sometimes fight each other, but more often raid and foray across the border, looting and killing blacks and whites alike.

The pact that was drawn up by the three moderate leaders and Prime Minister Smith excluded the guerillas from representation but they have since been invited to participate.

The absurdity of the guerillas' position is that though in combination they represent only 10 to 15 percent of the blacks in Rhodesia, they are demanding equal representation. This would mean, in effect, that these two Russian-backed outlaws would have the same voting strength as the three elected blacks who represent 85 percent of the population.

This, of course, makes no sense to us, but as their goal is a socialist state and as all of the countries surrounding Rhodesia have dictator governments, their demand has been seriously discussed and considered by Great Britain and the United States and actually favored by Andrew Young.

It could be that Young is an unintentional racist who empathizes—quite understandably—with any black minority.

These minority leaders, Mugabe and Nkomo, hardly merit such support from the U.S. or Britain. Mugabe, for instance, is a loudly-proclaimed Marxist who favors a one-party communist state in Rhodesia.

To illustrate the drift of Young's thinking, one should consider a little vignette that took place in Dar Es Salaam, Tanzania last week. After Mugabe had announced that he considered a multi-party system of voting as a "luxury" and that he favored a Marxist one-party system, a reporter asked Ambassador Young how Mugabe could be counted on to be a true Rhodesian leader. One of Young's aides replied, "If George Wallace can run for president of the United States, then Mugabe can run for office in Rhodesia. It doesn't mean he will be elected."

The indication here is that Young is acting either out of ignorance or out of sympathy, and neither one has a place in foreign diplomacy. There is a strong feeling that Andy Young is confusing the Africa of 1978 with the Georgia of the early 1960s. Then the way to handle the black-white problem was to stage a sit-in at a department store.

Andy Young is a loose cannon on our deck and he could cause great damage unless he is restrained. He will not win many black votes for Carter by supporting dangerous people like Mugabe and Nkomo.

The people of this nation have a right to wonder why our secretary of state and UN ambassador think it is wise to meet repeatedly with these two guerillas. It is like conferring with a bunch of thugs outside city hall who want to oust the elected mayor and run the city.

The visit of Vance, Owen and Young to Africa can be said to have widened the gap between the differing parties inside and outside Rhodesia.

It must be remembered that the army, which previously fought for the white government alone, is now fighting for an interim government that is 50 percent black.

As the Financial Times of London editorialized:

"What has long been a political struggle for power between rival black nationalists has thus now turned into a military contest . . . as things stand currently, neither side is winning and therefore both sides could well soon be tempted to call on external allies to help them win."

The very thing that Young and Vance say they are trying to avoid—the entry of the Cubans into the Rhodesian situation—may very well be brought about by their policy on Mugabe and Nkomo.●

STUPENDOUS STEIGER

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1978

● Mr. MICHEL. Mr. Speaker, the Wall Street Journal has editorially commented on a recent proposal made by our good friend and colleague, Mr. STEIGER of Wisconsin. His amendment to cut back the tax on capital gains was offered to the President's tax package now before the Ways and Means Committee. The Steiger proposal is praised highly by the Wall Street Journal and for good reason. As the Journal puts it:

A lower tax on capital gains will raise more money, not less, for the government.

Equally important—

it would give the economy a powerful shove and boost revenues from other taxes as well.

Now you would think that any proposal that results in all these benefits would be greeted by cheers by the administration. Unfortunately, the administration believes many ideological and economic myths, chief among which is that soaking the investor is good economics.

The administration's faith in their myths is touching, but it does not answer the question: Where are we going to find those willing to take the risks of investing if we do not make our tax laws attractive to would-be investors?

The Wall Street Journal, not known for journalistic exaggeration, says:

The Steiger amendment is not one tax provision among many, but the cutting edge of an important intellectual and financial breakthrough.

At this time I would like to insert in the RECORD "Stupendous Steiger," from the Wall Street Journal, April 26, 1978:

STUPENDOUS STEIGER

Rep. William Steiger of Wisconsin, a slight, youthful 39-year-old Republican, has shaken the earth, causing convulsions in the Carter administration, a titanic struggle in the business world and the rapid aging of House Ways and Means Chairman Al Ullman.

What Mr. Steiger did, in all innocence, was propose an amendment to Mr. Carter's tax package. The amendment cuts back the tax on capital gains to where it stood in 1968, before President Nixon was talked into boosting it and hitting it with minimum-tax provisions. Because there are 37 members of the committee and only 12 Republicans, it hardly seemed likely the Steiger amendment could walk, much less fly. But a nose count on both sides turned up at least seven Democrats favoring the amendment. That gives Mr. Steiger 19 votes, a majority, with additional members undecided and potential converts.

The Carter tax package, already reeling from other setbacks, has been stopped in its tracks by the Steiger amendment. Mr. Carter wants to raise, not lower, the capital gains rate. Soaking the rich investor is such an article of faith among liberal tax "reformers" that they are likely to vote against any bill with the Steiger amendment, without even listening to the arguments that have persuaded a majority of Ways and Means. So the tax bill, originally scheduled for mark-up on May 3, has been put off for a week or more. The chief purpose of this delay is to stop Mr. Steiger by trying to horse-trade away some of his 19 votes.

The key to Mr. Steiger's sudden success is one argument: A lower tax on capital gains will raise more money, not less, for the government. The Treasury of course calculates that the rate cut would lose money, handing it out to rich investors. But the Treasury insists on using "static analysis," which calculates the effects of tax cuts by making the convenient but plainly silly assumption that nothing else in the economy changes as a result of different tax rates. Others work with "dynamic analysis," trying to calculate the feedback effects from the rate cuts themselves; often they argue that some kinds of tax cuts will increase total revenues.

With most taxes, you have to argue about the possible dynamic effect. But on the capital gains tax it is written in black and white: In 1968, the last year of the lower capital gains rate, the tax pulled in $7.2 billion in revenues. In 1969, at the higher rate, the tax took in $4.8 billion. After a decade, it is only now getting back to the 1968 level, and in inflated dollars.

So Mr. Steiger is asking the liberals whether they want to cut off their nose to spite their face. Are they really so intent on soaking the rich investor they want the government to give up money in the process? Understandably, the "tax reform" legions are running for cover.

We are prepared to argue that the Steiger amendment would not only boost the revenues from the capital gains tax itself, but would give the economy a powerful shove and boost revenues from other taxes as well. The 1969 change effectively cut in half the jackpot for high-risk capital investment. Reversing that move would double the jackpot and send the economy onto a real growth path.

This prospect of growth is spawning new political coalitions as well. Los Angeles Mayor Tom Bradley, a black liberal Democrat, has testified on Mr. Steiger's side, seeing that higher rewards for risk would boost the young electronics companies in his city. Black bankers and energy groups, seeing that favorable capital gains treatment helps rising enterprises, are pushing hard in a new, unusual alliance with the U.S. Chamber of Commerce.

Meanwhile, the Business Roundtable and the National Association of Manufacturers stand silent, tempted to throw in their lot with Ralph Nader and Jimmy Carter against Mr. Steiger. Big Everything does not relish competition from young upstarts. It prefers tax boondoggles like the Domestic International Sales Corporation, an export-subsidy scheme with no economic justification but of considerable help to multinationals that can hire hordes of lawyers to figure out its provisions.

So the battle is brewing. It remains to be seen whether Mr. Steiger—perhaps with help from Ways and Means minority leader Barber Conable, who also recognizes that a cut in the capital gains rate would boost revenues—can hold together 19 votes against the inevitable temptations of log-rolling. Everyone should know that the Steiger amendment is not one tax provision among many, but the cutting edge of an important intellectual and financial breakthrough.●

INTERRUPTION OF MAIL BY U.S.S.R.

HON. BENJAMIN A. GILMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1978

● Mr. GILMAN. Mr. Speaker, each year, thousands of pieces of registered mail, including private communications, packages, vyzovs (invitations to join family members abroad), and cultural materials are sent to citizens of the Soviet Union from the United States of America. In recent times, a significant number of those items have either disappeared or were opened, inspected, and/or confiscated by postal officials of the Soviet Union, in contravention of the constitution and laws of the U.S.S.R., and without the proper notification given to mailers or addressees about the interruption of their mail service and reasons therefor as required by international postal covenants, to which the Soviet Union is a signatory.

As a consequence, a large volume of constituent complaints, primarily from the American Jewish community expressing their concern and frustration over the failure of postal officials of the Soviet Union to insure uninterrupted delivery of U.S. mail to citizens of the U.S.S.R., has been received in congressional offices. In response to the rising number of complaints over the last decade, the U.S. Postal Service has within the past few years begun to monitor inquiries directed to the Soviet Union when the return receipts accompanying registered mail were not forwarded to the sender. This effort produced the following statistical information about registered mail sent from the United States to the Soviet Union for the years 1976 and 1977.

In 1976, during a period of 7 months, a total of 1,716 return receipts were not received by senders who mailed registers from the United States to the U.S.S.R. During the first 9 months of 1977, 1,848 similar complaints were made where the sender did not receive his return receipt from the addressee acknowledging receipt of the letter. It should be noted that the U.S.S.R. insists that of the 1,716 complaints of 1976, 342 of these letters were actually delivered to the proper addressee; and of the 1,848 complaints filed in 1977, Soviets insist that action was taken on 1,006 letters.

In the category of nonreceipt whereby the addressee in the Soviet Union has written the U.S. letter writer that his letter has not been received, there were 139 complaints registered within a 7-month period of 1976 and 95 complaints made within the first 9 months of 1977.

In the 7-month period of 1976, 234 letters were seized by the Soviet Union and within the first 9 months of 1977, 468 more letters were seized. The reason given for the seizure was that internal Soviet regulations prohibited the importation of letters with such contents.

Of the 1,716 letters sent in 1976 where return receipts were not received by the U.S. sender, the U.S.S.R. accepted the responsibility and paid the indemnity to the sender in 413 instances (or less than 25 percent of the cases) because the Soviets failed to prove delivery or assumed the responsibility for the loss of these postal items. Likewise, of the 1,848 complaints filed within the first 9 months of 1977, the U.S.S.R. again, because of their failure to prove delivery or because they assumed responsibility for the loss of those postal items, accepted responsibility for the losses and paid the indemnity to the sender in 1,050 instances (or 57 percent of the violations). Additionally, in 1976, the U.S.S.R. paid an indemnity in 229 instances where they failed to respond to the United States-origin inquiries within the time period specified in the Universal Postal Union (UPU) Convention. In 1977, the U.S.S.R. paid an indemnity in 365 instances because Soviet postal authorities failed once again to respond within the prescribed time period to U.S. inquiries concerning return receipts not received by U.S. mailers.

These total inquiries represent approximately 2.88 percent of total mail volume with the Soviet Union since May 1976. This is to be compared with other countries' inquiry figures: Poland, 0.29 percent; France, 0.14 percent; and East and West Germany, 0.19 percent.

On November 9, 1977, I submitted a report to the Post Office and Civil Service Committee detailing the problem of the U.S.S.R.'s interruption of the U.S. mail. This report, entitled "Union of Soviet Socialist Republics' Interruption of United States Mail," Committee Print 95–9, which was a product of a year's work involving numerous discussions, foreign travel, and extensive study of this subject, documents a systematic scheme by the Soviet Union to isolate the Soviet Jewish community in general, and activists who have risen to prominence through their organized opposition to oppressive measures dictated by the Communist Party in particular, from any contact with or aid from the outside world through the deliberate interruption of the international mail system.

Unfortunately, short of morale adherence, there presently exists no mechanism to enforce prescribed international postal standards.

Having attempted to resolve this issue through private channels with representatives of the Universal Postal Union and the Soviet Union (see Committee Print 95–9), and failing, I next sought to bring public pressure to bear on the U.S.S.R.

Accordingly, and in addition to publishing my findings with the Committee on Post Office and Civil Service, I made this information available to the Commission on Security and Cooperation In Europe and to the American delegation to the Belgrade Conference which met last fall and winter. This material, supplemented by many personal case histories which wholly substantiated the allegations contained in my report, convinced the American delegation that the interruption of international mail by the Soviet Union constituted an issue of noncompliance with the Helsinki Final Act and warranted review by the Belgrade Conference.

Consequently, on the first day of closed meetings, U.S. Delegate Joyce Hughes, a Northwestern University law professor, while addressing the plenary session of the Belgrade Conference, charged that the Communist barrier to the free exchange of letters and publications represented a continuing pattern of disrespect for the 1975 Helsinki Accords.

Drawing from my findings, Ms. Hughes remarked:

> In Principle X, we have agreed that all participating states "will fulfill in good faith their obligations under international law." That commitment is closely bound to the preceding principle on cooperation among states. The rules we live by at home and abroad order our daily existence and secure our prospects of improving it.
>
> In one area the United States sees with deep regret a continuing pattern of disrespect for the pledges we have all made. Let me be specific. In some signatory states, ordinary and registered mail is improperly handled.
>
> When letters do not pass freely between members of the same family—some living in one country and some in another—the process of family reunification is obstructed, not facilitated. When a publisher in New York cannot correspond directly with a literary adviser or author in Moscow, "contacts and cooperation among persons active in the field of culture" are frustrated, not increased. And, when an American friend is unable to obtain delivery of a subscription to the National Geographic Magazine for a Soviet schoolboy or a copy of the World Almanac for a teacher in Czechoslovakia, the flow of information is choked, not widened. These are not hypothetical incidents. These are actual cases. These are facts and we intend to address them forthrightly and with candor and straight talk.
>
> The conduct just described runs contrary to principle IX and also to the "freedom of transit" guaranteed in the Universal Postal Convention. Such actions conflict with the broad pledge of principle X to fulfill obligations under international covenants, as well as provisions elsewhere in the final act.

Finally, in my report to Congress, I offered three recommendations that would further serve to heighten public awareness of this issue and also place the United States squarely on record in objecting to the Soviet Union's flouting of their international obligations in this area.

These recommendatons were:

First. That the Committee on Post Office and Civil Service initiate a formal inquiry into the Soviet Union's deliberate interference with the flow of international mail.

Second. That a resolution be introduced urging the Executive to lodge a formal protest with the U.S.S.R. over their failure to adhere to international postal covenants, to which the United States and the United Soviet Socialist Republics are both signatories.

Third. That U.S. postal representatives at the next UPU Congress be instructed to propose a resolution calling for a strengthened role for the International Bureau to insure member states' compliance with UPU regulations.

In conjunction with my first recommendation, I am pleased to announce today that the Committee on Post Office and Civil Service's Subcommittee on Postal Operations and Services, chaired by our colleague from New York (Mr. JAMES

HANLEY) has consented to hold several hearings on this subject, beginning with one on May 8 in New York City.

In order to give impetus to my final two recommendations, I am today introducing a resolution that expresses the sense of the Congress that, first, the President, through the Department of State, should express to the Government of the Soviet Union the disapproval of the American people over the failure of the Soviet Union to abide by its international obligations; and second, that, at the next meeting of the Congress of the Universal Postal Union in Brazil in 1979, the representatives of the U.S. Postal Service should—

First, bring to the attention of the representatives of the member countries of the Universal Postal Union the Soviet Union's disregard of regulations governing the exchange of mail under the Universal Postal Convention; and

Second, call upon the other member countries for support in encouraging the Soviet Union to respect its international obligations.

The full text of the resolution follows:

CONCURRENT RESOLUTION

Whereas the integrity of the mail service between the United States and the Soviet Union is being called into question by mailers in the United States who assert that postal items are systematically not being delivered to selected addresses in the Soviet Union.

Whereas the explanations required under international law and given by the Soviet postal administration in regard to the nondelivery of mail to certain addresses have consistently been untimely or insufficient;

Whereas the mail which is not being delivered typically is between family members or persons sharing a religious bond and typically consists of personal correspondence or gifts of articles for personal use;

Whereas the non-delivery of mail which is deliverable as addressed and which does not contain prohibited articles is an interference by the Soviet Union with internationally recognized human rights guaranteed to all persons by the Universal Declaration of Human Rights, the International Covenant on Civil and Political Rights, and the Final Act of the Conference on Security and Cooperation in Europe;

Whereas the systematic exclusion of certain persons from international mail services also violates the Convention of the Universal Postal Union and the Constitution of the Union of Soviet Socialist Republics: Now, therefore, be it

Resolved by the House of Representatives (the Senate concurring), That it is the sense of Congress—

(1) that the President, through the Department of State, should express to the Government of the Soviet Union the disapproval of the American people—

(A) concerning those postal items which are mailed in the United States and are deliverable in the Soviet Union as addressed but which are systematically not delivered by the Soviet Union to the persons to whom they are addressed; and

(B) concerning violations by the Soviet Union of the articles of the Universal Postal Convention and violations of the Final Act of the Conference on Security and Cooperation in Europe; and

(2) that, at the next meeting of the Congress of the Universal Postal Union in Brazil in 1979, the representatives of the United States Postal Service should—

(A) bring to the attention of the representatives of the member countries of the Universal Postal Union of the Soviet Union's disregard of regulations governing the exchange of mail under the Universal Postal Convention; and

(B) call upon the other member countries for support in encouraging the Soviet Union to respect its international obligations.●

HOW TO HURT BLACKS IN SOUTH AFRICA: CUT OFF TRADE

HON. ROBERT E. BAUMAN

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1978

● Mr. BAUMAN. Mr. Speaker, it now appears that the House Committee on Banking and Currency may well report legislation extending the authorization of the Export-Import Bank containing an amendment which will exclude the Republic of South Africa from participating in the bank's loans and guarantees. The supposed reason for this restriction is to punish the white Government of South Africa and aid the millions of blacks whose political rights are limited.

The sheer hypocrasy of this approach is clearly evidenced by the fact that the same legislation contains a special provision to allow the bank's assistance to the mass murderers who rule Red China. But then liberals have never been known for consistency or logic.

The utter folly of this restriction against South Africa is well set out in an article from the current issue of "Politics Today" by Robert Moss, whose background the magazine describes:

Robert Moss is editor of the Economist's confidential weekly newsletter, Foreign Report, and a columnist for the Daily Telegraph in London. His latest book is The Collapse of Democracy. Moss's revelations about the secret war in Angola made world headlines, and he is completing a book on the subject. A former history professor at the Australian National University, Moss lectures at many universities and defense academies, including the NATO Defense College in Rome.

Mr. Speaker, I hope that the House will not support this restriction against an anti-Communist ally such as South Africa. To do so would harm the blacks and the chance for constructive change in South Africa. I urge all of my colleagues who are interested in knowing the facts about this important issue to read the article.

The article follows:

FRIENDS IN NEED: FIVE GOOD REASONS FOR STANDING BY SOUTH AFRICA

(By Robert Moss)

(A strident chorus is now urging Western governments and corporations to commit a destructive act of folly: cut business ties with South Africa. We have heard that demand, on and off, for the best part of two decades. But lately it has become a bull roar. Under a thunder of rhetoric likening South Africa to Nazi Germany, church groups have disinvested in companies with big South African holdings. Universities are being pressured to follow suit. Newspapers and TV networks are lobbied not to run advertisements for Krugerrands. Nigeria threatens to boycott corporations that are heavily involved in South Africa and, with the backing of the Communists, third world radicals and sundry.)

Arabs, pushes for a UN oil embargo and other sanctions. And David Rockefeller feels obliged to put out a statement that Chase Manhattan will not make loans that tend to support apartheid. For all the clamor, the advocates of disinvestment have not yet succeeded in persuading any large Western company with a significant stake in South Africa to pull out.

I can readily understand that, in the wake of Steve Biko's tragic death and the clampdown on the South African press, passions are running high. I can also understand that the system of apartheid—which I personally abhor—has singled South Africa out, in many people's eyes, as a uniquely repressive society—which it is not. But what the campaigners for disinvestment should understand is that, if Western governments and corporations succumbed to their demands, the immediate effect would be to push many more South African blacks into penury and unemployment and to drive white South Africans in overwhelming numbers to support the most inflexible, *verkrampte* policies.

In a condition of economic as well as political isolation, South Africa would become the complete fortress-state, quelling beneath an iron heel the social revolt that would stem from the loss of hundreds of thousands of jobs in the cities. All hope of liberalization, for which foreign business in South Africa is a primary catalyst, would be lost. Instead, two grim alternatives would face the country. Either the Afrikaners, whose stamina, military prowess and sheer determination to survive is equal to that of the Israelis, would manage to hold out—perhaps at terrible cost—until the West changed its mind. Or a combination of civil war and foreign invasion would eventually drive them into the sea and bring about a black dictatorship of "Azania" closely aligned with the Soviet bloc and able, if it suited Soviet strategy, to deny the West access to vital raw materials and the strategic cape route.

Such a prospect is unlikely to trouble Marxists who want a revolutionary outcome, inverted radicals who don't care what sort of government South Africa has as long as it's black, or the voyeur liberal who simply gets a thrill out of seeing anti-Communist countries kicked in the ribs. But it should worry anyone who hopes for liberal reform.

There are five major reasons for opposing economic sanctions against South Africa. The first is that there is no moral case for sanctions unless they are also to be applied to every other country that commits equal, or greater, abuses of human rights. Consistency would require applying sanctions to over half the member countries of the UN, and to nearly all of the African continent. Second, the survival of South Africa under a pro-Western government is central to Western security; if South Africa were to fall under Soviet domination, the strategic position of Western Europe would become untenable. Hence it is strange policy to seek to destabilize South Africa's government by undermining its economy. Third, Western investment in South Africa not only creates jobs for workers in Europe and America, but helps to employ more than 500,000 migrant workers from neighboring African countries and to provide other vital props for their teetering economies. Fourth, the private sector in South Africa has been the leading catalyst for change, and some Western companies there have set an enlightened example in their treatment of their black work force. Finally, the first people to suffer from Western economic sanctions would be the blacks that the boycott campaigners imagine they are defending. I will briefly explore each of these arguments. Then we can consider some realistic suggestions for social reform in

South Africa that have been put in jeopardy by the campaign to isolate it from the world community.

THE MORAL ARGUMENT

Everyone knows the name of Steve Biko, and the terrible story of his death. But how many people know the name of Ijegayehu Asfa-Wossen, the late Emperor Haile Selassie's daughter, who died under almost identical conditions in a prison hospital in Ethiopia on January 31 last year? According to an Amnesty International report, her death "was possibly due to bad detention conditions and lack of proper medical treatment."

South Africa's crimes are writ large, while those of other African countries are completely ignored. South Africa's government is described as a repressive regime; but how repressive is it compared to the other governments of Africa? Western nations were rightly shocked by the banning of editors and the forcible closure of black newspapers. Yet the African director of the International Press Institute has observed, with reason, that "there is more press freedom in South Africa than in the rest of Africa put together." Only whites can vote in South Africa, but no one can vote in much of black Africa. Of the 49 member states of the Organization of African Unity (OAU) only four can boast anything resembling democratic institutions—Gambia, Botswana, Mauritius and the newly independent Djibouti. The rest are either one-party states or military dictatorships. In a recent Freedom House survey of the state of human liberties in Africa, only two countries were described as free.

The abuses of the security police in South Africa are kindergarten fun compared to the tribal and political massacres that have been executed since independence in such countries as Uganda, Nigeria, Zaire or Equatorial Guinea. Yet the documented slaughter of thousands, the murder of an archbishop and the mass expulsion of the local Asian community by Uganda's crazed dictator did not prevent him from being elected president of the OAU (whose original secretary-general, Dinlo Telli, is languishing in one of Sekou Toure's jails in Guinea). And no one is calling for economic sanctions against Uganda.

So why is South Africa singled out for special punishment? The answer is not that South Africa is "uniquely racist," as is often claimed. Idi Amin praised Hitler for his treatment of the Jews. What is the expulsion of Asians from Uganda or the expropriation of their property in Mozambique if not racism? Wasn't the slaughter of Comorian migrants in Madagascar in December 1976 (virtually ignored by the Western press) a case of racism run wild? In precisely what ways is "racism" worse than "tribalism" in Africa, or even distinguishable from it? Tribal genocide is still being practiced systematically in a number of black African countries (all of which supply jobs for the boys on a tribal basis); witness Idi Amin's efforts to kill off all the leading families of the Acholi and Langi ethnic groups.

No, South Africa is not being hounded because it is racist, but because its rulers are white and, to compound their offense, anti-Communist. Harry Oppenheimer, the leader of the liberal opposition party in South Africa, put his finger on it when he declared in an address to the Foreign Policy Association in New York last November that "the American attitude towards Southern Africa begins to appear to be based neither on defense of human rights nor of majority rule, but on a policy of supporting blacks against whites."

So let's be done with the moralistic claptrap that the boycott campaigners use to justify their demands. South Africa's blacks live in greater security, comfort and freedom than blacks in most other African countries. They are ruled by a white tribe rather than a black one, which is considered by some to be unforgivable. Because the United States has a higher proportion of black voters than any other Western country, it is peculiarly susceptible to racially based appeals to act against South Africa, and is in serious danger of allowing its foreign policy toward Africa to shrink into nothing more than a function of US domestic politics.

I am not denying the force of the moral case against apartheid, which amounts to a denial of individual freedom. But I would insist on the basic point: Selective morality is no morality at all. Those who call for economic sanctions against South Africa on moral grounds should remember that the same argument applies, with just as much force, to countries as diverse as the Soviet Union and Iran, China and South Korea, Mozambique and Zaire, Cuba and Chile. (There is a false symmetry in lists of this kind because no right-wing authoritarian regime matches the Communist totalitarian regimes in the ferocity of their repression of civil liberties.) If the boycott campaigners want us to stop trading and investing in more than half the world, I admire their consistency, but I am afraid they are holy idiots. If they just want to attack South Africa, or anti-Communist regimes, I do not believe that they are genuinely motivated by any concern for human rights.

THE SECURITY FACTOR

While the UN was debating the arms embargo against South Africa last year, the Egyptians decided not to permit a British nuclear submarine, the *Dreadnought*, to pass through the Suez Canal on its way to naval exercises in the Pacific. The incident was a timely reminder of the critical importance of the cape route. Last year, about half of America's oil imports were supplied by tankers using this route (supertankers cannot get through the canal anyway) and the proportion is rising. Some 25,000 ships use the cape route every year.

South Africa's strategic importance lies in its mineral wealth as well as in its geographical position astride one of the world's major sea roads. South Africa has been aptly described as "the world's metal bin." The country produces 99 percent of the Western world's platinum, 84 percent of its chrome and manganese, 61 percent of its gold and 40 percent of its titanium. Chrome, of which South Africa is the world's second largest producer, is of singular importance to the United States, since it has almost no chrome of its own, and the mineral is essential in producing alloys for jet engines. Significantly, the Red Army's Major General Lagovskiy drew attention to this vulnerability more than 20 years ago in a book entitled *Strategy and Economics*. He suggested that lack of chrome was a weak link in American defenses that the Soviets should seek to exploit.

Critics of South Africa who accept that the West is heavily dependent on the country's mineral resources nevertheless argue that there is no reason for relenting in the boycott campaign. Whatever regime rules South Africa, they contend, it will have to trade with us—and, pace Andy Young, the more it trades, the more amenable it will become. The weakness in this argument is that it ignores the fact that the Soviets are pursuing a clearly defined strategy of denial toward the West: Through their expansionism in Africa, and the buildup of their navy, the Soviets hope to be able to deprive the Western economies of ready access to vital raw materials. The potential for OPEC-style cartels and embargoes is obvious. Why, given this risk and South Africa's evident strategic importance, should Western governments and corporations participate in a campaign to undermine the South African economy, particularly when that campaign is explicitly intended to achieve political destabilization, whose outcome would be wholly unpredictable?

BENEFITS TO BLACK AFRICA

Whatever their official line on South Africa, many black African countries are heavily dependent on it to provide jobs, revenue, technical help and a wide range of imported goods. The shrinkage of the South African economy that would result from major disinvestment could deal some of these states a body blow. The most ironic example is that of Marxist Mozambique, which sends more than 100,000 migrant workers to South Africa's gold mines every year.

Zaire imports half its food from South Africa, the Seychelles and Mauritius get most of their tourists from South Africa, Malawi got the cash it needed to build its new capital from South Africa, and the leftist government in Cape Verde gets a fifth of its foreign earnings from refueling South African Airways planes at Sal airport.

South Africa has a thriving trade—overtly or covertly—with most of Africa. At least a dozen black African states would face economic ruin if they were compelled to respect a total trade embargo with South Africa. Who would pick up the bill? Even without a total embargo, these states stand to suffer badly from the deepening recession in South Africa that would result from a cutoff of Western investment.

BUSINESS BRINGS REFORM

According to the advocates of disinvestment, putting money into South Africa means "investing in apartheid," i.e., helping to shore up a system whose economic raison d'etre (in their view) is to ensure a permanent supply of cheap labor. Now there is no doubt that cheap labor rates—compared to wage levels in Western countries—are a major attraction to foreign investors, as is true in any developing country. But wage rates are considerably higher for industrial workers in South Africa than in the black African states to the north. The living standards of black South African families are, on average, from two to five times higher than the norm in other African countries. The average industrial wage is nearly twice as high as in Ghana, which has one of the highest wage structures on the continent. And family incomes more than doubled in the Johannesburg area between 1970 and 1975. Black wage levels remain shockingly low by our standards, and in relation to the earnings of South African whites. But it must not be forgotten that market forces are involved. If higher wage rates are imposed and, therefore, a company no longer has a profitable investment, it will normally seek to cut costs by introducing machinery to replace men and firing part of its work force, turning underpaid workers into unemployed persons.

Foreign business in South Africa has demonstrably been a catalyst for beneficial change. Allegations about corporations that pay their workers at levels below the poverty line get massive exposure in the media. Less attention is paid to initiatives like General Motors' statement of principles, drawn up last year by a black director, Reverend Leon Sullivan. It calls for American firms in South Africa to abandon racial segregation in the workplace, to provide equal pay for equal work and to follow fair practices in making promotions. The Sullivan declaration has been endorsed by 56 American companies.

Apart from initiatives of this kind, there is a logic in the growth of manufacturing industry in South Africa that is helping to advance the social position, as well as the living standards, of blacks and to show up the economic absurdity of racial discrimination. The white community cannot supply all the skilled labor that is required, espe-

cially given the inroads of military conscription. As a result, blacks are being brought into positions of greater responsibility. It is in the context of an expanding economy, not the siege economy into which South Africa would be driven by trade or investment embargoes, that equality on the job is most likely to come about. This may appear a frustratingly slow process to outsiders, but peaceful reforms come about through short steps, not giant leaps.

THE BLACKS WOULD SUFFER FIRST

South Africa's blacks have the highest rate of population growth on the continent—an annual 3.3 percent. This is a tribute, in part, to the extensive medical services available to them, such as the colossal Baragwanath hospital for nonwhites on the outskirts of Johannesburg, which handles 700,000 outpatients a year. Rapid population growth also means that 120,000 young blacks are entering the job market every year. These are people who are likely to be condemned to rural underemployment in the "homelands" if the boycott campaign succeeds. Many blacks who now hold industrial jobs in the towns would join the ranks of the jobless, and be packed off to the "homelands." A trade or investment embargo could help to throw many blacks whose living standards and job opportunities have been steadily improving into acts of violent frustration or the sad torpor of the hopeless and underfed.

An embargo would cost jobs much farther afield as well. If Britain (which provides 60 percent of foreign investment in South Africa) supported a total embargo of South Africa, some 100,000 British workers—many of them employed in transport and engineering—would join the welfare lines.

Those who presume to tell other countries how to run their affairs should be reminded that political ideas are not always exportable. Witness the experience of Britain, which produced written constitutions for its former colonies only to see most of them torn up.

Any approach to the South African problem must begin with the recognition that the whites have every right to be there and that their nationalism, which runs strong, is as valid as anyone else's. The Afrikaner pioneers did not steal the land of black nations; the northern area that they settled was for the most part uninhabited. South Africa is a multinational state, where the divide is not simply between black and white, but between a white nationalism and a number of black nationalisms including those of the Zula nation, the Xhosa nation, the Tswana and Sotho peoples. Above all, South Africa is not, and has never been, a colonial problem, as was recognized even by the black African leaders who issued the Lusaka Declaration against colonialism and racialism in 1969.

South Africa's political establishment is seeking a solution for the problem of rival white and black nationalism in the policy of separate development. Some 13 percent of the country's land, including almost half of the most fertile agricultural land, has been designated as black "homelands." To outsiders, it might appear that the South Africans are industriously turning their country into a Swiss cheese. The "holes" are the homelands, or Bantustans that have either become independent states—like the Transkei or the unpronounceable named Bophutatswana—or are destined to become so. It is understandable that leaders like Chief Buthelezi, who faces the prospect of becoming president of many separate parcels of land while failing to gain diplomatic recognition from any foreign state (apart from South Africa itself), are not overjoyed by this formula for achieving black majority rule. The Afrikaners themselves may have second thoughts about "separate development" if one or more of these new ministates should take its independence seriously enough to open up relations with the Soviet Union and provide bases for armed guerrillas.

"Separate development" in its present form may be no solution for South Africa's problems, but then neither is the simplistic demand for majority rule now. The United States, after all, only began to solve its racial problems after a hundred years and a bloody civil war. Outside the Communist party of South Africa (which doesn't believe in "bourgeois democracy" anyway), no serious figure in the white community believes that one man, one vote will be possible in this country anytime soon. The fundamentalism with which most Afrikaners adhere to the ideology of apartheid makes it certain that the more strongly the demand for majority rule is voiced, the more firmly it will be resisted.

This does not rule out some realistic proposals for gradual reform—if South Africa is allowed to work out its own destiny. But the prospects that any of these proposals will be implemented are lessened, not enhanced, by the international campaign against South Africa. The possibilities include the creation of a commonwealth of white and black states within the present boundaries of South Africa. That could be a way to reconcile contending nationalisms. There are also appeals for the selective enfranchisement of nonwhites, especially the Coloureds and Asians. If the Coloureds—the people of mixed race—were to be given the same privileges as the whites and enabled to merge with them as a group, the ratio between the enlarged "white" community and the blacks would rise to 1:2.25. This is obviously a reason why, if only in order to divide and rule, white South Africans may come to lower the color bar. There are white South Africans who wish to go further, by enfranchising better-educated urban blacks, who already constitute an incipent labor aristocracy.

Economic sanctions against South Africa would greatly reduce the chances of such reforms. Limited as they may seem to be to outsiders, they are radical indeed to many Afrikaners.

The West must come to terms with the fact that it needs South Africa, as do many black African countries. A friendly South Africa is a vital ally in the struggle to contain Soviet expansionism, as we saw in Angola. Try telling any moderate black leader in Africa that racism, not communism, is the problem and he will laugh in your face. Men like Kenyatta, and Kaunda, and Mobutu and most of the French-African leaders are not threatened by South Africa; they are threatened by the protégés of Moscow. Most of them were secretly begging the South Africans to go into Angola in response to the invasion by the Cubans, Russia's proxy troops.

Boycott or no boycott, my own hunch is that South Africa is going to survive. I cannot explain my confidence purely in terms of South Africa's self-sufficiency in every major commodity except oil (and it has enough oil stockpiled to last three or four years) or its highly professional and well-equipped armed forces, or the probability that it already has nuclear weapons, or even its vital defense relationship with Israel, France, West Germany and Iran.

The primary reason for my confidence lies in the character of the Afrikaners. They are, in fact, a white tribe in Africa. They owe nothing to anyone: They didn't steal their lands from any existing culture; they fought the British for independence; they are not colonial settlers who will meekly depart with a retreating colonial power. They have no place to run to, and their nationalism runs strong and deep. Like the Jews of the Bible, they are a "stiff-necked people." Like the Israelis, they mean to survive.●

THE BEGINNING OF THE END FOR OVERREGULATION

HON. PHILIP M. CRANE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1978

● Mr. CRANE. Mr. Speaker, it is with great pleasure that I share the following presentation with you. Mr. William T. Ylvisaker, who is chairman of the board of Gould, Inc., and also a resident of my congressional district, was singled out this year by the Chicago chapter of the American Marketing Association. His achievement "Marketer of the Year." His acceptance address makes some very important points with respect to our free market system and our plethora of Government regulations. I encourage my colleagues to read it:

"THE BEGINNING OF THE END FOR OVERREGULATION"

(By William T. Ylvisaker)

Thank you Governor and Mrs. Thompson. Ladies and gentlemen thank you for being with us and for your warm support. And for your courage in braving still another wintry Chicago evening to attend this event.

I especially want to thank all the people of Gould Inc.—all 37,000 of them—for making this evening possible. Without them, there would be no products . . . there would be no markets . . . there would be no modern-day Gould. Certainly, there would be no Bill Ylvisaker standing before you this evening to accept this award, which I do, for all of us.

However, let me also indulge myself. I personally am very pleased to receive this award. I recognize . . . as I know you do . . . that marketing is a very creative, innovative function.

Marketing is the force that brings our products and services to the broadest number of people at the fairest possible price. It is the keystone of our private enterprise system. It is the function that probably most of all distinguishes our economic system from those of so-called planned economic societies.

It is evident that this system has served us well . . .

What do we mean by a free market system or the private enterprise system? Simply put, it is an economic system that offers reward for risk.

At its zenith, our country encouraged individual initiative, spawned creativity and innovation and rewarded risk. The result has been the unparalleled progress of our Nation.

In the last few decades this progress has slowed. We are no longer the world's industrial leader. Some would say this ebb is the result of our growing dependence on foreign sources of energy and raw material. I do not agree. You have only to look to Japan—where the real resource is economic desire—to lay that argument to rest.

I think we need look no further than our current political system to find the reasons for our slower progress. Over the past two decades, this progress has subsided in direct proportion to the growth of Government and its continuing intrusion into the free market system.

To be sure, it is a trend spawned by genuine concerns for the quality of life in this country. No one here should doubt the real need for equality, for clean air . . . for pure water . . . for quality products and for honest services.

But we all should be concerned about how these goals are achieved. We are fast approaching the time when we will be throwing out the baby with the bathwater.

The basic problem—no matter how well-mentioned—is that the pendulum of Government involvement in business has swung too far. Our Government programs are putting undue penalties on economic reward. They are discouraging risk. They are smothering creativity and innovation. They are, in short, stifling progress.

It is time to speak up, to regain our lost momentum. To bring the pendulum back to a better balance. To seek reasonable solutions to our problems. And, as businessmen, to participate in their resolution.

I would like to tell you a true story about a Mr. Ferrol G. Barlow. Not many have heard of Mr. Barlow I'm sure . . . but he is important.

Mr. Barlow lives in Pocatello, Idaho. He happens to be a Democratic precinct committeeman.

Mr. Barlow owns and runs a heating and plumbing business in Pocatello . . . and he recently did something many of us have not had the courage to do. Mr. Barlow told the Government to get out of his business.

Specifically, at 11:00 a.m, on September 3, 1975, he stood at the doorway of his heating and plumbing shop and barred the entrance of a Federal inspector from OSHA—the Occupational Safety and Health Administration. Mr. Barlow claimed the inspector—who did not have a warrant—was unauthorized to make a routine inspection of his shop. Barlow claimed his property was protected by the fourth amendment against unwarranted search or seizure.

In 17 years of operation, Mr. Barlow pointed out that none of his employees ever had been injured in a work-related accident. Mr. Barlow said he didn't need OSHA to tell him how to run his plant. And a panel of three judges agreed. Now the Government of the United States is appealing to the Supreme Court . . . and that Court will hand down a decision in July.

Whatever the court's verdict, Mr. Barlow's message has not fallen on deaf ears. In the last year—facing similar pressures from other businesses—OSHA has eliminated more than 1,100 of its unnecessary regulations. Under new leadership, it has promised a more commonsense approach to insuring worker safety and health . . . and to assist, rather than inhibit, the efforts of business to create a safer and healthier working environment.

In my opinion, Mr. Barlow speaks for a growing majority of Americans. Our electorate selected a President who says he is committed to eliminating waste in Government and to controlling Federal spending . . . and our society is fast losing its tolerance for the excesses of overregulation.

Since 1960, Congress has passed 90 new laws regulating the conduct of business. But in this session, our legislators seem to have lost their appetite for further intervention into the private sector. Last month the House of Representatives sent down to final defeat the office of Consumer Representation, yet another proposed layer of bureaucracy that would have added untold new costs to business operations. As Congressman John Anderson of Illinois remarked, the defeat again signalled that government is already, quote, "too big, too intrusive and too bureaucratic," unquote.

I could cite dozens of statistics that underscore the excessive costs . . . inefficiencies . . . and inconsistencies of overregulation.

For example, in 1970 one out of every seven workers in this country was employed by Federal, State and local governments. Today, one out of every five is employed by government—clear evidence that our bureaucracy is growing bigger and bigger.

In 1971, the Federal government reached its first $100 billion budget . . . by 1975 that budget had grown to $300 billion . . . and this year the proposed Carter budget is more than $500 billion.

To give you an idea of just one element of this budget, a report from the Commission on Federal paperwork—yes, there really is a Commission on Federal Paperwork, just to show you how ridiculous the situation has become—revealed that over $32 billion is expended annually simply to process the avalanche of Federal forms that confronts all of us. Most of which are never used.

Are some of these budget monies wasted? Well, for one thing, the Ford administration estimated that $130 billion in taxpayers' money has indeed been wasted in each of the last several years on what it termed "useless" Federal regulation.

Eighty-five government agencies now intrude or regulate business operations. They regulate product safety . . . content . . . labeling . . . and advertising. They establish hiring . . . firing . . . and working conditions. They control the environment . . . and our community relations. And, more recently, they have told us exactly what we can do politically—and what we cannot do—to alter this pattern of interference, just to mention a few.

Yet, for all of this supposed help—for all of this over-regulation . . . for all of these enormous costs . . . government cannot create wealth or create capital—which in itself is the only way to create jobs. Government is still dependent on the private sector for its existence.

In fact, because government competes with private industry for many of the same resources—resources that could be put to productive use in the private sector—our growing federal bureaucracy has a marked impact on the spiraling rate of inflation.

As the noose of overregulation tightens, it threatens to strangle creativity and invention—and therefore productivity . . . to create further unemployment . . . to discourage investment in capital expansion—to discourage increasing investment in research and development . . . and to erode our standard of living.

Syndicated columnist James Kilpatrick wrote recently, upon reading a government study conducted by the Council on Wage and Price Stability, that it was, quote: "A study of the slow triumph of socialism over . . . American industry."

As a matter of fact, we as a nation are now devoting a smaller portion of our gross national product to capital investment than any other major industrial nation in the free world. The aggregate profits of American business, as a percentage of the gross national product, were nine percent in 1968 . . . today they are less than five percent. And the same holds true for research and development, our business lifeblood, which has declined from 3 percent of gross national product in 1964, to less than 2.2 percent today, a drop of 27 percent in 13 years.

As Irving Kristol, the noted author and a senior fellow at the American Enterprise Institute, has stated: "The new class of bureaucrats do not, on balance, like a free commercial society . . . whose central economic institution is the marketplace."

Franklin Delano Roosevelt—no conservative—said it as early as 1938: "Private enterprise is ceasing to be free enterprise."

What does it all mean? I think it means—I think it reinforces—the fact that economic freedom is still a far more effective arbiter of constituency needs than the tangled bureaucratic maze on the banks of the Potomac. Our competitive economic system—if allowed to work—will work. But it must be given the opportunity.

We must do everything possible to restore public confidence in the discipline of the marketplace. And we must do whatever we can—whenever and wherever we can—to convince government that it should return to a more balanced and less regulatory role.

Granted, in view of the government's explosive growth, this is no easy task.

But we must continually bring into focus that a growing bureaucracy does not impede inflation, it fosters it.

This inflation impacts the ability to purchase new plants and equipment, which are the principal foundations on which we build expanded capacity and create new jobs. Today's capital costs, for example, are nearly double those of five years ago.

Government-mandated increases in the minimum wage . . . investments in environmental control . . . tax policies . . . import an export limitations . . . foreign policy . . . pollution laws . . . affirmative action programs . . . occupational safety laws . . . and the endless stream of inspections and reports—all adding enormously to the complexity and the cost of doing business—not to mention the diversion of time and talent

In the last several years, the decision clearly, has been to make social progress . . . whether it's fighting pollution or increasing employee protection. And, to be sure, we have made important strides.

I believe the time has long since arrived when we must begin to restore some semblance of restraint and reasonableness to the regulatory process. What is reasonable? Let me try to define that by giving you an example of something that is unreasonable—even ridiculous.

Not long ago the Occupational Safety and Health Administration told hospitals that they could not put plastic liners in wastebaskets. The contention was that someone might drop a lighted cigarette into a wastebasket, causing hazardous smoke fumes.

Seems reasonable, right? Well, it was . . . until some inspectors from the Department of Health, Education, and Welfare came along. They told hospital administrators that they should use plastic liners for sanitation purposes.

So what do the hospitals do now? As I understand it, they adhere to each rule, depending on which inspector is due next?

Do you see what I mean by unreasonable? Even ridiculous.

Now, obviously, the controversy of the plastic wastebasket liner is not about to turn the course of business or send shock tremors through the free market system, whether it's ever enforced or not.

I cite it only because of its ridiculousness. And that's just the point. . . . Because it is ridiculous, and because it is relatively minor, you can imagine what happens—and what regulations evolve—when Government intrudes in the more serious aspects of private enterprise.

Incidentally, OSHA was created by an act of Congress less than seven years ago. Since that time, just this one agency alone has issued over 4,000 specific regulations.

And not only are Government agencies prolific in their issuing on standards, they are verbose to the extreme, confusing the businessman in a garble of rhetoric and red tape. The Lord's Prayer, for instance, consists of 56 words; Lincoln's Gettysburg Address, 268 words; and the Declaration of Independence, 1,322 words. A Government regulation on the sale of cabbages, however, requires 26,911 words.

Whenever—and wherever—these regulatory excesses or abuses exist, we must speak out against them. And we, as marketers, must remember that the most effective business lobby is not one that simply protects or promotes the special interests of business . . . but it also monitors the business community

to assure that it does not fall victim to the same shortcoming of which it is so critical.

Business can—and must—play a constructive role in communicating to public officials how existing Government programs can incorporate—and should incorporate—sound managements practices. We can begin now to lay the foundation for the renewal of a cooperative partnership between business and Government. . . . One that will result in a more reasoned approach to regulation.

We at Gould believe in a truly competitive market . . . and in the private enterprise system. We're proud to be a participant in it . . . and to see that it prospers and grows.

Our commitment is to growth . . . both for Gould and our economic system. In the past ten years our sales have risen from $115 million to 1977's $1.6 billion. Ten years ago we spent about $800,000 on research and development. . . . This year we expect to spend about $80 million.

Because we are willing to make this kind of investment we call ourselves, "The Creative Electric Company." We are committed to technical leadership. We are concerned about the lack of a positive national energy policy. And that is one reason why we are designing and creating products that will deliver more energy at less cost . . . more efficiently.

This year Gould has approved new capital expenditures of $148 million. . . . That's 85 percent above last year. It's also about four times our depreciation . . . a true indicator of our seriousness about growth. With that kind of capital investment, we will create over 5,100 new jobs because most of this money will be allocated to expanded production capacity.

Our hope as a nation is that all business people will be willing to make a bold commitment to growth. That commitment is what made this country great to begin with, and it will work again, and it will put many of the unemployed back to work.

But it also requires a strong willingness on the part of business to stand up to the Government, to ensure that incentives for growth survive. Individual initiative, in concert with a system of reward and risk, has seen our Nation through two centuries of prosperity and growth. It is not too late to undo the damage that has been done by stifling Government overregulation in recent decades. But it will take some of that initiative that business has so ably demonstrated over two centuries to correct our economic system and put it back on stream. Businessmen and women have the creativity, the knowledge, and the capability to balance the scales again. What we need now, is a unified voice coupled with a commitment to action. So armed against the spector of Government intrusion, we have the means to maintain a strong and resilient private enterprise system throughout our third century.●

BUDGET CUTS THREATEN VA MEDICAL SYSTEM

HON. W. G. (BILL) HEFNER

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1978

● Mr. HEFNER. Mr. Speaker, Representative OLIN E. TEAGUE of Texas has sent me a letter detailing the enormous impact the administrations' fiscal year 1979 budget cuts will have on veterans in North Carolina. Mr. TEAGUE has been known as "Mr. Veteran" in Congress since he became a Member in 1946. He is a member of the Veterans' Affairs Committee and served for 16 years as its chairman. He is alarmed at the present threat to the Veterans' Administration medical system posed by the upcoming budget. Considering his profound knowledge of the system and his commitment to America's veterans, I feel when he is alarmed, it is time for all of us to be alarmed.

Mr. Speaker, I know of no mandate from the American people to take from veterans of our country's wars a portion of their entitlement to quality medical care in VA hospitals. Yet that is exactly what is going to happen if Congress permits the administration's fiscal year 1979 budget to prevail.

In addition to the bed losses, reductions in staff, drugs, food, and related items for their States, our colleagues should consider the number of veterans who will be denied needed hospitalization and medical treatment by bed reductions.

This is serious enough, but other developments are still more ominous and threatening to the VA medical system. Research programs are being phased out. Medical schools which have been affiliated with VA hospitals for teaching and research have reevaluated these programs in light of budget cuts and have indicated their intentions to dissolve their affiliations. Once that trend sets in, Mr. Speaker, it will be impossible to turn back.

I ask every Member of this body to consider if they are prepared to turn their backs on America's veterans by permitting the VA medical system to begin its decline into a medical ghetto. I ask those who received, as I did, a letter from Mr. TEAGUE to read it carefully and consider the cuts that will be made in health care for their own State's veterans.

I urge the Members of the House to reject the recommended budget and reaffirm this Nation's commitment to our veterans. I urge you to support RAY ROBERTS, the distinguished chairman of the Veterans' Affairs Committee, when he offers an amendment on the floor of the House to the budget resolution that will, in effect, save the VA medical system.

I commend Chairman ROBERTS, for the strong leadership he has taken in this crucial battle. He will have my full support. I trust all Members who honor the commitment of the Congress and the American people to provide quality care to veterans will give his amendment their support as well.●

FINANCIAL STATUS OF CONGRESSMAN ROBERT W. EDGAR

HON. ROBERT W. EDGAR

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1978

● Mr. EDGAR. Mr. Speaker, as a firm believer in financial disclosure of public officials and candidates, I am submitting for the RECORD a listing of Mrs. Edgar's and my assets and liabilities, as well as our income and taxes. I am including data for 1975, 1976, and 1977:

FINANCIAL STATEMENT OF CONGRESSMAN AND MRS. ROBERT W. EDGAR

	Dec. 31, 1975	Dec. 31, 1976	Dec. 31, 1977
ASSETS			
Savings account	$49.52	$361.97	$528.48
Cash on hand in checking account(s)	689.10	1,872.17	420.47
Mortgage escrow account(s)	380.59	433.50	640.10
1971 Volkswagen	1,400.00	1,000.00	800.00
1975 Ford Granada	2,500.00	2,100.00	0
1976 Volvo	0	0	6,105.78
House in Broomall, Pa	37,000.00	40,000.00	45,000.00
House in Arlington, Va	60,000.00	70,000.00	75,000.00
Household goods and miscellaneous personal property	11,000.00	13,000.00	15,000.00
U.S. civil service retirement fund	2,930.41	6,275.41	10,346.04
U.S. savings bonds (approximate value)	0	0	750.00
Total assets	115,949.62	135,043.05	154,590.87
LIABILITIES			
Mortgage on house in Broomall, Pa	19,370.92	18,950.51	18,496.14
Mortgage on house in Arlington, Va	56,750.00	55,808.06	55,361.35
Personal loan	958.95	0	3,200.00
Auto loan	0	0	5,130.50
Total liabilities	77,079.87	74,758.57	82,187.99

	1975	1976	1977
TAXES			
Federal	$4,579.01	$2,694.00	$7,434.89
Pennsylvania (State)	782.01	1,264.51	1,646.97
Pennsylvania (local)	646.80	729.26	769.71
Virginia (local)	40.396	875.44	1,038.56
Total taxes	6,411.78	5,563.21	10,890.13
INCOME			
Salary as a Member of Congress	39,072.08	44,600.00	54,275.00
Interest on savings account	28.59	13.15	27.51
Honorarium	0	200.0	0
Reimbursement for medical expenses claimed in 1976	0	0	1,200.00
Total income	29,100.67	44,813.15	55,502.51
Net worth	38,869.75	60,284.48	72,402.88

MYTHS ABOUT TUITION TAX CREDITS

HON. BILL FRENZEL

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1978

● Mr. FRENZEL. Mr. Speaker, much misinformation is circulating about tuition tax credits—some of it generated by opponents of the proposal, some simply the result of inadequae understanding. This brief paper attempts to correct some of the more widespread myths about current tuition tax credit proposals. Unless otherwise indicated, the information is based on the Tuition Tax Relief Act of 1978 (H.R. 3946, as reported by the Senate Finance Committee on February 28, 1978, and introduced in the House by Bill Frenzel, H.R. 11695). The myths follows at this point:

MYTHS

MYTH NO. 1: TUITION TAX CREDITS ARE PRIMARILY INTENDED TO HELP CHURCH-RELATED ELEMENTARY AND SECONDARY SCHOOLS

Fact.—According to estimates by the Joint Committee on Internal Revenue Taxation, 75 percent of the benefit of H.R. 3946 (when fully implemented) would accrue to college and other post-secondary students and their families.

Fact.—At the elementary and secondary level, according to the National Center for Educational Statistics, more than one-fifth of all students enrolled in non-public institutions attend schools that are not affiliated with any religious group.

MYTH NO. 2: TUITION TAX CREDITS ARE AVAILABLE ONLY TO STUDENTS ATTENDING PRIVATE SCHOOLS AND COLLEGES

Fact.—The benefits of H.R. 3946 include everyone who must pay tuition (or fees) for his or her education. At the post-secondary level, according to recent estimates by the Congressional Budget Office, 62 percent of the benefit will go to students enrolled in state colleges and universities and other public educational institutions.

MYTH NO. 3: TUITION TAX CREDITS WILL UNDERMINE THE PUBLIC SCHOOLS

Fact.—In 1966, 87 percent of all elementary and secondary school students in the United States were enrolled in public schools. Ten years later, 90 percent of all students studied in public institutions. Even if tuition tax credits slowed or stopped this trend, it is difficult to conclude that the public schools would be harmed.

Fact.—Many persons vitally interested in the well-being of the public schools believe that non-public schools also warrant assistance. For example, in an address on November 29, 1977, U.S. Commissioner of Education Ernest L. Boyer stated that "Private education is absolutely crucial to the vitality of this Nation, and public policy should strengthen rather than diminish these essential institutions."

Fact.—Support for the public schools is strongest in states and communities where private education is strongest. For example, in the five states where the largest percentages of students are enrolled in private schools, public school expenditures (per pupil) average $300 more than in the five states where private schools account for the smallest fraction of total enrollments.

MYTH NO. 4: TUITION TAX CREDITS PRIMARILY ASSIST WEALTHY PEOPLE

Fact.—According to the Bureau of the Census, 32 percent of all college and university students come from families earning less than $15,000. 79 percent come from families below $30,000. Only 4 percent are above $50,000.

Among private elementary and secondary students, more than 71 percent are found in families with incomes under $25,000, and fewer than 4 percent have family incomes over $50,000.

The Joint Committee on Taxation estimates that 85 percent of the total benefit of H.R. 3946 will accrue to families with adjusted gross incomes below $30,000.

MYTH NO. 5: MIDDLE-INCOME FAMILIES HAVE NO REAL NEED FOR HELP WITH COLLEGE COSTS

Fact.—There has been considerable slippage over the past ten years in the rate at which middle income persons attend college. According to the Bureau of the Census, while the enrollment rate among low income 18 to 24 year olds has shown some slight improvement, at all other income levels there has been a decline.

College enrollment rates of dependent family members 18 to 24 years old, by family income (income in constant 1967 dollars)

Income	1967	1976	(1)	(2)
Less than $5,000	20.0	22.4	+2.4	+12
$5,000 to $9,999	37.9	36.3	−1.6	−4
$10,000 to $14,999	51.9	47.5	−4.4	−8
$15,000 and over	68.3	58.2	−10.1	−15

[1] Actual change.
[2] Percentage change.

Source: Bureau of the Census, Current Population Reports, Series P-20 No. 319, 2/78.

Fact.—Between 1970–71 and 1976–77, the average cost of attending a public college rose 57 percent, and the cost of attending a private college increased 54 percent. During this same period, the median income of all families rose by 52 percent; the median income of families with college-age (i.e., 18–24-year-old) dependents rose just 46 percent.

Fact.—According to a new Brookings Institution study of private higher education, "Students with family incomes between $15,000 and $25,000 a year face a substantially wider tuition gap relative to their ability to pay than either richer or poorer students. In fact, for many low-income students, many private colleges are probably cheaper than public colleges. At the same time, the relative representation of the upper middle class in private higher education has been falling rather sharply—[I]t is reasonable to . . . conclude that the upper middle class is indeed responding to a price squeeze in private higher education."

MYTH NO. 6: TUITION TAX CREDITS PROVIDE NO HELP TO POOR FAMILIES WHO PAY LITTLE OR NOTHING BY WAY OF FEDERAL INCOME TAXES.

Fact.—A refundable tuition tax credit, such as H.R. 3946, offers substantial more assistance to low income families than would result from increased grant and loan programs such as the administration has proposed. According to the Congressional Budget Office, 1,486,000 *families* with incomes below $10,000 would benefit in 1979–80 from the postsecondary portion of H.R. 3946, whereas just 181,000 low-income students would gain from the Administration's proposal.

MYTH NO. 7: TUITION TAX CREDIT ENCOURAGE "DOUBLE-DIPPING" BY STUDENTS ALSO ELIGIBLE FOR GRANT AID.

Fact.—Tax credits are available only for tuition expenses actually paid by the student or the student's family. Any grant aid is substracted from "eligible expenses" before the tax credit is calculated.

MYTH NO. 8: THE STUDENT AID BILL PROPOSED BY THE ADMINISTRATION ADEQUATELY ADDRESSES THE NEEDS OF MIDDLE INCOME FAMILIES.

Fact.—The alternative proposals offer nothing but loans to the 2.4 million college students with family incomes between $25,000 and $40,000, let alone to the 871,000 students from more prosperous families.

Fact.—Many students slated for grant aid would receive very little. The Administration bill, for example, offered flat grants of just $250 to all students with family incomes between $15,000 and $25,000. The bill reported by the Senate Human Resources Committee would grant an average of $310 to a student whose family earned $24,000. These figures must be compared with college attendance costs that next year will average $3,054 in public institutions and $5,110 in private ones. None of the alternative proposals would make a nickel available to families with children attending non-public elementary and secondary schools.

MYTH NO. 9: COLLEGES WIILL INCREASE TUITION TO CAPTURE BENEFITS OF THE TAX CREDIT

Fact.—Competition among colleges presents a strong incentive to avoid tuition increases. Like other consumers, students and their families are cost conscious, and tuition levels substantially affect which college they choose and whether they go to college at all. According to the Brookings Institution, "The one universal finding in the studies under review here is that price *does* affect access—every single one finds a significant negative relationship between the net price faced by students and their probability of attending college." Hence, any college that increased its tuition to "capture" the tax credit would face a strong likelihood of losing students to schools that do not raise tuitions. In a period when total enrollments are expected to decline, this competition will be even keener and the effects of a tuition increase that much more acute.

MYTH NO. 10: TAX CREDITS WOULD RESULT IN A SUBSTANTIAL ADMINISTRATIVE BURDEN

Fact.—According to the Congressional Budget Office, an expansion of the current grant program, such as the Administration has proposed, "would involve a greater administrative burden" than tuition tax credits. The existing programs have produced substantial administrative difficulties. For colleges and universities as well as for students, Dr. Melvin A. Eggars, Chancellor and President of Syracuse University, testified before Senate Finance and House Ways and Means Committee that the existing programs "have yielded a 'crazy quilt' of application and eligibility procedures which is bewildering to potential applicants, have defied the ability of our bureaucrats to administer them, and have resulted in a labyrinth of disconnected, overlapping and uncoordinated parts that must be brought into better order."

MYTH NO. 11: FEDERAL AID TO PRIVATE SCHOOL STUDENTS IS A NEW AND ABERRANT NOTION ADVANCED ONLY BY THOSE SEEKING TO FOSTER SECTARIAN INTERESTS

Fact.—Both the Democratic and Republican Parties have repeatedly endorsed the principle of aiding private schools and their students. President Carter did the same on October 19, 1976, when he said, "I am firmly committed to finding constitutionally acceptable methods of providing aid to parents whose children attend parochial schools." In 1972, Treasury Secretary George Shultz testified before the Ways and Means Committee in support of tuition tax credits for elementary and secondary school students.

MYTH NO. 12: TUITION TAX CREDITS FOR PRIVATE SCHOOL STUDENTS ARE UNCONSTITUTIONAL

Fact.—The Supreme Court has never ruled on federal tuition tax credits, and the state programs it has previously reviewed differed in many significant respects from the provisions of H.R. 3946.

Fact.—Many eminent constitutional experts believe that the Supreme Court would find no fault with H.R. 3946.

Fact.—The Congress has the responsibility of passing legislation it believes to be constitutional. Until a tax credit bill is enacted, the Supreme Court will have no opportunity to review it.

MYTH NO. 13: TUITION TAX CREDITS WILL ENCOURAGE "FLY BY NIGHT" SCHOOLS

Fact.—For a student to be eligible for a tax credit, the school he or she attends must (a) be approved as a bona fide non-profit institution by the Internal Revenue Service and (b) be accredited or approved under the laws of the state in which it is located.

MYTH NO. 14: TUITION TAX CREDITS WILL FOSTER RACIAL SEGREGATION

Fact.—For a private elementary or secondary school to attain and keep tax-exempt status, (which it must have in order for its students to qualify for tax credits), it must satisfy the Internal Revenue Service that it does not discriminate. There are established procedures for auditing compliance with these requirements and for investigating complaints.

Fact.—Many minority group members attend private schools now, and more would be enabled to do so with the help of tuition tax credits. In 1976–77, fifteen out of every hundred students enrolled in Catholic elementary and secondary schools were black or Spanish-surnamed. In the 82 schools operated by the Archdiocese of Chicago, 78 percent of the students are black or Spanish-surnamed. Almost 40 students out of 100 are not even Catholic.

MYTH NO. 15: TUITION TAX CREDITS WOULD RESULT IN FAR MORE FEDERAL AID FOR PRIVATE SCHOOL STUDENTS THAN FOR PUBLIC SCHOOL STUDENTS

Fact.—In addition to billions of dollars in direct expenditures for public school programs, the Congressional Reference Service estimates that in 1978 the federal government will forego $4.6 billion in revenues as a consequence of tax expenditures that support public schools. By contrast, if it had been fully effective in 1978, HR 3946 would result in a tax expenditure of $923 million on behalf of non-public elementary and secondary school students.

Fact.—The principle is already well established at the college level that a person enrolled in a private institution should receive more assistance than if he or she attended a state college, simply because it costs more to study in the former. Attentiveness to such differing educational price levels is integral to federal education policy.●

A TRIBUTE TO EDWARD L. UPSON

HON. DALE E. KILDEE

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1978

● Mr. KILDEE. Mr. Speaker, a few weeks ago the State of Michigan lost a devoted public official with the unexpected passing away of Edward L. Upson, a senior district engineer for 17 years with the Michigan Department of State Highways. Mr. Upson as a man of remarkable ability and absolute integrity who had directed the development of Flint's freeway system since construction began. He was a prominent and respected leader throughout the 11-county Saginaw district which he headed, and he was one of the department's most effective administrators in working with government and civic groups. He also was an active citizen in Frankenmuth, where he resided, serving more than 10 years on the Frankenmuth planning commission and contributing his time and leadership abilities to the Frankenmuth Lions club. Mr. Upson joined the Michigan highway department in 1951, immediately after graduating from the University of Michigan with a degree in civil engineering. I wanted to call the attention of my colleagues to this very brief sketch of Edward L. Upson's accomplishments because of the very high regard I had for his ability and his commitment to public service.●

CHICAGO FLOOD CONTROL PROBLEM

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1978

● Mr. DERWINSKI. Mr. Speaker, along with other Members of the Illinois delegation, I have been interested in an overall plan to control the periodic flood problem in the Chicago Metropolitan area. Tied in with this, are efforts to comply with the Federal Water Quality Standards that would effect cities in the metropolitan area.

The Congress has authorized the funding for the Metropolitan Sanitary District Tunnel and Reservoir Plan. Federal and State environmental officials have approved the concepts of this plan. However, this plan has come under fire in recent months.

Mr. Nicholas Melas, president of the Chicago Metropolitan Sanitary District, presented his views in a March 13 rebuttal to a WLS-TV editorial critical of the tunnel and reservoir plan.

Mr. Melas' comments follow:

REBUTTAL

(With a rebuttal to a WLS-TV editorial, here is Nicholas J. Melas, President of the Metropolitan Sanitary District.)

Every time it rains, raw sewage, equivalent to the human waste from one million people per day, spills into our waterways. The Sanitary District must intercept these wastes at 640 locations in 54 communities with combined sewer systems. These outfalls violate Water Quality Standards mandated by Congress in the Clean Water Act of 1972.

The Flood Control Coordinating Committee, appointed by the Governor, selected the Tunnel and Reservoir Plan in 1972 as the most effective means of complying with these standards after an exhaustive review of 23 alternatives. The plan was aired at numerous public hearings. Only last week, the Civic Federation, League of Women Voters and the Lake Michigan Federation strongly supported TARP at a public meeting held at District headquarters.

TARP costs have increased because of the same pressures affecting the rest of the economy. However, a cost vs. benefits study, prepared by the Corps of Engineers of the United States Army, has shown that for each dollar spent on TARP there will be a benefit of $1.57.

Thus, we maintain that TARP is still the best and most economical answer to our pollution and flood control problems.

(The above rebuttal was telecast at various times during the week of March 13, 1978.)●

DESEGREGATION OF COLLEGES AND UNIVERSITIES

HON. AUGUSTUS F. HAWKINS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1978

● Mr. HAWKINS. Mr. Speaker, my friend, Carl Rowan, recently made a commentary on the issue of desegregation of public colleges and universities, and the fact that Secretary Califano has mounted an effort to force several States to face up to the law of the land and integrate their public schools on the post-secondary level. Over the last several months, he has been successful in getting States to begin such efforts in earnest.

I am pleased to direct my colleagues' attention to Mr. Rowan's recent commentary:

I want to tip a cap today to Joe Califano, Secretary of Health, Education and Welfare. In the face of public ignorance and anger, he keeps trying to do what is right. Every now and then he succeeds.

For example, while much of white America is crying against "reverse discrimination," or demanding that "affirmative action" programs be outlawed, Califano has not trembled before the mob.

He has used his control of the Federal purse strings to force several southern states to begin honest-to-goodness efforts to integrate their public colleges. The latest state to fall in line is Virginia, and that is no achievement by Califano.

HEW Secretary Joe Califano is hardly the most popular man in the land. Whether he's trying to stop Americans from smoking or trying to produce real integration of the public schools, he infuriates whites in states like North Carolina and Virginia, where Jim Crow and tobacco have long been two of the proudest products.

Though cursed in a thousand ways, Califano has not backed off. In fact, he has gotten tougher—and that toughness won him a big one ten days ago. By threatening to withhold $100 million a year in Federal funds, Califano got Virginia Gov. John Dalton to agree to a comprehensive plan to put more blacks in Virginia's white state colleges and more whites in predominantly-black institutions.

Under the plan agreed to, black enrollment at predominantly white schools is to be increased by 150 per cent, or another 1600 students, by the 1982–83 school year.

Equally important, the State's white institutions have agreed to increase their employment of blacks as teachers and administrators.

And let's not ignore the fact that Califano scared half to death some black college educators in Virginia. They thought he was pushing integration to the point that Norfolk State and Virginia State would be destroyed. But if the Califano-Dalton agreement is lived up to, the black schools will become stronger. They will get new undergraduate and graduate programs, hopefully programs that the white colleges do not have—meaning that White students will have

extra incentives to enroll at Norfolk State and Virginia State.

The black schools will get endowments for bringing scholars of high reputation to their campuses.

Scholarships will be made available for blacks attending white schools and for whites enrolling at black colleges.

Dalton has committed Virginia to spend about $1 million in the 1982-83 school year for the purpose of expanding college integration.

Not bad, considering Virginia's history of massive resistance to racial integration. Not bad, given the fact that the fight between HEW and Virginia has gone on for a decade.

Maybe Califano isn't the only one who deserves a tip of the cap. Let's lift a glass to Gov. Dalton in the hope that he has ushered in a new era of racial cooperation and sanity in Virginia.●

AMENDMENTS TO H.R. 12050, THE TUITION TAX CREDIT ACT OF 1978

HON. CHARLES A. VANIK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1978

● Mr. VANIK. Mr. Speaker, on April 17 the House Committee on Ways and Means reported H.R. 12050, the Tuition Tax Credit Act of 1978. As reported, the bill provides a tuition tax credit of up to 25 percent of tuition expenses for each of a taxpayer's dependents attending postsecondary schools. The credit would be phased in over a priod of 3 years, with maximum credits of $100 the first, $150 the second year, and $250 the third. Although elementary and secondary schools were included under the coverage of the bill I introduced, they were removed during the committee's considerations. The Ways and Means Committee also voted to decrease the credit to 25 percent of tuition costs which were set at 50 percent in my original bill.

I intend to offer two amendments to the bill when it is on the floor of the House: the first will restore the original provisions of H.R. 11776 and allow tuition tax credits to elementary and secondary students. I consider this essential to the purpose of this legislation.

The second amendment will restore another section of H.R. 11776 and increase the percent of tuition eligible for the credit to 50 percent from 25 percent.

For the information of my colleagues, both the amendments are printed below:

AMENDMENT BY MR. VANIK TO H.R. 12050, TO PROVIDE A TAX CREDIT FOR TUITION AT ELEMENTARY AND SECONDARY SCHOOLS

Page 2, strike out the table following line 12 and insert in lieu thereof the following:

Calendar year:	Applicable amount in case of—(1)	(2)
1978	$50	$100
1979	100	150
1980	100	250

[1] Student at elementary or secondary school.

[2] Student at post-secondary institution.

Page 3, strike out line 20 and all that follows down through line 4 on page 4 and insert in lieu thereof the following:

"(B) GENERAL COURSE OF INSTRUCTION DEFINED.—For purposes of subparagraph (A), the term 'general course of instruction' means a course of instruction—

"(i) which is offered by an elementary or secondary school, or

"(ii) for which credit is allowable toward a baccalaureate or associate degree by an institution of higher education or toward a certificate of required course work at a vocational school but does not include any course of instruction which is part of the graduate program of the individual.

Page 4, after line 25, insert the following:

"(C) Individual who attends both secondary school and postsecondary institution during same calendar year.—In the case of an individual who is a full-time student or a qualified part-time student at an eligible educational institution for any calendar year, for purposes of this section—

"(i) if such individual is a full-time student or a qualified part-time student for such year determined by taking into account only his status as a student at a postsecondary institution, he shall be treated as a full-time student or a qualified part-time student (as the case may be) at such an institution, or

"(ii) if clause (i) does not apply, he shall be treated as a full-time student or a qualified part-time student (as the case may be) at an elementary or secondary school for such calendar year.

Page 5, strike out lines 10 through 12 and insert in lieu thereof the following:
courses of instruction,

"(B) meals, lodging, transportation, or similar personal, living, or family expenses, or

"(C), education below the first-grade level, or for attendance at a kindergarten or nursery.

Page 5, line 15, strike out "subparagraph (A) or (B)" and insert in lieu thereof "subparagraph (A), (B), or (C)".

Page 5, strike out lines 23 and 24 and insert in lieu thereof the following:

"(A) an institution of higher education,

"(B) a postsecondary vocational school,

"(C) a secondary school, or

"(D) an elementary school.

Page 6, after line 11, insert the following:

"(4) ELEMENTARY AND SECONDARY SCHOOLS.—The terms 'elementary school' and 'secondary school' mean, respectively, any elementary or secondary school (as defined in subsections (c) and (h) of section 801 of the Elementary and Secondary Education Act of 1965 as in effect on January 1, 1978) which is privately operated but only if it is—

"(A) accredited or approved under State law (or, in the case of school in a State which has no procedure for the accreditation or approval of privately operated schools, which meets the requirements of State law relating to compulsory school attendance), and

"(B) exempt from taxation under section 501(a) as an organization described in section 501(c)(3).

The terms 'elementary school' and 'secondary school' include facilities which offer education for individuals who are physically or mentally handicapped as a substitute for public elementary or secondary education.

"(5) POSTSECONDARY INSTITUTION.—The term 'postsecondary institution' means an institution of higher education or a postsecondary vocational school.

Page 6, line 12, strike out "(4)" and insert in lieu thereof "(6)".

AMENDMENT TO H.R. 1250 OFFERED BY MR. VANIK

[To increase the percentage of tuition allowable as a credit]

Page 2, line 5, strike out "25 percent" and insert in lieu thereof "50 percent".

Page 8, strike out lines 9 through 13 and insert in lieu thereof the following: "taxable year.●

TO INCREASE ECONOMIC GROWTH, CREATE JOBS, AND FIGHT INFLATION, CONGRESS MUST REDUCE TAXES ON CAPITAL GAINS AND RESTORE ENTREPRENEURSHIP TO AMERICA

HON. JACK F. KEMP

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1978

● Mr. KEMP. Mr. Speaker, since 1969 the Congress has moved repeatedly to increase taxes on capital gains, increasing the maximum tax rate from 25 percent to 50 percent. This has been justified on the grounds that all income should be taxed the same and that having a preferential tax rate for capital gains is somehow a "loophole."

The sad fact of the matter as I have been saying for years is that Congress has made a serious error in 1969 and again in 1976 and the results are all too apparent: high rates of inflation—unemployment and drop in entrepreneurial activity adversely affecting our growth rate.

Since 1969 the number of companies offering new issues of stock has declined from 1,800 to just 150 in 1975.

In 1969 small companies were able to raise $1.1 billion in equity capital. By 1974 this had declined to a mere $16 million—or a reduction of 98.5 percent.

Since 1970 the number of direct shareholders has dropped 18 percent, as 5½ million individuals left the stock market.

Capital gains revenues as a percentage of total taxes has dropped from 9.3 percent in 1968 to 4.5 percent in 1975.

All of which are very negative results in terms of our national goal of noninflationary growth and new jobs.

Taxes on capital gains must be reduced substantially for the good of the national economy. Part of the reason for this is the massive distortion of inflation on capital gains. Inflation increases nominal values while real values may be unchanged or even reduced. But since taxes are levied on the nominal gain, the taxes represent a tax on capital itself, rather than a capital gain.

For example, suppose you buy an asset for $1,000. A year later you sell it for $1,100. The $100 difference between the purchase price and the sale price is a capital gain. But suppose there has been 10-percent inflation. Then in real terms there has been no gain at all. If you pay $50 tax on the illusory gain this represents a tax on capital.

Thus a recent study by the National Bureau of Economic Research of capital gains in 1973 concluded that the $4.5 billion in capital gains on corporate stock reported that year was actually a $1 billion loss, when adjusted for inflation. The $500 million in tax paid on this gain, therefore, increased the real loss to $1.5 billion.

Consequently, a reduction in capital gains taxes, as proposed by Representative STEIGER of Wisconsin, would have highly beneficial effects on the economy and would actually increase Government revenues, for the following reasons:

Existing high capital gains tax rates with a high rate of inflation discourage individuals from realizing their gains, create a lock-in effect, and hinder new investment. As a result, the Government receives less revenue than it would if rates were lower, more capital gains were realized, and investment were higher.

The additional investment generated by reducing the tax rate on capital gains would have feedback effects on the economy. This increased investment activity would lead to greater economic growth and job creation, add to taxable personal and corporate incomes, and therefore, increase Federal tax revenues.

Thus Data Resources, Inc., a national economic forecasting firm, has caculated that elimination of all taxes on capital gains would increase Federal tax revenues by $38 billion within 4 years and add $200 billion in real growth to GNP while creating millions of new jobs.

This dramatic change in the investment climate would have an immediate impact on the ability of our economy to create jobs, for it has been the small, independent and entrepreneurial companies in America today which have suffered the most from the shortage of equity capital and venture capital. Yet these type of small enterprises have historically created jobs at a rate 40 to 50 times faster than older, bigger, and more mature firms—as documented in a recent study by the American Electronics Association.

I believe that this shortage of investment in the most dynamic sector of our economy has directly impacted on our economy in terms of the reduction in growth of real GNP, employment, and productivity that our economy has experienced since 1965. This, in turn, has fueled inflation, as the real output of goods and services relative to Government spending has fallen off.

Reducing the tax on capital gains to a maximum of 25 percent, as it was prior to 1969, as proposed by Representative STEIGER, would be enormously beneficial to the economy. And I am happy to see that his efforts have been recognized editorally by the Wall Street Journal. I would therefore like to commend to my colleagues an excellent editorial entitled, "Stupendous STEIGER." Someday I hope this Congress would consider removing any tax on capital gains, but this is a "stupendous" step.

[From the Wall Street Journal, April 26, 1978]

STUPENDOUS STEIGER

Rep. William Steiger of Wisconsin, a slight, youthful 39-year-old Republican, has shaken the earth, causing convulsions in the Carter administration, a titanic struggle in the business world and the rapid aging of House Ways and Means Chairman Al Ullman.

What Mr. Steiger did, in all innocence, was propose an amendment to Mr. Carter's tax package. The amendment cuts back the tax on capital gains to where it stood in 1968, before President Nixon was talked into boosting it and hitting it with minimum-tax provisions. Because there are 37 members of the committee and only 12 Republicans, it hardly seemed likely the Steiger amendment could walk, much less fly. But a nose count on both sides turned up at least seven Democrats favoring the amendment. That gives Mr. Steiger 19 votes, a majority, with additional members undecided and potential converts.

The Carter tax package, already reeling from other setbacks, has been stopped in its tracks by the Steiger amendment. Mr. Carter wants to raise, not lower, the capital gains rate. Soaking the rich investor is such an article of faith among liberal tax "reformers" that they are likely to vote against any bill with the Steiger amendment, without even listening to the arguments that have persuaded a majority of Ways and Means. So the tax bill, originally scheduled for mark-up on May 3, has been put off for a week or more. The chief purpose of this delay is to stop Mr. Steiger by trying to horse-trade away some of his 19 votes.

The key to Mr. Steiger's sudden success is one argument: A lower tax on capital gains will raise more money, not less, for the government. The Treasury of course calculates that the rate cut would lose money, handing it out to rich investors. But the Treasury insists on using "static analysis," which calculates the effects of tax cuts by making the convenient but plainly silly assumption that nothing else in the economy changes as a result of different tax rates. Others work with "dynamic analysis," trying to calculate the feedback effects from the rate cuts themselves; often they argue that some kinds of tax cuts will increase total revenues.

With most taxes, you have to argue about the possible dynamic effect. But on the capital gains tax it is written in black and white: In 1968, the last year of the lower capital gains rate, the tax pulled in $7.2 billion in revenues. In 1969, at the higher rate, the tax took in $4.8 billion. After a decade, it is only now getting back to the 1968 level, and in inflated dollars.

So Mr. Steiger is asking the liberals whether they want to cut off their nose to spite their face. Are they really so intent on soaking the rich investor they want the government to give up money in the process? Understandably, "the tax reform" legions are running for cover.

We are prepared to argue that the Steiger amendment would not only boost the revenues from the capital gains tax itself, but would give the economy a powerful shove and boost revenues from other taxes as well. The 1969 change effectively cut in half the jackpot for high-risk capital investment. Reversing that move would double the jackpot and send the economy onto a real growth path.

The prospect of growth is spawning new political coalitions as well. Los Angeles Mayor Tom Bradley, a black liberal Democrat, has testified on Mr. Steiger's side, seeing that higher rewards for risk would boost the young electronics companies in his city. Black bankers and energy groups, seeing that favorable capital gains treatment helps rising enterprises, are pushing hard in a new, unusual alliance with the U.S. Chamber of Commerce.

Meanwhile, the Business Roundtable and the National Association of Manufacturers stand silent, tempted to throw in their lot with Ralph Nader and Jimmy Carter against Mr. Steiger. Big Everything does not relish competition from young upstarts. It prefers tax boondoggles like the Domestic International Sales Corporation, an export-subsidy scheme with no economic justification but of considerable help to multinationals that can hire hordes of lawyers to figure out its provisions.

So the battle is brewing. It remains to be seen whether Mr. Steiger—perhaps with help from Ways and Means minority leader Barber Conable, who also recognizes that a cut in the capital gains rate would boost revenues—can hold together 19 votes against the inevitable temptations of log-rolling. Everyone should know that the Steiger amendment is not one tax provision among many, but the cutting edge of an important intellectual and financial breakthrough.●

RESULTS OF DEPARTMENT OF ENERGY STUDY ON BARNWELL NUCLEAR FUEL PLANT

HON. JOHN W. JENRETTE, JR.

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1978

● Mr. JENRETTE. Mr. Speaker, I have been a strong supporter of finding uses for the Barnwell Nuclear Fuel Plant in South Carolina that are consistent with the President's nonproliferation policy. As part of the fiscal year 1978 budget, DOE was directed to study short-term uses of the Barnwell facility and staff, as well as longer term uses. DOE released the "Barnwell Nuclear Fuel Plant Applicability Study" on April 11. The results state clearly that near-term research and development benefits can be gained by utilizing the unique staff and facilities at Barnwell for R. & D. on nuclear safeguards and fuel cycle alternatives that are more proliferation resistant. These conclusions are consistent with recent actions of the House Science and Technology Committee. Under the capable guidance of Chairman TEAGUE and WALTER FLOWERS, that committee has decided to continue the ongoing fiscal year 1978 program at Barnwell through fiscal year 1979.

The owners of the Barnwell plant, Allied-General Nuclear Services (AGNS), have provided me with a critique of the DOE study that is an excellent summary of the major conclusions. Because of the importance of this matter to the Congress, I am offering the AGNS critique for the review of my colleagues:

COMMENTS BY ALLIED-GENERAL NUCLEAR SERVICES ON THE DEPARTMENT OF ENERGY'S "BARNWELL NUCLEAR FUEL PLANT APPLICABILITY STUDY"

The Fiscal Year 1978 Appropriations and Authorization Acts for the Department of Energy (DOE) directed DOE to conduct a study of the Barnwell Nuclear Fuel Plant (BNFP) to determine if that facility can be utilized in support of the nonproliferation objectives of the United States. Congress specifically directed the study to be completed in six months so as to provide data necessary for consideration of continued funding of research at Barnwell as well as an evaluation of possible long-term optional uses of the facility.

The Barnwell study report was released by DOE on April 11, 1978. The report states that it is not possible to make a policy determination on the use of Barnwell before completion of the International Nuclear Fuel Cycle Evalation (INFCE), now scheduled for early 1980. The report's first conclusion is that:

"Several potentially proliferation-resistant reprocessing modes as well as various international, multinational and national ownership/management options might be applicable to the BNFP. Until the INFCE, NASAP and any follow-on studies and international consultations are completed, it is not possible to determine whether, when, under what conditions or at what costs, any of these reprocessing alternatives might be undertaken in a manner that would be supportive of U.S. non-proliferation objectives."

Because the results from the INFCE will not be available until 1980, the study is supportive of continued funding for Barnwell as an interim, near-term measure until the INFCE is completed. In addressing Barnwell's role it states:

"As a facility for conducting research, development and demonstration of segments of more proliferation-resistant fuel cycle technologies, it could continue (a) studies and demonstrations of transportation, receiving, handling, and storage of spent LWR fuel; (b) evaluation of safeguards instrumentation and procedures; (c) evaluation of the feasibility of various reprocessing alternatives for uranium-based fuel; (d) study of the feasibility of various reprocessing alternatives for thorium-based fuels; and (e) maintenance and training development activities."

Acknowledging an emerging requirement for trained safeguards inspectors and operating personnel for nuclear facilities throughout the world, the study recognizes:

"As a technology training facility, it (the BNFP) would be used in the instruction of such personnel as (1) U.S. safeguards and physical security inspectors, (2) IAEA safeguards inspectors, and (3) fuel cycle operators, other than just reprocessing (U.S. and/or foreign, keeping in mind restrictions on dissemination of sensitive technology). These training programs could proceed concurrently with other possible applications of the plant discussed below."

The use of the BNFP to support the Nuclear Nonproliferation Act of 1978 requirement that DOE "establish a safeguards and physical security training program to be made available to persons from nations . . . which have developed . . . or may be expected to develop . . . nuclear materials and equipment for use for peaceful purposes" has recently been proposed to Congress and the Administration. AGNS believes the existing facilities and staff of the BNFP are ideally suited to implement this Congressional mandate on nuclear safeguards training.

While recognizing a near-term, interim role for Barnwell conducting alternative fuel cycle and safeguards research and development, the study's fifth conclusion states that:

"While some technical benefit may be derived from the interim use of the BNFP for training and R&D purposes, they are likely to be relatively marginal and are not likely to make major contributions to INFCE or NASAP. It is possible that such uses of the BNFP may contribute to follow-on assessments or help confirm the results of these evaluations."

AGNS believes that the FY '78 and FY '79 R&D programs at Barnwell will make significant contributions to INFCE and NASAP. AGNS also believes that interim use of the Barnwell Plant for training and R&D purposes will keep a number of the options open for the United States regarding management of spent fuel and reprocessing in a proliferation-resistant mode.

The proposed FY 1979 program at Barnwell will continue work on alternative fuel cycles, including coprocessing, started in FY 1978. This work is directed at identifying the feasibility of such schemes as it applies to the Barnwell Plant and identifying what changes would have to be made to Barnwell for selected alternatives to reprocessing that are proliferation-resistant. If it is determined, as a result of the INFCE, that Barnwell should be used to demonstrate reprocessing, utilizing an alternative fuel cycle, valuable time will be lost if development of such information that is specific to Barnwell does not proceed. It should be noted that this work is complementary and not duplicative of certain coprocessing evaluations being conducted by the Japanese at their Tokaimura reprocessing plant.

Similarly, safeguards RD&D currently underway as a part of the FY 1978 program are proposed to continue in FY '79. This work also complements work being done at Tokaimura and various DOE facilities. It is important to note that since Barnwell does not have material requiring safeguarding, the entire facility can be utilized to test systems and equipment in a simulated operating situation without the requirement that actual material be safeguarded.

In considering the long-term role for the BNFP, one must consider the current Administration policy of indefinite deferral of spent fuel reprocessing within the United States. The study recognizes this policy and, looking to the future, states:

"Should the U.S. eventually determine that some form of spent fuel reprocessing is consistent with U.S. non-proliferation objectives and should that technology be compatible with the generic design and construction of the BNFP, then the BNFP could be used to help demonstrate its technical and economic feasibility and proliferation resistant features."

The earliest date when the U.S. would make such a determination is sometime after the completion of the INFCE, scheduled for early 1980. If FY 1979 funding is not provided, the alternative is to "mothball" the plant and reduce the highly trained technical staff drastically. Preliminary studies indicate that such an action would involve an additional cost of a minimum of $50 million and lost time of at least 2½ years if a decision were made after completion of the INFCE to reactivate the Barnwell plant for use in some mode.

The study makes the following statement in its conclusions regarding the use of Barnwell for spent fuel storage:

"Utilization of the BNFP as a spent fuel storage facility could support U.S. nonproliferation and nuclear policy objectives. Since the BNFP capacity could be modified and made available within less than three years, plus additional time required for completion of licensing, it could help to implement U.S. policy in a timely fashion, particularly to handle critical or emergency storage problems. If the BNFP should be used as a spent fuel storage facility, additional storage space could be constructed at the site."

The total present storage capacity at Barnwell could be considered to be about 400 metric tonnes of uranium. Replacing the present canisters with high-capacity neutron absorbing canisters and utilizing the same pool as presently planned would permit a total of about 700 metric tonnes to be stored at Barnwell. This concept is being studied as part of the FY '68 DOE program at Barnwell. A recent preliminary report which is part of the FY '78 DOE study shows that by using a different type of storage rack the Barnwell fuel pool could be expanded to 1250 metric tonnes and that it would take about 2½ years and cost approximately $18.9 million to effect such expansion. It may be that alternate fuel storage arrangements could possibly be engineered and constructed whereby all available pool space would be used for fuel storage. If such modifications were accomplished, the present capacity could be increased conceivably to 2,000–3,000 metric tonnes. The exact total storage capacity would depend upon a number of technical parameters. In addition, further substantial storage capacity could be added to the existing facilities at a cost significantly below the investment required in new Away From Reactor fuel storage facilities. For example, using existing capacity, it would be possible to have 5000 tonnes of capacity on line at Barnwell by 1983 at a cost slightly in excess of $100 million. AGNS, as a matter of prudent business judgment, has decided that the spent fuel storage business by itself is of no interest.

The owners of the Barnwell plant have accepted President Carter's indefinite deferral of commercial reprocessing in the United States. The ongoing FY '78 R&D program at Barnwell and the proposed FY '79 program in no way enhance the readiness of the Barnwell Plant for reprocessing. This is consistent with the final conclusion in the study that:

"Nothing in this study would support modification of the Presidential decision that the BNFP receive neither Federal encouragement nor funding for its completion as a reprocessing facility."

While acknowledging the current policy of reprocessing deferral, the study has the foresight to consider the possible eventual need for that activity. Addressing the benefits of reprocessing, the report points out:

"A savings in uranium feed materials and enrichment requirements could be realized if LWR spent fuel elements could be reprocessed and the contained uranium and plutonium could be recycled in LWR's (light water reactors)."

"The total uranium that might be conserved as a result of its design operation and of the recycle of both the uranium and plutonium products would be approximately 55 thousand short tons through the year 2000. In addition, such operation could save about 20 million SWU's of enrichment service."

The study goes on to state that:

"It is not clear that reprocessing and recycle in LWR's would lead to a more efficient use of the nation's energy resources during the rest of this century. The effect of the operation of the BNFP on the costs of nuclear power will not be significant during the remainder of this century."

The economics of LWR recycle has been subjected to intense study over the past few years. The conservative conclusions of most studies, including those by the Government, are that LWR recycle will result in a net economic benefit. These economic benefits are significant but not large compared to total energy costs because, among other things, reprocessing, recycle, and reprocessing waste disposal costs, even under pessimistic scenarios, are only 2 percent to 4 percent of the total cost of generation of electricity by nuclear power.

While it is true that the Barnwell Plant by itself will not lead to significant uranium and enrichment services savings relative to our total supplies during this century, the savings that would result from Barnwell operation are not trivial. Several experts have recently warned of shortfalls in uranium supply beginning in the mid-1980's. This is not because the uranium is not there (although the total amount of recoverable uranium is also a matter of considerable controversy and uncertainty), but because of mining and milling capacity limitations.

Other experts warn of potential enrichment supply problems. Annual demand for separative work from DOE could exceed DOE's annual production in less than three years—FY 1981. The currently announced DOE capacity addition (the Portsmouth add-on) is fully committed simply to enable DOE to supply its existing commitments at a tails assay of 0.2 percent.

As stated in the study, operation of the Barnwell Plant alone through the year 2000 could eliminate the requirement for 55 thousand short tons of U_3O_8, or 5.5 percent of our needs. Savings in separative work amount to 20.4 million separative work units (SWU's). This is the equivalent of:

The annual fueling requirements for 260 LWR's; or

The 40-year lifetime enrichment requirements for about 6 LWR's, without any recycle; or

Almost 2½ years operation of the new gas

centrifuge enrichment facility planned for Portsmouth, Ohio (8.75 million SWU's per year planned capacity).

Because the post-INFCE policy of the U.S. on reprocessing is not known at this time, the study was unable to put each of its separate findings into a common context. It should be remembered however, that some of the valuable short-term uses of BNFP could be combined with one or more of the long-term uses mentioned, such as safeguards training. The study also states in its second conclusion that:

"If and when the U.S. identifies an alternative reprocessing technology that offers promising nonproliferation benefits and therefore merits further R&D, it may be possible to modify the BNFP to help demonstrate the feasibility of that technology."

The FY '78 and the proposed FY '79 programs at Barnwell keep this option open.

In conclusion, the report is supportive of using Barnwell in the near-term for safeguards training purposes and for fuel cycle research and development activities geared toward finding a more proliferation-resistant fuel cycle. This support of near-term activities at Barnwell does lend credence to continuing R&D at Barnwell through FY '79. The FY '79 program at Barnwell is oriented toward proliferation-resistant fuel cycle development with an emphasis on nuclear safeguards development. Research and development at Barnwell during FY '79 helps preserve the option of having the Barnwell facility and staff available at the conclusion of the INFCE for use in whatever mode would further the Administration's non-proliferation goals.●

DRUGGED SOCIETY

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1978

● Mr. DERWINSKI. Mr. Speaker, so much has been written for so long about the adverse effects of drug abuse, but it seems to fall on deaf ears. We must properly reinforce this message before it becomes too late.

An editorial in the Christian Science Monitor of April 21, comments on the importance of efforts to increase our controls over various drugs in order to prevent a "drugged society." The article follows:

"THE DRUGGED SOCIETY"

Americans today are making the decisions that will determine if they become known as "the drugged society" tomorrow. They get closer to it with every weakened control on—or freshly encouraged use of—items in the spectrum from legal pills and alcohol to illegal marijuana, heroin, cocaine, and all the "angel dust" and other "highs" in between. It becomes worthy of note when a single state court resists the tide, as the Massachusetts Supreme Judicial Court has done in upholding a law making the possession of even small amounts of marijauna a crime.

Almost every day a new voice is raised against the drugging trend. A group of state attorneys general has been trying to stop television advertising from conditioning audiences, particularly the young, toward reliance on drugging. Improved controls are urged on drugs available through doctors and druggists. States that have lowered drinking ages are reconsidering in the wake of tragic statistics related to alcohol. There are warnings that no longer quite so inconceivable are the science-fiction fantasies of drugged populations in the world losing individual will, growing less resistant to outside aggression, or becoming compliant drones working for an undrugged elite.

So there is a monstrous irony in the simultaneous efforts to reduce controls on marijuana. Though in widespread use already, marijuana has still not become as established as alcohol. There may still be time to nip it in the bud, comparatively speaking. Imagine what agony and waste the world would have been spread if earlier societies had mustered the will to keep alcohol from being locked into the lives of future generations.

Does America have the will to keep itself from becoming the drugged society? In the proposed new federal criminal code, the efforts to decriminalize marijuana were resisted sufficiently to keep it on the books though with reduced penalties. Now the Massachusetts court has wisely ruled that it is not unconstitutional to ban the use of something so potentially harmfully to society as marijuana.

"In the case of marijuana," the court said "we are bound to assume for constitutional purposes that the private use does have public results, does spill over into the public domain and touch matters of legitimate state interest."

A citizen cannot drug himself without drugging his society to that extent. Whatever the courts rule, each one of us, in whatever country, has the power to contribute to the kind of vigorous society the times demand—or the comfortably drugged one so many forces stand ready to exploit.●

FRANK ANNUNZIO—"THE CONGRESSMAN"

HON. ADAM BENJAMIN, JR.

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1978

● Mr. BENJAMIN. Mr. Speaker, I am delighted to be able to have an opportunity to pay tribute to one of my colleagues and neighbors from our great Midwest, the Honorable FRANK ANNUNZIO.

One of Congressman ANNUNZIO's constituents wrote a warm and thoughtful poem about FRANK's performance as a legislator which I am including for your enjoyment.

It is obvious that his constituents have a fondness and respect for FRANK that has allowed him to serve his great city for seven consecutive terms in our House of Representatives.

It is not often that we Members take the time to compliment one another on a job well done. I am happy today to have the occasion to commend FRANK and to let him know how others feel about the great work he has done for his native Chicagoans and the Nation, as well.

"The Congressman"

Oh who's our man in Washington
the one that gets things done
Who represents each one of us
each day from sun to sun
And who's the man that history
has shown such great respect
Whom common folks from Illinois
repeatedly elect
And who's the man that speaks out
for the voters' hopes and dreams
In the halls of our great nation
where the light of freedom beams.
And who's the man that quarterbacks
the vital bills that pass
Who knows that truth won't emanate
from Pravda or from Tass
And who's the man that knows the score
about the town and city
And does his homework thoroughly
for each small subcommittee
And who's the man that rises
everyday to meet the dawn
With the problems on his shoulders
tho the lobbyists are gone.
And who's the man that went to Crane
and later to DePaul
Whose roots in Illinois are deep
and make him ten feet tall
And who had three nice daughters
and six Grandsons bye and bye
Who turned out to be Democrats
and the apples of his eye
Well friend it is no secret
he's a man grown from a boy
For his name is Frank Annunzio
and he comes from Illinois.

HARRY THE HORSE.●

HEARING IMPAIRMENT NOT AN INSURMOUNTABLE OBSTACLE

HON. CHARLES E. GRASSLEY

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1978

● Mr. GRASSLEY. Mr. Speaker, we, in Iowa, are proud of our heritage and the accomplishments of our people. A native Iowan, born in Mason City and educated in the State's school systems, has made good in a big way. The gentleman I am referring to is Fred W. O'Green and he is president of Litton Industries, Inc.

The important thing is that Mr. O'Green has accomplished this in spite of a hearing impairment first discovered when he was 5 years of age. Mr. O'Green overcame a handicap and, with the benefit of electronic assistance, went on to head up America's 60th ranking company.

The Better Hearing Institute of Washington, D.C., works to bring public attention to the plight of the 13 million Americans who have audio problems. This organization recently selected Fred W. O'Green as one of its "poster persons" this year. Something of his story and achievements due to his growing technological support base for those with hearing problems was given by Col. Barney Oldfield, USAF (ret.) at a Hearing Industries convention earlier this month. I would commend Colonel Oldfield's remarks to the attention of my colleagues:

REMARKS OF COL. BARNEY OLDFIELD (RET.)

Members and Friends of the Hearing Industries Association:

How lucky can I be? I'm here among nice people in Hilton Head, South Carolina, representing Litton Industries' President and Better Hearing Institute Board Member, Fred W. O'Green. He found he couldn't be here, because of some chores he has to do in Europe. It took him a lot longer to get there than it did for me to get here. And the tasks which face him there are bound to be much more difficult than mine are here. Beyond that, he can't monitor what I'm about to say about him which might embarrass him—but it's the sort of thing you should know in order to understand how important he feels you are.

You have been very much a part of his success story. I know he would want me to say that. Because of the fantastic items you people have manufactured, and improved on, and continue to better through the years, he has known one of the fullest of widely ranging professional levels in this country. Without you all, it couldn't have happened!

Fred has only worked for three companies. Each one thought him a real talent, and he proved those assessments to be correct. He was that kind of executive able to grow to meet the requirements of the job he was on, and the next one he was given—no matter how demanding, how large, or how exotic.

When the Russians put up Sputnik I, he was one of the key Americans selected to get us back in space competition, and eventually ahead in that race. He became the first individual cited by our Air Force Systems Command for his early work in satellite programs.

He came to Litton Industries in 1962, which was a lucky moment in our corporate history. He worked his way up to the Presidency of the corporation. He has played a most significant role in our recovery from recent difficulties, and the stability and vigor with which Litton faces the world today.

At no point along his amazing career when he was being considered for each major, new responsibility has anyone ever asked if he could hear. If anyone had phrased that question he would have had to say that on his own—without electronic assistance—he could not!

Fred is a man who loves stories, tells them well to make others laugh, and laughs louder than anyone else at the ones he hears. He would be first to see kinship with the oldtimer whose hearing was deteriorating, so he went to his doctor for a checkup. After the usual audio tests, the doctor wanted a current profile update on him, his habits, customs and lifestyle. Did he drink? Sure, two bottles of whisky a day. Did he smoke? Of course, two packs of cigarettes a day. Sex? As often as possible, but never more than twice a day. His doctor was shocked and told him so, and said he would just have to cut all that out! "What," the oldtimer said, "just so I can hear a little better?"

Fred O'Green had his own quiver of arrows in the form of executive talents, and through you all, HE has been able to hear more-than-a-little better.

For how long has this shadow of silence fallen over him?

One thing sure about a top executive as visible as he is, is that he is tremendously busy. But he also gets a certain kind of mail, and no matter how involved he is, he answers it promptly. These are the letters he gets from youngsters who have hearing problems, and he knows how much extending hope and reassurance to them can mean.

Not long ago, he had one from a boy in Findlay, Ohio, who wrote:

"Dear Mr. O'Green—I am a student at the Howard School for the hearing impaired. We are doing a project for American Heritage Day. We know that you are hearing impaired. Will you help us? Will you please answer these questions? When did you lose your hearing? Do you have a hearing aid? What kind of a hearing aid do you have? Are you deaf or hard of hearing? Where did you go to school? Have you had any problems because you are hearing impaired? Could you tell us about your work? Thank you for helping us. Your friend, Eddie Wilch."

Fred O'Green at that moment was deeply into a hassle over a multi-billion dollar contract when that letter came. But he took the time to write Eddie thanking him for his letter on a subject which he described as of great importance to them both. The exact cause of his hearing loss, he said, probably derived from such childhood diseases as measles or mumps. "My hearing loss began when I was a youngster and was first detected when I began to use the telephone, having to use my right ear instead of my left ear which would have been more common for the old-fashioned telephones of that day. . . . my hearing loss in my other ear began to show itself after I had finished school, graduating from college in 1943. By 1947 when I was 26 years old I went to the Hearing and Speech Clinic at Johns Hopkins in Baltimore. I learned there of my need to begin wearing a hearing aid, and purchased a Zenith hearing aid at that time.

Since then I have worn several Zenith aids and at present wear one made by Siemens because of its excellent amplification capabilities in a small package. My present position is that of a total or near-total loss in my left ear, and a very, very severe loss in my right ear to the point where I would be non-functional on a hearing basis without an aid. I have had a Stapes mobilization performed on my left ear and have had no operations on my right ear. I wear a behind-the-ear aid most of the time, and a body aid under certain circumstances when noise background is very high. I went to grade and high school in Mason City, Iowa. I graduated from Iowa State University at Ames, Iowa and finished my Master's Degree at the University of Maryland. At present I am an executive in a very large company, serving as President. The kinds of work I do are varied and cross many disciplines. My work definitely involves the ability to communicate with people on a constant basis. I would guess that all who have hearing problems experience certain difficulties as a result. My answer to your question is that I do not feel I have prob'ems because of impaired hearing. I encourage all who have hearing impairments to recognize them only as a physical defect and to adopt an attitude which will permit them to achieve a happy and successful life in spite of any difficulties they may encounter.

Sincerely,

FRED W. O'GREEN.

In that letter to Eddie Wilch, he went well beyond just using his personal accomplishments as beacons of hope and inspiration. He stepped back in time to a close relationship with his young correspondent, let him sense the 5-year old who was just discovering the telephone, but his limitations in its use. There was the possible kinship of a measles and mumps experience. There was the moment of graduation from two major Universities, being ready and eager to take on a world, but aware of its all-important sounds and human voices were denied him. These are the bleak plateaus on which the Eddie Wilchs and Fred O'Greens stand, but there is comfort in knowing they are not unique, and they are not immovable obstacles. Having conveyed this essence of courage, and with his credibility to re-enforce it, a Fred O'Green could go back to his hassle over a contract. But there in his mind must have been the thought that perhaps he just may have written to a future company President or Chairman of the Board in the making.

Naturally, with all this known to him as a possibility and better than most, he wanted to be sure that as I am here on his behalf that you are thanked for what you have done and continue to do in the Hearing Industries Association. He has been a long time believer in the programs which are pushed and made possible by Better Hearing Institute. In the past year the Better Hearing Institute has cajoled more than $4,000,000 in public service time from our country's radio and television stations, more than $20,000,000 in the past five years to raise the level of understanding for those with hearing troubles. The continuance of this effort is crucial, and he hopes you will all search your consciences and your treasuries to the end of increasing contributions in this sector.

The deaf, or those with severe hearing restrictions, have many an uphill battle still to win. The Fred O'Greens indicate to us how much is possible, but there are hundreds of others whose stories are heart-rending. Out our way, we had a deaf couple who had their youngster taken from them, the fear being that the child would never learn to talk. Court action became necessary to restore the family unit, with the child getting speech instruction from other quarters. When we consider that about 10% of the U. S. population encounters audio difficulties, we are addressing ourselves to no small fraction. Our public school system is often unable to deal effectively with such afflicted children, and higher education even less so because shortages of teachers and interpreters in this area are considerable. The deaf consumer has hard going, often penalized by insurance companies who shy away from coverage of deaf drivers. Our Federal Communications Commission says 13,000,000 people require special telephone services. The deaf are challenged when they come up for jury duty. The list of shortcomings which seem to accent rather than relieve this kind of handicap stretch and grow daily.

An entity such as the Better Hearing Institute is extremely "good business" for the millions who need and benefit from its persistence. The more the word is spread to the general public, the more appreciated your kind of manufacturing effort will be. A combination of understood need and an infrastructure which can provide and insure ever advancing technologies attracts funding as iron filings to a magnet. The Better Hearing Institute is a round-the-clock, unflagging story teller and placer of this information and alternatives for all those who can see and hear, to see and hear.

Litton itself is a beneficiary of the hearing business. A part of our heritage comes from two men with hearing shortcomings, and we literally reach around the world by means of what they gave us. One was a man from Milan, Ohio named Tom Edison, who gave us the motion picture, and the other, Lee De Forest, of Council Bluffs, Iowa, whose inventiveness brought about the audion tube. The audion tube was the key to making possible the long distance telephone, radio and television networks, and sound and talk on the motion picture screen. Both men had a deep interest in amplification, one giving us a second dimension of a visual—movement—and the other, the means for the screen to speak and project natural sound loudly to a whole world. From this wedding of two men who did not hear well, what is now the Westrex Division of Litton Industries was born. More than 250 nominations for Academy Awards in the category of Best Sound have been Westrex-assisted over the years, and four of the five nominations up for decision earlier this month had Westrex help. When the U.S. Postal Service brought out its 50th Anniversary of Talking Pictures stamp last October, Litton was deeply involved in that commemoration along with all the motion picture industry. We continue to be very much in the action of movie studios around the globe helping all peoples everywhere hear, be informed, entertained and made an audience in the truest sense of that word. In part, it was Lee De Forest's inability to hear well which spurred his quest for many related technologies which provided bridges to fuller lives for some of us, and a way out of stillness for the less fortunate among us.

When I was a youngster I had a favorite cousin who was born deaf. She became one of the most revered and respected teachers at the Omaha School for the Deaf. She was older than I was, and she fascinated me because she was a keen lipreader. In all those jumbled enthusiasms which are plentiful among the young prone to start talking in the middle of their thoughts rather than beginning at the beginning, I used to come

to her with absolute cascading torrents of words, and she always knew what I was saying—seeming to sense it all in context before I got it out. And she loved movies—they were silent then—and she used to take me. Afterward she would tell me about the titles of those old movies, that the actors who were credited with saying them didn't really say that. She got more from the movies than others did because she could read lips, and I was made wiser for knowing her. I thought how wonderful it was that rather than losing anything by deafness, she gained a whole new avenue and dimension in understanding. Years later, when I got in the public relations business and had to advise people going on TV talk shows, that favorite cousin's earlier admonitions have been useful. For instance, never trust a microphone even when they say CUT, it may still be on; and even if it's not, watch your language while the camera stays on the principals and the credits roll. There may be lip-readers out there!

And if I may be personal—stepping away from my role as Fred O'Green's surrogate, I want to thank you all myself.

My mother is 91 years old, going on 92. Had it not been for hearing aid manufacturers and suppliers like you, she would never have been able to hear me when I have talked to her these last 21 years. Thank you for making that difference!●

YOUTH UNEMPLOYMENT AND THE MINIMUM WAGE

HON. PAUL SIMON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1978

● Mr. SIMON. Mr. Speaker, I would like to bring to my colleagues' attention several recent items concerning the minimum wage and its effects on youth unemployment.

The first is the most recent Bureau of Labor Statistics figures on youth unemployment. According to the BLS, teenage unemployment in March was 17.3 percent, more than 1½ percent higher than the 15.6 percent figure for December of last year, right before the higher minimum wage took effect. Unemployment among minority teenagers has also worsened since the minimum wage increased in January. Minority teenage unemployment is up from 38 percent in December to 39 percent in March.

At the same time these increases have occurred, the overall unemployment rate has decreased from 6.4 percent to 6.2 percent. In fact, since December of last year, every category of workers listed by the BLS, except for teenagers, has shown improvements.

While this is not conclusive evidence, it does seem that the unique trend in youth unemployment is attributable—at least to some degree—to the 15 percent minimum wage increase in January from $2.30 to $2.65.

The increase in youth unemployment is especially distressing in light of the public jobs that have been created for young people through the youth employment bill passed last year. The increases in jobs due to our youth employment programs appear to have been offset by the minimum wage increases. This is not surprising. In fact, as I pointed out in last year's controversy over the youth differential amendment, the Labor Department documented this problem as early as 1970. A study by the BLS in 1970 reported that:

> There is some basis for the inference that the effect of Federal manpower programs and the Federal minimum wage have tended to offset each other. The analysis of quarterly data indicates that increases in employment attributed to the manpower programs have been offset, to some degree, by decreases in employment attributed to the minimum wage.

A later paper by the Congressional Research Service referred to this finding as "ironic and even pathetic." I agree.

Last year, I examined in great detail the economic studies on the effects of the minimum wage on youth unemployment, and found that the vast majority of the evidence demonstrates that higher minimum wage rates hurt teenagers. An April 1978 study by the Congressional Budget Office reached a similar conclusion. According to the CBO report:

> . . . since youths are generally less skilled and less stable employees than more mature workers, they are more likely to suffer losses in employment as a result of these laws than most other groups. Furthermore, the minimum wages may interact with the increases in the size of the youth labor force in a way that reduces the proportion of youths with jobs. If wages were allowed to be flexible, a larger proportion of the increased supply of young workers might be employed at lower wages, rather than unemployed or out of the labor force.

At a recent Budget Committee hearing, Congressional Budget Office director underscored this point and held out little hope for the future:

> Increases in the minimum wage . . . can diminish employment opportunities for less skilled workers, particularly teenagers . . .
>
> Higher minimum wages . . . will continue to discourage employers from hiring younger and less educated workers.

Finally, I would like to point out some of the conclusions of a recent international conference on youth unemployment held by the Organization for Economic Cooperation and Development (OECD). Youth differentials have been used successfully in several European countries. The OECD conference report refers directly to the negative impact of minimum wages on youth employment:

> Opinion appears to be fairly widespread that the causes of the high rate of unemployment among young people include the relatively high wage rates . . . for entry level jobs . . . Many employers are unable or reluctant to pay such rates to young people whose contribution to production is low, and even at first negative . . .
>
> (M)ore refined analyses have shown some serious negative effects of a minimum wage on teenage labour. By and large, a single undifferentiated minimum seems to reduce teenage employment, causes teens to be clustered unduly in uncovered industries, and part-time work, both of which are sensitive to the vagaries of the business cycle . . . Some of these effects, such as reduced work experience, may have long-lasting consequences.

Mr. Speaker, these pieces of information are additional evidence that the minimum wage hurts teenagers and that we ought to have a lower minimum wage for young workers.●

SENATE COMMITTEE MEETINGS

Title IV of the Senate Resolution 4, agreed to by the Senate on February 4, 1977, calls for establishment of a system for a computerized schedule of all meetings and hearings of Senate committees, subcommittees, joint committees, and committees of conference. This title requires all such committees to notify the Office of the Senate Daily Digest—designated by the Rules Committee—of the time, place, and purpose of all meetings when scheduled, and any cancellations or changes in meeting as they occur.

As an interim procedure until the computerization of this information becomes operational the Office of the Senate Daily Digest will prepare this information for printing in the Extensions of Remarks section of the CONGRESSIONAL RECORD on Monday and Wednesday of each week.

Any changes in committees scheduling will be indicated by placement of an asterisk to the left of the name of the unit conducting such meetings.

Meetings scheduled for Thursday, April 27, 1978, may be found in Daily Digest of today's RECORD.

MEETINGS SCHEDULED

APRIL 28

9:00 a.m.

Energy and Natural Resources

To hold hearings on the nomination of John K. Mansfield, of Connecticut, to be Inspector General of the Department of Energy.

3110 Dirksen Building

Judiciary

Constitution Subcommittee

To continue hearings on S.J. Res. 65, to amend the Constitution so as to provide for representation of the District of Columbia in Congress.

5110 Dirksen Building

9:30 a.m.

CANCELLATIONS

MAY 2

9:30 a.m.
Environment and Public Works
To mark up proposed legislation authorizing funds for those programs which fall within the committee's jurisdiction.
4200 Dirksen Building

HOUSE OF REPRESENTATIVES—*Thursday, April 27, 1978*

The House met at 11 o'clock a.m.

Rev. Rudolf Reinaru, pastor, Estonian Holy Ghost Evangelical Lutheran Church of Lakewood, Lakewood, N.J., offered the following prayer:

Let us pray:

Almighty and most merciful Father, we give Thee praise and hearty thanks for all Thy mercies.

Preserve our Nation in righteousness and honor and give Thy blessings to us as a people—that we may live in peace and happiness.

Bestow Thy blessing upon Thy servant, the President of the United States, and upon all in authority over us and grant them Thy grace and guidance that they may labor for the welfare of the people.

O God, help all captive nations, ruled by Communists, among them once independent Estonia, the country of my birth, which have been deprived of freedom.

Inspire the hearts of all men to follow after justice and hasten the time when nation shall not lift up sword against nation but live in peace and in righteousness.

God bless America. Amen.

THE JOURNAL

The SPEAKER. The Chair has examined the Journal of the last day's proceedings and announces to the House his approval thereof.

Without objection, the Journal stands approved.

There was no objection.

MESSAGE FROM THE PRESIDENT

A message in writing from the President of the United States was communicated to the House by Mr. Chirdon, one of his secretaries, who also informed the House that on the following dates the President approved and signed bills and a joint resolution of the House of the following titles:

On April 24, 1978:

H.R. 4979. An act to direct the Secretary of the Interior to convey certain public and acquired lands in the State of Nevada to the county of Mineral, Nev.;

H.R. 6693. An act to promote the healthy development of children who would benefit from adoption by facilitating their placement in adoptive homes, to extend and improve the provisions of the Child Abuse Prevention and Treatment Act, and for other purposes;

H.R. 9179. An act to amend the Foreign Assistance Act of 1961 with respect to the activities of the Overseas Private Investment Corporation; and

H.J. Res. 578. Joint resolution authorizing the President to proclaim the third week of May of 1978 and 1979 as "National Architectural Barrier Awareness Week."

On April 26, 1978:

H.R. 7744. An act to amend the acts of August 11, 1888, and March 2, 1919, pertaining to carrying out projects for improvements of rivers and harbors by contract or otherwise, and for other purposes.

REV. RUDOLF REINARU

(Mr. HUGHES asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. HUGHES. Mr. Speaker, just a short while ago the Estonian people celebrated the 60th anniversary of the declaration of independence of their nation. Although their homeland is presently under Soviet domination, those Estonians fortunate to have moved to the New Jersey Shore area have remained together as a community preserving their religious principles and heritage.

One of the Estonian leaders in New Jersey, Rev. Rudolf Reinaru, honored the House of Representatives this morning by offering the opening prayer. Our colleague, Congressman JIM HOWARD, was to have welcomed Reverend Reinaru this morning. Unfortunately he is ill and could not be here. I pray that he will have a speedy recovery.

The determination of Reverend Reinaru to aid people throughout the world is indicated by his humanitarian service in Estonia, Poland, West Germany, Canada, and now as pastor of the Holy Ghost Estonian Evangelical Lutheran Church in Lakewood, N.J.

I ask my colleagues to join with me in extending best wishes to the Estonians in the United States in appreciation of their contributions to this great Nation.

PERSONAL STATEMENT OF CLIFFORD ALLEN REQUESTING LEAVE OF ABSENCE

(Mr. ALLEN asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. ALLEN. Mr. Speaker, I shall be obliged to miss part of today's session.

My wife, who is at home in Nashville, has not been feeling well, and her doctor has called and advised me he is putting her in the hospital for tests and treatment. Understandably, I feel I should go and be by her side when she enters the hospital.

I hope I may have some encouraging word before my return Monday. In any event, I wish to explain the reason for leaving, and to request leave of absence at noon today, in order to catch the plane home.

INFLATION THE SINGLE MAJOR ISSUE

(Mr. SISK asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. SISK. Mr. Speaker, it seems evident to me as we get the message from the people back home that it is time that Congress recognizes that inflation is the one single big major issue that this country is concerned about.

I think the time has come to face up to the fact we should not, and I believe very strongly, we should not cut taxes this year.

I would hope that the administration as it continues to look at this situation, and particularly the Committee on Ways and Means in this Congress, determine that, in fact, we shall not reduce taxes but rather face up to the problems we have; also to do something to strengthen the dollar and let the world know we are prepared and will be prepared to do the things necessary to bring our budget within a reasonable, decent balance.

Mr. Speaker, I would also join with others in saying that the time has come when we should recognize that now is not the time to dabble with a change in social security taxes which we passed last year. I think we should let this matter stand as it is, at least for a period of some 2 or 3 years, and let us see what happens. A recent poll of the American people shows that well in excess of 50 percent of the people support our actions of last year on social security.

Mr. Speaker, let me again plead with the President and his administration to reexamine their stand on taxes, withdraw his request for a tax cut, and, instead, concentrate on an all-out war on inflation. The greatest tragedy in America today is the millions of people caught on more or less fixed incomes and in the grip of runaway inflation.

Please, Mr. President, let us tighten our belts and restore some sanity and reason in connection with our budgetary process.

THE "BUDGET TWO-STEP"

(Mrs. HOLT asked and was given permission to address the House for 1 minute and to revise and extend her remarks.)

Mrs. HOLT. Mr. Speaker, some have referred to the legislative process as the "dance of legislation" through Congress.

Well, get out your dance cards, ladies and gentlemen, the "dance" of the Budget Act is about to begin.

I would liken our present budgetary process with that of the "hustle" dance, with all its spins and gyrations. The process has become a "hustle" to spend more and more money without regard to the available revenues. The "hustle" of the American taxpayers has resulted in an ever-increasing public debt.

I have given considerable thought and study as to how we might improve our budget procedure so that there would first be a closer coordination between tax revenues and outlays, and then a consideration of the spending priorities within those aggregate limitations.

To this end, I have introduced H.R. 12345. Yes, that is H.R. 1, 2, 3, 4, 5. The bill number is significant in that it represents our current budget procedure where the Congress continues to add on more spending but never exercises responsibility.

H.R. 1, 2, 3, 4, 5 has been called the "Budget Two-Step," and I propose that our budget "dance" of legislation not be a "hustle" to spend more and more, but rather a "two-step"—"two steps" to a more practical and orderly process by which we can effectuate greater control over Government spending.

PROVIDING FOR EXPENSES OF INVESTIGATIONS BY COMMITTEE ON SCIENCE AND TECHNOLOGY

Mr. ANNUNZIO. Mr. Speaker, by direction of the Committee on House Administration, I call up a privileged resolution (H. Res. 1013) to provide for the expenses of investigations and studies to be conducted by the Committee on Science and Technology, and ask for its immediate consideration.

The Clerk read the resolution, as follows:

H. RES. 1013

Resolved, That for the further expenses of investigations and studies to be conducted by the Committee on Science and Technology, acting as a whole or by subcommittee, not to exceed $1,609,000, including expenditures for the employment of investigators, attorneys, and clerical, and other assistants, and for the procurement of services of individual consultants or organizations thereof pursuant to section 202(i) of the Legislative Reorganization Act of 1946, as amended (2 U.S.C. 72a(i)), shall be paid out of the contingent fund of the House on vouchers authorized by such committee, signed by the chairman of such committee, and approved by the Committee on House Administration. Not to exceed $55,000 of the total amount provided by this resolution may be used to procure the temporary or intermittent services of individual consultants or organizations thereof pursuant to section 202(i) of the Legislative Reorganization Act of 1946, as amended (2 U.S.C. 72a(i)); but this monetary limitation on the procurement of such services shall not prevent the use of such funds for any other authorized purpose.

SEC. 2. No part of the funds authorized by this resolution shall be available for expenditure in connection with the study or investigation of any subject which is being investigated for the same purpose by any other committee of the House; and the chairman of the Committee on Science and Technology shall furnish the Committee on House Administration information with respect to any study or investigation intended to be financed from such funds.

SEC. 3. The authorization granted by the resolution shall expire immediately prior to noon on January 3, 1979.

SEC. 4. Funds authorized by this resolution shall be expended pursuant to regulations established by the Committee on House Administration in accordance with existing law.

Mr. ANNUNZIO (during the reading). Mr. Speaker, I ask unanimous consent that the resolution be considered as read and printed in the RECORD.

The SPEAKER pro tempore (Mr. ROSTENKOWSKI). Is there objection to the request of the gentleman from Illinois?

There was no objection.

COMMITTEE AMENDMENT

The SPEAKER pro tempore. The Clerk will report the committee amendment.

The Clerk read as follows:

Committee amendment: Strike out all after the resolving clause and insert:

That for the further expenses of investigations and studies to be conducted by the Committee on Science and Technology, acting as a whole or by subcommittee, not to exceed $1,500,000, including expenditures for the employment of investigators, attorneys, and clerical and other assistants, and for the procurement of services of individual consultants or organizations thereof pursuant to section 202(i) of the Legislative Reorganization Act of 1946, as amended (2 U.S.C. 72a(i)), shall be paid out of the contingent fund of the House on vouchers authorized by such committee, signed by the chairman of such committee, and approved by the Committee on House Administration. Not to exceed $55,000 of the total amount provided by this resolution may be used to procure the temporary or intermittent services of individual consultants or organizations thereof pursuant to section 202(i) of the Legislative Reorganization Act of 1946, as amended (2 U.S.C. 72(i)); but this monetary limitation on the procurement of such services shall not prevent the use of such funds for any other authorized purpose.

SEC. 2. No part of the funds authorized by this resolution shall be available for expenditure in connection with the study or investigation of any subject which is being investigated for the same purpose by any other committee of the House; and the chairman of the Committee on Science and Technology shall furnish the Committee on House Administration information with respect to any study or investigation intended to be financed from such funds.

SEC. 3. The authorization granted by the resolution shall expire immediately prior to noon on January 3, 1979.

SEC. 4. Funds authorized by this resolution shall be expended pursuant to regulations established by the Committee on House Administration in accordance with existing law.

Mr. ANNUNZIO (during the reading). Mr. Speaker, I ask unanimous consent that the committee amendment be considered as read and printed in the RECORD.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Illinois?

There was no objection.

The SPEAKER pro tempore. The gentleman from Illinois (Mr. ANNUNZIO) is recognized for 1 hour.

Mr. ANNUNZIO. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, the Committee on Science and Technology, under the chairmanship of the gentleman from Texas, OLIN E. TEAGUE, and with the gentleman from New York, JOHN WYDLER, as ranking minority member, presented a budget of $1,609,600. The committee unanimously voted an amount of $1,500,000.

Mr. BAUMAN. Mr. Speaker, will the gentleman yield?

Mr. ANNUNZIO. I yield to the gentleman from Maryland, for debate purposes only.

Mr. BAUMAN. Mr. Speaker, my information is that the reason the consideration of this resolution was held up was because of a disagreement about the number of minority employees which minority Members had a right to appoint. Have all of these disagreements been settled between the majority and the minority prior to this time?

Mr. ANNUNZIO. Mr. Speaker, I will state to the gentleman that to my knowledge these disagreements have been satisfactorily settled and worked out.

Mr. BAUMAN. Mr. Speaker, I thank the gentleman.

Mr. ANNUNZIO. Mr. Speaker, I have no requests for time.

The SPEAKER pro tempore. The question is on the committee amendment.

The committee amendment was agreed to.

Mr. ANNUNZIO. Mr. Speaker, I move the previous question on the resolution, as amended.

The previous question was ordered.

The resolution, as amended, was agreed to.

A motion to reconsider was laid on the table.

GENERAL LEAVE

Mr. ANNUNZIO. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on the resolution just agreed to.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Illinois?

There was no objection.

PRINTING OF COPIES OF CONGRESSIONAL RESOURCE GUIDE TO THE FEDERAL EFFORT ON NARCOTICS ABUSE AND CONTROL

Mr. WOLFF. Mr. Speaker, I ask unanimous consent that the Committee on House Administration be discharged from the further consideration of the resolution (H. Res. 1105) to provide for the printing of the Congressional Resource Guide to the Federal Effort on Narcotics Abuse and Control, and ask for its immediate consideration.

The Clerk read the title of the resolution.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from New York?

There was no objection.

The Clerk read the resolution, as follows:

H. RES. 1105

Resolved, That there shall be printed for the use of the Select Committee on Narcotics Abuse and Control, the maximum number of copies of the Congressional Resource Guide to the Federal Effort on Narcotics Abuse and Control which may be printed at a cost not to exceed $1,200.

The resolution was agreed to.

A motion to reconsider was laid on the table.

PROVIDING FOR CONSIDERATION OF H.R. 11302, EPA AUTHORIZATION FOR FISCAL YEAR 1979

Mr. PEPPER. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 1112 and ask for its immediate consideration.

The Clerk read the resolution, as follows:

H. RES. 1112

Resolved, That upon the adoption of this resolution it shall be in order to move, section 402(a) of the Congressional Budget Act of 1974 (Public Law 93-344) to the contrary notwithstanding, that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 11302) to authorize appropriations for environmental research, development, and demonstrations for the fiscal year 1979, and for other purposes. After general debate, which shall be confined to the bill and shall continue not to exceed one hour, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Science and Technology, the bill shall be read for amendment under the five-minute rule. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final pasage without intervening motion except one motion to recommit.

The SPEAKER pro tempore. The gentleman from Florida (Mr. PEPPER) is recognized for 1 hour.

Mr. PEPPER. Mr. Speaker, I yield 30 minutes to the able gentleman from California (Mr. DEL CLAWSON), pending which I yield myself such time as I may consume.

Mr. Speaker, House Resolution 1112 provides for the consideration of H.R. 11302, a bill to authorize appropriations for environmental research and development and demonstrations for fiscal year 1979 for the Environmental Protection Agency. This is an open rule providing 1 hour of general debate to be divided and controlled in the customary manner, and there is a waiver of section 402(a) of the Budget Act. This waiver is necessary to permit consideration of section 7 of the bill which amends the Environmental Research and Development Act of 1978. Since this may be construed as creating new budget authority for fiscal year 1978, the waiver was requested, and it was approved by the Budget Committee with the understanding that the Committee on Science and Technology will offer an amendment making section 7 effective on October 1, 1978, thus curing the Budget Act problem.

Mr. Speaker, H.R. 11302 authorizes a total of $431 million for environmental research, development, and demonstration activities of the Environmental Protection Agency for fiscal year 1979, and for certain environmental programs at the National Bureau of Standards. Included in this aggregate sum is $71 million for research and air quality standards, $138 million for energy related health and ecological effects, and close to $60 million for activities in the area of water quality. Mr. Speaker, there also are some special authorizations contained in this bill, providing for grants for demonstration projects in waste water use, and for the gulf coast study which was authorized in the 1977 Clean Air Act amendments. Overall, this legislation will permit a continuance of programs aimed at the improvement of all components of our environment, and the results will be a better quality of life and prospects for a healthier existence for this country. I respectfully request the adoption of House Resolution 1112 so that we may move to the consideration of the bill.

Mr. DEL CLAWSON. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, this is a 1-hour, open rule permitting consideration of H.R. 11302, the Environmental Research, Development, and Demonstration Authorization Act for fiscal year 1979. The rule waives section 402(a) of the Budget Act, which section imposes the May 15 deadline. It is my understanding that an amendment will be offered to cure the Budget Act violation.

This legislation authorizes $386 million for research, development, and demonstration in EPA's regular research program. In addition, the following special authorizations are made:

First, $3 million for the gulf coast study authorized in the Clean Air Act;

Second, $10 million for long-term research grants;

Third, $5 million for environmental research at the National Bureau of Standards;

Fourth, $2 million for a study of the coordination and application of environmental research; and

Fifth, $25 million for grants demonstrating waste water reuse.

The total cost in fiscal year 1979 of this bill is $431,338,000. This figure is $12 million above the fiscal year 1978 authorization.

Mr. Speaker, this is important legislation. It is important from the standpoint that it provides money for EPA to conduct the necessary research prior to making many of its policy decisions. This research, demonstration, and development by the agency should be completed before it issues environmental guidelines which affect every citizen in the country, directly or indirectly.

I support the passage of the rule so that we may proceed to consider H.R. 11302.

Mr. Speaker, I have no further requests for time.

Mr. PEPPER. Mr. Speaker, I have no further requests for time, and I move the previous question on the resolution.

The previous question was ordered.

The resolution was agreed to.

A motion to reconsider was laid on the table.

EXECUTIVE ORDER AUTHORIZING EXPORT OF LOW-ENRICHED URANIUM TO INDIA—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES (H. DOC. NO. 95-327)

The SPEAKER pro tempore laid before the House the following message from the President of the United States; which was read and, without objection, together with the accompanying papers, referred to the Committee on International Relations and ordered printed:

To the Congress of the United States:

I am transmitting herewith, pursuant to Section 126b(2) of the Atomic Energy Act of 1954, as amended, an Executive Order authorizing the export of 7,638 Kgs. of low-enriched uranium to India for use in the fueling of its Tarapur Atomic Power Station.

In our Agreement for Cooperation with India, the United States agreed to supply all of the fuel requirements for that Power Station, and India agreed to operate it exclusively on U.S.-supplied fuel. We contracted to supply the specific fuel here involved a number of years ago.

An application for a license to export this fuel was submitted to the Nuclear

Regulatory Commission early last year. This application was carefully reviewed within the Executive Branch, which concluded that the proposed export would not be inimical to the common defense and security, that it would meet all the immediate statutory criteria under the then pending Nuclear Non-Proliferation Act, and that the license should be issued. Later that month, the Commission was officially notified of the Executive Branch findings and recommendations.

On April 20, the Nuclear Regulatory Commission found itself unable to agree upon the issuance of this license, being divided by a 2–2 vote. The Nuclear Non-Proliferation Act of 1978 wisely provided for just such a contingency. Previously, there was no clear way of dealing with a situation in which the Commission was unable to decide upon the issuance of an export license, and no way of ensuring that in cases where the licensing process would lead to a result that the President believed would be seriously prejudicial to the achievement of United States non-proliferation objectives, such prejudice could be avoided.

I have determined that this is such a case. The Government of India has given us its commitments to use our exports only at the Tarapur Atomic Power Station and not for any explosive or military purpose, and I have the highest confidence that it will honor these commitments. I am convinced that denial of this export would seriously undermine our efforts to persuade India to accept full-scope safeguards, and would seriously prejudice the achievement of other U.S. non-proliferation goals. I intend to pursue these matters further with the Government of India.

A period in which to seek agreement to full-scope safeguards was clearly provided for in the Act. The Act permits a continuation of exports during this period, including exports in cases where there are questions as to whether and when that objective may be achieved. Rather than prejudice the prospects for success in such efforts by refusing to fulfill an existing commitment that is important to India's power supply, we should be using this period to find, in the light of the new legislation's requirements, mutually acceptable ways of meeting both India's need for continued operation of the Tarapur Atomic Power Station and our need for full-scope safeguards and the attainment of other non-proliferation objectives.

In transmitting this Executive Order to you pursuant to Section 126b(2) of the Act, I wish to make clear that I am not departing from the reservations I expressed at the time I signed the Nuclear Non-Proliferation Act of 1978 concerning the constitutionality of provisions of that Act which purport to allow Congress to overturn my decisions by actions not subject to my veto power.

JIMMY CARTER.

THE WHITE HOUSE, *April 27, 1978.*

EPA AUTHORIZATION FOR FISCAL YEAR 1979

Mr. BROWN of California. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 11302) to authorize appropriations for environmental research, development, and demonstrations for the fiscal year 1979, and for other purposes.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from California (Mr. BROWN).

The question was taken; and the Speaker pro tempore announced that the ayes appeared to have it.

Mr. MONTGOMERY. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER pro tempore. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 384, nays 5, not voting 45, as follows:

[Roll No. 258]

Mr. PATTEN changed his vote from "nay" to "yea."

So the motion was agreed to.

The result of the vote was announced as above recorded.

IN THE COMMITTEE OF THE WHOLE

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill H.R. 11302, with Mr. EDGAR in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

The CHAIRMAN. Under the rule, the gentleman from California (Mr. BROWN) will be recognized for 30 minutes, and the gentleman from Pennsylvania (Mr. WALKER) will be recognized for 30 minutes.

The Chair recognizes the gentleman from California (Mr. BROWN).

Mr. BROWN of California. Mr. Chairman, with the cooperation of the Members, I hope that we will be able to expedite consideration of this legislation. What we are dealing with here is the fiscal year 1979 authorization for the Office of Research and Development only in the Environmental Protection Agency. I might say that in the subcommittee which I chair, and of which the distinguished gentleman from Pennsylvania (Mr. WALKER) is the ranking member, and in the full Committee on Science and Technology there was no objection to this bill. It was reported out unanimously from both the subcommittee and full committee. While that does not certify that the bill is perfect, it indicates that we have attempted to minimize any objections to the bill.

I would just like to say a few summary words that would give the general parameters of the bill. Basically, what the subcommittee found with regard to the EPA research and development requests for this year was that the Agency requested a substantial increase in funds for their regulatory activities, which was approved by the administration. The Office of Management and Budget approved an approximately 12-percent increase for the regulatory phase of the Agency, but for the research and development activities—which is the subject of this bill—the Office of Management and Budget had approved only a 1-percent increase over fiscal year 1978.

It has been the feeling of our subcommittee over a period of some time that the quality of the regulatory work done by the Environmental Protection Agency can only be as good as the quality of the supporting research which goes into establishing solutions to the pollution problems that they are addressing in the environmental agency. As a consequence of this general philosophy and our feeling that the Research and Development Office had been shorted in this otherwise rather reasonable increase in the Environmental Protection Agency, the subcommittee sought to select out certain areas which we felt were of higher priority. We added reasonable amounts of money in those areas—reasonable amounts of authorization—in order to to indicate our sense of the priorities for research within the Agency.

As a consequence, this bill will recommend to the House an increase of about $12 million, or roughly 3 percent for the reasearch and development program authorization over last year, instead of the 1 percent, which the Office of Management and Budget had requested.

That is the general situation with regard to the bill. I could indicate the general scope of the amounts that we are talking about. This provides approximately $431 million for all of the programs which are included within it, compared to $418 million for similar programs last year. We feel that this increase is reasonable and justified.

The rationale for all of these levels are set forth in great detail in the committee report, which I would very much recommend to the Members for reading.

Mr. Chairman, I would like to state in more detail why I rise in support of H.R. 11302, a bill to authorize $431,338,000 for environmental research, development, and demonstration. This bill is the vehicle which authorizes the appropriation of funds to support the Office of Research and Development within the Environmental Protection Agency. It is not a regulatory bill, but authorizes the funding of research programs that will generate information leading to fair, equitable, and effective abatement of environmental pollution.

The $431 million authorized for next year should be compared with the $418 million authorized for fiscal year 1978.

The bill also: First, has miscellaneous reporting provisions, section 5; second, encourages EPA to provide training opportunities to its staff when this bill will aid the Agency, section 6; and third, amends last year's bill (Public Law 95–155) to slightly broaden the waste water reuse grants program (section 7).

Hearings on the President's budget request for research activities at the EPA were held before the Environment and Atmosphere Subcommittee which I chaired on February 7, 8, and 9 of this year. The bill before you was developed in response to information presented at the hearings, and subsequently it was unanimous—31 to 0—ordered reported by a rollcall vote of the full Science and Technology Committee on March 14, 1978.

The committee adopted two amendments to the bill both of which were minor. The first amendment, to section 3(a)(2), merely corrected ambiguous language to more clearly reflect the committee's intentions. The second amendment, to section 5(c), merely reflects amendments in other legislation to which section 5(c) refers. That is, originally only one report was involved, but now this language requires two reports be made available to the public for comment, et cetera.

In addition, I will be offering an additional technical amendment to the bill to bring it into conformance with the Congressional Budget Act of 1974 (Public Law 93–344). The amendment would add a new paragraph to subsection 7(a). The new language, "This subsection shall be effective October 1, 1978," removes the problem that the amendment to Public Law 95–155, in slightly broadening the authority in that law, conflicts with section 402(a) of the Budget Act. In essence, the amendment retroactively makes an authorization—after the May 15, 1977, deadline for fiscal year 1978 authorizations. That was certainly not our intent, and the amendment will correct this technical deficiency.

Before explaining the specific provisions of the bill, I would like to make a few general comments about the program we are authorizing. The activities of EPA can be divided into two parts: First, abatement and enforcement and second, research and development. As you know, the Agency's abatement and enforcement activities touch every facet of American society. Occasionally that touch has been rather clumsy. Conceding that, I want to ask you to focus on the bill we have before us today which authorizes funds for research, development, and demonstration, and which presents our committee with both an opportunity and a responsibility to contribute the protection of the public health and welfare. A significant fraction of EPA's problems in the past have been caused by a lack of credible information. Although credible information is exactly what should be generated by the EPA research program such information has not always been forthcoming. Our committee's study of the CHESS program provides a specific example.

However, I feel we are making progress. In recent years EPA's Office of Research and Development has received extensive congressional oversight, and they are responding. Although they still have far to go, the research program does show signs of improvement. I believe that this improvement in research will have positive impact on all the Agency's activities—specifically on abatement and enforcement activities. I urge you to act favorably on the bill and thereby to continue to encourage EPA's research program so that the kind of rigorous information needed to protect the public health and welfare can be developed.

I believe that the funds for research authorized in the bill can be best explained if they are first put into context. In 1978 the Federal Government spent $1.8 billion on environmental research, of which EPA funded $321 million. It is clear from this that EPA does not dominate Federal spending in this area. This year the total EPA request is $1.127 billion—including research, abatement and enforcement but not including the $4.5 billion construction grants program. This is an overall 12 percent increase for the Agency over their 1978 level of $1.004 billion. By comparison, research funds requested increase 1 percent from $321 million in 1978 to $324 million in 1979. The research program has also fared badly with respect to personnel. In the last 2 years the Agency's personnel ceiling has been increased by 1,280 positions but research has received only 21 of these.

During this time the Agency has received major new responsibilities with passage of the—

Toxic Substances Control Act;

Resource Conservation and Recovery Act;

Safe Drinking Water Act amendments;

Clean Air Act amendments, and

Water Pollution Control Act amendments.

The Agency has also been given new responsibilities under the President's new energy plan.

Because of these responsibilities and in response to information brought out at hearings, the committee believes that

the research budget is inadequate. Accordingly, the committee recommends a $62 million increase, 19 percent over the President's request of $324 million for regular program-related research. In addition the subcommittee recommends $40 million for specific activities that were not in the President's request.

Table I, entitled "Summary Comparison of the 1978 and 1979 R.D. & D. Authorizations" compares funding authorized last year with the subcommittee recommendations for fiscal year 1979 and shows that the funding in this year's bill is only $13 million above the amount authorized last year. Last year the committee reported a bill, which when signed by the President authorized $254 million. Other legislation, the Clean Air Act Amendments and the Resource Conservation and Recovery Act, added $165 million—all program-related—for a total authorization of $419 million. Of this total of $419 million, $379 million was for regular program-related research. For fiscal year 1979 all these authorizations are in one bill, H.R. 11302.

The regular program-related research increases recommended for 1979 by the subcommittee are shown in the last column of table II entitled "Budget Summary/Program-Related Research."

Table II shows that the largest increase requested, $23.6 million, is in the energy programs. Of this $14.8 million is recommended for studies of potential health and ecological effects of: First, coal combustion, including coal conversion, second, production and combustion of synthetic fuels, and third, the operation of new energy technologies, among other things. An additional $7.55 million is for R.D. & D. on control technologies including technologies for industrial uses subject to coal conversion.

The next largest increase requested, $19 million, is in the air programs. $10.5 million of this increase is for health and ecological effects research. This increase would be used, in part, to initiate health effects studies in different geographical areas or seasons of the year in order to find out whether or not the research results are valid and repesent a suitable basis for national standards. There is also an additional $8.6 million recommended for the development and demonstration of industrial emission control technologies.

The committee also recommends an increase of $11.3 million for the water quality programs; $6.7 million of this is in the industrial and public sector areas to support the Agency's efforts to develop control technologies for nonpoint-sources (NPS) of water pollution. As the Nation's point sources are brought under control as a result of the construction grants program, it becomes clear that NPS which are now responsible for nearly half of the input of contaminants to the Nation's waters, will become the major source of such contamination. Yet, NPS of pollution have not been addressed in the Agency's research program to a significant degree. In the health effects and ecological effects area the committee recommends an increase of $3 million for the Great Lakes program and $1 million for studies of the effects of waste disposal in the oceans.

An increase of $4 million is recommended for groundwater research in the drinking water program. The committee also recommends that: First, the Agency conduct research on alternate methods for treating drinking water that are more economical to implement than the grandulated activated carbon method and second, that the Agency develop inexpensive, and simple methods to monitor drinking water contaminants for which the Agency has issued or expects to issue regulations.

In the interdisciplinary medium the committee again—as in fiscal year 1978—recommends a $3.5 million increase to carry out intermedia—that is, air/water/soil—ecological studies as recommended by the EPA Science Advisory Board.

The committee also recommends that $2 million be transferred from the pesticides medium to the toxic substances medium. This represents our belief that certain general test development work should be centrally managed. For example, both the pesticides and toxic substances programs need to develop screening tests to determine which substances are likely to be carcinogenic. While the regulation of pesticides under FIFRA demands certain specific research support which should not be transferred, basic test development work is more efficiently conducted centrally, with specific applications to pesticides and toxics as appropriate. The committee believes this would strengthen both programs.

Section 3 of the bill provides for three special authorizations. Section 3(a) provides $10 million for grants for long-term environmental research and training in the physical, natural, health and social sciences. The purpose is to develop sources of expertise outside EPA which would be available to that Agency and to others. Thus, we envision block grants in the range of $100,000 to $500,000 continuing for at least several years which would enable a university to build up an environmentally oriented program and staff.

To clarify the subcommittee's intent to develop rigorous programs of high intellectual content, the following technical amendment to section 3(a) will be made if no objection is heard:

Amend section 3(a)(2) to read:

(2) These grants are for the purpose of developing continuing centers for environmental research and training in the engineering, physical, natural, health, and social sciences.

Section 3(c) authorizes a study of the coordination and application of environmental research. This reaffirms the committee's continuing interest in the effective conduct of environmental research. Last year's bill provided for a joint study by CEQ and OSTP, but these agencies are unable to properly address the study because of limited resources. Section 3(c) would in effect make resources available for an externally conducted study which could use this year's abbreviated CEQ/OSTP study as a point of departure.

Section 4 authorizes environmentally related programs at the National Bureau of Standards. That Agency has had a targeted program related to environmental measurement as part of its traditional mission to develop measurement science in general, but OMB has tried to eliminate the program, saying that the environment is EPA's responsibility. While it is clear that EPA is the lead agency for environmental regulation, the committee has repeatedly heard testimony—from non-NBS witnesses—that NBS has much to contribute. Thus the committee recommends that NBS be authorized to carry out these programs in coordination with EPA.

Section 5 deals with various reporting requirements. It requires that the committee be kept informed, provides for public and Agency comments on certain reports, and provides that EPA shall keep DOE informed of the status and results of its research programs.

Section 6 would give the Agency some relief from the effects of restrictive personnel ceilings imposed by OMB by encouraging them: First, to provide training opportunities to research staff where this will help the Agency accomplish its mission and second, to utilize postdoctoral and industrial research associates.

Section 7 reauthorizes a program of grants for demonstrating the reuse of wastewater. This program was first authorized in last year's bill—also at $25 million. The amendment would provide an additional degree of flexibility to the program by allowing demonstrations of the sequential use of water. For example, the amendment would allow funding of a demonstration in which a city—with agreement of all concerned—might intercept high quality water destined for agricultural use, use the water in the city drinking water system, and then after sufficient treatment return it for the agricultural use for which it was originally intended.

Mr. Chairman, this completes my statement. I urge approval of this bill.

TABLE 1.—SUMMARY COMPARISON OF 1978 AND 1979 RESEARCH DEVELOPMENT DEMONSTRATION AUTHORIZATIONS

[In thousands of dollars]

EPA	Authorization 1978	Recommendation 1979	1979–1978 change
Regular program-related research	[1] 378,603	386,338	+7,735
Long-term research	10,000	10,000	0
Grants for reuse of waste water	25,000	25,000	0
Gulf coast study	3,000	3,000	0
Training health scientists	2,000	0	−2,000
Study of research coordination and application	0	[2] 2,000	+2,000
Subtotal EPA	418,603	426,338	+7,735
NBS for environmental science	([3])	5,000	+5,000
Total in bill	418,603	431,338	+12,735

[1] Includes $120,000,000 authorized in the Clean Air Act amendments (Public Law 95–95) and $45,000,000 authorized in the Resource Conservation and Recovery Act (Public Law 94–580).

[2] This is a 2-yr authorization of $1,000,000 for each year, 1979 and 1980.

[3] There was no authorization specifically for NBS in 1978.

TABLE II.—BUDGET SUMMARY, PROGRAM-RELATED RESEARCH

EPA OFFICE OF RESEARCH AND DEVELOPMENT

[In thousands of dollars; fiscal years]

Medium: Program category	1978 authorization (1)	1978 estimate (2)	1979 President's request to Congress (3)	1979 Committee's recommendation (4)	Difference (4)–(3) (5)
Air:					
Health and ecological effects	36,000	28,179	31,414	41,897	10,483

Mr. FUQUA. Mr. Chairman, will the gentleman yield?

Mr. BROWN of California. I am glad to yield to the distinguished gentleman from Florida, the chairman of the Subcommittee on Space Science and Applications.

Mr. FUQUA. Mr. Chairman, I thank the gentleman for yielding. I rise in support of H.R. 11302 and commend the gentleman from California and the subcommittee for the fine job they have done in bringing this very important measure before the House for consideration.

There is one point I do want to make and I ask this primarily for emphasis. In the last authorization bill there was authorized moneys for hydrilla control, that is in the warmer tropical or subtropical areas in the country, that has become an increasing menace to fresh water supplies to our lakes and streams. Money was provided to begin studies on the effects of this on the possible ecological control level.

Is it the intent of the chairman of the subcommittee that these funds be continued for fresh water supplies, and that they be included in the authorization as contained in H.R. 11302?

Mr. BROWN of California. Mr. Chairman, let me assure the gentleman that it was the intention of the subcommittee to continue the authorization which we had last year. We had specific discussion of the importance of this in the subcommittee, and we regret very much that while we authorized the funds for what we felt would be an adequate program, there was no corresponding appropriation coming to the Agency.

Nevertheless, the Agency, in response to the sense of urgency that the gentleman had created with regard to this problem, reprogramed a reasonable amount of money to initiate this program and expressed its intention to continue with it, hopefuly with some additional appropriated funds, in order to be able to develop an even greater program in this area.

Mr. FUQUA. Mr. Chairman, I appreciate the gentleman's comments. I will say that I am certainly glad the subcommittee took the action it did, and I hope that the Committee on Appropriations will respond with some additional appropriated funds for this most important area.

Mr. Chairman, I thank the gentleman for his information.

Mrs. FENWICK. Mr. Chairman, will the gentleman yield?

Mr. BROWN of California. I am happy to yield to the gentlewoman from New Jersey.

Mrs. FENWICK. Mr. Chairman, I am very happy to see this bill on the floor, and I compliment the chairman and the ranking minority member of the subcommittee for bringing it to us.

I am convinced that, just as fossil fuels are the problem of this decade and probably the next, water is going to be right on its heels as our next problem. Section 7 of the bill, which increases the research in water problems, is, I think, of paramount importance for the future. I congratulate both the gentlemen for their efforts.

Mr. BROWN of California. Mr. Chairman, I thank the gentlewoman for her remarks.

Mr. Chairman, I should have indicated that the high priority areas in which the committee did authorize slight increases included the two areas the gentlewoman mentioned, those dealing with energy and with water.

Mrs. FENWICK. Mr. Chairman, I thank the gentleman.

Mr. WALKER. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, as the ranking minority member on the Subcommittee on the Environment and the Atmosphere, I rise to join with my chairman, Mr. BROWN of California, in supporting the bill H.R. 11302 to authorize appropriations for the Office of Research and Development of the Environmental Protection Agency for fiscal year 1979.

This bill was introduced in February by Mr. BROWN and seven members of our subcommittee as cosponsors. The bill was developed in response to hearings held by the subcommittee on the President's budget request. During the course of those hearings, we discovered that there were several areas within the administration budget which the committee strongly felt required some modification to meet the needs of the Nation as perceived by the Congress. Among those needs is a requirement for more health effects research, particularly in energy-related areas, a substantial need for demonstration of pollution control technologies, a need for research to determine the effects of control practices for nonpoint sources of water pollution, and particularly a continuing need for more research on ground water quality and related health effects.

The bill calls for a total authorization of $431,338,000 for environmental research, development, and demonstration to be conducted by the EPA during 1979. Within that total are a number of special authorizations including: $3 million for the gulf coast study authorized in the 1977 Clean Air Act amendments; $10 million for long-term research grants; $5 million for environmental research to be done by the National Bureau of Standards in support of EPA activities; $2 million for a study of the coordination and application of environmental research; and, finally, a $25 million reauthorization for grants demonstrating waste water reuse.

Mr. Chairman, the question has been raised as to why the House should pass a bill which is above the President's budget. This is a question which always troubles me individually, and yet, in this case, I feel that there is more than adequate justification. At a time when we are moving into new areas of energy consumption and are devoting more and more dependence to new energy sources, surely it is penny-wise and pound-foolish to allow the Environmental Protection Agency to regulate standards of pollutants in the atmosphere based on insufficient research. Many of our colleagues have complained that EPA regulations have not always been fully documented in the past. It is the hope of the Committee that the funds provided in this bill will assure that future EPA regulations are based on all necessary R. & D.

Mr. Chairman, I would only like to reiterate the point that this bill was entirely noncontroversial. It was reported unanimously both by the Subcommittee on the Environment and the Atmosphere and by the full Committee on Science and Technology. I firmly believe that the bill represents the best possible allocation of resources within the EPA and I urge the Committee to pass the bill.

Mr. McCLORY. Mr. Chairman, will the gentleman yield?

Mr. WALKER. I yield to the gentleman from Illinois.

Mr. McCLORY. Mr. Chairman, I have been concerned about the subject of ozone in the air. This is not ozone which is up in the higher levels of the atmosphere, but this is ozone at the ground level. We have had a very serious problem of ozone pollution in the Waukegan, Ill., area. I note that there is an increase in funds authorized for monitoring air quality and providing for technical support programs in regional areas with respect to air quality. I wonder, if this authorization will benefit my area, in connection with the problem of ozone pollution? Will that be taken care of through the funds that are authorized in this legislation?

Mr. WALKER. Mr. Chairman, I would say to the gentleman that it is my understanding that there is ozone research as a part of the ongoing program of EPA research and development, and that as a part of the regular appropriations authorized in this bill that research would go forward. It would seem to me that the agency would want to look into the situation arising in the gentleman's area.

Mr. McCLORY. If the gentleman will yield further, there is an intention, is there not, by this legislation to enhance the degree of support programs dealing with that kind of air pollution?

Mr. WALKER. Mr. Chairman, I would say to the gentleman that, particularly as it is health-effects related, that is the specific intent of this legislation.

Mr. McCLORY. I thank the gentleman.

Mr. BROWN of California. Mr. Chairman, I yield such time as he may consume to the gentleman from Oklahoma (Mr. WATKINS).

Mr. WATKINS. Mr. Chairman, I would like to acknowledge the remarks of my colleague, the gentlewoman from New Jersey, when she addressed the fact that eventually water is going to be scarce and as big of a problem as trying to produce energy in this country. That is very true. I think that, sitting on this committee, I have been enlightened and educated a great deal on water problems. Let me say this: A great deal of this is dealing with ground or subsurface water. One of the witnesses who testified indicated to us that we have 20 times more water in subsurface or below the ground than we have in surface water, and when we look at our past research and the moneys invested. We have done very little in behalf of subsurface water. Twenty of the major cities of this country have their water sources from ground water or subsurface water. Approximately 95 percent of the people in the rural areas of this Nation also have access to well water or subsurface water. I think, as we see the urban sprawl and many of the other things that are occurring today that cause leaching into the well water systems of many of these small towns and many of our large cities, we need to act in doing the necessary research, providing the necessary moneys in order to be able to do preventive work instead of being faced with some tragedies of contaminated water serving millions of citizens of many thousands of small towns and some of the larger cities of this country.

Mr. Chairman, I commend you as chairman of the subcommittee for the many, many hours that you have spent in holding subcommittee hearings.

Finally, through the Clean Water Act 2 years ago, and moving forward through this past year, we are recognizing that ground water is in abundance but much research must be done concerning the quantity and quality of this water.

Mr. BROWN of California. Mr. Chairman, I want to thank the gentleman for his comments, and I would like to note also his very substantial contribution to the work of the subcommittee.

Mrs. FENWICK. Mr. Chairman, will the gentleman yield?

Mr. BROWN of California. Mr. Chairman. it is a pleasure to yield to the gentlewoman from New Jersey.

Mrs. FENWICK. Mr. Chairman, this matter of ground water is so important. So many people think that the West is the place where there is trouble with water.

Mr. Chairman, in New Jersey, which is the most densely populated State in the Nation, we have large areas covered with roads, houses, parking lots, all sorts of things, so we have a tremendous problem with runoffs. There have been some thoughts in some places and at some times that these runoffs should be piped into the ground water. It cannot be done on account of the pollutants. The roads have bits of rubber on them and bits of debris which come off a road or off the roof of a house.

Mr. Chairman, how they are going to handle those problems I do not know. Such things cause flash floods where such things should not be caused since the waters go into the storm sewers and brooks. However, they do not dare tunnel them back into the ground water, and the ground water level is falling. The water table is falling in heavily populated areas.

Mr. Chairman, this problem is not found only in the arid parts of this Nation. It is a growing problem, and it is going to be an absolutely crucial problem in the further development of the Nation.

Mr. BROWN of California. Mr. Chairman, I thank the gentlewoman from New Jersey (Mrs. FENWICK) for her comments. I think I should ask the gentlewoman to testify at our next subcommittee hearing.

Mr. WALKER. Mr. Chairman, I yield 1 minute to the distinguished gentleman from New York (Mr. WYDLER), the ranking member of the full committee.

Mr. WYDLER. Mr. Chairman, I thank the gentleman for yielding.

I want to congratulate the gentleman on the job that he did on this bill as ranking member of the subcommittee.

Mr. Chairman, I rise in general support of the bill. The only reservation I have is that the bill does expend a rather large sum of money. However, I am mindful of the fact that the Committee on Appropriations will have some review of the spending levels, and I believe they will manage to reorient, if that is the proper word, some of the amounts contained in the authorizing legislation.

With that reservation, however, I support the legislation and hope the Members will do likewise.

Mr. Chairman, I only want to take a few moments to make very brief remarks to express my support for the bill H.R. 11302. This legislation was written by the Subcommittee on the Environment and the Atmosphere after rather extensive hearings on the administration's budget request for research activities within the Environmental Protection Agency. It was subsequently reported unanimously by both the Subcommittee on the Environment and the Atmosphere and by the full Committee on Science and Technology.

Total authorization contained within the bill is $431,338,000 for environmental research, development, and demonstration to be conducted in fiscal year 1979. This total may be compared with $418,603,000 which was authorized by the Congress in fiscal year 1978.

Mr. Chairman, I believe the subcommittee has done an excellent job, and I commend, in particular, the ranking minority member of the subcommittee, Mr. WALKER, for the important role that he played in shaping this legislation.

In summary, I would like to reemphasize the fact that the Committee on Science and Technology has every intention of exercising our constitutional legislative oversight to insure the Environmental Protection Agency maintains a sound, forward-looking research program, which generates reliable data on the causes and effects of the entire spectrum of environmental pollutants. We are deeply concerned that the regulatory activities of the Environmental Protection Agency be closely linked to research that is on-going within the Agency so that regulations will always be based on the soundest possible data.

Mr. Chairman, in conclusion, let me only remind the committee that this bill received the unanimous support of both subcommittee and full committee. I urge my colleagues to vote in favor of the legislation.

Mr. WALKER. Mr. Chairman I yield 1 minute to the gentleman from Kansas (Mr. WINN), a member of the subcommittee.

Mr. WINN. Mr. Chairman, as a member of the Subcommittee on the Environment and the Atmosphere, I rise in support of H.R. 11302, the annual authorization bill for fiscal year 1979 for environmental research and development within the Environmental Protection Agency.

I had the opportunity to participate in hearings on this legislation which were held in February of this year. H.R. 11302 represents the committee's views as to how available financial resources should be allocated.

Mr. Chairman, as some Members noted, the bill is above the President's budget request. The committee feels that this is justified because of the broad responsibility given to EPA to regulate environmental pollutants. The committee feels that a financial commitment must be made by the Congress to insure there are sufficient resources available for research and development to fully justify any regulatory activities of the Agency.

Mr. Chairman, in conclusion, I wish to remind the Committee the underlying purpose of this legislation is to insure that the Environmental Protection Agency maintains a sound research program which will generate reliable information on the causes and effects of environmental pollutants. In order to protect the public health, it is obvious that we must have environmental regulation. But I cannot overemphasize the importance placed by the Committee on Science and Technology that any regulation be based on reliable information. We believe that in many cases of environmental pollution, the problem to be dealt with is perceived only dimly and more information is needed to generate precise and effective regulatory efforts. It is obvious that this type of information may only be generated through an effective research program.

Mr. Chairman, our committee has in the past, and undoubtedly will continue to diligently pursue the goal of a high quality, effective research program within the EPA. The legislation before the House today represents a step towards that goal. I urge my colleagues to join in voting in favor of the legislation.

Mr. WALKER. Mr. Chairman, I yield 1 minute to the gentleman from New Jersey (Mr. HOLLENBECK), a member of the full committee.

Mr. HOLLENBECK. Mr. Chairman, I rise in strong support of H.R. 11302, the research and development authorization for the Environment Protection Agency for fiscal 1979.

As many of my colleagues are aware, Rutherford, N.J., which is located in my district, has been the subject of national attention in recent weeks because of the discovery of an unusually large number of cases of leukemia and Hodgkins disease. Although we do not yet know the reason for this phenomenon, the EPA has assigned a toxic substances coordinator to the case and has promised the use of laboratory facilities and any available funding. I also should note the cooperation of New Jersey and Center for Disease Control officials.

It is tragic that legislation such as H.R. 11302 is so vitally needed. However, the research and development programs of the Environmental Protection Agency are essential if we are to make any progress whatever in the implementation of such milestone legislation as the Clean Air Act, the Federal Water Pollution Control Act, and the Safe Drinking Water Act.

I am particularly pleased that the committee report on this bill takes note of several deficiencies in the current EPA program, including the lack of a specifically identified program of long-range research as required in last year's authorization.

H.R. 11302 authorizes $71.8 million for research and development in air quality, a 32.9 percent increase over last year's authorization; $41.9 million of this function is allocated toward studies of pollutants, environmental carcinogens, and the health implications of automobile emissions. An additional $13.6 million is directed toward industrial processes, with an emphasis on industrial source emissions and the development of technologies to remove these pollutants from our air and water.

As a member of the Committee on Science and Technology, I am pleased to have served on the committee which drafted this legislation and reported to the full House for consideration. I urge its passage.

Mr. WALKER. Mr. Chairman, I yield 2 minutes to the gentleman from California (Mr. ROUSSELOT).

Mr. ROUSSELOT. Mr. Chairman, I thank the gentleman for yielding.

Just in case anybody believes that everyone here thinks this is a great Agency, I rise to say that it is not. Instead of authorizing it for another year, we ought to be abolishing it.

Mr. Chairman, this Agency has done more damage than almost any other to lessen the productive capacity of this country. Look at my own home State of California. There, Dow Chemical sought to construct a $500 million petrochemical complex in the San Francisco Bay Area, which would have provided 1,000 construction jobs and more than 1,000 permanent jobs. Dow canceled the project after more than 2 years of seeking to gain regulatory approval from EPA and other agencies involved in the review process. Over $4 million had been spent by Dow on the project's review and only four permits had been obtained when the plans were halted. Mr. Speaker, this is just one corporation.

Again, I would not want anybody to think that everybody here thinks EPA is a wonderful or a great Agency. It has been a failure, and it ought to be abolished.

● Mr. WALGREN. Mr. Speaker, I would like to express my strong support for an amendment to the EPA authorization bill, H.R. 11302, offered by my good friend and colleague from Pennsylvania, Representative JOHN MURTHA. Mr. MURTHA'S amendment would require the Environmental Protection Agency to conduct its review of the ambient air quality criteria data by December 31, 1978, instead of December 1980, as now stated in the Clean Air Act. Such a change in this deadline would assure that the State implementation plans filed in July of 1979 would be based on the most current and up-to-date scientific criteria data.

I would like to add that, simultaneous with today's consideration of H.R. 11302, I am sponsoring a meeting here in Washington between Mr. David Hawkins, Director of the Office of Air and Waste Management of EPA, Members of Congress, and representatives of the Pittsburgh industry community. The delegation from Pittsburgh includes representatives from the following corporations: ALCOA, PPG Industries, Gulf Oil, Koppers, Dravo, Allegheny Ludlum, United States Steel, Jones and Laughlin Steel, Edgewater Steel, Westinghouse, IBM, Neville Chemical, H. J. Heinz, Energy Impact Associates, Green International, Heyl and Patterson, the National Auto Dealers Association, the Manufacturing Chemists Association, the National Chamber of Commerce, the Pennsylvania Chamber of Commerce, and the Greater Pittsburgh Chamber of Commerce.

Earlier this year, I arranged a similar meeting with the director of legislation for EPA. One of the issues raised in that meeting was the need to review and revise the national ambient air quality standards. These standards were first issued in 1971. Since then, a number of studies have indicated a need to update these criteria. Many have suggested that the criteria be reviewed before companies engage in expensive capital expenditures required to meet pollution deadlines set for 1979.

Last year the Congress, in the Clean Air Act of 1977, required the EPA to review the ambient air quality criteria and standards by December 31, 1980. But unless the EPA reviews the standards before the 1979 pollution deadline, companies may be required to meet standards which are later declared to be obsolete.

I fully support national ambient air quality standards to protect public health. But these standards must be based on the most up-to-date scientific evidence available so that companies and jobs are not jeopardized by compliance with costly, outdated environmental regulations.

We have come to realize the profound impact environmental regulations have on the Pittsburgh community. I urge my colleagues to support the amendment offered by Representative MURTHA.●

Mr. WALKER. Mr. Chairman, I have no further requests for time, and yield back the balance of my time.

Mr. BROWN of California. Mr. Chairman, I have no further requests for time, and yield back the balance of my time.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

H.R. 11302

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SHORT TITLE

SECTION 1. This Act may be cited as the "Environmental Research, Development, and Demonstration Authorization Act of 1979".

PROGRAM AUTHORIZATIONS

SEC. 2. (a) There are authorized to be appropriated to the Environmental Protection Agency for environmental research, development, and demonstration activities for the fiscal year 1979 for the following activities:

(1) Air quality activities in the Health and Ecological Effects program, $41,897,000.

(2) Air quality activities in the Monitoring and Technical Support program, $16,283,000.

(3) Air quality activities in the Industrial Processes program, $13,610,000.

(4) Water quality activities in the Health and Ecological Effects program, $25,001,000.

(5) Water quality activities in the Industrial Processes program, $13,875,000.

(6) Water quality activities in the Monitoring and Technical Support program, $5,539,000.

(7) Water quality activities in the Public Sector Activities program, $15,214,000.

(8) Drinking water activities in the Public Sector Activities program, including groundwater research, $20,150,000.

(9) Pesticides activities in the Health and Ecological Effects program, $8,800,000: *Provided*, That no part of any amount appropriated pursuant to this paragraph may be obligated or expended except to the extent hereafter specifically authorized by law.

(10) Pesticides activities in the Industrial Processes program, $1,200,000: *Provided*, That no part of any amount appropriated pursuant to this paragraph may be obligated or expended except to the extent hereafter specifically authorized by law.

(11) Solid waste activities in the Public Sector Activities program, $11,912,000.

(12) Toxic substances activities in the Health and Ecological Effects program, $8,862,000.

(13) Toxic substances activities in the Industrial Process program, $150,000.

(14) Toxic substances activities in the Monitoring and Technical Support program, $3,200,000.

(15) Radiation activities in the Health and Ecological Effects program, $930,000.

(16) Interdisciplinary activities in the Health and Ecological Effects program, $9,500,000.

(17) Interdisciplinary activities in the Anticipatory Research program, $13,860,000.

(18) Interdisciplinary activities in the Public Sector Activities program, $25,000.

(19) Interdisciplinary activities in the Monitoring and Technical Support program, $14,900,000.

(20) Energy activities in the Health and Ecological Effects program, $70,000,000.

(21) Energy activities in the Energy Control program, $65,370,000.

(22) Energy activities in the Monitoring and Technical Support program, $3,000,000.

(b) There is authorized to be appropriated to the Environmental Protection Agency, Office of Research and Development, for the fiscal year 1979, for program management and support, $23,060,000.

(c) No funds may be transferred from any particular category listed in subsection (a) or (b) to any other category or categories listed in either such subsection if the total of the funds so transferred from that particular category would exceed 10 per centum thereof, and no funds may be transferred to any particular category listed in subsection (a) or (b) from any other category or categories listed in either such subsection if the total of the funds so transferred to that particular category would exceed 10 per centum thereof, unless—

(1) a period of thirty legislative days has passed after the Administrator of the Environmental Protection Agency or his designee has transmitted to the Speaker of the House of Representatives and to the President of the Senate a written report containing a full and complete statement concerning the nature of the transfer involved and the reason therefor, or

(2) each committee of the House of Representatives and the Senate having jurisdiction over the subject matter involved, before the expiration of such period, has transmitted to the Administrator written notice to the effect that such committee has no objection to the proposed action.

SPECIAL AUTHORIZATION

SEC. 3. (a)(1) There is authorized to be appropriated to the Environmental Protection Agency for the fiscal year 1979, for grants for long-term environmental research programs at universities or other such research institutions, $10,000,000.

(2) These grants are for the purpose of developing continuing centers for research and training in the environmental sciences, including the engineering, physical, natural, health, and social sciences.

(b) There is authorized to be appropriated to the Environmental Protection Agency for the fiscal year 1979, to implement the study authorized in section 403(d) of the Clean Air Act Amendments of 1977 (Public Law 95–95), $3,000,000.

(c)(1) There is authorized to be appropriated to the Environmental Protection Agency for the fiscal year 1979, $1,000,000 and for the fiscal year 1980, $1,000,000, for a study and report, to be conducted outside the Federal Government, on (A) coordination of the Federal Government's efforts in environmental research, development, and demonstration, and (B) the application of the results of such efforts to environmental problems.

(2) The study shall be conducted under a contract let by the Administrator. Such contract shall (A) be developed in consultation with an interagency advisory committee whose membership includes representatives of the Office of Management and Budget and of all agencies conducting or using the results of environmental research, and (B) provide for an oversight and review role by the National Academy of Sciences.

(3) The study shall conclude with a report to be submitted to the President, the Administrator, and the Congress within two years after the date of the enactment of this Act. The report shall include recommendations for action by the President, the Administrator, other agencies, or the Congress, as may be appropriate.

(4) The report shall not be subject to any prior clearance or review (except as specifically provided in this subsection), nor shall any such prior clearance be a part of the contract let under paragraph (2).

OTHER AUTHORIZATIONS

SEC. 4. There is authorized to be appropriated to the Secretary of Commerce for the fiscal year 1979, for use by the National Bureau of Standards—

(1) $3,000,000 for research in the area of environmental measurement sciences; and

(2) $2,000,000 to carry out activties authorized in section 5002 of the Resource Conservation and Recovery Act of 1976 (Publaw Law 94–580).

MISCELLANEOUS REPORTS

SEC. 5. (a) All reports to or by the Administrator relevant to the Agency's program of research, development, and demonstration shall promptly be made available to the Committee on Science and Technology of the House of Representatives and the Committee on Environment and Public Works of the Senate, unless otherwise prohibited by law.

(b) The Administrator shall keep the Committee on Science and Technology of the House of Representatives and the Committee on Environment and Public Works of the Senate fully and currently informed with respect to matters falling within or related to the jurisdiction of the committees.

(c) The report provided for in section 11(d) of Public Law 93–577 shall be made available to the public for comment, and to the heads of affected agencies for comment and, in the case of recommendations for action, for response.

(d) For the purpose of assisting the Department of Energy in planning and assigning priorities in research development and demonstration activities related to environmental control technologies, the Administrator shall actively make available to the Department all information on research activities and results of research programs of the Environmental Protection Agency.

STAFF MANAGEMENT

SEC. 6. (a)(1) The Administrator is authorized to select and appoint up to 75 full-time permanent staff members in the Office of Research and Development to pursue full-time educational programs for the purpose of (A) securing an advanced degree or (B) securing academic training, for the purpose of making a career change in order to better carry out the Agency's research mission.

(2) The Administrator shall select and appoint staff members for these assignments according to rules and criteria promulgated by him. The Agency may continue to pay the salary and benefits of the appointees as well as reasonable and appropriate relocation expenses and tuition.

(3) The term of each appointment shall be for up to one year, with a single renewal of up to one year in appropriate cases at the discretion of the Administrator.

(4) Staff members appointed to this program shall not count against any Agency personnel ceiling during the term of their appointment.

(b)(1) The Administrator is authorized to appoint up to 25 Postdoctoral Research Fellows in accordance with the provisions of section 213.3102(aa) of title 5 of the Code of Federal Regulations.

(2) Persons holding these appointments shall not count against any personnel ceiling of the Agency.

(c)(1) The Administrator is authorized and encouraged to utilize research associates from outside the Federal Government in conducting the research, development, and demonstration programs of the Agency.

(2) These persons shall be selected and shall serve according to rules and criteria promulgated by the Administrator.

REUSE OF WASTEWATERS

SEC. 7. (a) Section 5(a)(2) of the Environmental Research, Development, and Demonstration Authorization Act of 1978 (Public Law 95–155) is amended by inserting "agricultural use or" immediately after "reuse of wastewaters for drinking and".

(b) There is authorized to be appropriated to the Administrator for the fiscal year 1979, for purposes of section 5 of the Environmental Research, Development, and Demonstration Authorization Act of 1978, $25,000,000.

Mr. BROWN of California (during the reading). Mr. Chairman, I ask unanimous consent that the bill be considered as read, printed in the RECORD, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from California?

There was no objection.

COMMITTEE AMENDMENTS

The CHAIRMAN. The Clerk will report the first committee amendment.

The Clerk read as follows:

Committee amendment: On page 5, lines 13 through 16, amend section 3(a)(2) to read:

(2) These grants are for the purpose of developing continuing centers for environmental research and training in the engineering, physical, natural, health, and social sciences.

The committee amendment was agreed to.

The CHAIRMAN. The Clerk will report the last committee amendment.

The Clerk read as follows:

Committee amendment: On page 7, line 22, amend "report" to read "reports" and amend "section 11(d)" to read "section 11".

The committee amendment was agreed to.

AMENDMENT OFFERED BY MR. FISH

Mr. FISH. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. FISH: On page 4 after line 4 add:

(23) Noise Control activities in the Industrial Processes Program, $1,000,000.

Mr. FISH. Mr. Chairman, I want to congratulate the subcommittee chairman and the ranking member for bringing a fine piece of legislation for us today. H.R. 11302 is a good bill. With the addition of my amendment it will be an excellent bill. I ask my colleagues to look favorably on this amendment which addresses a problem that continues to confound and exasperate American industry. This amendment would earmark $1,000,000 for R. & D. in the noise control area as it relates to industrial processes only.

Mr. Chairman, I am well aware of the work being done in the Subcommittee on Transportation and Commerce chaired by my able colleague from Pennsylvania (Mr. ROONEY) and I applaud these efforts to address the problems of the lack of demonstrated noise abatement technology. However, H.R. 12068, the committee bill, is limited to "(B) development of technology for noise abatement." It is national in scope and addresses all noise abatement technology, not just industrial. The sum requested of $3,000,000 in the Commerce bill to address a myriad of problems relating to noise abatement throughout the Nation will, in all likelihood, be spread so thin that little or no advance can be expected in the industrial area.

Mr. Chairman, while I do not believe that every problem should have a Federal solution, I do believe that the Government should be responsive to the problems which they create. Small business and industry has suffered at the hands of both Commerce and OSHA and yet, regulatory agencies offer no technical assistance to these businesses to aid in compliance. They are regulating with no offers of assistance to help business comply. The state of the art should be available to all manufacturers or regulatory agencies should realize the impossibility of compliance and adjust regulations accordingly. We, too, must be responsive to the cries of the small businessman when we legislate as well. We must offer industry the chance to actively pursue a solution to their noise abatement problems and offer an opportunity for demonstration programs to discover just how to address these problems.

My amendment tracks at least three R. & D. activities already enumerated in H.R. 11302:

Water quality activities in the Industrial Processes Program, $13,875,000;

Pesticides Activities in the Industrial Processes Program, $1,200,000;

Toxic substances activities in the Industrial Processes Program, $150,000.

My amendment simply adds an additional activity (No. 23) for noise control activities in industry.

The industrial processes program in EPA is presently in existence, but noise control programs have been negligently funded for a number of years. In my judgment, noise control activities in industry are equally as important as such worthy activities as water quality, pesticides, and toxic substances activities in industry.

Mr. Chairman, examples of these problems are brought to my attention continuously by firms located within the 25th Congressional District of New York. One firm, manufacturing wire and cable connectors, was visited by OSHA in 1971 and cited for noncompliance with ambient noise level regulations in his swagging operations. Many minor modifications were made in an attempt to comply. Personal protective equipment, such as ear protection, was deemed inadequate and OSHA expressed their interest in the need for engineered controls on a larger scale. In cooperation with regulations, this firm made major structural changes and enclosed their machinery. As a result, fire regulations were violated and again, in accordance with Federal regulation, a rework of the entire sprinkler system was ordered.

This company, as well as hundreds of companies across the Nation, spent tens of thousands of dollars in attempts to satisfy Federal requirements. Hearing tests were given to employees on a regular basis, employees attended noise abatement seminars under company sponsorship, and extensive monitoring equipment was installed—all at substantial cost to the manufacturer. Many companies do not have the resources to continually effect short-term solutions to these requirements.

That is the key point here. Companies are told every 6 months: "Bring it up to a little better, more modern, new form of technology. We really do not know what that is, but we will let you know when you reach it."

While I appreciate and understand the need to enforce the law, I cannot fathom how the Federal Government can expect compliance without offering a chance to discover a workable solution. Companies have requested assistance on numerous occasions from agencies as to how to comply and they are consistently met with vague responses.

Many of these companies, Mr. Chairman, could very well be pioneers in the field of industrial noise abatement, yet with limited resources they are either forced to go out of business, accept a passthrough of noncompliance or continue to exhaust their resources with no final guarantee of compliance.

Mr. Chairman, it is within our ability under my amendment to make the Federal Government more responsive to the needs of its citizenry.

I had hoped the gentleman from Pennsylvania (Mr. ROONEY) himself could have been on the floor with us to express the view he has expressed to me, that he is in favor of this amendment as complementary to the effort of the Commerce Committee bill which, as I indicated, does not specify the question of industrial noise.

I would also like to indicate for those Members who say, "Why EPA, when normally these types of regulations are forthcoming from OSHA?" That, according to Mr. Charles Elkins, director of the EPA noise program, EPA is responsible for coordinating all noise pollution research for the Federal Government. They have just completed a 1-year interagency assessment of all noise research for the Federal Government and have discovered what areas need to be addressed by research activities in the area of noise pollution.

So we are talking about the proper division within the proper agency to do the research for the technology that, when available, will be applicable industrywide and I think will meet head on a number of problems all our industries face.

As to OSHA itself, granted there is a fine line between EPA activities and OSHA, but the fact of the matter is as of today there is no effective R. & D. program within OSHA to address the activities I hope to meet by this very straightforward amendment that I think will be in the best interest of businessmen in all our communities.

Mr. BROWN of California. Mr. Chairman, it is difficult to take a position in oposition to the needs for additional research on a hazard of pollution as important as noise in the industrial setting.

I want to pay tribute to the deep concern and the vast amount of work that the gentleman from New York (Mr. FISH) has done in researching this problem and in following through to demonstrate his concern for some solution to it.

I think in his own statement he has laid out the case fairly well on both sides with respect to the merits of the argument. Undoubtedly the research would be helpful. As he points up, EPA in their office of research and development does not have a research program and did not request funds for a research program in this area. They have only a very modest budget figure for coordination of research.

As I am sure the Members know, much of the activity in this field of noise pollution and noise control takes place in other agencies: OSHA, for example, in the workplace, and the Federal Aviation Administration for those agencies

which consider aircraft noise and things of that sort.

Even NASA has activity in this area in their program for the development of advanced aircraft engines. The EPA in its Office of Research and Development does not have and has not requested a program for noise research.

Let me put it this way: If the Members in their wisdom feel that this is an appropriate priority item to add, then I would suggest they vote for this amendment offered by the gentleman from New York (Mr. FISH). If they would feel reluctant to compel EPA to take on another program which they do not want and do not have and if they think the budget figure is high enough in this bill they probably would vote against the amendment.

That is about all I could say about the amendment.

The CHAIRMAN. The question is on the amendment offered by the gentleman from New York (Mr. FISH).

The question was taken; and on a division (demanded by Mr. FISH) there were—ayes 4, noes 15.

So the amendment was rejected.

AMENDMENT OFFERED BY MS. HOLTZMAN

Ms. HOLTZMAN. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Ms. HOLTZMAN: Page 3, line 14, delete "$930,000" and insert in lieu thereof "$2,500,000".

Ms. HOLTZMAN. Mr. Chairman, I offer this amendment on behalf of the gentleman from Massachusetts (Mr. STUDDS) and myself.

This amendment substantially increases the funding for research on the health effect of microwave radiation. It raises the funding level from $930,000 to $2.5 million.

The reason that I have offered this amendment is that I am deeply concerned about our lack of scientific information about the hazards of microwave radiation. I asked the General Accounting Office to assess the effects of low level microwave radiation and to report on how the EPA was carrying out its responsibility to protect the public from possible harmful health effects. The GAO, in a report issued March 29, 1978, found the following: First, that there was no official health standard to govern the exposure of the American public to low levels of microwave radiation in the environment; second, that the research that has been done on the health effects of microwave radiation has been so inadequate as to preclude the formulation of any scientifically sound safety standards; and third, that preliminary results of an EPA research program have shown that low level exposure to microwaves has had serious health effects, including causing genetic damage and various nervous disorders in laboratory animals.

The American public is constantly being bombarded by measurable levels of microwave radiation. The danger is rapidly increasing because sources of microwave radiation increase by 15 percent each year.

We have an obligation to make sure that the American public is not being subjected to unsafe levels of microwave radiation.

This amendment will help insure that our Government begins a serious and substantial research program on microwave radiation that will make it possible to protect the health and safety of the American public.

EPA has informed me that it can use the additional funds to finance important research, such as research on the relationship of microwave exposure to the infant mortality rate of monkeys, a followup study of the exposure of those who worked with U.S. radar systems during World War II, and studies to confirm experiment results showing increased birth defects from low level radiation.

Mr. STUDDS. Mr. Chairman, will the gentlewoman yield?

Ms. HOLTZMAN. I am happy to yield to my colleague, the gentleman from Massachusetts (Mr. STUDDS).

Mr. STUDDS. Mr. Chairman, I thank the gentlewoman from New York (Ms. HOLTZMAN) for yielding to me. I also would like to thank the chairman of the subcommittee, the gentleman from California (Mr. BROWN) and the ranking minority member, the gentleman from Pennsylvania (Mr. WALKER). I understand the amendment will be acceptable to both gentlemen and I will not take a great deal of time.

Let me emphasize to the members of the committee that if there were ever an area of human knowledge that calls for humility on our part, it is this. The question is not what we know, but what we do not know about the safety of low level nonionizing microwave radiation.

The U.S. Air Force, for example, has just constructed two enormous radars, called PAVE PAWS, one located in California and one located in my district on Cape Cod.

These radars, which are currently being tested, will emit nonionizing radiation at levels which in some cases are projected to approximate the levels at which our embassy in Moscow has been bombarded over a number of years by the Soviet Union. That radiation has elicited the very intense protests of at least two Presidents of the United States with respect to the possible health implications for our personnel in Moscow.

We do not know the effects, as the gentlewoman from New York (Ms. HOLTZMAN) points out. We are being bombarded from ovens; we are being bombarded from television transmission facilities, from CB radios, and now from what are supposed to be facilities erected in our own defense by the U.S. Air Force. I do not mean to prejudge. We do not know. One thing we do know—and I would ask the Members to think on this—is that the Soviet Union has set a safety standard for its citizens' exposure to nonionizing radiation which is 10,000 times more stringent than the occupational standards set by OSHA for American workers. It seems to me that out of humility we ought to support this amendment for a modest increase in attempting to get these answers.

I thank the gentlewoman for offering the amendment, and I thank the chairman and ranking member for their support.

Ms. HOLTZMAN. I thank the gentleman.

Mr. BROWN of California. Mr. Chairman, I move to strike the last word.

Mr. Chairman, the subcommittee had some difficulty in dealing with the Agency's request in the field of radiation, and that difficulty is reflected in the language of the report in which the committee pointed out that we felt that the agency should have a larger program and specifically referred to a larger program in the field of ionizing radiation. This amendment deals not with ionizing but with the nonionizing radiation. But our point essentially was that we were disappointed that in the light of the points that were made by the gentlewoman from New York (Ms. HOLTZMAN) and others interested in this amendment that a larger effort was not being made. There is a very great and increasing concern on the part of the public for a better base of knowledge in this area, and we felt that the agency should proceed to address that. Unfortunately, they did not, and I must say that the committee, not wishing to involve itself in too many fights with the administration, accepted their recommendation on this matter. In rethinking the subject as a result of conversations with the gentlewoman and other supporters of this amendment, I am of the opinion that the House probably should indicate that it feels this research ought to have a higher priority. I doubt if the agency will move as rapidly as the gentlewoman and others concerned about this wish, but if they would make even some slight progress in increasing the program, it would be beneficial.

For that reason I personally am willing to accept the amendment.

Mr. WYDLER. Mr. Chairman, will the gentleman yield?

Mr. BROWN of California. I yield to the gentleman from New York.

Mr. WYDLER. I thank the gentleman for yielding.

I am interested in this discussion because we have had a lot of talk in the Congress in the last few years about the problems of the energy sources that we have in our country, be they fossil fuel or nuclear energy, and that the clean answer for the future is, of course, the solar power energy that we hope some day to use. I predicted a couple of years ago that if we ever really got to the point where we were going to use solar power in a large way to really produce a lot of energy in our Nation, we would, or somebody would, find out that in fact it had all kinds of environmental problems, too. I think we are seeing the first blush of that in this amendment that is being offered here today, because the solar satellite system that we have been talking about, of course, is going to use microwave energy to return the power

that is collected in the atmosphere to the Earth, I can imagine when we get the language about the bombardments of the body that are possible from such a device by microwave energy, the possibility of the enormous damage to the human body will exceed all possible measurements.

I would also like to say that when we talk about bombarding the human body with microwave energy—and, frankly, I do not know much about it—are our bodies not literally being bombarded by short wave and AM and FM waves in the air, of television signals of all kinds? With 13 channels in New York going all the time signals are going through the air and bombarding our bodies.

What are we going to do about it?

What are we going to do about investigating all the potential and possible damage to the human body from these items as well? I wonder if the gentleman might comment on that in some fashion?

Mr. BROWN of California. Well, I think the comments the gentleman from New York makes are absolutely appropriate. As the gentleman well knows, the Committee on Science and Technology is about to vote out a program for the House to consider involving our satellite solar energy system. If that program is adopted, it in itself would justify a major investigation, a major research program into the health effects of nonionizing radiation. It would be mandated, in fact, if we go forward with it.

The CHAIRMAN. The time of the gentleman from California has expired.

(By unanimous consent, Mr. BROWN of California was allowed to proceed for 2 additional minutes.)

Mr. BROWN of California. Mr. Chairman, as the gentleman points out, our entire environment today is saturated with radiation in many ways, many forms, and the research activity to determine the health effects on human beings has been consistently downplayed in the past.

Mr. WALKER. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I would simply rise to say I am personally prepared to accept the amendment as well. It seems to me that the important factor here is that as we see public awareness rising on this particular issue, there is a need for adequate research and study to show there are no harmful effects, if that is the case, and to make sure we have some information on the public record with regard to the effect of microwaves in our society.

Therefore, it seems to me this additional research is responsible at this time and I am prepared to accept the amendment.

● Mr. WEISS. Mr. Speaker, I support the amendment to the Environmental Protection Agency Authorization (H.R. 11302) to increase funding for research on the health effects of microwave radiation.

This amendment offered by my colleagues, Representatives HOLTZMAN and STUDDS, underlines the urgent need for greater knowledge and activity relating to the effects of low-level microwaves and low-level radiation produced by other forms of nonionizing radiation.

Sources of nonionizing radiation include radio and TV antennas, microwave ovens, radars, industrial heating equipment, mobile communications systems such as CB radios, and point to point microwave communication systems. Already some human health disorders have been attributed to this radiation—leukemia and pancreatic cancer to name two.

It is apparent from this listing that sources of low-level nonionizing radiation surround us and appear commonplace. Thus I cannot stress too much the need to gain knowledge about any adverse effects that may be emitted by this equipment which plays such an integral part in our daily lives.

The current U.S. effort in regulating this radiation is less than adequate. There is no official U.S. health standard for exposure to microwave or nonionizing radiation sources. The existing guideline that Government and industry currently follow on a voluntary basis is 10.000 times less stringent than that followed by many countries abroad. As a result segments of our population may be exposed to dangerous levels of nonionizing radiation. The General Accounting Office (GAO) recently issued a report which concluded:

The population is receiving measurable exposures to nonioniznig radiation. The sources are increasing while the effects of such exposures at low levels is a controversial subject . . . Research programs, including EPA efforts to detect and evaluate biological effects of nonionizing radiation, have not yet been able to generate a sufficient data base.

Therefore, it would seem the increase in funding for EPA activity is badly needed.

This amendment would increase funding for research activity of nonionizing radiation from $930.000 to $2.5 million. Hopefully this increase will take us a large step closer toward solving questions about low-level radiation of this kind. The incident in 1976 where American workers at the U.S. Embassy were found to be exposed to microwaves produced by Soviet eavesdropping equipment clearly demonstrates the need for more aggresive activity in this field. Currently we are confronting other examples of potential dangers to public health posed by sources of nonionizing radiation: Such as the PAVE PAW radar system in Cape Cod and broadcasting activity in Rutherford, N.J., leading some observers to name it the "cancer capital" of the country.

I have raised concern about possible adverse effects in relation to the Microwave Landing System (MLS), currently under consideration for "deployment" by the Federal Aviation Administration (FAA). The MLS releases low-level microwave radiation into the atmosphere in a narrow beam in assisting airplanes land in inclement weather. While there is no indication that the MLS poses a health hazard, there has been no environmental impact statement (EIS) filed with EPA and Congress. My colleagues, Representatives HOLTZMAN and SOLARZ, have joined me in the letter printed below suggesting to FAA Administrator Bond that such an EIS be completed before appropriations are considered for the MLS.

I strongly urge my colleagues to support this amendment and support vigorous action toward regulating the potential health hazard of low-level nonionizing radiation.

HOUSE OF REPRESENTATIVES,
Washington, D.C., April 18, 1978.

MR. LANGHORNE M. BOND,
Administrator, Federal Aviation Administration, Independence Avenue, SW., Washington, D.C.

DEAR ADMINISTRATOR BOND: We are concerned about the Microwave Landing System (MLS) being developed by your agency.

We were informed by the Congressional liason office of the FAA on April 11th that no Environmental Impact Statement had been completed yet on the MLS.

Under section 102 of the National Environmental Policy Act of 1969 an EIS must be filed on "major Federal actions significantly affecting the quality of the human environment" with the Environmental Protection Agency (EPA).

The discovery of potential dangers to health from microwaves was well publicized recently when U.S. embassy personnel became ill as a result of microwave eavesdropping techniques employed by the Soviet Union.

A recent General Accounting Office (GAO) study reveals that the Federal government has been negligent in carrying out its responsibility in protecting the public from potential microwave health hazards.

The GAO study points out that there has been a significant increase in microwave radiation in the atmosphere—partly as a result of increased use of microwaves in relation to aircraft.

It is thus vital that the FAA assess what impact, if any, the MLS will have on the overall level of microwave radiation in the atmosphere. Furthermore, it should be determined if the MLS will have an adverse effect on human beings located near the MLS during its operation or on individuals engaged in maintenance work on microwave equipment.

The completion of a full assessment of any health hazard resulting from the MLS is an essential step in proceeding with the MLS. It is urgently suggested that you complete an EIS on the Microwave Landing System and submit it to both EPA and Congress prior to Congressional action on the appropriation measure for the System.

Sincerely,

ELIZABETH HOLTZMAN,
TED WEISS,
STEPHEN SOLARZ,
Members of Congress.

The CHAIRMAN. The question is on the amendment offered by the gentlewoman from New York (Ms. HOLTZMAN).

The amendment was agreed to.

AMENDMENT OFFERED BY MR. MURTHA

Mr. MURTHA. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. MURTHA: Page 9, after line 25, insert:

CLEAN AIR ACT DEADLINES RESPECTING TOTAL SUSPENDED PARTICULATES

SEC. 8. (a)(1) Section 109(d)(1) of the Clean Air Act is amended by inserting after "December 31, 1980,": "(December 31, 1978, in the case of criteria for total suspended particulate matter)".

(2) Section 109(d)(2)(B) of such Act is amended by inserting after "January 1, 1980,": "(December 31, 1980, in the case of criteria for total suspended particulate matter)".

(b) Section 129(c) of the Clean Air Act Amendments of 1977 is amended by striking out the period after "January 1, 1979" and inserting in lieu thereof the following: "(July 1, 1979 in the case of any plan revision respecting total suspended particulate matter). Any such plan revision respecting total suspended particulate matter shall take into account any revision in the ambient air quality standards for such pollutant which takes effect before such plan revision is submitted and which reflects the review of the criteria respecting such pollutant carried out pursuant to section 109(d) of the Clean Air Act.".

Mr. MURTHA (during the reading). Mr. Chairman, I ask unanimous consent that the amendment be considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

Mr. ROGERS. Mr. Chairman, I reserve a point of order on the amendment. I am opposed to the amendment.

The CHAIRMAN. The gentleman from Florida (Mr. ROGERS) reserves a point of order.

Mr. MURTHA. Mr. Chairman, I withdraw the amendment. I would like to have a colloquy with the gentleman.

Mr. Chairman, I ask unanimous consent that the amendment be withdrawn.

The CHAIRMAN. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

Mr. MURTHA. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, it has come to my attention that the National Ambient Air Quality Standards for particulate matter have been in existence since April 1971. These standards are based on the Air Quality Criteria Document for Particulate Matter which was published in January 1969 after consideration of the scientific literature "on a worldwide basis through March 1968." The criteria document upon which the standards are based has not been revised since its issuance, although reports of the National Air Quality Criteria Advisory Committee, the EPA Science Advisory Board, and the National Academy of Sciences have provided evidence which suggests that the original criteria and the present standards are no longer valid. Furthermore, two independent studies sponsored by the American Iron and Steel Institute in 1976–77 have concluded that the present air quality standards are based on invalid criteria and could be made more lenient without adverse effect on public health. The Clean Air Act Amendments of 1977 require EPA to review the ambient air quality criteria and standards by December 31, 1980. Because the States are required to complete revisions to their State Implementation Plans for control of air pollution by July 1979 in order to achieve the existing standards, any review and possible revision of the standards will come too late to avoid enormous capital expenditures by the steel industry, which is severely impacted by the existing particulate standards. To achieve the present standards, it is anticipated that the steel industry will be required to spend a major portion of an estimated $4 billion for further capital expenditures for air pollution control. These expenditures will be required at a time when capital formation for all purposes is extremely difficult. Accordingly, we believe that EPA should be directed by Congress to investigate immediately the validity of the present air quality criteria and standards for particulate matter and to provide relief if warranted, before July 1979.

1. HISTORY OF CURRENT STANDARDS

The U.S. Clean Air Act of 1970, as amended, provided for promulgation by the Administrator of the Environmental Protection Agency (EPA) of "national primary * * * ambient air quality standards." For "each air pollutant for which air quality criteria" has been issued prior to December 31, 1970, the act required that the Administrator should prescribe within 120 days of that date "National primary ambient air quality standards * * * (which) shall be ambient air quality standards the attainment and maintenance of which in the judgment of the Administrator, based on such criteria and allowing an adequate margin of safety, are requisite to protect public health."

On April 30, 1971, the Administrator promulgated national primary ambient air quality standards for particulate matter (TSP). The primary standards for TSP were set forth in section 410.6 as follows:

SEC. 410.6 National primary ambient air quality standards for particiulate matter.

The national primary ambient air quality standards for particulate matter, measured by the reference method described in Appendix B to this part, or by an equivalent method are:

(a) 75 micrograms per cubic meter—annual geometric mean.

(b) 260 micrograms per cubic meter—maximum 24-hour concentration not to be expected more than once per year.

The method prescribed for measuring TSP, described in appendix B to the regulation, is the "high volume method."

The air quality criteria on which the TSP standards were based were available data set forth in a document entitled "Air Quality Criteria for Particulate Matter" (Criteria Document), prepared and published by the U.S. Department of Health, Education, and Welfare, January 1969. That document was prepared as required by the Air Quality Act of 1967, and was based on a review of the literature "on a worldwide basis through March 1968", page xiv. The "Résumé" of the document stated that "adverse health effects were noted when the annual geometric means of particulate matter exceeded 80 $\mu g/M^3$," page 189. The primary source for this conclusion, according to the document, was derived from the studies discussed and cited in chapter 11 entitled "Epidemiological Appraisal of Particulate Matter."

The criteria document upon which the current primary and secondary ambient air quality standards for particulate are based has not been revised since it was issued by the Secretary of Health, Education, and Welfare in January 1969, on the basis of the scientific knowledge available through March 1968, and no longer accurately reflects, if indeed it ever did accurately reflect, "the latest scientific knowledge useful in indicating the kind and extent of all identifiable effects on public health or welfare which may be expected from the presence of (particulate) in the ambient air in varying quantities," as required by section 108 of the Clean Air Act.

2. BASIS OF STEEL INDUSTRY'S CONCERN FOR PRESENT LIMITS

A review panel of the Science Advisory Board of EPA issued a report dated March 14, 1975, which raised serious questions as to the validity of the new information developed since the initial publication of the current air quality criteria document for particulate matter, citing weaknesses on many bases. In addition, an EPA draft review of the scientific and technical data base for criteria and hazardous pollutants showed that certain of the so-called CHESS [1] studies, which have been used by EPA to support the present TSP standards, demonstrate no relationship of chronic respiratory disease to levels of suspended particulate twice as high as the primary standard.

With respect to the question of whether current air quality standards are adequate to assure protection of the public health and welfare with an adequate margin of safety, a report by the U.S. National Academy of Sciences dated September 1974 states with respect to suspended particulates that "to the extent that British data were used to establish 1968 criteria, an additional safety factor could be said to have been accidentally incorporated into the standards." This safety factor results from differences in British and U.S. methods of measurement and is as high as a factor of two. A safety factor this high has not been incorporated into the air quality standards for other criteria pollutants, nor is such a safety factor needed in view of the "transitory" risks involved.

---

[1] CHESS is an acronym for EPA's Community Health and Environmental Surveillance System which has recently been the subject of a Congressional review (See "Investigative Report on EPA's Research Program, with Primary Emphasis on CHESS" by House Committee of Science and Technology, dated November 1976).

As stated above, the criteria document has never been definitely reviewed and reevaluated by EPA; however, a review and reevaluation was made in 1975–76 by the National Air Quality Criteria Advisory Committee (NAQCAC) of the Science Advisory Board of the Agency. In its final report submitted in June 1976, the committee said that the criteria document, "is in serious need of revision and that such a revision is not only desirable, but necessary."

To illustrate, the committee found the authors of the criteria document based their conclusions in respect of health effects (the basis for the primary ambient air quality standards) on six studies, five of which were British epidemiological studies and the sixth of which was the Winkelstein epidemiological study done at Buffalo, N.Y. The committee recognized that the Winkelstein study "suffers from several serious deficiencies which render it questionable for standard setting purposes," and that respecting the remaining British studies, "the original conversion of British measurement methods to U.S. measurements methods (for particulate) resulted in British (health) effects being ascribed to levels as much as a factor of two below the actual levels." Moreover, the committee observed that the criteria document did not reflect any of the health effect studies made available since March 1968.

3. STEEL INDUSTRY STUDIES OF THE PROBLEM

Because of the concerns raised by the National Academy of Sciences and NAQCAC that the current U.S. particulate standards may be invalid and in view of the enormous economic impact of these standards on our industry, the American Iron and Steel Institute (AISI) commissioned two critical studies (summarized below) of the health effects of particulate with emphasis on the adequacy of the U.S. standards.

First. The first study, which was conducted by an environmental consulting firm, was completed in 1976. The consultant's report concluded that the present standards were not suitably validated either by the literature referenced in the criteria document (which supposedly included all pertinent studies through 1968) or any literature then available. The report also reached the conclusion that the post-1968 literature (excluding EPA-sponsored studies allegedly based on the EPA-administered CHESS program) suggests that the standards should both be substantially higher, and, to be valid according to the data available, expressed in terms of concurrent measurements of sulfur dioxide. Our experts recommended that additional work must be accomplished by medical epidemiologists to support such standards authoritatively.

Second. Accordingly, a second study by a "blue ribbon panel" of international epidemiologists under the direction of Prof. Walter Holland of St. Thomas Hospital Medical School in Great Britain[2] was initiated in November 1976, and was completed in September 1977. The preliminary results of this study appear to be supportive of the general conclusions of the initial study that the present U.S. air quality standards for particulate are scientifically invalid and could be revised upward without significant adverse effects on the public health. Specifically, the Holland report concluded that the U.S. standards could be relaxed by approximately 40 percent without significant adverse effect on public health.

Since emission standards for particulate matter are established at levels designed to achieve the air quality standards, it follows that a general relaxation in the particulate standard would generally permit less stringent emission limits to be adopted. Considering current background levels of particulate matter in this country, a 40-percent relaxation of the air quality standards, which is reasonable in view of the Holland report, would permit almost a twofold increase in allowable emissions.

4. SIGNIFICANCE OF DELAY IN ISSUANCE OF REVISED STANDARDS

As stated above, the ambient air quality standards are the cornerstone of the national particulate control strategy. Depending upon the existing ambient air quality levels and the degree of reduction in emissions necessary to achieve the air quality standards, the stringency of emission limits is established. Accordingly, any valid basis for relaxing these standards is of great concern to the steel industry in view of the pressure being exerted by Government on the industry to achieve air quality limits. Because of the direct relationship between the existing air quality levels, the emission requirements established by State implementation plans, and the air quality standards, any relaxation of the present standard will have a direct effect on the ability of the U.S. steel industry to maintain existing jobs and operations or to expand operations in the next several years. A relaxation of the standards will have an immediate and direct positive effect on the air quality standard attainment status of many locations where steel is a significant factor in the local economy. A reduction in capital spending obligations associated with air pollution control would substantially improve the competitive position of steel plants in those areas.

Conclusions of a comprehensive study of the U.S. steel industry show that approximately $4 billion more over and above that already spent will potentially be required to achieve the present primary air quality standard for particulate matter. If that standard is incorrectly established, as AISI studies now show, enormous capital expenditures by the steel industry will be mandated under the Clean Air Act in a needless and wasteful effort to achieve an improper and unnecessary level of air quality.

The Clean Air Act Amendments of 1977 require EPA (under section 109 (d)(1)) to complete a thorough review of the ambient air quality criteria and the NAAQS by December 31, 1980. The Administrator's timetable to implement this requirement shows that the review of the air quality criteria for particulate has the lowest priority (the draft document is tentatively slated for December 1979).

At the same time, the Clean Air Act also requires that States revise, and make more stringent, the State implementation plans for control of air pollution in order to achieve the existing ambient air quality standards. States are required to complete revisions to their plans by July 1979, 18 months before the EPA Administrator is required to complete his review of ambient air quality standards. In the event that the Administrator of EPA finds in December 1980 that the evidence supports a relaxation of the particulate ambient air quality standards, such relaxation would come 18 months too late to avoid further enormous capital expenditures to achieve the current ambient air quality standards. In view of the availability of new evidence and the enormous financial impact that would result from a relaxation of the particulate standards, EPA should be directed by Congress to immediately reassess the particulate ambient air quality criteria and standards and, if appropriate, provide relief before July 1979 in order to prevent the adoption of unnecessarily stringent new requirements or the enforcement of unnecessary existing requirements in State implementation plans. A relaxation of the air quality standards would permit EPA and the States to relax existing emission limits in the current State implementation plans, thus reducing capital expenditures currently contemplated to meet existing requirements and further, would affect the need for and stringency of any "second round" controls possibly saving the steel industry a major portion of the $4 billion estimated for further capital expenditures at a time when capital formation for all purposes is extremely difficult.

My sugestion to the subcommittee chairman is that we make that money available to EPA so that it will speed up this study. For instance, Congress has required EPA as a priority to study the ambient air criteria. The problem is that they have this as a low priority because they have no money available for this study.

Mr. BROWN of California. Mr. Chairman, will the gentleman yield?

Mr. MURTHA. I yield to the chairman of the subcommittee.

Mr. BROWN of California. Mr. Chairman, I have had a chance to review the amendment which the gentleman has now withdrawn and to analyze the content of the amendment.

As the gentleman has clearly pointed out, what he is seeking to do is to have the Environmental Protection Agency move up the date on which it would issue its ambient air quality standards for total suspended particulates by about a year and a half so that there would not need to be a possible change in State implementation plans and a corresponding hardship on many industries, particularly the steel industry, if it were to attempt to conform to one set of imple-

[2] Professor Holland is a former president of the International Society of Epidemiology and is considered an international expert on the health effects of community air pollution.

mentation plans and then find a year or so later it had to conform to a different set of implementation plans.

I think the suggested amendment would be meritorious. The Agency would of course, have had problems or would claim to have had problems in meeting this expedited timetable, but as the gentleman pointed out, it should assign a higher priority to whatever activity is necessary in order to produce these standards so as to minimize the economic hardship on the industries involved, which are very substantial.

Mr. Chairman, I want to commend the gentleman from Pennsylvania (Mr. MURTHA) for his thought in offering the amendment.

Mr. MURTHA. Mr. Chairman, I thank the gentleman.

I want to stress the fact that we are not suggesting the standards be lowered. We do not know what the standards are. What we suggest is that the Federal Government implement its study, and that the Environmental Protection Agency, in line with the thrust of the amendments we agreed to last year, expedite the study.

I appreciate the gentleman's agreement on that point, and I hope we will get the agency to move quicker so that we may save substantial amounts of investment money in nonproductive equipment.

Mr. BROWN of California. Mr. Chairman, I assure the gentleman that he will have my cooperation in trying to get the agency to move quickly in this area.

Mr. MURTHA. Mr. Chairman, I thank the gentleman.

● Mr. ROGERS. Mr. Chairman, I rise to comment on the amendment offered by the Gentleman from Pennsylvania. This amendment actually would amend the Clean Air Act to require EPA to review the national ambient air quality standard for total suspended particulate no later than December 31, 1978, rather than by December 31, 1980. The amendment would also delay until July 1, 1979, the effective date of Clean Air Act requirements for areas with air quality which does not meet minimum Federal health standards .

I feel compelled to share with you my strong views that this move represents yet another attempt by the steel industry to further delay State and Federal efforts to require that industry to meet basic health requirements for clean air, which were supposed to have been achieved by mid-1975. This is the same industry which, as they themselves admit, has the single worst Clean Air Act compliance record, with absolutely no plants anywhere in the Nation in compliance.

Let me provide a little background on the provisions of the 1977 Clean Air Act Amendment which the Murtha amendment would revise.

Section 109(d) of the Clean Air Act requires EPA to institute routine periodic reviews of its ambient air quality (health) standards. The first review is to be completed by December 31, 1980, and future reviews are to be conducted every 5 years. This provision, which I authored, was adopted as part of the 1977 amendments to the act. But it did not result from any determination that present health standards are inadequate. To the contrary, the committee found the current standards are appropriate. Indeed, this is the conclusion of the National Academy of Sciences, which stated that its comprehensive review of the present health standards found no basis on which to recommend that the standards be changed. All the same, the committee felt that this standards review procedure should be included in the clean air law to assure that EPA establishes a routine mechanism for keeping air quality standards current with new developments in science and medicine.

The December 31, 1980, completion date for the first review of the standards was chosen carefully by the conferees so as to fall well after the new 1979 compliance deadlines under the Clean Air Act. The intent was to assure that the fact that the Congress had established a new program of routine review of standards could not be used by industry to argue that compliance with clean air requirements ought to be delayed until the EPA review is completed. This proposal offered today to the EPA R. & D. bill would move up the deadline for the review of the particulate standard, thereby allowing industry to make that very argument.

The industry is proposing a deadline for EPA review of the standards which it knows EPA cannot meet. The agency could not possibly complete the complex and lengthy scientific review of particulate standards by December 31, 1978, just over 6 months from now. Such a deadline would be physically and scientifically unattainable.

You can be sure, however, that when EPA fails to meet such an unrealistic timetable, the steel industry will use that as a basis for arguing in court and before Congress that compliance with the Clean Air Act should not be required of it until the EPA completes the review of the standard. Based on the steel industry's past performance, it seems reasonable to assume that when EPA does complete its review the industry will file suit challenging the validity of the Agency's findings. And the existence of that suit surely will be used to justify further compliance delays.

Such continued delays by the steel industry—now totaling more than 10 years—can no longer be tolerated.

The national ambient air quality standards have been scientifically established to protect the health of the American people. All through the 1970's these standards have been subject to continuing analysis by a number of independent organizations. These organizations, including not only the National Academy of Sciences, but also the American Medical Association, repeatedly have found no reason to conclude that the current particulate standards is inadequate. Therefore, nothing is to be gained by further delaying industry compliance with national public health standards, standards now in existence for nearly 10 years. Indeed, millions of Americans will continue to suffer because of industry's recalcitrance.

I urge opposition to the Murtha amendment now and in the future. In doing so, we will send a clear message to the steel industry that they too must abide by the same laws as the rest of American industry and the American people.●

Mr. LEVITAS. Mr. Chairman, I move to strike the last word.

Mr. Chairman, when I noticed that the calendar of the House had scheduled the consideration of an Environmental Protection Agency authorization bill, it was my purpose, and I had notified a number of Members to this effect, that I would offer an amendment which would give the Congress the right to veto rules and regulations promulgated by the Environmental Protection Agency.

As many of us are aware, the Environmental Protection Agency and many other agencies in Government are devoting a great deal of their time to issuing rules and regulations which have the force and effect of law and yet are without benefit of being considered by anyone in the United States who is elected by anybody but, rather, are the product of unelected bureaucrats.

The Members of the House have given strong support to this effort in the past, and I am pleased to note that our action with respect to the Federal Trade Commission has now given us the opportunity for having the congressional veto applied to that agency. Certainly the Environmental Protection Agency is meriting that same consideration.

However, on careful study of the bill now before us, I ascertain that it relates to the research and development activities of the Agency which most of us support very strongly, and I do not believe it would be appropriate to attempt to amend this authorization which does not deal with the regulatory functions of the Environmental Protection Agency.

I make this announcement for the benefit of those who are anticipating with great expectation the opportunity of adopting a congressional veto for the Environmental Protection Agency and to assure them that at the proper time that amendment will be offered to the appropriate bill.

Mr. BROWN of California. Mr. Chairman, will the gentleman yield?

Mr. LEVITAS. I am happy to yield the gentleman from California.

Mr. BROWN of California. Mr. Chairman, I want to commend the gentleman for his action in this matter. I am aware, of course, of his great interest in this area and have supported him in the past in those cases where I felt his amendment was offered to an appropriate vehicle.

I do not think this is an appropriate vehicle, and I commend the gentleman for his willingness to not offer the amendment.

Mr. LEVITAS. Mr. Chairman, I thank the gentleman for his remarks, and I would like to take this opportunity to commend the chairman and the ranking minority member for bringing to this committee an outstanding piece of legislation.

Mr. WALKER. Mr. Chairman, will the gentleman yield?

Mr. LEVITAS. I yield to the gentleman from Pennsylvania.

Mr. WALKER. I thank the gentleman for yielding.

Mr. Chairman, I would like to say, along the same line, when the gentleman does find an appropriate vehicle to offer the amendment I would like to be very supportive of it at that time. I think it would be a quite appropriate amendment, something that I think the public is screaming for.

Mr. LEVITAS. I thank the gentleman for his remarks.

Mr. Chairman, this congressional veto effort, of course, has substantial bipartison support. I think the American people are very anxious for us to get on with this job. And at the proper time and with the proper vehicle before us, I can assure the Members that this amendment will be offered.

AMENDMENT OFFERED BY MR. BROWN OF CALIFORNIA

Mr. BROWN of California. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. BROWN of California:

On page 9, line 17, after "Sec. 7.(a)" insert: "(1)".

On page 9, after line 21, add a new paragraph:

"(2) This subsection shall become effective October 1, 1978."

Mr. BROWN of California. Mr. Chairman, this is a technical and perfecting amendment offered as a result of a discussion in the Committee on Rules with regard to a possible technical violation of the Budget Act. This would correct that possible technical violation.

The CHAIRMAN. The question is on the amendment offered by the gentleman from California (Mr. BROWN).

The amendment was agreed to.

AMENDMENT OFFERED BY MR. BROWN OF CALIFORNIA

Mr. BROWN of California. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. BROWN of California: Page 9, line 22 strike out "(b)" and substitute "(c)".

Page 9, after line 21, insert the following:

(b)(1) Not later than nine months after the date of enactment of this Act, the Administrator shall promulgate guidelines establishing supplemental standards or treatment technique requirements for microbiological, viral, radiological, organic, and inorganic contaminants, which guidelines shall be conditions, as provided in paragraph (2), of any grant for a demonstration project for water reclamation, recycling, and reuse funded under section 5 of Public Law 95-155 or under section 1444(a)(2) of the Public Health Service Act. Such guidelines shall provide for sufficient control of each such contaminant, such that in the Administrator's judgment, no adverse effects on the health of persons may reasonably be anticipated to occur, allowing an adequate margin of safety.

(2) A grant referred to in paragraph (1) may be awarded on or after the date of promulgation of guidelines under this subsection only if the applicant demonstrates to the satisfaction of the Administrator that the project—

(A) will comply with all national primary drinking water regulations under section 1412 of the Public Health Service Act,

(B) will comply with all guidelines under this subsection, and

(C) will in other respects provide safe drinking water.

Any such grant awarded before the date of promulgation of such guidelines shall be conditioned on the applicant's agreement to comply to the maximum feasible extent with such guidelines as expeditiously as practicable following the date of promulgation thereof.

(3) Guidelines under this subsection may, in the discretion of the Administrator—

(A) be nationally and uniformly applicable to all projects funded under section 5 of Public Law 95-155 or section 1442(a)(2) of the Public Health Service Act;

(B) vary for different classes or categories of such projects (as determined by the Administrator);

(C) be established and applicable on a project-by-project basis; or

(D) any combination of the above.

(4) Nothing in this subsection shall be construed to prohibit or delay the award of any grant referred to in paragraph (1) prior to the date of promulgation of such guidelines.

Mr. BROWN of California (during the reading). Mr. Chairman, I ask unanimous consent that the amendment be considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from California?

There was no objection.

Mr. BROWN of California. Mr. Chairman, this is an amendment that I offer on behalf of the gentleman from Florida (Mr. ROGERS) and myself. It is an amendment which, in my opinion, is a perfecting amendment to the bill, in that it sets forth a requirement that, prior to the making of any grants under a certain section of the bill, the administrator shall promulgate guidelines establishing standards pertaining to the quality of the water resulting from the demonstration grant.

To be more specific, the amendment pertains to the "water reuse" provisions of the bill and of Public Law 95-155 which the bill amends.

The purpose of the amendment is to assure the health and safety of federally funded drinking water demonstration projects which will rely to a significant extent on reuse or recycling of industrial, agricultural, or domestic waste waters as a raw water source. There is ample evidence that the use of waste water effluents—including human sewage—as a raw water source for drinking purposes presents special risks to human health. The special dangers include microbiological, viral, and chemical contaminants, including potentially higher concentrations of heavy trace metals and known or suspected organic cancer-causing agents.

The National Academy of Sciences in its 1977 report, "Drinking Water and Health," specifically warned Congress and EPA that—

Meeting current coliform standards are not satisfactory for water reclaimed directly from waste water. Meeting current coliform standards for water reclaimed directly from waste water, or for water containing several percent of fresh sewage effluent, is insufficient to protect public health. For such raw water supplies, new microbiological standards should be developed and applied as supplementary to coliform standards.

Members of the Conference of State Sanitary Engineers have also expressed serious concerns about the public health dangers of inadequately controlled reliance on waste water reuse as potable water sources.

I want to make clear that this amendment will not have the intent, nor the effect of prohibiting or delaying the funding of water reuse demonstration projects. All it says is that after promulgation of special public health guidelines for those projects, new project applicants must comply with the guidelines. Those projects funded before the date of promulgation of the guidelines will have to comply as fully as is practical after the guidelines are issued.

It should be understood that the guidelines may take a variety of forms at the discretion of the Administrator. They may be nationally and uniformly applicable to all federally funded demonstration grant projects for water reuse. Or they may vary by class or category of project—as determined by the Administrator. Or they may be applicable on a project-by-project basis, taking into account special local conditions. Or some combination of these approaches may be taken by the Administrator in establishing and applying the guidelines.

Finally, while the EPA Administrator is not specifically required by the amendment to take into account these guidelines when amending interim primary national drinking water regulations under section 1412 of the Safe Drinking Water Act and when revising those regulations, it is expected that he will do so.

This amendment is a noncontroversial health measure; it has broad support, and I urge its adoption.

The CHAIRMAN. The question is on the amendment offered by the gentleman from California (Mr. BROWN).

The amendment was agreed to.

Mr. WALGREN. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I rise to speak in support of H.R. 11302 which authorizes a total of $431,338,000 in fiscal year 1979 for EPA environmental research development and demonstration. H.R. 11302, introduced on February 28, 1978, is the product of careful work and deliberation by the Subcommittee on the Environment and the Atmosphere and the Committee on Science and Technology. The committee has adopted the practice of annual authorization of the Environmental Protection Agency research programs as a way of insuring that the program is well managed to support the Agency's primary role of protecting the public health and welfare. This bill continues in that pattern by authorizing program funds, by providing a specific mechanism for carrying out certain long-term research, and by giving the agency certain flexibilities to

enable it to meet changing responsibilities.

As a member of the Subcommittee on the Environment and the Atmosphere as well as a cosponsor of H.R. 11302, I feel this bill represents a credible effort to improve EPA's ability to respond to its research, development and demonstration mission. Through my experience with EPA and its officials I have seen how EPA has moved progressively in the direction of providing high quality research in order to insure equitable and effective control of pollution.

The budget in this legislation includes research for air quality, water quality, drinking water, solid waste, pesticides, radiation, toxic substances, energy, and several interdisciplinary projects.

I would like to comment specifically on the subject of solid waste management in H.R. 11302. This bill authorizes a total of $11,912,000 in fiscal year 1979 for solid waste management—an increase of $1,000,000 over fiscal year 1978. The purpose of this research program is to develop cost effective technology in support of the goals of the Resource Conservation and Recovery Act of 1976. It directly supports the research needs of the Office of Solid Waste Management in EPA. These needs generally require that the Office of Research and Development develop new technologies and generate a data base to support EPA regulations related to solid waste disposal and resource recovery. The current research program is developing solutions for such problems as materials released into the environment from solid and hazardous waste disposal; separation and processing of waste resources; environmental impact of unsound land disposal of industrial residues; and the cost of collection and storage of solid waste.

The major goals of the program are to develop methodology to control the release of hazardous waste and to establish a technical basis to support the Agency's effort in developing guidelines and regulations for solid waste management as required under the Resource Recovery and Conservation Act. In the effort to achieve these goals I would like to suggest that in order to alleviate what will be a shortage of acceptable disposal sites the Office of Solid Waste Management focus part of its R. & D. effort on methods of removing toxic or hazardous constituents from a variety of wastes for recycling and disposal. I also urge EPA to undertake a feasibility study to determine what materials are amenable to this form of solid waste treatment and where these materials are located. It is apparent that we do not have a comprehensive listing of all such substances at this time. Such a listing or inventory would improve the effectiveness of programs designed to solve the solid waste problem.

In closing, I would like to compliment those involved with the development of legislative policy in this administration, especially Charles Warren, Director of EPA's Office of Legislative Policy. Mr. Warren and his staff have been more than ready to sit with members of my community to create a constructive relationship between business and government. I firmly believe we can all work together to bring about a safe and productive environment. Mr. Speaker, I urge my colleagues to adopt this legislation.

The CHAIRMAN. Are there additional amendments? If not, under the rule, the Committee rises.

Accordingly the Committee rose; and the Speaker pro tempore (Mr. BURLISON of Missouri) having assumed the chair, Mr. EDGAR, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 11302) to authorize appropriations for environmental research, development, and demonstrations for the fiscal year 1979, and for other purposes, pursuant to House Resolution 1112, he reported the bill back to the House with sundry amendments adopted by the Committee of the Whole.

The SPEAKER pro tempore. Under the rule the previous question is ordered.

Is a separate vote demanded on any amendment? If not, the Chair will put them en gros.

The amendments were agreed to.

The SPEAKER pro tempore. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

The SPEAKER pro tempore. The question is on the passage of the bill.

The question was taken; and the Speaker pro tempore announced that the ayes appeared to have it.

Mr. WALKER. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER pro tempore. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 367, nays 33, not voting 34, as follows:

The Clerk announced the following pairs:

Mr. Rodino with Mr. Allen.
Mr. Howard with Mr. Conyers.
Mr. Gammage with Mr. Frey.
Mr. Baucus with Mr. McKay.
Mr. Bingham with Mr. Runnels.
Mr. Ford of Tennessee with Mr. Ashbrook.
Mr. Eilberg with Mr. Gudger.
Mr. Rahall with Mr. Thornton.
Mr. Teague with Mr. Fowler.
Mr. Roberts with Mr. Whitten.
Mr. Waxman with Mr. Tsongas.
Mr. Mann with Mr. Walsh.
Mr. Krueger with Mr. Sawyer.
Mr. Jones of North Carolina with Mr. Tucker.
Mr. Whitley with Mrs. Burke of California.
Mr. Vento with Mr. Nix.

Messrs. LATTA, LOTT, SHUSTER, and POAGE changed their vote from "yea" to "nay."

Mr. RISENHOOVER changed his vote from "nay" to "yea."

So the bill was passed.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

GENERAL LEAVE

Mr. WALKER. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks and to include extraneous matter, on the bill just passed, H.R. 11302.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

WATER REUSE PROGRAM

(Mr. PANETTA asked and was given permission to extend his remarks at this point in the RECORD.)

● Mr. PANETTA. Mr. Speaker, I am pleased by the strong passage of H.R. 11302 and in particular am pleased by the adoption of the amendment by the gentleman from Florida (Mr. ROGERS).

Last year, after considerable effort by a number of Members, including the gentleman from Colorado, the House adopted and the Senate agreed to a $25 million program of grants for the construction of wastewater reuse plants. Despite some reluctance on the part of EPA, the Appropriations Committees of both Houses kindly consented to insert strong language in the appropriations bill requiring EPA to spend funds to get this program off the ground.

Despite this fact, the Agency has not even began this program. That is why it is ever more important today to put this money in the authorization bill to make clear Congress strong support for water reuse.

Frankly, I think the merits of the water reuse program are self-evident. Each of us knows that water is a scarce resource. Each of us knows the terrible impact of the recent drought on large parts of this country. Each of us has faith in the ability of American technology and science to work out the few problems that remain before water reuse can be practical on a large scale. The program outlined in the bill, along with Mr. ROGERS's amendment to limit the time that EPA can delay initiation of a proposal, will put us solidly on the road to sound water management.

I might note that the guidelines for the awarding of grants laid out in the committee report are an excellent guarantee that this money will be well and properly spent. The report requires that the Administrator give preference to projects that provide dependably safe water supply, strike a balance between urban and rural water needs and water sources, and incorporate a comprehensive water resources mangement program, including irrigation, recycling, and treatment. Conservation of water is to be emphasized, as are programs that will help reduce or eliminate the need for tertiary treatment facilities. These requirements taken together insure a sound, responsible program, one that may even reduce long-term costs for water pollution cleanup, an expensive program by anyone's standards.

The section 7 water reuse program is a modest proposal that represents a sound investment in our Nation's future.●

MESSAGE FROM THE SENATE

A message from the Senate by Mr. Sparrow, one of its clerks, announced that the Senate had passed with amendments in which the concurrence of the House is requested. A bill of the House of the following title:

H.R. 8331. An act to amend the Securities Investor Protection Act of 1970.

SUPPLEMENTAL APPROPRIATIONS FOR THE U.S. RAILWAY ASSOCIATION

Mr. McFALL. Mr. Speaker, pursuant to the order of the House of Tuesday, April 25, 1978, I call up the joint resolution (H.J. Res. 859) making supplemental appropriations for the U.S. Railway Association for the fiscal year ending September 30, 1978, and for other purposes.

The Clerk read the title of the joint resolution.

The Clerk read the joint resolution, as follows:

H.J. RES. 859

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the following is appropriated, out of any money in the Treasury not otherwise appropriated, for the fiscal year ending September 30, 1978, and for other purposes, namely:

UNITED STATES RAILWAY ASSOCIATION
ADMINISTRATIVE EXPENSES

For an additional amount for "Administrative Expenses", $13,000,000, to remain available until September 30, 1979.

GENERAL LEAVE

Mr. McFALL. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on House Joint Resolution 859.

The SPEAKER. Is there objection to the request of the gentleman from California?

There was no objection.

Mr. McFALL. Mr. Speaker, I move to strike the last word.

Mr. Speaker, we submit for your consideration today House Joint Resolution 859, making supplemental appropriations for the U.S. Railway Association (USRA) for fiscal year 1978.

SUMMARY OF THE RESOLUTION

The resolution includes a total of $13 million in new budget authority for administrative expenses of the USRA. The amount recommended is the same as the budget request.

NEED FOR SUPPLEMENTAL APPROPRIATIONS

Because of substantially increased funding requirements, about 75 percent of USRA's fiscal year 1978 appropriation was obligated by the end of March 1978, and the remaining funds will be exhausted before the end of May. These increased requirements are due primarily to two factors: First, the litigation arising from the reorganization of certain bankrupt railroads in the Northeast and Midwest regions; and second, the financial monitoring of the Consolidated Rail Corporation (ConRail), the Delaware & Hudson Railway Co. (D. & H.), and the Missouri-Kansas-Texas Railroad Co. (Katy).

LITIGATION

USRA is primarily responsible for conducting on behalf of the Government the litigation which has arisen from the reorganization of the bankrupt railroads in the Northeast and Midwest.

Both the Justice Department and Department of Transportation have agreed that USRA should be the principal agency representing the Government in this case. URSA has been involved in the reorganization process since its inception and was required, in connection with developing the final system plan, to conduct a considerable amount of asset valuation work.

The litigation involves claims for compensation amounting to billions of dollars. A three-judge special court has been set up to determine the amount of compensation owed to the bankrupt railroads for rail property conveyed under the Regional Rail Reorganization Act of 1973. Last October this court issued its opinion on the appropriate measure of just compensation. The central valuation theory adopted by the court is the market value of the conveyed properties, whether sold for scrap or for continued rail use. However, the court also indicated it would consider, in some circumstances, other evaluation theories,

such as original cost less depreciation and deterioration.

Consideration of alternative valuation methodologies and the unanticipated extensive field work needed have resulted in increased funding requirements to support the litigation. In addition, title quality work and document processing have resulted in funding requirements that were unexpected a year ago.

The special court's October opinion included a strong statement urging the parties to settle the case through negotiation instead of litigation. We hope that a fair settlement can be negotiated, thus reducing the costs of litigation. However, it is our belief that the information being collected on asset valuation is as essential for negotiating a fair settlement as it is for litigation. If trial preparation work is not continued, then the Government's negotiating posture would be weakened and the Government would be unprepared if a settlement cannot be reached.

If sufficient funds are not provided to USRA and if the position of creditors of the estates of the bankrupt railroads is sustained by the court, the Federal Government could be required to provide as much as $4 billion in claims. Because of the potentially large Government liability in this case, we believe that USRA should be provided with the resources necessary to adequately represent the Government's position. The resolution would provide $10 million for expenses associated with asset valuation and other legal support.

FINANCIAL MONITORING

With respect to financial monitoring, USRA has the responsibility for assessing the financial viability of ConRail, the D. & H. and the Katy. Substantial amounts of Federal assistance have already been provided to these railroads. More than $2 billion has been appropriated for ConRail, and USRA has approved loans of $30 million to the D. & H. and $19 milion to the Katy.

ConRail and the D. & H. are presently experiencing considerable financial problems. These railroads will have great difficulty achieving the financial results forecast less than a year ago. The Secretary of Transportation, as chairman of the Finance Committee of the USRA Board, recently indicated that ConRail cannot become financially self-sustaining without significant additional Federal assistance.

These developments have resulted in a need for additional USRA resources to do an effective job of monitoring ConRail, the D. & H. and the Katy. The resolution would provide $3 million for the financial monitoring of these railroads. We believe these funds are adequate to permit USRA to properly monitor the assistance already provided, as well as to assess the requirements for future assistance to these railroads.

I am well aware of the grave concern of many Members with respect to the operation and management of ConRail. I would like to make it very clear that none of the money in the resolution would be used to fund ConRail. In fact, as I have stated, a portion of the funds provided would be used to monitor the operations of ConRail. The committee is hopeful that the USRA monitoring will be useful in assuring an effective use of the Government's money.

CONCLUSION

Mr. Speaker, I believe that the funds provided in this resolution are necessary to permit USRA to effectively carry out its responsibilities and I urge its adoption.

Mr. CONTE Mr. Speaker, I move to strike the requisite number of words.

Mr. Speaker, I rise in support of House Joint Resolution 859, which would provide $13 million in supplemental appropriations for the U.S. Railroad Association for fiscal year ending September 30, 1978.

These additional funds are necessitated by two factors: First, the litigation arising from the reorganization of certain bankrupt railroads in the Northeast and Midwest regions; and second, the financial monitoring of the Consolidated Rail Corporation (ConRail), the Delaware & Hudson Railway Co., and the Missouri-Kansas-Texas Railroad.

The U.S. Railway Association (USRA) was created in 1973 to develop plans and estimates for a consolidated rail system, ConRail, including the Final Systems Plan for reorganizing major railways. The association, which monitors the finances of ConRail and certain other rail companies, also represents the Federal Government in litigation arising from the reorganization of bankrupt railroads.

For its operations in fiscal year 1978, USRA was appropriated $10 million from an authorization level of $23 million. However, due to heavy litigation costs arising from the valuation of property conveyed to ConRail, and increased monitoring necessitated by the financial difficulties of ConRail and the Delaware & Hudson Companies, it is expected that USRA will exhaust its available funding before the end of May.

The U.S. Governmental financial investment in ConRail, the Delaware and Hudson and the Missouri-Kansas-Texas Railroad Co. is quite large. More than $2 billion has already been appropriated to ConRail alone. The Secretary of Transportation, as Chairman of the Finance Committee of the USRA, recently indicated that ConRail cannot become self-sustaining without additional financial assistance.

The additional funds required will permit USRA to properly monitor this investment as well as the $30 million in loans extended to the Delaware and Hudson and the $19 million to the Missouri-Kansas-Texas Railroad.

The committee recommends approval $6 million for asset valuation, $4 million for other legal support, and $3 million for the financial monitoring of ConRail, the Delaware & Hudson, and the Missouri-Kansas-Texas Railroad Company.

Mr. BAUMAN. Mr. Speaker, I move to strike the requisite number of words.

Mr. Speaker, in the past I have supported in almost every instance both the USRA, Amtrak and ConRail, mainly because of the dilemma the Northeast finds itself in maintaining necessary rail service. But we ought to pause before we vote for this bill. I was indebted to another fiscal conservative from Maryland, the gentlewoman from Maryland (Ms. MIKULSKI) earlier today in a discussion we had about what $1 million in tax funds we spend in this House means to average American taxpayers.

The gentlewoman pointed out to me that the average middle-class family of four, a husband and wife working, earns about $16,000. Without any loopholes or tax rakeoffs that corporations or rich people get, this family probably pays about $4,000 in taxes annually, which is 25 percent of their income. They could surely use that money for themselves for other purposes. That means every time we appropriate $1 million in this House, we are spending the taxes of about 250 average American taxpayers.

In this case we are asked to spend the tax money of about 3,250 average taxpayers for this particular piece of legislation before us appropriating $13,000,000.

I do not know whether anyone cares what the USRA is doing. I understand the role it has to play, but I think we ought to know what it is actually doing with its appropriations. I hope the Members read U.S. News & World Report this week revealing some of the expenditures of this agency in the past. I would like to call this to the attention of the House; it happened under a previous administration, and I do not know whether it is going on now. I hope it is not, but still we ought to understand, before we add $13 million to the budget of this agency, what they have done in the past.

In the fiscal year 1976 USRA spent $35,000 for entertainment, which is euphemistically called a "reception and representation allowance."

They spent $200,000 for their headquarters in Philadelphia to set up and operate a private dining room for 57 top executives. I do not represent Philadelphia, and I do not get there very often, but the few times I have been there I have seen restaurants which could certainly accommodate such lavish luncheon appetites, even with two martinis, for a lower price than that.

USRA spent $221,000 on travel, without even requiring receipts for the actual travel made, and they routinely paid parking tickets and traffic fines for their employees. They paid out $13,773 for initiation fees to private clubs for the top officers of USRA. After a Treasury Department audit the former chairman of USRA, Mr. Lewis, reimbursed the Government $6,400 for his membership fee in the Burning Tree Golf and Country Club in Washington, D.C., which USRA, meaning the taxpayers, had paid.

If that is what the USRA is spending our money on, I only hope that the subcommittee chaired by the gentleman from California (Mr. MCFALL) took a close look at this additional increase. Frankly, many of us would like to see

the taxpayers of the United States represented here.

Mr. Speaker, that is what our title is—Representatives—and if these agencies are not spending our money properly—and it does not appear that USRA has done so, at least in the past—we ought to reject these requests for additional funds.

Mr. Speaker, I would offer one further thought on this appropriation. Several weeks ago I traveled the full length of the ConRail railroad located in my congressional district from the Delaware State line to the Virginia State line. This is a vital link in the only major alternate rail route on the east coast. For 3 years ConRail has not been able to come up with the money needed to rebuild this segment and it is literally rotting away, with trains being constantly derailed. Thousands of jobs in three States depend on this railway. Yet we are told that USRA can squander funds as I have just described while ConRail is denied funds to make necessary repairs.

Unless some member of the Appropriations Committee can answer these factual statements I must vote no on this bill and I urge my colleagues to do likewise. This ought to be a good test as to whether we are indeed serious in our desire to fight inflation and stop Government waste.

Mr. McFALL. Mr. Speaker, I move the previous question on the joint resolution to final passage.

The previous question was ordered.

The SPEAKER. The question is on the engrossment and third reading of the joint resolution.

The joint resolution was ordered to be engrossed and read a third time, and was read the third time.

The SPEAKER. The question is on the passage of the joint resolution.

The question was taken; and the Speaker announced that the ayes appeared to have it.

Mr. QUILLEN. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 202, nays 196, not voting 36, as follows:

Mr. Santini with Mr. Dent.

Mrs. FENWICK and Messrs. BURKE of Massachusetts, HOLLAND, MURPHY of Pennsylvania, MAGUIRE, HOLLENBECK, and BIAGGI changed their votes from "nay" to "yea."

Messrs. MOLLOHAN, KINDNESS, BRINKLEY, PIKE, KREBS, and VOLKMER changed their vote from "yea" to "nay."

So the joint resolution was passed.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

LEGISLATIVE PROGRAM

(Mr. RHODES asked and was given permission to address the House for 1 minute.)

Mr. RHODES. Mr. Speaker, I take this time for the purpose of inquiring of the distinguished acting majority leader, the gentleman from Florida (Mr. FUQUA) as to the program for the balance of this week and next week.

Mr. FUQUA. I will be glad to respond to the inquiry of the distinguished gentleman from Arizona (Mr. RHODES) if the gentleman will yield.

Mr. RHODES. I yield to the gentleman from Florida.

Mr. FUQUA. Mr. Speaker, I might say that this concludes the program for this week, and it is the intention of the leadership that when the House adjourns today it adjourn to meet on Monday at noon.

On Monday the program will consist of the calling of the Consent Calendar, then three suspensions:

H.R. 11657, Pacific Fisheries Development Act authorization,

H.R. 10392, establish Hubert H. Humphrey Fellowship at Woodrow Wilson Center, and

House Joint Resolution 816, extension of Treasury Federal Reserve draw authority.

Then there will be one other bill, H.R. 9400, civil rights of institutionalized persons under an open rule with 1 hour of debate.

On Tuesday we will come in at noon and will call the Private Calendar. Then there will be no two suspensions:

H.R. 11713, solar energy sources loan program, and

H.R. 8099, water rights for Ak-Chin Indians.

We will also consider a contempt citation resolution for Claude Powell by the Select Committee on Assassinations. That can take up to 1 hour.

We will then consider House Concurrent Resolution 559, budget for the U.S. Government for fiscal year 1979, general debate only on that day.

It is our intention to ask that the House come in at noon on Wednesday and conclude consideration of House Concurrent Resolution 559, the budget for the U.S. Government for fiscal year 1979.

Mr. Speaker, it is the intention also to ask that we meet on Thursday at 10 o'clock, and we will take up the conference report on H.R. 6782, Emergency Agricultural Act of 1978, subject to a rule being granted.

We will also consider House Concurrent Resolution 485, industrial fasteners trade resolution.

H.R. 2222, National Labor Relations Act amendments under an open rule with 1 hour of debate.

And House Joint Resolution 873, supplemental appropriations for SBA emergency disaster loans.

It is the intention that the House not be in session on Friday next and that we will try to adjourn by 5:30 on all days except Wednesday.

Conference reports may be brought up at any time, and any further program will be announced later.

Mr. RHODES. I thank the gentleman.

ADJOURNMENT TO MONDAY, MAY 1, 1978

Mr. FUQUA. Mr. Speaker, I ask unanimous consent that when the House adjourns today, it adjourn to meet on Monday next.

The SPEAKER pro tempore (Mr. WRIGHT). Is there objection to the request of the gentleman from Florida?

There was no objection.

DISPENSING WITH BUSINESS IN ORDER UNDER THE CALENDAR WEDNESDAY RULE ON WEDNESDAY NEXT

Mr. FUQUA. Mr. Speaker, I ask unanimous consent that the business in order under the Calendar Wednesday rule be dispensed with on Wednesday next.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Florida?

There was no objection.

HOUR OF MEETING ON WEDNESDAY, MAY 3, 1978

Mr. FUQUA. Mr. Speaker, I ask unanimous consent that when the House adjourns on Tuesday, May 2, 1978, it adjourn to meet at noon on Wednesday, May 3, 1978.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Florida?

There was no objection.

REQUEST THAT THE HOUSE MEET AT 10 A.M. ON THURSDAY, MAY 4, 1978

Mr. FUQUA. Mr. Speaker, I also ask unanimous consent that when the House adjourns on Wednesday, May 3, 1978, it adjourn to meet at 10 o'clock a.m. on Thursday, May 4, 1978.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Florida?

Mr. BAUMAN. Mr. Speaker, reserving the right to object, I wonder what the purpose is of making these requests 4 or 5 days in advance?

Mr. FUQUA. Mr. Speaker, if the gentleman will yield, the purpose is so that we can conclude our business and not have a Friday session next week.

Mr. BAUMAN. Mr. Speaker, I certainly sympathize with the gentleman on that purpose, but there are a couple of bills that have been scheduled that we could just as well drop. I think we ought to decide on this question next week.

Mr. Speaker, I object.

The SPEAKER pro tempore. Objection is heard.

NEED TO INCREASE APPROPRIATIONS FOR THE YOUNG ADULT CONSERVATION CORPS

(Mr. DICKS asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. DICKS. Mr. Speaker, I am introducing today legislation to increase the appropriation for the Young Adult Conservation Corps. The YACC employs young adults, 16–23, in conservation jobs on our public lands.

The program accomplishes two goals. First it reduces unemployment among young adults from all socioeconomic backgrounds. Although young men and women comprise one-fourth of the work force, they represent one-half of the unemployed. Second, the YACC returns money to the Treasury through projects such as reforestation of our national forests and improvement of our National and State park systems. Agencies which employ YACC members include the Forest Service (Agriculture) and Interior's National Park Service, Bureau of Land Management, U.S. Fish and Wildlife Service, Bureau of Indian Affairs, Bureau of Reclamation, and Geological Survey. Over $65 million will go directly to States and the Territories for their own programs.

The Young Adult Conservation Corps is patterned after the highly successful Youth Conservation Corps, or YCC, auauthorized in 1970. The YCC was preceded by President Roosevelt's Civilian Conservation Corps, or CCC. Since 1970, Congress has twice extended and expanded the YCC, making it a permanent part of our national conservation and youth employment effort. The YACC, in its first year of operation, has already demonstrated that it will also be a popular and cost-effective youth employment program.

The need for the Young Adult Conservation Corps is even greater this year than when it was first proposed. According to an April 1978 Congressional Budget Office issue paper for fiscal year 1979, the outlook for youth employment has not improved. Youth employment will continue to remain high until more significant improvements to our economy are made. Unemployment among nonwhite youths has not declined at all. Nonwhite teenagers continue to be the last hired and the first fired. Competition for unskilled entry-level jobs has been intense, and large numbers of nonwhite teenagers have lost out. Moreover, the proportion of nonwhite teenagers in the job market has declined, and is far below that of white teenagers. Nonwhite youths have simply given up.

While millions of our young people are idle, jobs that need doing on our Nation's public lands remain undone for lack of staff and money. There is a tremendous backlog of resource conservation and restoration work on Federal- and State-owned lands. Last year, the Forest Service was funded at a level which provided only 85 percent of the work which must be done if we are to achieve our national goal of renewable natural resources. In almost every part of our country there is a desperate need to replant forests, to prevent erosion, to abate pollution, to guard against and fight fire, to enhance the beauty and utility of our parks and to add new facilities, such as trails, bridges, and camping areas in our recreation areas. We need to improve watershed management, and to make the beauty and grandeur of our public lands accessible to the American people.

The Departments of the Interior and Agriculture estimate a backlog of some 730,000 person years of recurrent and nonrecurrent work which could be performed by the YACC.

For many of our people, the only alternative to unemployment is the YACC. The young men and women enrolled in the program are pleased with their jobs, glad to be working, and feel that the work they are doing is valued by their

agencies. They joined the YACC to work hard, through all kinds of weather. Some want to test their interest in outdoor work, and hope that they might be hired by the agency on a permanent, full-time basis. According to recent testimony before the Subcommittee on Interior Appropriations, the Department is pleased with the applicants and plans to hire as many as are qualified provided jobs are available.

Project managers, work coordinators and crew leaders rate their young workers in positive terms; they are dependable even though they have had little prior work experience. Supervisors are pleased with the eagerness and energy demonstrated by these young men and women. The Corps learns how to work, develops good work habits, and also learns that outdoor jobs have real hazards that require the development of safe work habits.

Although these young men and women are from all social, economic, and educational backgrounds, a significant portion have less than a high school education. The median age is near 20, and a high percentage have had only marginal, low-skill employment experience prior to YACC. A significant proportion are females—over 40 percent. These women have been rated by peers and supervisors as outstanding in performing leadership roles in completing rugged work assignments. One-third of the YACC are from racial minority groups, and over 40 percent are from disadvantaged families.

The Departments of Interior and Agriculture are committed to the success of this program. The valuable experience they have gained during the past 7 months of operation has prepared these agencies to assume a much larger role in meeting the needs of America's young adults for meaningful employment. In the Departments view, a program level of $500 million can be successfully undertaken. The need is there, and they have the capability.

I urge my colleagues in Congress to join with me in support of this amendment.

MR. CLAY ON ABORTION

(Mr. DELLUMS asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. DELLUMS. Mr. Speaker, I am taking this opportunity to relay a message spoken by our fine colleague from Missouri, the Honorable WILLIAM CLAY, when he testified before the House Education and Labor Committee during markup of the pregnancy disability legislation which will soon be coming before us. He has made some very eloquent remarks on the subject of abortion amendments and their increasing popularity, and I feel it would be in everyone's best interest to read over what he has said, and to think long and hard about this wrenching moral issue. The controversy over these amendments has clouded the implications of imposing abortion restrictions, but in his few simple words, Mr. CLAY has managed to clarify that which ought to concern us.

Mr. CLAY said:

I want to speak in opposition to the amendment, but first let me preface my remarks by saying that personally I don't believe in abortion. Perhaps that position is the result of my being a descendant of four generations of Catholics on both sides of my family. I'm sure my personal opinion has something to do with the fact that I was baptized at birth into the church—received my elementary and secondary education at catholic schools—and I even graduated from a catholic university.

I think we ought to say precisely what this controversy is about. This amendment is history repeating itself. It's the concept of the holy wars all over again. The heathens must be conquered and convicted. This amendment says in effect that we must impose our code of morality, indeed our religious views on those who would exercise their right of freedom of religion.

That's what's wrong with this amendment. I for one am sick and tired of seeing it pop up on every piece of legislation, causing confusion, unnecessary debate and delay. It has become the albatross for all legislation regardless of merit. It's strange that those who now express so much concern for human life were conspicuously silent when tons of napalm was being dropped on men, women, and children in Indo-China several years ago. They did not march on State capitals and Washington, D.C. in protest. But I often wonder how fanciful they would have become if B–52's were dropping tons of prophylactics on the people of North Vietnam. I wish that those so concerned about the unborn would express a similar concern for the 40 million people already born who go to bed hungry each night, and the 15 billion already born who are jobless.

Mr. Chairman, I oppose the amendment strictly on the basis that it flies in the face of the first amendment—and sets a dangerous precedent for Federal legislation.

And we have not beaten our swords into plow shares and our spears into pruning hooks, but rather amendments.

OUR BASIC APPROACH TO COLLEGE FINANCING

The SPEAKER pro tempore (Mr. WRIGHT). Under a previous order of the House, the gentleman from Massachusetts (Mr. HARRINGTON) is recognized for 15 minutes.

● Mr. HARRINGTON. Mr. Speaker, in recent weeks, those of us in Congress have heard a great deal about the plight of middle- and lower-income families trying to put their children through college. The evidence of a crisis in higher education financing has come from every front. The statisticians in the field tell us that college costs continue to rise precipitously. A study by the College Entrance Examination Board released earlier this month detailed the growing reluctance on the part of middle-income parents to bear overwhelming college costs. Like most of my colleagues, I hear from dozens of constituents every week. One woman who wrote me last week complained:

We have sent 5 children to college and have two more to go * * *. In a few months my husband will be 65 and there is a possibility he will no longer be employed full-time. So you see some of our reasons for wanting you to [do something] * * *.

Clearly, these pressures have prompted a majority in both Houses of Congress to support legislation to assist more families with college bills to pay. I have joined my colleagues in supporting both the tuition tax credit bills and the President's middle-income assistance plan. But beyond these bills, which can only promise a few hundred dollars of relief from college expenses that range into the thousands of dollars, I believe we should take this opportunity to reassess our basic approach to college financing.

It is high time that we challenge the convention that a student's ability to go to college, or his decision about which college to attend, must largely depend on how much money his parents have been able to save up in advance. As our system is structured today, those students who want to take on some of the financial responsibility for their own education are forced either to take out loans, at heavy interest rates, which must be repaid in the first years out of college, or they must spend much of their time in college earning money to pay for tuition.

H.R. 12268, which I introduced in the House last week, would take a major step toward correcting this inequitable situation. This bill would create a Federal tuition advance fund (TAF) which would enable any student who is a sophomore, junior, or senior enrolled in a degree program at an accredited college to receive an advance from the Federal Government to cover the full cost of tuition and $1,000 in additional educational expenses up to a maximum of $5,000 annually. This tuition advance would be repaid by the student after graduation on a long-term basis, over as much as 35 years, for example, at an annual rate of 2 percent of adjusted gross income.

The TAF plan differs in several important respects from existing Federal loan programs. First of all, it would be available to all families regardless of their income. This seems to me to be a realistic step in the face of runaway college tuition costs that can be a problem for even middle-income families.

Second, with a repayment schedule that can stretch out over as much as 35 years, the financial burden assumed by the student upon graduation becomes a lot more manageable and ceases to become a deterrent to higher education in and of itself. Third, although the amount ultimately to be repaid is firmly set (150 percent of the principal advanced), the amount due in any given year is entirely contingent on income. For instance, a recent graduate who was making $10,000 a year would have to repay the advance fund 2 percent or $200 of that annual income. On the other hand, someone making $30,000 a year would discharge his total obligation more quickly, paying about $600 annually into the fund. Fourth, unlike loans, TAF obligations are not transferrable—in cases of death, disability, or consistently low income, any obligation would be discharged.

Finally, the TAF program would not be subject to the students defaults which have plagued existing loan programs. Collection will be the responsi-

bility of the Internal Revenue Service through annual income taxes.

Beyond these provisions, the TAF bill insures that colleges will not take advantage of this new availability of capital: institutions participating in the TAF program must agree not to raise their tuition above an amount keyed to the cost of living index.

For those who are justifiably concerned with the prospect of yet another big Government program at unending expense, it is important to note that the TAF legislation creates a trust fund into which students' initial repayments will be channeled. Thus, within 20 years—when enough money has accrued to the trust fund—the TAF program will be self-sustaining since the interest which it generates will be sufficient to offset the effects of inflation.

In working on this proposal with Dr. John Silber, president of Boston University, I have become convinced that a tuition advance fund can make an important difference in the way college educations are financed in this country. For the first time, all families will be able to get out from under the crushing burden of college expenses, students will be able to assume much of the responsibility for paying for their own education, and repayment will become both equitable and certain.

I do not suggest that H.R. 12268, which I introduced last Thursday, solves all of the complex problems involved. But I do believe it takes an important step in the right direction. At this time I include the full text of H.R. 12268 to be printed with my remarks in the RECORD:

H.R. 12268

A bill to amend title IV of the Higher Education Act of 1965 to establish a system of student tuition advances to be repaid as an income tax imposed by the Internal Revenue Code of 1954, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Tuition Advance Fund Act".

SEC. 2. Title IV of the Higher Education Act of 1965 is amended by adding immediately after part C thereof the following new part:

"PART D—TAX COLLECTABLE TUITION ADVANCES TO STUDENTS IN INSTITUTIONS OF HIGHER EDUCATION

"STATEMENT OF PURPOSE AND AUTHORIZATION OF APPROPRIATIONS

"SEC. 451. (a) It is the purpose of this part to authorize the Commissioner to establish a program for the making of advances to cover costs of tuition and other education-related expenses to students at institutions of higher education and to provide for the referral to the Secretary of the Treasury for collection under the Internal Revenue Code of 1954 of those obligations which are in repayment status.

"(b)(1) There is hereby established in the Treasury a trust fund which shall be available, without fiscal year limitation, to the Commissioner for purposes of this part. There shall be deposited in such fund amounts appropriated pursuant to paragraph (2) and all amounts collected pursuant to section 5 of the Internal Revenue Code of 1954.

"(2) There is authorized to be appropriated, for each fiscal year beginning on or after the effective date of this part, to the fund established by paragraph (1) an amount sufficient to fulfill the purposes of section 452 of this Act, not to exceed $4,500,000,000 adjusted by the inflation adjustment factors established by the Commissioner under section 454(b)(2). Such authorization shall not apply to any fiscal year which is more than two fiscal years after the fiscal year (hereinafter referred to as the 'break-even year') in which the income from the unused portion of such fund plus the amount collected pursuant to section 5 of such Code for such break-even year exceeds the amount necessary to fulfill the purposes of section 452 of this Act for such break-even year.

"ELIGIBILITY OF STUDENT BORROWERS AND TERMS OF OBLIGATIONS

"SEC. 452. (a) An advance shall be made by the Commissioner under the provisions of this part only to a student—

"(1) who has not successfully completed a program of undergraduate education and is thirty-five years of age or younger;

"(2) who is enrolled in such a program at an eligible institution, has successfully completed the first year of such program, and is in good standing as determined by the institution; and

"(3) who is carrying at least one-half the normal fulltime academic workload as determined by the institution.

"(b) No advance made under this part to any student for any academic year shall exceed $5,000, adjusted by the inflation adjustment factors established by the Commissioner under section 454(b)(2) or the allowable tuition and expenses, whichever is less. The aggregate unpaid principal amount for all such advances made to any student shall not at any time exceed $15,000, adjusted by the inflation adjustment factors established by the Commissioner under section 454(b)(2).

"(c)(1) An advance made under this part shall be evidenced by a note or other written agreement which—

"(A) is made without security and without endorsement;

"(B) provides for disbursement of the proceeds of the advance by check, payable to the institution at which the advance recipient is in attendance, requiring endorsement by such recipient;

"(C) provides that the portion of such proceeds allocable to nontuition expenses described in subsection (d)(2) shall be paid by such institution to the advance recipient upon presentation of satisfactory evidence to the institution that such portion shall be used for such expenses;

"(D) provides for repayment in accordance with section 5 of the Internal Revenue Code of 1954 during the period in which such student is in repayment status;

"(E) provides for repayment of the total principal amount of advances under this part plus an amount equal to 50 per centum thereof, subject to the limitations contained in paragraph (2);

"(F) entitles the advance recipient to accelerate without penalty repayment of the whole or any part of the advances, plus an amount equal to 50 per centum thereof, in accordance with regulations prescribed by the Commissioner; and

"(G) contains such other terms and conditions, consistent with the provisions of this part, as may be required by the Commissioner and agreed to by the borrower.

"(2) For purposes of this subsection and section 453, an advance recipient shall be deemed to be in repayment status from the beginning of the first calendar year which begins after such recipient ceases to carry at an eligible institution at least one-half the full-time academic workload as determined by the institution and certified to the Commissioner until the earlier of (A) the beginning of the calendar year in which such borrower will become sixty-five years of age, or (B) the date on which the total principal amount of advances made to the borrower, plus an amount equal to 50 per centum of the total of such advances, is paid in full.

"(d) For purposes of subsection (b), the term 'allowable tuition and expenses' means—

"(1) the tuition charged by the eligible institution at which the borrower is enrolled plus

"(2) an amount determined, in accordance with regulations prescribed by the Secretary, as necessary to cover education-related expenses such as transportation, room, board and materials, but not exceeding $1,000.

"COLLECTION PROCEDURES

"SEC. 453. (a) The Commissioner shall, not later than January 1 of each year certify to the Secretary of the Treasury for each borrower in repayment status on such date an amount equal to the sum of the total principal amount of advances made to such borrower plus an amount equal to 50 per centum of such total minus the sum of any amounts collected pursuant to section 5 of the Internal Revenue Code of 1954. A copy of such certification with respect to a borrower shall be sent by the Commissioner to such borrower.

(b) Any borrower who receives a notice of certification under subsection (a) and who believes such notice to contain an error of statement or omission, or asserts a debt for which the borrower is not obligated or to which he desires to raise a defense or excuse, shall file an objection thereto with the Commissioner within sixty days after receipt of such notice. The Commissioner shall, within thirty days of receipt of such an objection, affirm, adjust, or withdraw such certification and send notice thereof to the borrower and to the Secretary of the Treasury. Such decision shall be reviewable by an appropriate district court of the United States as a final agency decision.

"DEFINITION

"SEC. 454. (a) The term 'eligible institution' means an institution of higher education as defined in section 1201(a)—

"(1) which has not, except under circumstances certified by the Commissioner as vital to the mission and purpose of such institution, increased undergraduate enrollment—

"(A) by more than 2 per centum in any academic year beginning after the enactment of this part; or

"(B) by more than 10 per centum in all the academic years beginning after such enactment;

"(2) which not imposed any excess charges in any academic year beginning after the date of enactment of this part, except under circumstances certified by the Commissioner as vital to the mission and purpose of such institution.

"(b)(1) For purposes of subsection (a)(2), the term 'excess charges' means any amount charged by an eligible institution for tuition which exceeds the tuition charged by such institution in the academic year which ends in the calendar year preceding the calendar year in which this section is enacted (hereinafter referred to as the 'base tuition') plus an amount equal to the sum of—

"(A) such base tuition adjusted by the inflation adjustment factors determined under paragraph (2), plus

"(B) in the case of eligible public institutions, an amount not to exceed 10 per centum of such base tuition.

For purposes of applying subparagraph (B), no additional amount of tuition at any eligible public institution shall be taken into account unless the Commissioner determines that such additional amount is available to

such institution to carry out its educational purposes.

"(2) The Commissioner shall prescribe a schedule for the calculation of inflation adjustment factors for purposes of paragraph (1) for each academic year beginning after enactment of this section which shall be based upon the increase in the consumer price index as determined by the Secretary of Commerce for the calendar year preceding the calendar year in which such academic year ends.".

SEC. 3. (a) Part I of subchapter A of chapter 1 of the Internal Revenue Code of 1954 (relating to tax on individuals) is amended by redesignating section 5 as section 6 and by inserting after section 4 the following new Section:

"SEC. 5. TAX IMPOSED FOR REPAYMENT OF FEDERAL TUITION ADVANCES.

"(a) IMPOSITION OF TAX.—In addition to the other taxes imposed by this chapter, there is hereby imposed on the includible adjusted gross income of every Federal tuition advance recipient in repayment status for the taxable year a tax equal to the lesser of—

"(1) the amount equal to the applicable percentage of such includible adjusted gross income, or

"(2) the sum of the aggregate amount payable on all Federal tuition advances of such recipient plus an amount equal to 50 percent of such aggregate amount payable.

For purposes of paragraph (2), the aggregate amount payable on any such advance shall be determined as of the last day prescribed by law for filing the return of tax imposed by this chapter for the taxable year.

"(b) APPLICABLE PERCENTAGE.—For purposes of subsection (a), the applicable percentage with respect to any Federal tuition advance recipient in repayment status shall be determined in accordance with the following table:

[In percent]

	Annual income of recipient					
	Up to $5,000	$5,000 to $10,000	$10,000 to $15,000	$15,000 to $17,500	$17,500 to $20,000	$20, 000 and above
Total Tuition Advance Fund obligation:						
Up to $3,750	0	2	2	2	2	2
$3,750 to $5,250	0	2	2	2	2	2
$5,250 to $6,750	0	2	2	2	2	2
$6,750 to $8,250	0	2	2	2	2	2
$8,250 and up	0	2	2	2	2	2

"(c) DEFINITIONS.—For purposes of this section—

"(1) TUITION ADVANCE.—The term 'tuition advance' means any advance made pursuant to part D of title IV of the Higher Education Act of 1965.

"(2 TUITION ADVANCE RECIPIENT IN REPAYMENT STATUS.—The term 'tuition advance recipient in repayment status' means for any taxable year any individual from whom a certification has been received by the Secretary pursuant to section 453(a) of the Higher Education Act of 1965 and has not been withdrawn pursuant to section 453(b) of such Act.

"(3) INCLUDIBLE ADJUSTED GROSS INCOME.—The term 'includible adjusted gross income' means—

"(A) in the case of a single individual, the adjusted gross income of such individual,

"(B) in the case of married individuals filing a joint return under section 6013, where both spouses are tuition advance recipients, an amount equal to the adjusted gross income of such individuals,

"(C) in the case of a married individual filing a separate return, or a married individual filing a joint return under section 6013 where the spouse of such individual is not a tuition advance recipient, the greater of—

"(i) the adjusted gross income of such individual, or

"(ii) an amount equal to ½ of the sum of the adjusted gross incomes of such individual and such individual's spouse.

"(d) SPECIAL RULES.—

"(1) TAX RELATED AS INCOME TAX.—For purposes of this title, the tax imposed by subsection (a) shall be treated, under regulations prescribed by the Secretary, as an income tax imposed by this chapter.

"(2) MARITAL STATUS.—For purposes of this section, marital status shall be determined under section 143.

"(3) CERTIFICATION BY SECRETARY OF ADVANCE AMOUNT REPAID.—The Secretary shall certify to the Commissioner of Education the amount of tax paid under subsection (a) for the taxable year with respect to each tuition advance recipient in repayment status."

(b)(1) The table of sections for such part I is amended by striking out the item relating to section 5 and inserting in lieu thereof the following:

"Sec. 5. Tax imposed for repayment of Federal tuition advances.

"Sec. 6. Cross reference relating to tax on individuals."

(2) Subsection (a) of section 6012 of such Code (relating to persons required to make returns of income) is amended by striking out "and" at the end of paragraph (6), by striking out the period at the end of paragraph (7) and inserting in lieu thereof "; and", and by adding at the end thereof the following new paragraph:

"(8) Every individual who, at the close of the taxable year, is a Federal tuition advance recipient in repayment status (as defined in section 5(c)(2))."

(3) Subsection (a) of section 3402 of such Code (relating to income tax collected at source) is amended before the period in the third sentence by inserting "and to reflect an additional amount of tax to be deducted and withheld by reason of the tax imposed by section 5".

(c)(1) The amendments made by this section shall apply to taxable years ending on or after the first day of the first calendar year beginning after the date of the enactment of this Act.

(2) The amendment made by subsection (b)(3) shall apply to wages paid on or after the first day of the first calendar year beginning after the date of the enactment of this Act.

SEC. 4. For the purpose of section 17 of the Bankruptcy Act, any tax imposed by section 5 of the Internal Revenue Code of 1954 shall be deemed to be a tax which became legally due and owing by the bankrupt to the United States within three years preceding bankruptcy.

SEC. 5. The Secretary of the Treasury and the Commissioner of Education shall, not later than January 15 of each year, submit to the Committee on Ways and Means of the House of Representatives and to the Committee on Finance of the Senate any recommendations for changes in the rates or methods of collection of the taxes imposed by section 5 of the Internal Revenue Code of 1954 that may be necessary to insure the continued solvency and availability of the trust fund established pursuant to section 451(b)(1) of the Higher Education Act of 1965.●

CARING FOR THE BURNED CHILDREN

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Ohio (Mr. WHALEN) is recognized for 5 minutes.

● Mr. WHALEN. Mr. Speaker, Colman McCarthy, writing in the Washington Post on April 22, makes a compelling case for increased concern with respect to fire losses in this country. Although the responsibility for fire protection lies primarily with State and local governments, we cannot sit idly by as the inferno continues. As McCarthy notes, we suffer staggering property losses and an unacceptable loss of life each year. Most tragic are the children, whose death rate due to fire is three times that of the general population. This morning's Washington Post detailed the deaths of two children who succumbed yesterday as a result of a fire in their Independence Avenue residence.

The bright spot in this otherwise bleak picture is represented by the Shriner's burn institutes, which have done an excellent job in treating those who have been severely burned. These institutes, located in Boston, Cincinnati, and Galveston, have been leaders in burn treatment and research. Advances in burn medicine have been dramatic in recent years. The rate of recovery from severe burns has been significantly increased, and recovery now is much more complete than in the past. The Shrine institutes have led the way in developing tissue banks for skin grafts, in developing the use of laser beam technology in removing and grafting skin, and in researching other treatments. It is remarkable that the Shriners never accept payment for the services they provide. Rather, the centers are financed entirely through the fundraising efforts of the Shriners. In the Third Congressional District alone, the Antioch Temple Shriners raise more than $50,000 annually by conducting a horse show. Additionally, they will be participating in a special statewide drive to solicit funds to increase the level of treatment, research, and training available at the Cincinnati Burn Institute. I commend the Antioch Temple Shrine for its efforts in providing improved treatment for burn victims.

Likewise, the Federal Government has been effective when it has undertaken to prevent fire losses. The Flammable Fabrics Act, which has virtually eliminated the problem of severe burns caused by childrens' sleepwear catching on fire, is an excellent example of this. Officials at burn treatment centers report that almost no children are coming to their facilities with burns from sleep-

wear. But, while this is encouraging, these public and private efforts address only small parts of the problem. Adults, as well as children still are being burned.

We must redouble our efforts in the fight against fire. I am pleased that the Science and Technology Committee has reported H.R. 11291, which will extend the authorization of the National Fire Prevention and Control Administration, and I trust that it will receive prompt and favorable consideration by the full House. The Administration is, and should be, the focal point for Federal fire reduction efforts. Although it has been in existence only for a short time, already it has shown potential to be of great assistance to local governments in their fire protection responsibilities.

But, even more than continuing the program, we need to look for ways of redirecting public policy in this area. The American people must develop the same type of concern as the Shriners have exhibited through their burn institutes and associated fund raising efforts. McCarthy best summarizes the need when he says:

Politicians concerned about cost should visit the Shriners Burn Center and look at the maimed children. . . . Not until public policy about fire prevention is shaped by a concern for children—and not by concerns about excessive costs—are the burn wards likely to be empty.

Colman McCarthy's column follows:

CARING FOR THE BURNED CHILDREN

(By Colman McCarthy)

BOSTON.—A doctor and nurse moved their gloved hands over the charred and deformed body of the child. The boy lay naked on the bed in the acute burn ward of the Shriners Burn Institute. But he was also clothed—in skin grafts, unhealed wounds, ointments and dressings that have been his agony since the day two months ago when he was trapped in a house fire. The institute is one of three Shriner hospitals in the country that specialize in the physical and psychological care of burned children. This particular boy, one of 15 children in the acute burn ward, is expected to live. In six weeks, he is scheduled to be moved to the hospital's other wing—the reconstruction unit—where he will begin the painful process of learning to live in the enforced dependency of a burn victim.

Visiting journalists, supposedly toughened by their exposure to the world's cruelty and absurdity, have been known to leave this hospital and weep uncontrollably about the suffering children they had just seen in the burn ward. But if powerful emotions are stirred by moving from bed to bed, a measure of elation is also possible. The Shiners' 30-bed burn center is one of the more heartening success stories in American medicine. In a few months, it will mark its 10th anniversary. The reputation for excellence earned by the center is due not only to the Shriners' commitment to their children and their families—no patient is ever charged—but also to those who were working a decade ago to protect children from flammable sleepwear, which is now banned.

When I was last at the hospital—in 1971, for a story on a New Hampshire boy whose pajamas caught fire—flammable sleepwear was a leading cause of burn deaths and injuries among the patients. Today, according to Elizabeth McLoughlin, a staff therapist, "children just aren't coming to us with burns from pajamas." In a recent paper in Pediatrics magazine, McLoughlin and three coauthors reported that "from 1969 to 1973, 32 percent of the children referred with burns [to the Shriners hospital] because of clothing ignition were clad in sleepwear at the time of the accident. Subsequently, the number of such injuries cared for at this unit has fallen dramatically. In all of 1976 and among a total of 24 children referred with injuries resulting from clothing ignition, only one involved sleepwear."

At the same time that a political solution—the Flammable Fabrics Act—was being imposed to prevent deaths and injuries, medical researchers were discovering ways to increase the survival rate among burn victims. In 1940, death was almost automatic for anyone with third-degree burns over more than 30 percent of his body. By 1973, most victims with third-degree burns over 40 percent of their bodies were surviving. New knowledge about skin grafting, controlling bacteria and the nutritional needs of burn victims were among the breakthroughs.

None of this means that this burn center, nor the other two run by the Shriners in Cincinnati and Galveston, will be closing anytime soon. According to the National Commission on Fire Prevention and Control, America is all but a coast-to-coast inferno. Annually there are 8,000 fire deaths, 300,000 fire injuries and 50,000 hospitalized burn injuries. The most vulnerable are children, whose death rate from fire is three times that of the general population.

Logic, not to mention compassion, would dictate that public policy be especially concerned about the treatment of burned children. But that isn't the case. In "America Burning," the commission reports that of the nation's 6,000 general hospitals, less than 100 provide specialized burn care. Only 12 burn centers exist at all, even though hundreds are needed. A two-year-old child with second- or third-degree burns over 45 percent of his body has a 60 percent chance of survival in a burn center but only a 10 percent chance in a hospital. Among eight-year-olds with burns over 60 percent of their bodies, the survival rate in a burn center is 50 percent; in a hospital, 20 percent.

The absence of concern for children after they are burned is matched by an indifference to keeping them out of fires in the first place. The major cause of fires that kill is the smoldering of material in furniture, but the National Fire Prevention and Control Administration (in the Commerce Department) has no regulatory authority. It can recommend that the Consumer Product Safety Commission take action against flammable upholstered furniture and then hope that something is done. At the moment, the issue is "under study" at CPSC. Fire chiefs across the country argue that sprinkler systems in homes are proven life savers in residential fires. But their arguments are usually rejected. Last week, a bill before the Anne Arundel County Council that would have required sprinkler systems for new homes was defeated as being too costly.

Politicians concerned about cost should visit the Shriners Burn Center and look at the maimed children. The average stay is 73 days at a cost of $36,500 per child; the emotional costs are unmeasurable. Not until public policy about fire prevention is shaped by a concern for children—and not by concerns about excessive costs—are the burn wards likely to empty. ●

PERSONAL EXPLANATION

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Connecticut (Mr. SARASIN) is recognized for 5 minutes.

● Mr. SARASIN. Mr. Speaker, on April 24, 1978, I was absent from the legislative session of the House of Representatives. Had I been present, I would have voted in the following fashion:

Rollcall No. 244: H.R. 11401: NASA authorization. The House agreed to the rule (H. Res. 1143) providing for the consideration of the measure, "yea";

Rollcall No. 245: H.R. 11504: Agricultural Credit Act. The House rejected the Madigan amendment in the nature of a substitute for the Emergency Credit Adjustment Act of 1978 (title II), that sought to establish one program to offer 100 percent insured and guaranteed "bridge" loans to meet payments on existing loans that come due, and to provide operating loan financing to farmers and ranchers, "no";

Rollcall No. 246: H.R. 11504: Agricultural Credit Act. The House passed the measure to amend the Consolidated Farm and Rural Development Act, provide an economic emergency loan program to farmers and ranchers in the United States, and extend the Emergency Livestock Credit Act, "yes."

Mr. Speaker, on April 25, 1978, I was absent from part of the legislative session of the House of Representatives. Had I been present, I would have voted in the following fashion:

Rollcall No. 249: H.R. 11877: Peace Corps authorization. The House rejected the Young amendment that sought to prohibit the use of authorized funds to carry out any program in the Central African Empire, "no";

Rollcall No. 250: H.R. 11877: Peace Corps authorization. The House passed the measure to authorize supplemental appropriations for fiscal year 1978, and to authorize appropriations for fiscal year 1979, for the Peace Corps and to make certain changes in the Peace Corps Act, "yea";

Rollcall No. 251: House Resolution 1049: Equal Employment Opportunity reorganization. The House failed to agree to the resolution to disapprove Reorganization Plan No. 1 transmitted by the President on February 23, 1978, "no"; and

Rollcall No. 252: House Concurrent Resolution 573: Violations of human rights in Cambodia. The House agreed to the concurrent resolution denouncing the Government of Cambodia for its disregard of basic human rights, "yea." ●

RESPONSE TO CITIZEN'S GUIDE ON HOW TO USE THE FREEDOM OF INFORMATION AND PRIVACY ACTS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from North Carolina (Mr. PREYER) is recognized for 5 minutes.

● Mr. PREYER. Mr. Speaker, a few months ago the House Government Operations Committee adopted a report prepared by the Government Information and Individual Rights Subcommittee, which I chair. The report, entitled "A Citizen's Guide on How To Use the Freedom of Information Act and the Privacy Act in Requesting Government Documents," is a handbook which was intended to encourage citizens to exercise their rights under these two laws.

The guide describes the kinds of records available under the FOIA and the Privacy Act, and sets out the procedures

for individuals to follow when requesting Government files. It also specifies the requirements for agency responses to inquiries. Sample letters are provided to assist in initiating requests and in appealing denials of information. Moreover, there is a discussion of the reasons why documents may be withheld. The handbook also includes the texts of both acts as well as the addresses of selected Government agencies.

I am pleased to advise that the response to this publication has been enthusiastic. To date, the full committee and the subcommittee together have distributed over 6,000 copies of the report, and the Government Printing Office has sold 11,500 copies.

The handbook can be obtained from the Superintendent of Documents, Government Printing Office, Washington, D.C. 20402, for $2 a copy.●

INTEGRITY OF HOUSE AT ISSUE

The SPEAKER. pro tempore. Under a previous order of the House, the gentleman from Wisconsin (Mr. KASTENMEIER) is recognized for 5 minutes.

● Mr. KASTENMEIER. Mr. Speaker, it was on September 27, 1951, that President Truman sent a special message to the Congress recommending conflict-of-interest legislation. Mr. Truman urged the Congress to pass a proposal requiring officials in all three branches of the Government to place on the public record each year full information concerning their incomes from all sources, public and private. President Truman told the Congress:

> Public office is a privilege, not a right and people who accept the privilege of holding office in Government, must of necessity accept that their entire conduct should be open to inspection by the people they are serving. With all the questions that are being raised today about the probity and honesty of public officials, I think all of us should be prepared to place the facts about our income on the public record. We should be willing to do this in the public interest, if the requirement is applied equally and fairly to the officials of all three branches of our Government.

Almost 27 years have passed since President Truman issued these words, and we still do not have a financial disclosure law which is applied uniformly to the three branches of our Government.

The House is now agonizing over the scheduling of H.R. 1, the Ethics in Government Act, which requires public financial disclosure for upper echelon officials of the legislative, executive, and judicial branches. The bill's future is depicted as being in peril because a vocal, albeit small, minority of Members would have us believe that the House has had enough of ethics reform.

Ethics reform is testing the will of the House. The integrity of this institution is at stake, and procrastinating over H.R. 1 will not make this legislation and the need for it disappear. Delaying tactics by opponents of H.R. 1 only serve to injure the reputation of the House. It leaves the impression that we lack the courage to face the moment of truth, and it reinforces the public's worst suspicions about the sincerity of our effort to write into statute a strict code of ethics.

Mr. Speaker, less attention should be paid to the cries of despair that are coming from the opponents of H.R. 1. I am confident that when H.R. 1 comes to the House floor, the majority of the House will vote for it. Also, the majority will reject the attempt to remove the earnings limitation ceiling we imposed on March 2, 1977, by a vote of 344 to 79, on outside earned income for Members.●

LEGISLATION TO ENABLE CITIZENS TO CHALLENGE LENIENT TAX RULES

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Massachusetts (Mr. DRINAN) is recognized for 5 minutes.

● Mr. DRINAN. Mr. Speaker, I am today introducing legislation which would remove a major loophole in the means by which defective rules and regulations issued by the Internal Revenue Service can be remedied. At present, the law provides ample opportunity for individuals and corporations to challenge and obtain comprehensive judicial review of tax rules and regulations which are allegedly defective in that they impose an improper or excessive tax. There exists no analogous right to challenge tax judgments by the Internal Revenue Service which are allegedly too lenient in the tax burden which they impose. The bill which I am introducing today would extend that right to every citizen.

THE NEED FOR JUDICIAL REVIEW OF LENIENT TAX RULES

To the extent that a tax rule is improperly favorable, all taxpayers suffer, in that their share of the burden is unfairly great. If the recipient of the favorable ruling is a corporation, its competitors may suffer. Finally, a lenient tax rule amounts to a forfeiture of revenue to which the Federal Government is entitled, thereby increasing the federal budgetary deficit.

We can be reasonably certain that IRS rules and regulations which impose an excessive tax will receive full and complete scrutiny by the courts, in that one or more of those taxpayers affected by the rule will bring suit against the IRS challenging its legality. Absent the right to challenge tax rules which are applied to others, however, we can be reasonably certain that improperly lenient rules will escape judicial scrutiny.

The only review of such lenient tax judgments takes place in the Internal Revenue Service itself and in the Congress. Both the IRS and the Congress, however, are subject to political and economic considerations and pressures which might make objective review on the merits impossible. It would seem self-evident that fair and equitable application of the Federal tax law requires the availability of judicial review not only of excessive but also of lenient rules and regulations.

Michael Asimov, professor of law at the UCLA Law School and a specialist in Federal taxation, has stated:

> Every tax professional has his or her own list of detested or cherished (favorable) rules of dubious legality.

And listed the following rules whose consistency with the Internal Revenue Code could be reasonably challenged: Rules which permit professionals, such as doctors and lawyers, to receive more favorable treatment than other self-employed people in applying the maximum tax on personal service income; rulings allowing the immediate deduction of prepaid intangible drilling costs and prepaid State and local property or income taxes; regulations treating as corporations many limited partnerships formed to exploit tax shelters; treatment of free travel fringe benefits enjoyed by airline employees as nontaxable; and treatment of scholarships provided to the children of private university faculty members as nontaxable.

In a more general sense, we have witnessed over the years the steady decline in the rate at which corporations are taxed, accompanied by a rise in the share of the total Federal tax derived from individuals. In 1967, corporate income taxes amounted to almost 25 percent of Federal receipts; by 1976, this figure had declined to 13 percent. More and more corporations pay no Federal tax each year. Corporations and special interests exert a greater degree of influence in the context of political institutions (Congress and the IRS, a part of the Department of the Treasury) than in the judicial process. Favorable rules and regulations obtained through the lobbying efforts and the political and economic importance of the beneficiary ought to be made subject to judicial review.

The individual taxpayer who resents what he perceives to be an unfair lenient tax on others can, it is argued, always rely upon Congress to remedy the situation by statute. This recourse is often more apparent than real, for several reasons. Individual taxpayers are not organized, while beneficiaries of the lenient rule usually are. Individuals have difficulty raising the needed funds to state their case, while beneficiaries usually have ample funds for this purpose. Finally, and probably of greatest importance, there is the inertia factor. Congress simply does not have the time or the resources to monitor and debate and act upon every arguably improper lenient tax ruling. Providing judicial review of such rulings would not strip Congress of its role in writing the tax law; it would simply shift the burden from those who are not the beneficiaries of improperly favorable tax rulings to those who were the recipients of its benefits.

THE REMEDY: CITIZEN STANDING TO CHALLENGE LENIENT TAX RULINGS

While the right to judicial review of administrative action has generally been expanding over recent years, the courts made it clear that, in the absence of a statutory right, taxpayers do not have standing to challenge Internal Revenue Service rules which apply to others. In order to insure the needed judicial review of the many existing tax rules which are arguably inconsistent with the law and which, if so, are unjustifiably robbing the U.S. Treasury of large sums, we must provide this legal standing to sue via statute. The bill which I have introduced today does so in a way which is designed to provide citizen access to

the courts simply, equitably, and with a minimum of procedural delay.

The bill extends to all citizens the right to challenge in any U.S. district court or in the U.S. Tax Court any tax ruling, as long as there is an actual controversy involving whether or not that ruling is inconsistent with the tax or any other law. Notice must be provided to the Secretary of the Treasury at least 90 days prior to the filing of the suit, and the Secretary must in turn publish notice that such action has been filed.

The court is empowered in its discretion to permit parties affected by the action to intervene. Thus all potentially affected parties receive ample notice and opportunity to intervene, while the court retains the right to limit intervenors if it feels such limitation is necessary.

No one need fear that extension of this right will create an unacceptably large caseload. The court retains the discretionary authority to dismiss all actions which do not involve an actual controversy as to the legality of the ruling.

There exists at present a serious imbalance in the scrutiny which we accord tax rules and regulations. Those which are arguably too harsh are subject to ready judicial review, while those which are arguably too lenient are effectively shielded from consideration by the courts. Enactment of the bill which I have introduced today would redress this imbalance. In so doing, it would help to bring about a more equitable system of taxation and help to prevent income from unjustly escaping taxation.

The bill's text follows:

H.R. 12416

A bill to amend the Internal Revenue Code of 1954 to provide for judicial review of certain interpretations of the Federal tax laws

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That subchapter B of chapter 76 of the Internal Revenue Code of 1954 (relating to proceedings by taxpayers and third parties) is amended by redesignating section 7430 as section 7431 and by inserting after section 7429 the following new section:

"SEC. 7430. DECLARATORY JUDGMENTS RELATING TO CERTAIN TAX RULINGS.

"(a) CREATION OF REMEDY.—In the case of an actual controversy involving the issue of whether a tax ruling is in accordance with the provisions of this title or of any other law, upon the filing of an appropriate pleading, the United States Tax Court or any United States district court may make a declaration with respect to such issue. Any such declaration shall have the force and effect of a decision of the Tax Court or a final judgment or decree of the district court, as the case may be, and shall be reviewable as such.

"(b) TAX RULING.—For purposes of this section—

"(1) IN GENERAL.—Except as provided in paragraph (2), the term 'tax ruling' means any interpretation by the Secretary of a provision of this title or of any other Federal law related to internal revenue taxes if such interpretation—

"(A) is contained in a regulation, instruction, or procedural guideline prescribed by the Secretary; or

"(B) is contained in a written determination (as defined in section 6110(b)(1)) which is open to public inspection under section 6110.

"(2) CERTAIN MATTERS NOT REVIEWABLE.—The term 'tax ruling' does not include any rule, regulation, or other statement relating to agency organization, procedure, or practice.

"(c) PERSONS WHO MAY BRING ACTION.—

"(1) PETITIONER.—A petition involving any tax ruling may be filed under subsection (a) by any person—

"(A) who is capable of adequately presenting the legal issues involved in such petition; and

"(B) who will fairly represent the position that such ruling is not in accordance with the provisions of this title or of any other law.

"(2) INTERESTED PARTIES.—No petition involving any tax ruling may be filed under subsection (a)—

"(A) by any person whose tax liability is, or can be reasonably expected to be, directly affected by such ruling; or

"(B) by any organization, if a substantial number of the members or shareholders of such organization are persons described in subparagraph (A).

"(d) NOTICE TO THE SECRETARY.—No action may be brought under subsection (a) with respect to any tax ruling unless—

"(1) at least 90 days before the filing of a petition under this section, the petitioner has submitted to the Secretary a statement of his intent to bring an action under this section and an explanation of his position with respect to such ruling; and

"(2) before the filing of such petition, the Secretary does not revoke such ruling.

"(e) SPECIAL RULES.—

"(1) NOTICE.—In the case of any action brought under this section with respect to any tax ruling—

"(A) the Secretary shall publish a notice that such action has been brought in the same manner as the Secretary publishes notice of proposed regulations; and

"(B) if such ruling was issued in response to a request by any person, the Secretary shall send a notice that such action has been brought to the last known address of such person, by registered or certified mail.

"(2) INTERVENTION.—Any person—

"(A) whose tax liability is, or can reasonably be expected to be, directly affected by any tax ruling; or

"(B) who under subsection (c)(1) would be eligible to bring an action under this section involving such ruling;

may, upon timely application, be permitted to intervene in any action under this section involving such ruling. The court may limit the number of persons who may intervene in such action, or may limit the extent of their participation in such action, if the court finds that such a limitation is necessary to prevent undue delay or prejudice to the adjudication of such action.

"(f) JUDGMENT.—

"(1) JUDGMENT FOR COSTS.—If the person bringing any action under this section prevails in such action, the court may award such person a judgment for—

"(A) the costs of such action, including fees and expenses of attorneys, plus

"(B) an amount not to exceed $100.

"(2) MANNER IN WHICH DECLARATION TAKES EFFECT.—The court shall provide the manner in which any declaration in an action under this section is to take effect.

"(g) TAX LIABILITY.—For purposes of this section, the term 'tax liability' means the liability of any person for any tax imposed by this title."

(b)(1) Sections 7451, 7459(c), 7476(c), and 7482(b)(1)(E) of such Code are each amended by striking out "7428" and inserting in lieu thereof "7428 or 7430".

(2) Paragraph (1) of section 7482(b) of such Code is amended by striking out "7428" in the last sentence and inserting in lieu thereof "7428, 7430".

(3) The table of sections for subchapter B of chapter 76 of such Code is amended by striking out the last item and inserting in lieu thereof:

"Sec. 7430. Declaratory judgments relating to tax rulings.
"Sec. 7431. Cross references."

(4) Subsection (e) of section 1346 of title 28, United States Code, is amended—

(A) by striking out "or section 7428" and inserting in lieu thereof ", section 7428"; and

(B) by inserting ", or section 7430" after "District of Columbia)".

(5) Section 2201 of title 28, United States Code, is amended by striking out "section 7428" and inserting in lieu thereof "section 7428 or 7430".

(c) The amendments made by this section shall take effect on the date of the enactment of this Act.●

THE NEW YORK CITY FINANCIAL ASSISTANCE ACT OF 1978

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Pennsylvania (Mr. MOORHEAD) is recognized for 5 minutes.

● Mr. MOORHEAD of Pennsylvania. Mr. Speaker, I am introducing today as a clean bill, following markup by the Subcommittee on Economic Stabilization of the Banking Committee, the New York City Financial Assistance Act of 1978. The bill, as amended, was approved by the subcommittee on April 26 by a vote of 12 to 2.

As it has proceeded through hearings and markup on this important legislation, the subcommittee has had to reconcile two seemingly conflicting considerations.

First, the evidence is compelling that there is a serious risk of default, insolvency or bankruptcy by the city later this year if there is no new Federal legislation to replace the present seasonal financing law that expires June 30. The evidence is also strong that such a catastrophe would have national and international financial repercussions extending well beyond the city and its residents.

Second, however, the difficulties of the city are largely self-inflicted, stemming from budgetary excesses of the past that are now being corrected but have left the city's credit-worthiness impaired. Any Federal solution to the problem must, therefore, be as lean as possible and maintain the pressure for budgetary stringency in New York. While the subcommittee members differ on some things, we are unanimous in conviction that the New York City problem is unique and that this legislation should not set a precedent for similar financial rescue of other cities.

I believe, Mr. Speaker, that the bill we have approved and that I am introducing today strikes the necessary balance.

By providing for a Federal guarantee of up to $2 billion of city obligations, with a maximum guarantee term of 15 years, it should enable the city to put together a financial package that will enable it to avoid insolvency and begin a modest attack on its desperate needs for capital investment. The amended bill specifies that the total Federal exposure, for interest and principal, cannot exceed $2 billion. The pressure on the city is maintained in several ways. No guarantees can be issued unless the Secretary of the Treasury is satisfied that the city will achieve in 4 years a balanced

budget on generally accepted accounting principles. There will continue to be outside supervision of the city's finances, including such things as labor contracts. And in the unlikely event of default, the Secretary is required to withhold enough revenue sharing and other Federal aid to the city and State of New York to make good the city's debt.

Although there remain some uncertainties in the New York City situation, including labor negotiations, the subcommittee has acted now in light of the May 15 deadline of the Budget Act and to make sure that Congress as a whole can approve the legislation before the expiration of the current law June 30.

Given the stringent conditions in the bill, Mr. Speaker, it is most unlikely that this legislation will ever cost the Federal taxpayers anything. But the guarantees are necessary to enable the city to complete its transition to fiscal soundness, a transition which is well underway. I am confident that when the bill comes to the floor of the House, the membership will reach the same conclusion as the members of our subcommittee, who have heard all the evidence.

SECTION-BY-SECTION ANALYSIS OF THE NEW YORK CITY FINANCIAL ASSISTANCE ACT OF 1978

Section 1. This section provides that the bill shall be titled the "New York City Financial Assistance Act of 1978."

TITLE I—EMERGENCY ASSISTANCE

Sec. 101. This section sets forth the definitions of various terms used throughout the bill.

Through the definitions, it makes clear that assistance is to be provided only for New York City, that the independent monitor's existence and authority must be covenanted by the State for so long as assistance under the bill is outstanding, and that the Department of the Treasury is to administer the program.

Sec. 102. Subsection (a) provides that the Secretary may guarantee the principal, interest, or both, of obligations of the city or a financing agent, such guarantees to remain in effect for no longer than 15 years.

Subsection (a) also provides that the maturity of obligations to be guaranteed may be of any duration.

This subsection further provides that such guarantees must be applied for in writing by the city and the Governor of the state.

Subsection (b) provides that a fee of not less than one half of one percent per annum on the outstanding principal amount of guaranteed obligations, computed daily, shall be assessed and collected at least annually. Funds received in payment of guarantees are to be deposited in the general fund of the Treasury.

This subsection also provides that the Secretary may increase the guarantee fee in order to induce the borrower to borrow in the private market.

Subsection (d) provides that if a guaranteed obligation is sold, transferred, or otherwise disposed of by the original purchaser, the guarantee shall lapse. The lapse provision, however, does not apply to a sale, transfer, or other disposition in the following cases: to an individual who acquires the obligation through inheritance, bankruptcy or other similar transaction; in a transaction which does not change the beneficial ownership; or to a purchaser who buys the obligation, as part of a distribution, from a person such as an underwriter or dealer, provided that person sells the obligation within 90 days of his acquisition of the obligation.

Conditions of eligibility

Sec. 103(a). Paragraph (1) of this subsection requires that the Secretary make a determination that the city is unable to meet its borrowing needs in the private market or elsewhere.

Paragraph (2) requires the city to submit, with the approval of the fiscal monitor and according to accounting principles prescribed by the Secretary of the Treasury, a plan for bringing its operating expenses into balance with its revenues for each of the first three full fiscal years following application for Federal assistance.

Paragraph (2) further requires the city to publish annually during the period covered by the plan an analysis reconciling the previous year's actual revenues and expenditures with projected revenues and expenditures, and to publish periodic projections reflecting the plan's impact on tax rates.

Paragraph (3) requires that, for the fourth full fiscal year after initial application for assistance, and for each fiscal year thereafter while assistance remains outstanding, the plans for bringing operating expenses into balance with revenues be in accordance with generally accepted accounting principles.

Paragraph (4) requires the fiscal monitor to demonstrate to the Secretary's satisfaction that it has the authority to control the fiscal affairs of the city for as long as assistance will be outstanding.

Paragraph (5) requires the Secertary, before issuing guarantees under this Act, to obtain assurances to his satisfaction that a substantial portion of the city's borrowing needs will be met through sources other than Federal assistance provided under this Act.

Paragraph (6) requires the Secretary, before issuing guarantees, to make a determination that there is a reasonable prospect that obligations to be guaranteed will be repaid according to their terms and conditions.

Paragraph (7) requires the city to have audits of its books conducted annually while any assistance under this Act is outstanding. Such audits must be conducted by independent public accountants.

Paragraph (8) provides that interest rates on the guaranteed obligations be reasonable.

Paragraph (9) gives the Secretary authority to impose upon the city any other terms or conditions which he deems appropriate.

Subsection (b) provides that a determination by the Secretary that the conditions of subsection (a) have been met shall be conclusive.

Subsection (c) provides that the Secretary may modify, amend, or waive the terms and conditions imposed at his discretion under paragraph (9), subsection (a).

Sec. 104. This section provides that the limitation on the amount of guarantees outstanding at any one time is $2,000,000,000, including principal and accrued interest.

Sec. 105. Subsection (a) provides that the Secretary shall take such actions as are necessary to enforce the rights of the United States as a result of the issuance of guarantees under this Act and that sums recovered shall be paid into the general fund of the Treasury.

Sec. 106. Provides for the inspection of city documents by the Secretary.

Sec. 107. This section authorizes the General Accounting Office to conduct audits of the financial records of the city or any financing agent, and requires the city or any financing agent to agree to such audits as a condition of the issuance of guarantees. The General Accounting Office is directed to report the results of such audits to the Congress.

Sec. 108. Provides for periodic reports by the Secretary to the Congress.

Sec. 109. Provides that the Secretary's authority to make guarantees terminates on June 30, 1982.

Sec. 110. Subsection (a) provides an authorization for the appropriation of such sums as may be necessary.

Subsection (b) provides that the authority of the Secretary to make any guarantee is limited to such extent and amounts as are provided in advance in appropriation acts.

TITLE II

This title amends the Internal Revenue Code to provide that interest on obligations guaranteed under this Act are taxable for the period of the guarantee.●

CONGRESSIONAL ACCESS TO SENSITIVE SECURITY DATA

(Mr. PRICE asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

● Mr. PRICE. Mr. Speaker, I recently made an informal check of the access of committees of Congress to classified security information. To obtain an indication of the degree of the proliferation of sensitive security information in the Congress, I limited my review to the distribution of "Restricted Data" amongst the various committees. The concept of "Restricted Data," as defined in the Atomic Energy Act, concerns very sensitive defense and national security material related to nuclear energy and provides for which a unique system of control and dissemination is statutorily specified.

I must admit that my check into this matter revealed a disturbing trend. I found that about 15 individual committees and subcommittees of the House and Senate have access to "Restricted Data" and maintain individual files of varying amounts of such information. I also found that about 300 staff members have been authorized to have access to this sensitive information. Since the 1960's, the number of staff people having access to such data has increased by a factor of 10.

A fundamental principle of maintaining the security of sensitive information is to limit its distribution. In its simplest terms, this means limit the access to the minimum number of people consistent with getting the job done. I am concerned that this principle is being violated with the growth in access to this one type of specially sensitive security information to 15 separate organizations in the Congress alone.

I fully appreciate the need for a certain number of committees to have direct and ready access to information and files on sensitive security information. My plea is for the reduction of this access to the essential minimum. I believe this access could be reduced considerably by stricter compliance with the committee system of organization wherein specific responsibilities are assigned to individual committees. Strictly limiting access to the committee needing the information to carry out its responsibility will, I am sure, reduce the proliferation which is occurring.

Although I have not looked into the handling of other areas of sensitive national security information than Re-

stricted Data, very probably similar unfavorable trends have developed in the treatment of such areas in the Congress. I firmly believe that we can greatly improve our treatment of these matters by reducing the number of congressional organizations handling such sensitive security information without relinquishing any congressional responsibilities or losing any legislative control in these areas.

I do not think we can overemphasize the importance of doing everything possible to safeguard sensitive security information. Loss of certain information could well result in the grave endangerment of our national security. Without consideration of the nature of the specific matter involved, it is not possible to estimate the seriousness of the consequences which could ensue. Losses of certain sensitive security information in the past has, in my view, resulted in the nullification of literally billions of dollars in investment in our defense forces. Obviously there is probably no graver matter that we have to contend with than the proper handling and safeguarding of such security information.

The protection of sensitive security information is also directly related to the proliferation of nuclear weapons which is now such a great concern to many Members of this body. The availability of nuclear weapons technology, and in some cases only an incidental piece of information concerning our weapons program, could make it possible for a striving dissident or other foreign national group to attain nuclear weapon capability. The forces for such harmful diffusion of sensitive information are proportional to the number of sources of such information. We should, accordingly, reduce the number of organizations and people to whom such information is distributed. Although I have limited my comments to the Congress, the same factors and related dangers apply to all organizations.

The tightening up of how the Congress handles sensitive security information is also important relative to the carrying out of oversight responsibilities which the Congress has. Simply put, the only way we can be effective in exercising effective oversight responsibilities over the safeguard functions performed by the executive agencies is by exemplary performance.●

ARE THERE NO CUBAN CASUALTIES IN AFRICA?

(Mr. SIKES asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

● Mr. SIKES. Mr. Speaker, there has been a dearth of news about Cuban casualties in Africa. This is an unusual situation. Castro has sent 35,000 of his countrymen to fight Russia's wars for the colonial conquest of Africa. Much of Africa is not healthy for people who are not acclimatized, nor are the bullets of the people who continue to fight for the right to determine their own destiny. Unquestionably, there have been deaths and wounds in battle and deaths and illnesses from natural causes. We suffered many casualties in Vietnam, despite the best medical and hospital services ever devised in time of war. The Cubans have no such medical resources.

Information on the page of Cuban casualties is completely blank. The press in this country is able to ferret out the most minute secrets about America's defense system. Their efficiency should not stop at our borders. Yet no information has been given on Cuban casualties in Africa. One has to wonder whether this same dearth of information prevails inside Cuba. Surely the families whose loved ones are away on Castro's foreign missions wonder about the fate of their missing relatives.

The Russian support system provided the Cuban forces is another story. Presumably, it is fully and capably organized. The Cubans did not walk to Africa. They go by aircraft or ship. They have been supplied with modern weapons, and presumably, with adequate food from Russia or elsewhere.

Castro's legions may soon be used for conquest in Central and South America. He is the captive of the Russians. If the Russians cut off assistance to Castro, his regime will collapse. So, supposedly, Castro will carry Russia's torch of conquest as long as a supply of young Cuban men is available.●

TO CLOSE THE KEY WEST NAVAL STATION?

● (Mr. SIKES asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. SIKES. Mr. Speaker, on the Navy's realinement list, just issued, is a study on the advisability of disestablishing the naval air station at Key West, Fla. I feel that it is not realistic to close this base. It played a very important part at the time of the Cuban missile crisis in 1962. If there should be trouble any where in the Caribbean, it may have a necessary function. The fact that we will no longer have a presence in Panama adds to the logic of maintaining a naval base at Key West. If, however, the study should result in the closure of the Key West facility, its mission could well be placed with the most important U.S. military installation left in the Caribbean. That facility is our naval installation at Guantanamo Bay, Cuba. Increasingly, however, there are signs that Guantanamo is considered to be decreasing in importance, rather than being upgraded.

An article which appeared in U.S. News & World Report in February discusses recent trends at Guantanamo. Particularly in light of the anouncement about Key West, it is now increasingly important that consideration be given to maintaining our forces at Guantanamo. I include the article at this point in the RECORD.●

"GITMO": TRANQUIL U.S. BASE AT CASTRO'S BACK DOOR

A strange quiet hovers over Guantánamo, America's 45-square-mile naval base in Cuba, after 20 years of threats by Fidel Castro to "oust the Yankees."

Suddenly the speeches have been toned down. The Cuban military guards who have patrolled the fence line around the base for years have been pulled back, out of sight. On the U.S. side, Marine guards no longer patrol the line.

Cuba's Communist leaders are clearly lifting their pressure to get U.S. forces out. The issue of "Gitmo," as the naval station at Guantánamo Bay is known locally, has not been raised in the bilateral talks being held between Washington and Havana in their "national-interest sections."

The reason is uncertain. But the guessing in Washington is that Castro is playing it low-key now in order to help his case for lifting the long-standing American trade embargo, one cause of Cuba's dire economic position.

Meanwhile, there are signs that Guantanamo is losing some of its old luster as a major U.S. installation.

Its status, for one thing, has been changed so that it is now commanded by a Navy captain, not a rear admiral as in the past.

Strength of the installation at Gitmo, including American military dependents, American civilian workers, Cuban exiles, Jamaican laborers and the 135 Cubans who live outside the base but enter it daily, has dropped steadily from 10,500 in 1962 to 6,189.

Many of the station's facilities are now in "minimum repair," which means they are unused or abandoned. Not even all of the 24 miles of wire fence around the base is being kept in repair.

But U.S. Navy officials insist that Gitmo is still essential, and there are no plans to abandon it in the future.

Its main function, now as before, is to train units of the Atlantic Fleet. For this, it is rated as ideal. On the average, there are 360 good flying days a year. The ocean floor drops away so steeply that ships docked at Guantánamo can be engaged in deep-water antisubmarine training within 15 minutes. Big aircraft carriers bound for the Mediterranean are first given a 10-week training stint here after overhauls.

Lookout for trouble. A secondary role is the defense of the approaches of the Panama Canal, still considered essential by naval planners. Guantánamo also is considered a potential staging area for trouble anywhere in the Caribbean, whether related to the Canal or to Communist forces based in the area.

Finally, Washington strategists are clearly reluctant to give up such a well-established military installation for fear of what use might be made of it. Says a State Department spokesman: "We don't intend to turn Guantánamo over to an adversary, be it Soviet or Cuban."

By law, U.S. forces can remain here indefinitely, based on the treaties of 1903 and 1936. The latter treaty specifies that Americans shall leave only by a U.S. decision—taken alone or by agreement with Cuba.

So Gitmo continues to function in its enclave on the southern coast of Cuba, isolated from the rest of the island and manned by a force of 2,108 sailors and 439 Marines.●

A BILL TO HALT ARBITRARY IRS AUDITS

(Mr. PANETTA asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

● Mr. PANETTA. Mr. Speaker, today I am introducing a bill which will provide immediate relief to thousands of businesses throughout the country which are currently being subjected to arbitrary and inconsistent action by the Internal Revenue Service. Within the last 3 years,

the IRS has attacked businesses where individuals whose occupations are real estate agents, barbers, beauticians, insurance agents, and service station operators work as independent contractors. By classifying such individuals as employees for Federal tax purposes, the IRS is now demanding that firms pay additional payroll taxes, withholding taxes, unemployment taxes, and both halves of social security. Such arbitrary labeling of self-employed persons is forcing countless businesses into bankruptcy or into the courts. It is my opinion that these unwarranted actions by the IRS must be halted without delay.

The classification of persons as employees or independent contractors has long been a subject of controversy. Consequently, House and Senate conferees on the Tax Reform Act of 1976 directed the Joint Committee on Taxation to conduct a study to resolve this highly debated topic. At the same time, the conferees directed the Internal Revenue Service to hold off on further tax audits until congressional review of the matter was completed. Unfortunately, this has not been the case and instead the IRS has chosen to take it upon itself to reverse nearly 30 years of established judicial opinions and Treasury Department guidelines, concluding that insurance agents, real estate salespersons, beauticians, barbers, and others are, in fact, self-employed independent contractors. This attack was unexpected and contrary to the express directions of the Congress.

The impact of the reclassification of independent contractors as employees can be financially crippling since the newly reclassified employer can be held liable for payroll taxes for past years. Retroactive assessments of these taxes can put the taxpayer literally out of business. Moreover, the reclassification often leads to an unjustifiable double taxation of the same income, a point that was forcefully made by a recent GAO study entitled, "Tax Treatment of Employees and Self-Employed Persons by the Internal Revenue Service." As independent contractors, salespersons must pay self-employment taxes, commonly referred to as SECA, and make quarterly estimated income tax payments. Yet when a salesperson is reclassified as an employee, in many cases no offset is allowed to the broker nor refund made to the salespersons for these prior taxes. This double taxation is often due to the reluctance of the IRS to notify salespeople of the right to a refund or to provide brokers with the information from salespeople's returns necessary to establish an offset.

It is my belief that the key factors in an efficient tax system are that the laws be clear, unambiguous and not subject to arbitrary interpretation, both for the taxpayer and the Government. It is obvious that who may be classified as an employee as opposed to a self-employed person presently is not clear and is subject to conflicting interpretations by the Internal Revenue Service. Although steps are now being taken to clarify this confusing situation, I feel there is a pressing need for swift legislative action to provide an interim respite from recent IRS actions.

Mr. Speaker, my bill would simply require the Internal Revenue Service to stop its attacks on thousands of businesses, until such time as Congress enacts legislation to resolve the issue of who is an employee and who is an independent contractor once and for all. It is my hope that my colleagues will support this effort to provide urgently needed relief to taxpayers in accordance with the previously expressed wishes of the House and Senate conferees on the Tax Reform Act of 1976.

I include the text of my bill at this point in the RECORD:

H.R. 12427

A bill to disregard, for purposes of certain taxes imposed by the Internal Revenue Code of 1954 with respect to employees, certain changes since 1975 in the treatment of individuals as employees

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That until enactment of any law which expressly repeals this Act, the determination of whether any individual is an employee for purposes of chapters 21 (relating to Federal Insurance Contributions Act), 23 (relating to Federal Unemployment Tax Act), and 24 (relating to collection of income tax at source on wages) of the Internal Revenue Code of 1954, shall be made and applied under audit practices and regulations which are consistent with such practices and regulations in effect December 31, 1975.●

IS THE ARMS CEILING ACCURATELY CALCULATED?

(Mr. HAMILTON asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. HAMILTON. Mr. Speaker, I want to bring to the attention of my colleagues and other persons interested in close oversight of our arms sales program a General Accounting Office (GAO) report which is a partial response to a general request I made of the GAO on November 16, 1977, to examine the Department of Defense's accounting procedures for establishing a foreign military arms sales ceiling.

This GAO report is critical of the arms sales ceiling calculations made by the Department of Defense. The GAO report indicates that the Defense Department miscalculated the base line of fiscal 1977 arms sales on which fiscal year 1978 sales would be reduced, thereby showing that the arms ceiling for fiscal year 1978 is only $66 million less than fiscal year 1977 sales, not $695 million less as was previously indicated. Using the GAO's corrected figures and applying the same percentage reduction of 7.5 percent, the fiscal year 1978 ceiling should be $584 million lower.

In its comments on the GAO report, the Defense Security Assistance Agency (DSAA) asserts that it does not agree with, nor accept, the conclusions and recommendations of the GAO regarding its accounting practices which record single transactions involving both scope and price increases against current rather than prior year sales. DSAA maintains that if it has a consistent accounting policy there should be no net effect on annual arms sales totals.

It is my hope that the administration will, in light of the GAO findings, reexamine the fiscal year 1978 arms ceiling to insure that the fiscal year 1978 sales level is in line with the original intention to reduce sales by, at least, 7.5 percent.

The GAO report, entitled, "Arms Sales Ceiling Based on Inconsistent and Erroneous Data" follows together with a response to the GAO report from the Defense Security Assistance Agency (DSAA) of the Department of Defense:

[Report by the Comptroller General of the United States]

ARMS SALES CEILING BASED ON INCONSISTENT AND ERRONEOUS DATA

The dollar value of fiscal year 1977 arms sales reported by the Department of Defense was used as a basis in establishing $8.6 billion as the 1978 arms sales ceiling. The ceiling set by the President represented a $695 million, or a 7.5 percent, reduction in sales from fiscal year 1977.

GAO identified inconsistencies and errors in accounting which resulted in substantial overstatement of fiscal year 1977 sales. Using corrected sales figures, the ceiling now represents only a $66 million reduction from fiscal year 1977 sales. Further, had a 7.5 percent reduction been applied to the corrected sales figures, the fiscal year 1978 ceiling would have been set $584 million lower.

GAO is continuing its review of Defense's system of accounting for foreign military sales.

COMPTROLLER GENERAL
OF THE UNITED STATES,
Washington, D.C.

Hon. LEE H. HAMILTON,
House of Representatives.

DEAR MR. HAMILTON: Your letter of November 16, 1977, asked us to examine the procedures by which the Department of Defense accounts for the value of foreign military sales agreements and by which the yearly foreign military sales ceiling is established. You requested the review after the disclosure by the Defense Security Assistance Agency, in November 1977, that its previously reported estimate of $9.9 billion for fiscal year 1977 foreign military sales was understated by $1.4 billion. This matter received widespread attention since the President based the fiscal year 1978 arms sales ceiling on fiscal year 1977 sales. On February 1, 1978, the President established a ceiling of $8.6 billion which is a reduction of $695 million, or 7.5 percent, from fiscal year 1977 sales adjusted for inflation to fiscal year 1978 dollars.

As agreed with your office, our initial efforts were directed to reviewing the accuracy of the $1.4 billion adjudstment. After briefing your office on March 3, 1978, it was agreed that we would prepare this interim report on our findings to date.

Our review disclosed substantial accounting inconsistencies and errors relating to the $1.4 billion adjustment. As a result, fiscal year 1977 sales of those weapons and weapons-related items that are subject to the ceiling were overstated by $594 million. The President, therefore, used erroneous sales information as a basis for establishing the arms sales ceiling for fiscal year 1978. Using corrected sales figures, the ceiling now represents only a $66 million reduction from fiscal year 1977 sales. Had a $7.5 percent reduction been applied to the corrected sales figures, the fiscal year 1978 ceiling would have been $584 million lower.

Details of our findings are included in appendix I. We informally discussed our findings with Defense Security Assistance and State Department officials and, where appropriate, their comments have been considered in preparing this report. The scope of our review to date is included in appendix II.

As arranged with your office, unless you publicly announce its contents earlier, we

plan no further distribution of this report until 7 days from the date of this letter. At this time we will send copies to interested parties and make copies available to others upon request.

Also, as arranged with your office, we will continue our review of Defense's system of accounting for foreign military sales and inform you of the results in a final report.

Sincerely yours,

ELMER B. STAATS,
Comptroller General of the United States.

APPENDIX I

FINDINGS AND RECOMMENDATIONS REGARDING DEFENSE'S ACCOUNTING FOR FOREIGN MILITARY SALES

BACKGROUND

The Defense Security Assistance Agency maintains an automated foreign military sales accounting system which, supplemented by manual records, provides detailed information on the value of foreign military sales. In September 1977, the Agency told the Congress that arms sales in fiscal year 1977 would approximate $9.9 billion. In November 1977, the Agency disclosed that its projections were understated by $1.4 billion. The understatement was attributed to a delay in applying a change in accounting policy whereby the dollar value of amendments increasing the scope of prior year sales agreements was to have been recorded as sales for the fiscal year in which the amendment was signed. Scope change increases cover additional quantities of items ordered, modifications to the configuration or design of items, and changes in the composition of services and training programs.

Defense Security Assistance Agency officials said that the $1.4 billion in accounting adjustments resulted because the Agency had erroneously followed superseded accounting practices and had recorded fiscal year 1977 scope increases as adjustments to prior year sales totals. They said that they were unaware of the magnitude of the error until the end of fiscal year 1977.

There are changes to sales agreements in addition to scope increases which have an important effect on the dollar value of sales reported. These changes are (1) scope decreases and (2) price changes. The accounting treatment prescribed by the Agency for the two types of changes follow.

Scope decreases. Where a change in a sales agreement results in a decrease in scope, Defense policies require it to be accounted for as a decrease to the sales total for the fiscal year in which the original sales agreement was signed. For instance, an amendment signed in fiscal year 1977, decreasing the scope of a fiscal year 1975 sales agreement, should have been accounted for as a decrease in the value of fiscal year 1975 sales.

Price changes. Price changes are generally the result of inflation, production delays, and/or poor price estimating. Defense policies require a price change to be accounted for in the same manner as a scope decrease. For instance, an amendment signed in fiscal year 1977 increasing or decreasing the price of an item or service included in a sales agreement signed in fiscal year 1975 should have been accounted for as an adjustment to the value of fiscal year 1975 sales.

ESTABLISHMENT OF FISCAL YEAR 1978 SALES CEILING

In a May 19, 1977, policy statement, President Carter said that the dollar volume of new commitments under the Foreign Military Sales and Military Assistance Programs for weapons and weapons-related items in fiscal year 1978 would be reduced from the fiscal year 1977 total. On February 1, 1978, the President placed an $8.6 billion ceiling on fiscal year 1978 sales.

In imposing the ceiling the President directed that the following sales be excluded: (1) sales to countries with which the United States has major defense treaties (North Atlantic Treaty Organization countries, Japan, Australia, and New Zealand), (2) sales of articles and services not considered to be weapons or weapons-related, such as most of this construction program in Saudi Arabia, and (3) commercial sales for which the U.S. Government must issue export licenses.

As shown below the fiscal year 1978 ceiling on sales was derived by inflating the value of fiscal year 1977 sales (less applicable exclusion as enumerated above) to constant fiscal year 1978 dollars and reducing the resultant figure by $695 million, or 7.5 percent, as directed by the President.

Calculation of value of fiscal year 1978 arms sales ceilings

[Amount in millions]

Total fiscal year 1977 sales reported by Defense Security Assistance Agency (including the $1.4 billion adjustment and applicable Military Assistance Program sales)	$11,469
Less exclusions:	
Sales to countries with treaties	(1,221)
Sales of articles and services not considered as weapons or weapons related	(1,479)
Subtotal	(2,700)
Adjusted fiscal year 1977 sales	8,769
Add 6 percent inflation factor to equate to fiscal year 1978 constant dollars	526
"Fiscal year 1977 sales in constant fiscal year 1978 dollars	9,295
Less reduction in sales set by the President (approximately 7.5 percent)	(695)
Fiscal year 1978 arms sales ceiling	8,600

INCONSISTENT AND ERRONEOUS SALES DATA USED TO COMPUTE FISCAL YEAR 1978 ARMS SALES CEILING

The Defense Security Assistance Agency used inconsistent accounting practices and made substantial accounting errors in increasing its reported fiscal year 1977 sales by $1.4 billion in adjustments made in November 1977. The inconsistencies and errors resulted in an overstatement of $594 million for those 1977 sales which related to articles and services subject to the arms sales ceiling.

The accounting inconsistencies and errors included in the $1.4 billion adjustments, which affected the computation of the 1978 arms sales ceiling, follow:

Although the Defense Security Assistance Agency reported that the entire $1.4 billion adjustment represented the value of sales scope increases, about $464 million of the adjustment pertained to price changes made to agreements signed prior to 1977. According to the Defense Security Assistance Agency's accounting procedures, price changes should be accounted for in the year the original sales agreement was signed.

About $133 million of the sales adjustment was misclassified as pertaining to increases in scope for items and services subject to the arms sales ceiling. The $133 million pertained to construction work administered by the Army Corps of Engineers in Saudi Arabia and the transaction should have been accounted for as a nonceiling sale.

About $11 million representing sales scope decreases pertaining to prior year sales agreements, were erroneously deducted from 1977 sales when the Agency made the $1.4 billion adjustment. As stated above, these decreases should have been accounted for as a decrease in sales for the year the sales agreement was originally signed.

The cumulative effect of other miscellaneous accounting errors was an overstatement of sales of $8 million.

As indicated above, the largest accounting problem pertained to price changes. Many of the contract amendments which were used as support for the $1.4 billion adjustment included both scope changes and price changes. Rather than determining how much of the amendment amount related to scope changes and how much related to price changes, the Agency treated the entire amount as a scope increase and recorded it as a fiscal year 1977 sale. Responsible Agency officials said that although they did not have a written policy covering those cases where scope and price were combined on a contract amendment, it was their intention to treat the entire value of the combined amendment as a scope change. This practice is inconsistent with (1) the Agency's overall policy of accounting for price changes and (2) the Agency's disclosure that the $1.4 billion adjustment represented the value of scope increases. For example, included in the $1.4 billion was an amendment increasing the value of a fiscal year 1974 sales agreement for sale of Patrol Chaser Missiles to Saudi Arabia by $185.6 million. The entire amount was treated as a scope change and recorded as a fiscal year 1977 sale. We found, however, that only $21.2 million of the amount represented a change in scope. The remaining $164.4 million represented the net value of price increases and should have, therefore, been accounted for as an increase to fiscal year 1974 sales to be consistent with the Agency's accounting policies for recording price changes. In two other instances, amendments for $49.8 million and $18.4 million, although entirely for price changes, were erroneously recorded as fiscal year 1977 sales.

IMPACT OF ACCOUNTING INCONSISTENCIES AND ERRORS ON ARMS SALES CEILINGS

Considering the accounting inconsistencies and errors we identified, the calculation of the fiscal year 1978 arms sales ceiling as shown in the following table may have been overstated by about $584 million.

Impact of accounting inconsistencies and errors on Defense Security Assistance Agency computations of fiscal year 1977 ceiling sales and the effect on the fiscal year 1978 arms sales ceiling

	Defense Security Assistance Agency (millions)	Adjusted for accounting inconsistencies and errors found by GAO (millions)	Difference (millions)
Value of fiscal year 1977 sales pertaining to items and services covered by the ceiling	$8,769	$8,175	$594
Sales adjusted for inflation from fiscal year 1977 to fiscal year 1978	9,295	8,666	629
Fiscal year 1978 arms sales ceiling	[1] 8,600	8,016	584

[1] Set by the President, representing an approximate 7.5 percent reduction from fiscal year 1977 ceiling sales adjusted for inflation to fiscal year 1978.

The table shows that instead of reducing sales in fiscal year 1978 by $695 million ($9,295 million less $8,600 million), the ceiling set by the President will result in reducing sales by only $66 million ($8,666 million less $8,600 million).

The table also shows that, had a 7.5 percent reduction been applied to the corrected sales figures the sales ceiling would have been $8.016 billion or about $584 million less than the current fiscal year 1978 ceiling. This is not to say, however, that the President would have decided to reduce sales by 7.5 percent had he known the correct value of fiscal year 1977 sales.

OTHER ACCOUNTING INCONSISTENCIES AND ERRORS PERTAINING TO THE $1.4 BILLION ADJUSTMENT DID NOT AFFECT THE 1978 ARMS SALES CEILING

In addition to the accounting problems discussed above, the Agency in recording the $1.4 billion adjustment used inconsistent accounting practices and made accounting errors amounting to $82 million which did not affect the value of fiscal year 1977 sales related to items and services subject to the arms sales ceiling. For instance, price changes totaling $81 million relating to sales of items and services not subject to the ceiling and sales to countries exempt from the sales ceiling, were included in the $1.4 billion adjustment. These amounts, although having no impact on the establishment of the fiscal year 1978 arms sales ceiling, caused fiscal year 1977 total sales to be overstated.

CONCLUSIONS

There were serious weaknesses in the Defense Security Assistance Agency's accounting for the $1.4 billion adjustment in fiscal year 1977 arms sales because the Agency inconsistently accounted for price changes and made other accounting errors. Also, its efforts to correct the accounting records at fiscal year end largely failed. As a result, information on which the President based the fiscal year 1978 arms sales ceiling was substantially incorrect.

The Defense Security Assistance Agency should correct its accounting records for arms sales and should inform the President and the Congress of the revised sales totals.

RECOMMENDATIONS

We recommend that the Secretary of Defense have the Defense Security Assistance Agency:

Make its accounting practices consistent by requiring that all price changes be accounted for as an adjustment to sales totals for the fiscal year in which the original sales agreement was signed.

Correct its accounting records for fiscal year 1977 sales taking into account the errors found to date in our review.

Formally report the revised sales totals to the President and the Congress.

Review its accounting for arms sales, especially for scope and price changes in fiscal year 1978, to assure that inconsistencies and errors similar to the ones we found were not made and correct the accounting records where necessary.

APPENDIX II

SCOPE OF REVIEW

Our review of the $1.4 billion in accounting adjustments included an examination of policies, procedures, transactions, and reports dealing with accounting for the value of Foreign Military Sales and Military Assistance Program commitments. We interviewed responsible officials to discuss policies, procedures, and other matters. Our review of the remaining fiscal year 1977 sales and the system of accounting for foreign military sales is still underway.

We made our review at the following military departments and organizations:

Departments of Defense, the Army, the Navy, and the Air Force, Washington, D.C.

Defense Security Assistance Agency, Washington, D.C.

Security Assistance Accounting Center, Denver, Colorado.

Army Corps of Engineers, Washington, D.C.

Naval Material Command, Washington, D.C.

Naval Air Systems Command, Washington, D.C.

Naval Sea Systems Command, Washington, D.C.

Department of State, Washington, D.C.

DEFENSE SECURITY ASSISTANCE AGENCY,
Washington, D.C., April 24, 1978.

Hon. LEE H. HAMILTON,
Chairman, Subcommittee on Europe and Middle East, House International Relations Committee, House of Representatives, Washington, D.C.

DEAR MR. CHAIRMAN: Thank you for providing the Defense Security Assistance Agency the opportunity to comment on the GAO report which examines the detailed accounting procedures used to calculate FY 1977 FMS sales, which formed the basis for the President's decision on the $8.6 billion ceiling on arms sales.

The General Accounting Office, in its review, employed different accounting methods to derive sales figures. Since we do not agree with the recording methodology employed, we cannot accept either the conclusions or recommendations contained in the report. The principal point of disagreement is the computation of combined scope and price changes. Scope changes represent alterations in the level or quality of goods or services to be provided. Price changes involve adjustments due to inflation, pricing refinements and changes in total quantity of an item produced, e.g., cuts for US and other customers thus increasing unit costs of remaining production. Scope changes plus combined scope and price changes are charged to the fiscal year in which they occur. Price changes are charged to the fiscal year in which the original contract was signed.

Fiscal year 1977 sales involved over 4,100 separate Letters of Offer and Acceptance—government-to-government contracts—between the U.S. military departments and foreign government procurement activities. These contracts included many more thousands of line items of defense articles and defense services. Included within these 4,100 contracts were approximately 100 modifications to prior year contracts which were executed during FY 1977 and charged to FY 1977 sales because our accountants had classified the transactions as a change in scope to the original contract. The FY 1978 ceiling of $8.6 billion—which is a policy approach established by the President to insure orderly decision-making, not a requirement of law—was established by applying a reduction of about $695 million to the total sales agreements executed during FY 1977.

In examining approximately 100 modifications to sales contracts, which we had classified as scope changes, the GAO contends that FY 1977 sales—which provided the basis for the FY 1978 ceiling—were overstated by $584 million. The GAO arrived at this conclusion by classifying a number of scope changes as price increases and stating that the changes should be shown against prior year activity, even though the modifications were negotiated and executed during FY 1977. Neither the Department of State nor the Department of Defense agree with the GAO conclusion. As long as a consistent recording policy is applied, there should be no net effect on the total amount of sales from year to year.

According to the GAO, the inclusion of approximately $464 million of price increases resulted in overstatement of FY 1977 recorded sales. Over $400 million of this amount resulted from DSAA's consistent practice (labeled as an inconsistency by the GAO) of recording single transactions involving both scope and price increases against current year rather than prior year sales. When occurring separately during FY 1977, scope changes above $100,000 were treated as sales in the year of the change; price changes were not. We are following the same practice in FY 1978 except the threshold has been lowered to $50,000 (i.e., additional scope increases would apply against (e.g., during contract definitization), military departments process the change as a single amendment (Form DD 1513–1) for the FY 1978 ceiling). When an amendment involves changes in both scope and price presentation within the Executive Branch, to the Congress when applicable, and to the purchasing country for acceptance, and DSAA records a single combined amount for the case value. This effect is offset in all subsequent years by the amount of price changes reported in the same cases with scope changes. As long as the treatment is consistent, there should be no net effect on the amount of new arms sales and scope changes in future years under the DSAA procedure, and there will be a significant saving in effort and simplification of the

The procedure outlined above has been review process.

The GAO approach would require separation of all scope and price changes even though they occur concurrently as part of a single transaction against the same case. This would involve difficult judgments as to the parts of the change attributable to scope and to price, but would have no substantial net effect on new sales and scope changes allowed within the ceiling in fiscal year 1978 or in future years. Based on our fiscal year 1977 experience, we believe that if we were to accept the GAO approach, over $400 million in sales would not have to be recorded against the fiscal year 1978 ceiling.
followed consistently since initial development of procedures to document price increases separately. Prior to May 1976, no distinction was made in documenting scope and price changes; all such changes were accounted for by issuing DD Form 1513–1. The first instruction which called for separate documentation of scope changes vs. price changes is enclosed for your review. This letter instruction was in effect on the date (August 1976) that a DD 1513–1 was issued to Saudi Arabia for the sales amendment mentioned in the first paragraph of page 5 of the GAO report.

On 6 October 1977, the Executive Branch made its final decision as to which item categories would be defined as ceiling related and non-ceiling related sales. After that decision, DSAA produced computer records identifying such sales based on the manner that they were coded in the computer system during fiscal year 1977. In its selective audit, GAO has identified a $133 million sale which, while correctly recorded in fiscal year 1977, should have been accounted for as a non-ceiling sale. This particular transaction was coded into the DSAA recording system shortly after Saudi Arabia accepted the sales amendment on 9 November 1976. GAO is correct that the transaction was not coded correctly. The error was caused by recording the purpose of the sale as technical assistance rather than administrative support. Since virtually all fiscal year 1977 transactions were recorded before firm decisions

were reached as to which sales would be considered ceiling related versus non-ceiling related, there was no added effort placed on the coding of individual line items on the Letters of Offer.

The two sets of transactions indicated above led to the GAO conclusion that the information on which the President based the fiscal year 1978 ceiling was substantially incorrect. The primary reason for this conclusion is, in our view, an erroneous interpretation by the GAO of DSAA procedures. The recording procedures which GAO labels inconsistent are those which DSAA applied consistently throughout fiscal year 1977 and has continued to apply consistently in fiscal year 1978. There is room for honest disagreement as to the amount of resources which should be expended to document separately those scope and price changes which occur within a single transacation. There would be disagreement as to how much of such changes were scope versus price; the distinction often cannot be made with certainty when the change occurs as the result of a single transaction.

Most transactions examined by GAO occurred during the first quarter of FY 1977—long before the decision was made to establish a FY 1978 ceiling. It is correct that DOD did not make major revisions to its recording system so as to "fine tune" the system for considerations involving the FY 1978 ceiling. Rather, the position was taken that the system generally was satisfactory as long as recording procedures were applied consistently from year to year.

We do not concur with the recommendations in the draft GAO report because we do not agree with the GAO conclusion relating to combining scope and price increases. We recognize that GAO has found some erroneous data during its selective audit, but if corrected these errors would only result in a less than 1 percent change in the FY 1977 sales totals.

As you know, the FY 1977 sales reported to Congress at year end simply represent a "snap shot" of the year's activity taken at a point in time shortly after the end of the fiscal year. Price changes, scope decreases, small scope increases, and sometimes program cancellations can affect the original estimated value of sales agreements over their complete life. Thus, DSAA issues annually a revised total of the value of sales agreements for each fiscal year, based on changes which take place in the current year. The true recording discrepancies identified by GAO represent an amount which is inconsequential in relationship to the value that FY 1977 sales totals ultimately will be revised for the reasons indicated above.

In summary, we believe that the GAO does not hold a valid basis for stating that FY 1977 sales were overstated.

Sincerely yours,

ERICH F. VON MARBOD,
Acting Director.

WASHINGTON, D.C., *May 4, 1976.*

Memorandum for Coordinator for Army Security Assistance (DACS-SA), Department of the Army; Director, Security Assistance Division (OP-63), Department of the Navy, and Director of Military Assistance and Sales/LGF, Department of the Air Force.

Subject: DD Form 1513-2, Notice of Modification of Offer and Acceptance

The DD Form 1513-2, "Notice of Modification of Offer and Acceptance" is herewith forwarded for immediate use. This form should be utilized to record modifications to an existing offer and acceptance, other than modifications which constitute a change in scope. (Note: Modifications which do affect the scope of the offer and acceptance require the use of DD Form 1513-1. Amendment to Offer and Acceptance.) All notifications of price increases to the purchasing government and related changes in payment schedules should be made by the DD Form 1513-2.

This form has been forwarded to the Military Department Supply Systems for distribution. Until this process is completed copies of this form may be obtained from DSAA, Management Division, Room 4B671.

Also attached are the instructions for use of the DD Form 1513-2. These instructions will soon be published as a revision to DOD Instruction 2110.29, "Method of Financing, Funding, Accounting, and Reporting for Foreign Military Sales to Friendly Foreign Governments and International Organizations."

WALTER B. LIGON,
Acting Director,
Defense Security Assistance Agency.

INSTRUCTIONS FOR PREPARING THE U.S. DEPARTMENT OF DEFENSE NOTICE OF MODIFICATION OF OFFER AND ACCEPTANCE, DD FORM 1513-2

A. General instructions:

1. This form is utilized to record modifications to an existing offer and acceptance, other than modifications which constitute a change in scope. (Modifications which do affect the scope of the offer and acceptance require a formal amendment, including acceptance by the customer. DD Form 1513-1, Amendment to Offer and Acceptance, is used for this purpose. See Enclosure 5, proceeding.)

2. Modifications appropriate for DD Form 1513-2 include all notifications of price increases to the purchasing government and related changes in payment schedules.

3. DD Form 1513-2 does not require acceptance by the customer, but merely acknowledgement of receipt.

4. All terms and conditions of an existing DD Form 1513 and any related amendments thereto not specifically noted as being modified by the DD Form 1513-2 remain unchanged and in effect.

5. Identifying reference data hereon will be the same as on the original offer and acceptance.

6. Instructions on the DD Form 1513 apply for the same columns of information that appear on the DD Form 1513-2.

7. Specific instructions apply only to additional entries to be made on the DD Form 1513-2.

B. Specific instructions:

Box:

(3) Notice No. Enter a consecutive notice number or alphabetical continuance of the number. Numbering of Amendments (DD Form 1513-1) and Notices (DD Form 1513-2) are independent, thus a possible sequence of events might be:

(1) Letter of Offer.
(2) Notice 1.
(3) Amendment 1.
(4) Notice 2.
(5) Amendment 2.

Box:

(8) Description of and Reason(s) for Modification. Describe briefly the modification(s) and the reasons(s) requiring that such modification(s) be made. Such information should be sufficiently clear, complete and specific that it could reasonably be anticipated to satisfy the customer without recourse to further correspondence. (Note that these remarks may be continued on the reverse of DD Form 1513-2, under Box 26, "Continuation.")

(10) List only items modified. Show dollar amounts in whole dollars only. If there are items on the DD Form 1513-2 not modified, enter N/A (not applicable) in appropriate boxes. For all notifications of price changes enter in box:

(a) Previous cost. The previous applicable costs from the original offer and acceptance or prior amendments and/or notices of modification thereto for the applicable cost lines 16, 17, 18, 19, 20, and 21.

(b) Revised cost. The best estimate of revised costs as applicable on lines 16, 17, 18, 19, 20, and 21.

(22) Acknowledgement of receipt. Authorized official should sign and forward to Military Department concerned to ensure that Notice of Modification has been received.

CHANGES RECOMMENDED TO DOD INSTRUCTION 2110.29 (SEPTEMBER 24, 1970)

Subject: Method of Financing, Funding, Accounting, and Reporting for Foreign Military Sales to Friendly Foreign Governments and International Organizations.

Brief: These changes are recommended in order to provide to the concerned DOD community a sample of the new (proposed) DD Form 1513-2, "Notice of Modifications of Offer and Acceptance," together with instructions for the use and completion of such form; and also to differentiate the DD Form 1513-2 from DD Form 1513-1, "Amendment to Offer and Acceptance" and to make clear the circumstances appropriate for the use of each of these forms.

Change 1: Revise Section XI (page 12) to read as follows:

* * * * *

XI. Instructions for preparing DD form 1513, offer and acceptance:

Instructions for preparing DD Form 1513, Offer and Acceptance, DD Form 1513-1, Amendments to Offer and Acceptance, and DD Form 1513-2, Notice of Modification of Offer and Acceptance, are stated in Enclosure 4, 5, and 6, thereto.

* * * * *

Change 2: Revise Section A of the "Instructions" page (page 1) of Enclosure 5, as follows:

* * * * *

A. General instructions:

1. This form is an amendment to an existing offer and acceptance. It is to be utilized only for changes affecting the scope of a DD Form 1513, and therefore requiring a formal amendment process including acceptance by the customer. Examples of changes of scope are changes affecting the type or number of major items and/or services to be provided or which significantly alter system configuration or functions. Modification to DD Form 1513 not affecting scope shall be made by DD Form 1513-2, Notice of Modification of Offer and Acceptance (e.g., all notifications of price increases and related changes in payment schedules). (See Enclosure 6, following.)

[2. through 4. remain the same]

* * * * *

Change 3: Revise "Box (a)" of Section B of the "Instructions" page (page 1) of Enclosure 5, to read as follows:

* * * * *

(a) Previous Cost. Enter the previous applicable costs from the original offer and acceptance or prior amendments and/or notices of modification thereto for the applicable cost lines 17, 18, 19, 20, 21, and 22.

* * * * *

Change 4: Add new Enclosure 6, as attached.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted as follows to:

Mr. WHITE, for the week of May 1, 1978, on account of business related to my U.S. Representative office.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

(The following Members (at the request of Mr. WALKER) and to revise and extend their remarks and include extraneous matter:)

Mr. WHALEN, for 5 minutes, today.

Mr. SARASIN, for 5 minutes, today.

Mr. MICHEL, for 60 minutes, on May 11.

(The following Members (at the request of Mr. WEISS) to revise and extend their remarks and include extraneous material:)

Mr. ANNUNZIO, for 5 minutes, today.

Mr. GONZALEZ, for 5 minutes, today.

Mr. ANDERSON of California, for 5 minutes, today.

Mr. PREYER, for 5 minutes, today.

Mr. KASTENMEIER, for 5 minutes, today.

Mr. PEPPER, for 60 minutes, today.

Mr. DRINAN, for 6 minutes, today.

Mr. MATTOX, for 15 minutes, today.

Mr. REUSS, for 20 minutes, today.

Mr. MOORHEAD of Pennsylvania, for 5 minutes, today.

EXTENSION OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

Mr. HAMILTON, notwithstanding the fact that it exceeds two pages of the CONGRESSIONAL RECORD and is estimated by the Public Printer to cost $1,068.

(The following Members (at the request of Mr. WALKER), and to include extraneous matter:)

Mr. BROOMFIELD.

Mr. HORTON.

Mr. SCHULZE.

Mr. ARMSTRONG.

Mr. ROUSSELOT in two instances.

Mr. HYDE.

Mr. BURGENER.

(The following Members (at the request of Mr. WEISS) and to include extraneous matter:)

Mr. WIRTH.

Mr. KASTENMEIER.

Mr. TEAGUE.

Mr. ANDERSON of California in three instances.

Mr. GONZALEZ in three instances.

Mr. CONYERS.

Mr. ROSE.

Mr. STARK in two instances.

Mr. OBERSTAR.

ADJOURNMENT

Mr. WEISS. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 1 o'clock and 45 minutes p.m.), under its previous order, the House adjourned until Monday, May 1, 1978, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

3994. A letter from the Principal Deputy Under Secretary of Defense (Research and Engineering), transmitting the fourth annual report on the Defense Industrial Reserve, covering calendar year 1977, pursuant to section 809 of Public Law 93-155; to the Committee on Armed Services.

3995. A letter from the Secretary of the Treasury, transmitting the eighth quarterly report on antirecession fiscal assistance to State and local governments, pursuant to section 213 of the Public Works Employment Act of 1976, as amended; to the Committee on Government Operations.

3996. A letter from the Secretary of the Treasury, transmitting a report on the status of the foreign contingent liabilities of the U.S. Government under its programs of foreign insurance or guarantee as of September 30, 1977, pursuant to section 634(f) of the Foreign Assistance Act of 1961, as amended; to the Committee on International Relations.

3997. A letter from the Assistant Secretary of State for Congressional Relations, transmitting notice of the Department's intention to consent to a request by the Government of Singapore for permission to transfer certain U.S.-origin technical data to the Government of Thailand, pursuant to section 3(d) of the Arms Export Control Act; to the Committee on International Relations.

3998. A letter from the Administrator of Veterans' Affairs, transmitting a draft of proposed legislation to amend title 18, United States Code, with respect to the protection of certain officers or employees of the United States, and for other purposes; to the Committee on the Judiciary.

3999. A letter from the Chairman, Interstate Commerce Commission, transmitting the Commission's 91st Annual Report, covering fiscal year 1977, pursuant to section 21 of the Interstate Commerce Act; jointly, to the Committees on Interstate and Foreign Commerce, and Public Works and Transportation.

REPORTED BILLS SEQUENTIALLY REFERRED

Under clause 5 of rule X, bills and reports were delivered to the Clerk for printing, and bills referred as follows:

Mr. UDALL: Committee on Interior and Insular Affairs. H.R. 12355. A bill to authorize appropriations to the Nuclear Regulatory Commission in accordance with section 261 of the Atomic Energy Act of 1954, as amended, and section 305 of the Energy Reorganization Act of 1974, as amended, and for other purposes (Rept. No. 95-1089, Pt. I). The Committee of the Whole House on the State of the Union discharged, and referred to the Committee on Interstate and Foreign Commerce for a period ending not later than May 15, 1978, for consideration of such provisions of the bill as fall within the jurisdiction of that committee under clause 1(1), rule X, and ordered to be printed.

PUBLIC BILLS AND RESOLUTIONS

Under clause 5 of rule X and clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. ARMSTRONG:

H.R. 12411. A bill to amend the Food and Agriculture Act of 1977 for the purpose of directing that an individual and the spouse of such individual in certain circumstances be considered as separate persons under certain regulations pertaining to payment limitations with respect to certain agricultural programs; to the Committee on Agriculture.

H.R. 12412. A bill to amend title 38, United States Code, to provide eligibility under the specially adapted housing assistance for disabled veterans program to any veterans with a permanent and total service-connected disability who is subject to loss of muscular control or seizures as a result of a service-connected nervous disorder; to the Committee on Veterans' Affairs.

By Mr. CORCORAN of Illinois (for himself, Mr. AUCOIN, Mr. ERLENBORN, Mr. ERTEL, Mr. MANN, Mr. MOORHEAD of Pennsylvania, Mr. RAILSBACK, and Mr. CUNNINGHAM):

H.R. 12413. A bill to expedite decisions concerning the temporary storage of spent fuel and the permanent storage of spent fuel and other radioactive waste, including the selection of sites for storage facilities, the determination of whether the Federal Government should take title to such fuel and such waste, and the amount of storage fees which should be charged; jointly, to the Committees on Interior and Insular Affairs, Interstate and Foreign Commerce, and Rules.

By Mr. DEVINE:

H.R. 12414. A bill to prohibit fuel adjustment clauses in electric utility rate schedules; to the Committee on Interstate and Foreign Commerce.

By Mr. DICKS:

H.R. 12415. A bill making additional appropriations for the Department of Labor for the fiscal year ending September 30, 1979; to the Committee on Appropriations.

By Mr. DRINAN:

H.R. 12416. A bill to amend the Internal Revenue Code of 1954 to provide for judicial review of certain interpretations of the Federal tax laws; jointly, to the Committees on Ways and Means, and the Judiciary.

By Mr. FLORIO:

H.R. 12417. A bill to establish a national system of reserves for the protection of outstanding ecological, scenic, historic, cultural, and recreational landscapes, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. HAMMERSCHMIDT (for himself, Mr. CLEVELAND, and Mr. KELLY):

H.R. 12418. A bill to amend the Communications Act of 1934 in order to prohibit the television broadcasting of programs portraying nudity, obscenity, or explicit sexual activity which is offensive to the public taste and morals; to the Committee on Interstate and Foreign Commerce.

By Mr. HOLLAND (for himself, Mr. BROYHILL, Mr. BRINKLEY, Mr. DERRICK, Mr. ROBINSON, Mr. MARKS, Mr. MICHEL, Mr. JENRETTE, Mr. ALEXANDER, Mr. SKELTON, Mr. WALGREN, Mr. GILMAN, Mr. TSONGAS, Mr. MATHIS, Mr. WOLFF, Mr. CHAPPELL, Mr. NOWAK, Mr. MARKEY, Mr. MOTTL, Mr. SCHULZE, Mr. MINISH, Mr. FLIPPO, Mr. BUCHANAN, Mr. HUCKABY, and Mr. BLOUIN):

H.R. 12419. A bill to amend the Trade Act of 1974; to the Committee on Ways and Means.

By Mr. HOLLAND (for himself and Mr. DAVIS):

H.R. 12420. A bill to amend title XVIII of the Social Security Act to authorize payment under the supplementary medical insurance program for optometric and medical vision care; jointly, to the Committees on Ways and Means, and Interstate and Foreign Commerce.

By Mrs. LLOYD of Tennessee:

H.R. 12421. A bill to amend the Internal Revenue Code of 1954 to provide for the exclusion from gross income of certain employer educational assistance programs; to the Committee on Ways and Means.

By Mr. McDADE (for himself, Mr. LEDERER, Mr. EDGAR, Mr. EILBERG, Mr. KOSTMAYER, Mr. MICHAEL O. MYERS, and Mr. NIX):

H.R. 12422. A bill to authorize the Secretary of the Interior to acquire the Walnut Street Theater, a national landmark, for

inclusion as a national historic site in Independence National Historical Park, Philadelphia, Pa., and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. MEEDS:

H.R. 12423. A bill to authorize the establishment of the Ebey's Landing National Historic Reserve in the State of Washington, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mrs. MEYNER:

H.R. 12424. A bill to amend title XIX of the Social Security Act to permit States to provide home health care service and other services to individuals who would otherwise be eligible to receive medical assistance if they were institutionalized; to the Committee on Interstate and Foreign Commerce.

By Mr. MOAKLEY (for himself, Mr. GUYER, Mr. DUNCAN of Tennessee, Mr. WINN, Mr. SIMON, Mr. PRICE, Mr. HARRINGTON, Mr. FARY, Mr. JENRETTE, Mr. WALGREN, Mr. CARNEY, Mr. EILBERG, Mr. BEDELL, Ms. HECKLER, Mr. MARLENEE, and Mr. PATTERSON of California):

H.R. 12425. A bill to amend title II of the Social Security Act to increase from 22 to 26 the age until which child's insurance benefits may be paid on the basis of full-time student status, and the age before which a child must have become disabled in order to qualify for such benefits on the basis of disability; to the Committee on Ways and Means.

By Mr. MOORHEAD of Pennsylvania (for himself, Mr. ASHLEY, Mr. BARNARD, Mr. CAPUTO, Mr. FAUNTROY, Mr. GARCIA, Mr. GREEN, Mr. LAFALCE, Mr. LUNDINE, Mr. MCKINNEY, Mr. PATTISON of New York, Mr. REUSS, and Mr. VENTO):

H.R. 12426. A bill to authorize the Secretary of the Treasury to provide financial assistance for the city of New York; jointly, to the Committees on Banking, Finance and Urban Affairs and Ways and Means.

By Mr. PANETTA (for himself, Mr. DUNCAN of Tennessee, and Mr. MINETA):

H.R. 12427. A bill to disregard, for purposes of certain taxes imposed by the Internal Revenue Code of 1954 with respect to employees, certain changes since 1975 in the treatment of individuals as employees; to the Committee on Ways and Means.

By Mr. RICHMOND (for himself, Mr. SYMMS, Mr. AKAKA, Mr. BALDUS, Mr. GLICKMAN, Mrs. HECKLER, Mr. HEFTEL, Mr. MCHUGH, Mr. NOLAN, Mr. PANETTA, and Mr. PEPPER):

H.R. 12428. A bill to establish procedures for the purposes of planning the coordination of certain nutrition education activities of Federal agencies; to establish certain programs for the purposes of coordinating nutrition education activities and of testing and demonstrating methods of increasing the quality, effectiveness, and availability of nutrition information; and for other purposes; to the Committee on Agriculture.

By Mr. STEIGER (for himself, Mr. ROSTENKOWSKI, Mr. GRADISON, and Mr. BRODHEAD):

H.R. 12429. A bill to amend the Internal Revenue Code of 1954 to provide a deduction for certain amounts paid to product liability loss reserve accounts; to the Committee on Ways and Means.

By Mr. ROUSSELOT:

H. Con. Res. 584. Concurrent resolution setting forth the congressional budget for the U.S. Government for the fiscal year 1979; to the Committee on the Budget.

By Mr. KAZEN:

H. Res. 1156. Resolution to amend the Rules of the House of Representatives to establish the Committee on Internal Security, and for other purposes; to the Committee on Rules.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. BENJAMIN:

H.R. 12430. A bill for the relief of Joseph Lichosyt; to the Committee on the Judiciary.

By Mr. KASTEN:

H.R. 12431. A bill for the relief of Yom, Chong Ok; to the Committee on the Judiciary.

SENATE—*Thursday, April 27, 1978*

(Legislative day of Monday, April 24, 1978)

The Senate met at 10 a.m., on the expiration of the recess, and was called to order by Hon. KANEASTER HODGES, JR., a Senator from the State of Arkansas.

PRAYER

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer:

Almighty and everlasting God, we lift our grateful praise to Thee for the glory of the Earth, the haunting new beauty of springtime, for gentle rains and lusty winds, the dawn of the new day, the stars in the night sky; for the love of family, for cherished friendships, for sacred memories, and for every radiant hope which inspires us on our pilgrim way.

Grant us wisdom and grace to face the tangled problems of the world, to do our best to solve them. As we work draw us closer to one another and to Thee. Despite disappointment, disillusion, defeat, and deferred hopes keep us striving for the better world yet to come. Surround the President, the Members of Congress, and all workers in the Government with Thy love and grace, granting to them that higher wisdom which hastens peace and justice at home and abroad. Reward their efforts by joy in Thy service and hearts at peace with Thee.

Through Him who loved mankind and gave Himself for our redemption. Amen.

APPOINTMENT OF ACTING PRESIDENT PRO TEMPORE

The PRESIDING OFFICER. The clerk will please read a communication to the Senate from the President pro tempore (Mr. EASTLAND).

The legislative clerk read the following letter:

U. S. SENATE,
PRESIDENT PRO TEMPORE,
Washington, D.C., April 27, 1978.

To the Senate:

Under the provisions of rule I, section 3, of the Standing Rules of the Senate, I hereby appoint the Honorable KANEASTER HODGES, JR., a Senator from the State of Arkansas, to perform the duties of the Chair.

JAMES O. EASTLAND,
President pro tempore.

Mr. HODGES thereupon assumed the chair as Acting President pro tempore.

RECOGNITION OF LEADERSHIP

The ACTING PRESIDENT pro tempore. The Senator from Colorado, the acting majority leader, is recognized.

THE JOURNAL

Mr. HART. Mr. President, I ask unanimous consent that the Journal of the proceedings of Wednesday, April 26, 1978, be approved.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

ROUTINE MORNING BUSINESS

Mr. HART. Mr. President, I ask unanimous consent that there be a period for the transaction of routine morning business, with speeches therein limited to 3 minutes.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

COMMITTEE MEETING

Mr. HART. Mr. President, I ask unanimous consent that the Foreign Relations Committee be authorized to meet during the session of the Senate on Friday, April 28, 1978, beginning at 2:30 p.m., to consider Middle East arms sales and other committee business.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

REFERRAL OF SENATE RESOLUTION 439 TO THE COMMITTEE ON FOREIGN RELATIONS

Mr. SCHMITT. Mr. President, yesterday I submitted Senate Resolution 439, to express the concern of the U.S. Senate about the April 20, 1978, Soviet attack on Korean Airline Flight 902.

We have checked with the Committee on Foreign Relations, and they have no objection to my requesting unanimous consent at this time that Senate Resolution 439 be referred to that committee.

The ACTING PRESIDENT pro tempore.

The Senator from Alaska, the acting minority leader, is recognized.

MINERAL EXPLORATION AND DEVELOPMENT IN ALASKA

Mr. STEVENS. Mr. President, a major issue involved in the d–2 question which

will be decided by Congress this year, is that of mineral exploration and development. Too little is known of Alaska's vast mineral potential to make final decisions on millions of acres of land which would preclude the appropriate and reasonable development of minerals found on d–2 lands. Sixteen of the eighteen minerals listed by the Federal Government in its strategic commodities list are found in sufficient quantities to justify commercial extraction. In fact, a recent Stanford Research Institute study of 7 mines in Alaska that are not now in production shows that in the 1990's, those mines would provide hardrock minerals valued between $850 million and $1 billion annually in 1977 dollars, create 20,000 to 40,000 jobs nationwide, and reduce the Nation's balance-of-payments deficit by between $700 million and $1 billion annually in 1970 dollars.

The vast majority of Alaska's lands, including the d–2 lands, have not been adequately explored. No permanent decision on the d–2 lands should be made without first completing an inventory of mineral resources.

Recently the Fairbanks North Star Borough Assembly passed a resolution calling upon Congress to establish a national mineral land designation. This resolution clearly points out the importance to all Americans of exploring, developing, and producing the mineral resources of Alaska to meet the needs of the United States. I ask that this resolution from the Fairbanks North Star Borough Assembly be printed in the RECORD at this time.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION NO. 77–5

Whereas, every human activity is dependent in some way upon the mineral industry; and

Whereas, the less minerals we mine domestically, the more we must import from foreign sources; and

Whereas, this spotlights the importance of exploring for and determining our domestic sources of every mineral that we use and develop them for our national needs to protect us from the threat of unwarranted price increases and curtailment of supplies; and

Whereas, every instinct of self preservation and national survival demands that we avoid any position of vulnerability in the supply of minerals; and

Whereas, potential sites for mineral development are determined by the natural occurrence of the minerals; and

Whereas, increasing amounts of land are being designated National interest lands and removed from potential development:

Now, therefore, be it resolved by the Assembly of the Fairbanks North Star Borough that they call upon Congress to establish a National Mineral Land designation to include all known mineralized areas whose principal use shall be for exploration, development and production of minerals to meet the needs of the United States of America; and

That a permanent process be developed to include designation of those mineral deposits that have been discovered or are discovered in the future on public lands.

Mr. STEVENS. Mr. President, I have had no requests for the minority leadership time. I yield back the remainder of that time.

(Routine morning business transacted and additional statements submitted are printed later in today's RECORD.)

CONCLUSION OF MORNING BUSINESS

The ACTING PRESIDENT pro tempore. Is there further morning business? If not, morning business is closed.

EXECUTIVE SESSION

The ACTING PRESIDENT pro tempore. Under the previous order, the Senate will now go into executive session and proceed to consideration of the nomination of Mr. Charles Luna, of Texas, to be a member of the Board of Directors of the National Railroad Passenger Corporation.

The Senate proceeded to the consideration of executive business.

The ACTING PRESIDENT pro tempore. The clerk will state the nomination.

NOMINATION OF CHARLES LUNA

The second assistant legislative clerk read the nomination of Charles Luna, of Texas, to be a member of the Board of Directors of the National Railroad Passenger Corporation.

The ACTING PRESIDENT pro tempore. The Senator from New Mexico is recognized.

Mr. SCHMITT. Mr. President, shortly today the Senate will vote on the nomination of Charles Luna to serve an additional term on the Board of Directors of the National Railroad Passenger Corporation—Amtrak. I think it is fairly well known that I am opposed to this nomination.

My concern with this nominee does not relate to his credentials. He has been involved with many facets of the rail industry through much of his life, and I presume his expertise and background have been meaningful to the Amtrak Board, upon which he has served two terms.

What is of great concern to me is the attitude that this nominee has toward the law and toward the Congress, and, in specific terms, toward the Committee on Commerce, Science, and Transportation.

Mr. President, a reading of the November 4, 1977, nomination hearing of Mr. Luna and others, provides an interesting background for today's vote. For openers, as Senator GRIFFIN noted on pages 20, 21, 22, 23, 38, and 40 of that hearing record, the hearing was held in violation of the Senate Rules and Senators who might otherwise have attended were not there to ask questions of Mr. Luna and the other nominees. I shall not, however, raise a point of order on that matter.

While I was one of those Senators who were not in attendance because of floor activities and other duties, I have been informed that the minority staff, prior to the start of the hearing, also voiced objections to its taking place.

Now, when the committee received Mr. Luna's financial statement just 2 days prior to his November 4, 1977 confirmation, hearing, which Senator GRIFFIN continually stated was in violation of Senate rules, it was noted that he held stock which clearly violated the provisions of the Amtrak Act. Additionally, his tax statements indicated that he was the recipient of a fee for services rendered as a member of the board of directors of a railroad company. Section 303(a)(7) of the Rail Passenger Service Act of 1973 specifically states that "No director appointed by the President may have any direct or indirect financial or employment relationship with any railroad during the time that he serves on the board." Mr. Luna's financial statement showed that he held 50 shares in the Providence and Worcester railroad, a small 45-mile freight line and was serving on its board of directors.

Additionally, Mr. Luna held 100 shares of Greyhound stock.

Section 303(a)(7) of the Rail Passenger Service Act also specifically prohibits any member appointed by the President from having "any significant direct or indirect financial relationship, or any direct or indirect employment relationship, with any person engaged in the transportation of passengers in competition with the Corporation, during the time that he serves on the board."

So, Mr. President, the 100 shares of Greyhound stock is also of significance and was held in violation of statute.

Mr. Luna was advised of his statutory conflict of interest situation by the White House and told to dispose of the stock and resign from the Providence and Worcester board. Mr. Luna did not do so, and, in fact, advised White House counsel that he has received permission from the Commerce Committee to hold such stock and serve on the P&W Board when he was confirmed as a board member in 1974.

Commerce Committee files and the hearing record show no such agreement between the committee and Mr. Luna, and the committee could not, in any event, release Mr. Luna from requirements of the law, Mr. President. It is ridiculous to think that they could.

After considerable pressure from the Commerce Committee, Mr. Luna agreed, in a letter dated November 4, 1977, the day of his reconfirmation hearing, to Chairman MAGNUSON, to sell his Providence & Worcester stock and resign his directorship from the Providence & Worcester Railroad Co. within 30 to 60 days after his confirmation—I underline and in italics emphasize the word "after." He stated that he had sold his Greyhound stock. However, since Mr. Luna was, and is presently serving on the Amtrack Board, his decision not to sell P. & W. stock and resign from its board only after his reconfirmation indicates to me his insensitivity to requirements of the law he is and will be charged with administering. I personally am shocked that a sitting Presidential appointment would advise a Senate committee that his agreement to resign a directorship and to sell stock which he holds clearly in conflict with the law is conditional upon his reconfirmation.

On February 9, the Commerce Committee met in executive session to consider the Luna nomination. At that time I, and others, expressed concerns about Mr. Luna's stock and directorship, and his attitude toward that stock, that directorship, that Commerce Committee, and the law.

While his nomination was reported, it was with the condition that he be instructed to advise the committee when he had sold his Providence & Worcester stock and resigned his directorship.

To date, the committee has only been advised that Luna has resigned from the P. & W. board.

Mr. President, it has been 5½ months since the committee first considered the Luna nomination and advised him to sell his stock. I believe we have been patient and reasonable. Frankly, I think his entire behavior from 1973 to the present demonstrates an arrogance with regard to the Senate, its committees, the White House, and the law.

I, frankly, am surprised that the White House has not withdrawn this nomination.

Now, Mr. President, no doubt there are some supporters of this nominee who will rise to his defense to express indignation about the difficulty of getting qualified individuals to serve in public office because of 'rampant retroactive morality."

Mr. President, I, too, am concerned about our ability to attract qualified individuals who have experience in particular fields to serve their country administering law and regulations relative to those fields. I think we have gone far overboard in many respects in making it difficult, if not impossible, to attract experienced personnel into Government.

However, I would remind those who might be tempted to take the position that we should confirm nominees, such as Mr. Luna, because of this difficulty in attracting qualified personnel, that there is nothing retroactive about this. What I am objecting to is a conflict of law and ethics that arose during the period Mr. Luna was holding public office.

If there existed criminal penalties for this violation of statute, we would have quite a different situation, Mr. President. Unfortunately, we are merely in a position where a statute has been violated without applicable criminal penalties.

Furthermore, this business about the new post-Watergate morality seems to be a song we hear more and more of these days and it is often sung by some of those same individuals who were quite happy to attack the ethical character of nominees from previous administrations. Well, what I am saying today is the standards by which we in the Senate judge possible illegal and/or unethical conduct of nominees—and our own colleagues and their employees—ought to be the same no matter which political party occupies the White House, or is in control of the Congress.

Mr. President, I hope that the Senate will see fit to, at the very least, recommit this nomination. But I, frankly, think the damage has been done, Mr. Luna's credibility is clearly compromised, and the Senate should not advise and consent to his nomination.

Mr. President, I yield the floor.

● Mr. CANNON. Mr. Charles Luna was nominated by the President on October 19, 1977, to serve as a member of the Amtrak Board of Directors. The Commerce Committee held hearings on his nomination on November 4, 1977, and the committee favorably reported his nomination on February 9, 1978.

Mr. Luna has previously served as a member of the Board, and his ability and understanding of the needs of Amtrak are beyond question. His continued service and experience will be invaluable to Amtrak in the future.

Some questions have been raised about Mr. Luna's ownership of a small amount of stocks and the membership of the board of a small railroad which has no connection with Amtrak. It is said that these relationships might create a potential conflict of interest. Mr. Luna fully disclosed these relationships at the time of his previous nominations, but due to an oversight by the Commerce Committee, they were never questioned. Mr. Luna was unaware that they might create a conflict of interest.

At the time of his current nomination, the committee pointed out the potential for conflict, and Mr. Luna agreed to divest himself of these relationships and, in fact, has taken steps to do so. I submit for the RECORD Mr. Luna's correspondence with the committee in this regard.

Any question of conflict of interest has therefore been resolved, and I urge that the Senate confirm Mr. Luna's nomination at this time.

The correspondence follows:

DALLAS, TEX.,
February 17, 1978.

Hon. HOWARD W. CANNON,
U.S. Senate, Russell Senate Office Building, Washington, D.C.

DEAR SENATOR CANNON: On November 4, 1977, I assured Senator Magnuson that I would take certain steps to remove objections which had been raised to my continued service on the Board of Directors of the National Railroad Passenger Corporation. Since that time I have sold my stock in Greyhound Corporation (at a loss) and no longer have any interest in that company.

Attached is a copy of a letter I mailed today to the President of Providence and Worcester Company (P&W) tendering my resignation from the Board of Directors of that company. I am also attaching copies of letters to the manager of the OTC trading desk at Shearson Hayden Stone and Herzog Heine & Co., notifying them that my 50 shares of P&W stock is for sale and asking them to make it available to a purchaser as soon as possible. With these steps, I believe I have substantially satisfied all obligations I agreed to assume.

You are entitled to an explanation regarding my offer to sell the P&W stock. As you may know, P&W's stock is not actively traded; two brokerage houses, Herzog Heine & Co., Inc. and Shearson Hayden Stone, make a market in P&W stock. Typically buyers or sellers of P&W stock place orders with one of these houses and ultimately trades are made. But since the stock is not actively traded, it often takes some time before a transaction is consummated. Complicating the problem further is the fact that my P&W stock, along with that of most other stockholders, is now being held in a depository pending consummation or abandonment of a tender offer. While it would be possible for me to retrieve my stock from the depository to make the certificates readily available to a brokerage house, such a step may not be necessary, depending upon the purchaser interested in acquiring my stock. Since retrieval could be disadvantageous to the company, I would prefer not to take that step at this time.

I hope and trust that the actions described above will be deemed sufficient. If they are not, I will do whatever else may be necessary.

Sincerely yours,

CHARLES LUNA.

DALLAS, TEXAS,
February 17, 1978.

Mr. ROBERT H. EDER,
President, Providence and Worcester Company, One Depot Square, Woonsocket, R.I.

DEAR BOB: The purpose of this letter is to tender my resignation from the Board of Directors of the Providence and Worcester Company.

Sincerely yours,

CHARLES LUNA.

DALLAS, TEXAS,
February 17, 1978.

MANAGER,
OTC Trading Desk, Shearson Hayden Stone, One Western Union International Plaza, New York, N.Y.

DEAR SIR: I own 50 shares of Providence and Worcester Company stock purchased in 1972 for $140 a share which I am required to dispose of as soon as is reasonably possible. Therefore, I am informing you that my 50 shares are for sale at par ($100 per share) or the best available price, even though I will suffer a $2,000 loss by selling at par.

I would prefer to dispose of my stock without withdrawing it from the depository now holding the certificates in connection with the tender offer. If this cannot be accomplished, however, I am willing to withdraw the certificates from the depository.

I look forward to hearing from you with respect to this matter as soon as possible.

Sincerely yours,

CHARLES LUNA.

DALLAS, TEXAS,
February 17, 1978.

MANAGER,
OTC Trading Desk, Herzog Heine & Co., Inc., Broadway, New York, N.Y.

DEAR SIR: I own 50 shares of Providence and Worcester Company stock purchased in 1972 for $140 a share which I am required to dispose of as soon as is reasonably possible. Therefore, I am informing you that my 50 shares are for sale at par ($100 per share) or the best available price, even though I will suffer a $2,000 loss by selling at par.

I would prefer to dispose of my stock without withdrawing it from the depository now holding the certificates in connection with the tender offer. If this cannot be accomplished, however, I am willing to withdraw the certificates from the depository.

I look forward to hearing from you with respect to this matter as soon as possible.

Sincerely yours,

CHARLES LUNA.●

Mr. HART. Mr. President, I ask unanimous consent that a vote on the nomination of Mr. Charles Luna occur at 1 p.m. today, that it be in order to ask for the yeas and nays at any time on that nomination, and that the pending nomination be laid aside so that the Senate may proceed to consider other nominations.

The ACTING PRESIDENT pro tempore. Is there objections?

Without objection, it is so ordered.

Mr. HART. Mr. President, I suggest the absence of a quorum.

THE ACTING PRESIDENT pro tempore. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. HART. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

NOMINATION OF BERTRAM R. COTTINE

Mr. HART. Mr. President, I ask unanimous consent that the Senate proceed to the next nomination.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered. The nomination will be stated.

The second assistant legislative clerk read the nomination of Bertram R. Cottine, of the District of Columbia, to be a member of the Occupational Safety and Health Review Commission.

Mr. HART. Mr. President, I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. WILLIAMS. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. SASSER). Without objection, it is so ordered.

Mr. WILLIAMS. Mr. President, the nomination of Bertram Cottine is the pending business?

The PRESIDING OFFICER. It is the pending business.

Mr. WILLIAMS. As the Senate now considers the President's nomination of Bertram Robert Cottine to be the third member of the Occupational Safety and Health Review Commission, I want to thank the leadership for bringing this nomination to the Senate at this time.

The Commission was created by section 12 of the Occupational Safety and Health Act of 1970, and serves the critically important function of reviewing the Secretary of Labor's enforcement of that act. It establishes the body of administrative law which governs our national effort to make our workplaces safe and healthful.

Mr. Cottine's nomination was referred to the Committee on Human Resources, and the committee extensively questioned him as to his fitness and competence to fill this most important post. I was impressed with the direct and frank nature of his answers, and his hope to simplify the Commission's procedures. I was pleased to hear his views on how the Commission can more efficiently and fairly fulfill its responsibilities.

After the hearing, Mr. Cottine responded to further written questions that were presented to him by the Senator from Utah (Mr. HATCH). His answers were made promptly and were most complete. On September 30, 1977, the committee unanimously reported Mr. Cottine's nomination to the Senate with a favorable recommendation. The nomination was again unanimously referred to the Senate on January 26, 1978—again with a favorable recommendation.

I am particularly impressed with the nominee. Mr. Cottine has devoted most of his professional life to the problems of industrial safety and health. He currently serves as special assistant to Assistant Secretary of Labor Bingham for policy matters. Prior to this, he had served with the health research group, and as an adjunct professor of law at Georgetown University.

He brings a wealth of valuable experience to this position. From the record of the Human Resources Committee hearings and from my discussions with him, I know that he will approach his duties in a fair and impartial manner and that he is committed to making the Commission truly responsive to the needs of America's workers and America's industry.

Mr. President, so that all Senators may know of the impressive background of Mr. Cottine, I ask unanimous consent that his biographical statement and curriculum vitae be included in the RECORD at this point.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

BERTRAM ROBERT COTTINE, NOMINEE TO BE A MEMBER, OCCUPATIONAL SAFETY AND HEALTH REVIEW COMMISSION

Bertram Robert Cottine is an attorney who has significant experience in administrative and health law. He is a member of the District of Columbia Bar and admitted to practice in several Federal jurisdictions.

Bert Cottine is the author of a major handbook for non-lawyers on how to prepare and argue a case before the Review Commission. This handbook was based on his working familiarity with the Commission's case law and procedures.

Since April 1977 Mr. Cottine has served on the staff of the Assistant Secretary of Labor, Dr. Eula Bingham.

Bert Cottine served on the faculty of the Georgetown University Law Center prior to his April appointment. He developed a comprehensive clinical program on the medical-legal problems of the disabled and also worked with the Georgetown University Program for Child Development on health and disability related legal issues.

From 1972 to 1975, Mr. Cottine was the staff attorney for occupational health at the Health Research Group in Washington, D.C. His responsibilities included administrative proceedings and appellate litigation on health standards, Review Commission proceedings, and testimony on the implementation of the Occupational Safety and Health Act.

Bert Cottine was educated in the public schools of Hicksville, New York. He completed his bachelor's degree with honors at Carnegie-Mellon University and received his Juris Doctor from Boston University School of Law. While at law school he founded a legislative research bureau and was presented the faculty award for community service.

Professional associations include the American Bar Association and the American Public Health Association.

Bert Cottine is a native of New York State and currently resides in the District of Columbia.

CURRICULUM VITAE: BERTRAM ROBERT COTTINE

Address: 4016 Calvert Street, N.W., Apartment 6, Washington, D.C. 20007 (202) 965-2719.

Born: April 2, 1947, Kingston, N.Y.

Marital Status: Single.

Admissions: United States Court of Appeals: District of Columbia, Third and Seventh Circuits; United States District Court for the District of Columbia; and District of Columbia Court of Appeals.

Legal Education: Boston University School of Law and J.D. Conferred June 1972.

Preparatory Education: Carnegie-Mellon University, Bachelor's Degree Conferred with Honors June 1969; Hicksville High School, Hicksville, New York; Regents Scholar.

Honors: Who's Who in Health Care; Law School Faculty Award for Dedication to Community Service; Carnegie-Mellon University Degree Conferred with Honors; and Regents Diploma with Scientific Honors.

Employment: Special Assistant, Office of the Assistant Secretary of Labor for Occupational Safety and Health; United States Department of Labor, April 1977—Present.

Adjunct Professor, Georgetown University Law Center; Project Coordinator and Attorney—Law and Developmentally Disabled; Deputy Director, D.C. Project: Community Legal Assistance and Street Law, October 1975—March 1977.

Legal Advisor, Developmental Disabilities State Planning Council for the District of Columbia; Seminar Instructor, Law and Developmental Disabilities Supervising Attorney: Clinical Students & Research Assistants; Mock Trial: The Infant's Right to Survive, Attorney, Georgetown Adolescent Intervention Team, University Affiliated Program for Child Development, Georgetown University Medical Center.

Legal Consultant, University Affiliated Program for Child Development; Associate Director on Legal Barriers, Regional Rehabilitation Research Institute, George Washington University.

Staff Attorney & Staff Associate for Occupational Health; Health Research Group, Washington, D.C., August 1972—October 1975.

Author, Winning at the Occupational Safety and Health Review Commission: A Handbook (1975).

Proceedings on Occupational Health Standard on Carcinogens.

Occupational Safety and Health Review Commission Proceedings.

Director, Task Force on Workers' Health Imminent Danger & Discriminatory Discharge at Metro Subway Construction Site.

Economic Impact Analysis of Permanent Standard on Vinyl Chloride.

Comments on Proposed Rulemaking, Administrative Testimony, Legislative Activities, Speeches and Press Conferences.

Faculty, Practicing Law Institute, Occupational Safety and Health Law 1975.

Legislative Intern, Massachusetts House of Representatives, Summer 1971.

Investigation & Legislation on Equal Educational Opportunity.

Law Clerk, Supreme Court of New York-Nassau County, Summer 1970.

Research & Briefings on New Criminal Procedure Law.

Investigation & Preparation of Criminal Defense Cases.

Mr. WILLIAMS. Mr. President, the Occupational Safety and Health Act is a comprehensive and far reaching law, which is intended to assure safe and healthful working conditions for our Nation's most valuable resource, its working men and women. It is also a widely resented program.

OSHA is addressing the problems of heavyhanded enforcement and nitpicking standards. Every Member of this body has a full file of constituent complaints that describe heavyhanded enforcement and nitpicking enforcement as well as nitpicking standards in the past. These files, I say, are fortunately yellowing with age because Secretary Marshall and Assistant Secretary Bingham have said they will purge the rule books of picayune standards, and will redirect OSHA's enforcement efforts so that it concentrates on the serious problems of workplace safety and health. This is more than in the process; it is being accomplished in so many specific and so necessary and such helpful ways.

Mr. Cottine, as policy assistant to Dr. Bingham, has played an important part in these reforms which are already, as I have indicated, well underway.

I am convinced that Secretary Marshall and Assistant Secretary Bingham will be successful in this reform effort, and that they will make OSHA an efficient and effective agency which assists America's industry and protects America's workers.

Mr. President, we must judge Bert Cottine on his background, his impressive credentials and his great promise. We should not judge Mr. Cottine on the basis of other people's records. We must not fail to confirm Mr. Cottine because there is resentment of OSHA because of that past history that I mentioned earlier, the regrettable past history of some of the regrettable enforcement or malenforcement under previous administration.

The review commission needs its third member. Every day that the commission continues with a bare quorum, its effectiveness remains diminished. This diminished effectiveness works to the distinct disadvantage of our working men and women and their employers, since until the Commission has all three members, it cannot resolve many of the cases which have been accumulating these past several months. Most of these cases are employers' appeals, and employers have the right to have their appeals ultimately decided. This failure to confirm a third member of the Commission presents a very serious obstacle to the administration's efforts to streamline the OSHA program, and continues the uncertainty which has plagued this program in the past.

Mr. President, it is time for the Senate to act. I strongly urge the confirmation of this dedicated and most promising nominee.

I know that there have been reservations expressed to this nomination, and that, of course, is one of the reasons why it has been so long in reaching the Senate floor. I respect the Members who have their reservations, but I hope that through this airing in this confirmation debate on the nomination, the problems will be clarified.

A relatively new Member of the Senate Human Resources Committee, a very diligent, hard-working, and very force-

ful member, has had some reservations. I see that he is on the floor. The Senator from Utah (Mr. HATCH), I know, wishes to speak, and so at this point, Mr. President, I yield the floor.

Mr. HATCH. Mr. President, I think the distinguished Senator from New Jersey, who has been a good friend of mine during my service in the Senate, and has been, I think, very fair and judicious in his chairmanship of the Human Resources Committee. He has been very kind to me personally, and I have deep regard for him.

I believe that my constituents in Utah and others in the Intermountain West have been extremely concerned about the effects of OSHA through the years of its operation because of the overwhelmingly oppressive nature of that agency. I compliment Secretary Marshall and the new head of OSHA, Mrs. Bingham, for their public statements indicating that they are going to stop that kind of officious, overwhelming, burdensome conduct for which OSHA has become notorious, and which conduct has, in my opinion, been tremendously detrimental to small business, and to both employers and employees throughout much of this country. I believe they have made some strides, and that they are trying to effectuate basically decent changes.

I do have some concern about Mr. Cottine. During committee hearings, I raised some questions, and he provided some answers. I did not hold up the reporting of his nomination out of the committee, nor even try to, because I believed the committee would report it out anyway. But I think it is important that we understand some of the criticisms and the nature of the criticisms with regard to this nomination, because Mr. Cottine, I think, has promised our committee and me that he will not act officiously in fulfilling his responsibility as a member of the Review Commission.

On the other hand, some of the things he has done in the past may lead reasonable minds to differ with that appraisal, and cause a lot of concern among small businessmen and other people throughout society because he has not always been a champion for both sides in OSHA matters, but for the most part, he has championed only one side and thus indicating that he could be every bit as oppressive as have been many OSHA-crats in the past.

BACKGROUND

Mr. Cottine was nominated by President Carter September 7, 1977, to fill the vacancy which presently exists on the Occupational Safety and Health Review Commission.

From 1972 to 1975 Cottine was a staff attorney and staff associate to Public Citizen's Health Research Group (a Nader organization).

From 1975 to 1977 he was an adjunct professor at Georgetown University Law Center.

In April 1977, Cottine became special assistant for policy in the office of the Assistant Secretary of Labor for Occupation Safety and Health.

Mr. Cottine has for the past several years been an active participant in OSHA matters, and his past affiliations and public statements on numerous safety and health issues give rise to serious concern within the business community over the possible elevation of Mr. Cottine to the position of Commissioner.

THE REVIEW COMMISSION SEC. 12 OCCUPATIONAL SAFETY AND HEALTH ACT OF 1970

The Occupational Safety and Health Review Commission (OSHRC) was established by the Occupational Safety and Health Act of 1970. It is an independent, adjudicatory body composed of three members appointed by the President "* * * from among persons who by reason of training, education, or experience are qualified to carry out the functions of the Commission * * *"

(f) For the purposes of carrying out its function under this Act, two members of the Commission shall constitute a quorum and official action can be taken only on the affirmative vote of at least two members.

The Review Commission takes jurisdiction of a case when an employer contests a citation issued by the Occupational Safety and Health Administration. Such notice can be filed by employers to contest proposed abatement periods, proposed penalties, and/or the merits of the violation alleged in the OSHA citation. Employees, or their duly authorized representatives, are also authorized by the act to file notices of contest with respect to abatement periods proposed by OSHA in citations it issues to employers. Once the Review Commission assumes jurisdiction, it can, after a hearing before an administrative law judge, "issue an order based on findings of fact, affirming, modifying or vacating the Secretary's citation or proposed penalty, or direct other appropriate relief, and such order shall become final 30 days after its issuance." Section 11(a).

Indeed, if supported by substantial evidence, the Commission's findings of fact are conclusive before the court of appeals.

An examination of background data and public statements reveals that Mr. Cottine has, for years, been an active and emotional advocate of unreasonably severe enforcement, higher penalties, shortened abatement periods, disregard for economic factors, and disregard for the employer's good faith efforts at compliance and abatement. Mr. Cottine's sympathies clearly and unequivocably have been on the side of labor. His attitude is characterized by severe criticism of the Department of Labor and OSHA on the ground of not enough inspections, too low penalties, as well as OSHA's alleged eagerness to avoid contests by withdrawal of citations or compromise of penalties or abatement periods. He has charged that the Labor Department is concerned with the "statutorily irrelevant" economic impacts of standards. His philosophy is that an employer will never recognize the force of law behind standards so long as there are infrequent inspections, relatively mild penalties and long abatement periods. With a Chairman already clearly and consistently backing labor's arguments, and there being a need of the vote of only two commissioners to make a quorum and majority.

Mr. Cottine's confirmation would create a serious imbalance in the panel with the scales of justice being heavily weighted solely on the part of labor.

The nominee has criticized both OSHA and the Review Commission for "overdevelopment" of due process. He has been regarded as blatantly anti-business. Following Cottine's testimony before the Select Subcommittee on Labor on May 22, 1974, Representative ESCH noted:

Perhaps our point of disagreement is the blanket condemnation of all employers which says, in effect, that the only time they are going to try to protect their workers would be when you have big-brother government enforcing the law. I believe that there are other motivations, one of which, of course, is an economic consideration. But a more important reason is that many employers do have a very deep conecrn for the health and safety of individual human beings. I reject the blanket condemnation that you make of all employers.

Representative ESCH was not very enthusiastic about some of the attitudes of this man whose nomination we are now considering.

Employers could be denied due process if we bear in mind the nominee's stated conviction that in the past the Commission has suffered from "overdevelopment" of due process; and the congressional objective of an adjudicatory body will again have been nullified.

In 1975 Mr. Cottine, while employed by Public Citizen's Health Research Group, coauthored a Workers' Handbook on Enforcing Safety and Health Standards entitled "Winning at the Occupational Safety and Health Review Commission."

The following are selected statements from that handbook:

Supposedly the Occupational Safety and Health Administration (OSHA) enforces your right by setting standards controlling work hazards and sending out inspectors to make sure these standards are met.

Thus, if you value your life and health, don't depend on OSHA to enforce your rights.

While discussing an employee's opportunity and importance in participating in Commission proceedings, he stated:

Since out-of-court settlements are strongly encouraged by the Commission the case may be settled from underneath you before you have a real chance to develop and present your side.

. . . it is easy for a judge to get lost in a maze of legal arguments and forget the urgent problems of real people in real danger.

Because your employer is aware that the Secretary knows very little about his operations, your employer can basically say whatever he wants when no one is there to contradict the statements.

Under a section entitled "Helping the Secretary's Lawyer" Cottine stated:

Second, some of the Secretary's lawyers like to maintain comfortable working relationships with the Judges they appear before regularly. A tendency not to make too many waves obviously conflicts with your need for aggressive representation.

Third, pressure on the Secretary's lawyers to settle cases tends to defeat the real purpose of the Act which is to make your workplace safe.

Fifth, cases are won or lost not on the basis of what the facts actually are, but on the basis of those facts presented to the judge at the hearing.

Participation also improves your bargaining position by providing first-hand information on how your employer is selling his occupational safety and health program to OSHA. Some employers want to appear reasonable and concerned *at the hearing*. To maintain this appearance they make commitments which can be effectively used at a later date. By participating, you can take note of these statements for use in future bargaining.

Further evidence of Mr. Cottine's close association with labor organizations throughout his career is shown by the following footnote from "Winning at the Occupational Safety and Health Review Commission": "The Health Research Group has joined with numerous unions to actively challenge the inadequate and incomplete standards issued by OSHA."

I must add that not many of our businessmen out West feel that the standards are inadequate or incomplete. OSHA standards have, in the past been overenforced, and our businessmen have been oppressively overregulated.

In the acknowledgements section of the handbook previously referred to, Mr. Cottine stated:

My working association with Tony Mazzocchi and Steve Wodka of the Oil, Chemical and Atomic Workers International Union, AFL–CIO, provided the practical experiences on which this Handbook is based.

In January 1974, Health Research Group and the Oil Chemical & Atomic Workers Union jointly petitioned for issuance of a carcinogen standard.

In addition, North Carolina Public Interest Research Group—a Nader associated organization—joined with the Textile Workers Union of America, AFL–CIO, in petition to Department of Labor for revision of the occupational health standard on cotton dust.

Since its creation under the Occupational Safety and Health Act of 1970, the Review Commission has emerged as an extremely important and active Federal agency in terms of its actual impact on the business community. Thus, for example, the Commission's affirmance of a single OSHA citation could easily trigger the compulsory expenditure of literally millions of dollars in abatement costs for the involved employer.

Historically, efforts have been made to provide a proper philosophical balance on the Commission by attempting to assure that labor, management, and Government's interests are all fairly represented on the panel. Presently, management's interests are represented by Commissioner (former Chairman) Barnako and labor's interests are represented by Chairman Cleary. The slot which Mr. Cottine is nominated to fill was recently vacated by Robert D. Moran who was perceived to be the "public" member, and I find it difficult to find Mr. Cottine to be "public" in any way, but is, indeed, oriented to the "labor" side.

Mr. Cottine has a lot of good responses in his answers to my interrogatories and many of those answers reassure me. I am concerned about abuse by the Review Commission if Mr. Cottine becomes a member of that Review Commission.

I am concerned in this day and age with the oppressions by the bureaucracy which have been almost overwhelmingly against business in our society, and almost all of which emanate from the seat of Federal bureaucracy in Washington.

Likewise, I am concerned with inadequate staffing and inadequate training of OSHA representatives who seem to think that their success is measured by how many citations they can indiscriminately issue against various small businessmen in our society. It is not necessarily limited to small businesses. I cite small businessmen because they are the most likely to always suffer from vicious bureaucratic standards of domination. We have seen enough of that to last us many lifetimes in the West, and I think all over this country.

Now I am concerned that a man who has been a total advocate for one special interest group may reverse the trend of recent months from a reasonable approach to OSHA standards, which may not be nearly so oppressive as it has been in the past, to one that will then become even more activistic and unrealistic in enforcement and compliance activities based upon some of the ridiculous, idiotic approaches that staff people of OSHA have tried to impose upon the American people in the past.

I have great concerns about Mr. Cottine, and I will be watching, assuming that he is confirmed today; I will be watching with great interest how he acts as a member of the Review Commission. I think he can do himself great harm. He can do great harm to the purposes of OSHA which are, after all, noble—that is, to provide safe work places for the working people of our society. He can do the whole Congress great harm by becoming too much of an activist for one particular point of view and this will only result in great harm to the country.

I hope that his experience as a law professor has broadened his outlook; and I hope that he has had additional experiences since working for what some have characterized as radical special interest groups so that he can become a useful and decent member of the Review Commission.

I am concerned in this day of overwhelming government dominance in our society that the current administration is appointing special interest people in special interest ways for special interest purposes. Because of their antagonistic approaches, these appointments are to the detriment of these who produce throughout our society, and ultimately they hurt our laboring force, the workers in society, for whom I have the highest respect.

I am further concerned, that in the mass of bureaucracy, we have here in Washington, this administration is appointing too many people who are not balanced in their perspectives, or, should I say, who are overbalanced in their perspectives to one particular point of view. There does not appear to be the fairness which has characterized administrations of the past.

I know that every businessman in the United States has to be concerned about Mr. Cottine being appointed to the Review Commission because, having lived through the last number of years, with the officiousness of OSHA prior to Secretary Marshall and Dr. Bingham, they surely do not want to go back to the "Gestapo-like" approaches which have been used by OSHA in the past.

Mr. WILLIAMS. Will the Senator yield?

The PRESIDING OFFICER (Mr. CHILES). Does the Senator yield?

Mr. HATCH. I am delighted to yield.

Mr. WILLIAMS. I hope he will reconsider that particular word "Gestapo."

Mr. HATCH. I will not reconsider it, because I have had thousands of employees from all over the country coming to me and saying they have just walked on their premises——

Mr. WILLIAMS. Then let us define what you are talking about when you say "Gestapo."

Mr. HATCH. I will not do it.

Mr. WILLIAMS. We have all had our laments with the enforcement and administration of OSHA under prior administrations. Everybody in this body has heard grievous laments. But nobody has ever suggested any language like that. I have heard some strong language used to describe some of the appointees to these positions under the Nixon administration. I did not approve of a great deal of the enforcement and administration of OSHA under the Ford administration. I will tell you that. But we never used "Gestapo" to describe that administrative agency.

Mr. HATCH. How does the distinguished Senator from Delaware describe——

Mr. WILLIAMS. Now, you see, you are false in part, and you are false in toto. Why do you put me into Delaware, for example?

Mr. HATCH. Excuse me. I should have known better.

Mr. WILLIAMS. You should have, and you should not have said "Gestapo."

Mr. HATCH. Yes, I should have said "Gestapo."

Mr. WILLIAMS. I will not pursue that. I was harsh on the Nixon administration and the Ford administration in many respects but never that harsh.

Mr. HATCH. I respect that, but maybe you should have been more harsh. Many of the things that went on in OSHA in bygone years have been detrimental to America and I think the actions have been officious, aggressive, and just as oppressive as some of the tactics used during the Second World War.

Mr. WILLIAMS. Those words I accept. They do not have the same connotation—officious, aggressive, oppressive, I can agree with.

Mr. HATCH. I think they do have the same connotation. When they can walk on a premise and start issuing citations without announcements, trying to get people trapped.

Mr. WILLIAMS. Even so, there has always been a review process. Here is what we are faced with now, I respectfully advise, once again, the Senator that I have so much friendship for: Here is where we are now. Cases are piled up without decision because we have a one-to-one situation on the Review Commission. We have had it because this nominee has not had the opportunity for his day in this Chamber; for a vote on his nomination.

We all respect the day in court, we also should respect the opportunity for the nominee to have his day in the Senate when he is nominated, to have a vote and maybe be confirmed.

Mr. HATCH. I appreciate the comments made by my distinguished colleague and friend from New Jersey, who knows I have deep feelings for him.

I will say this, you can ask someone like Mr. Barlow, from Idaho, whose case is now in the Supreme Court awaiting a decision that will be made any day now, whether he feels that word is too harsh, when it has cost him thousands and thousands of dollars to attempt to protect his rights and vindicate what he and I consider to be oppressive conduct by a police state-type approach. I do not think the word is too harsh for some of the past actions.

I agree with the distinguished chairman of the Human Resources Committee that that word would be harsh for most of the OSHA actions since Mrs. Bingham has come in and since Secretary Marshall has taken over the Labor Department. I have complimented them and I shall continue to do so.

I hope I can compliment Mr. Cottine in the future, because I shall be watching what he is doing. He has indicated that he will not be oppressive or officious. He will not be a "Gestapo-like" person, to coin a phrase.

I hope that he will not, because sometimes these people, in their zeal to have their one particular point of view put forth, do so at the expense of everybody in America.

In conclusion, I should like to say that I have to admit that the things I have heard in the past about Mr. Cottine have not pleased me. I am worried that we may be putting somebody in this position who is too stringently allied with special-interest groups and with only one special-interest sector of our society, who will not fulfill the public interest position to which he has been nominated and will weigh this Review Commission to one side, rather than having a fair, reasonable, and balanced Commission.

I hope that is not the case. I hope Mr. Cottine will be as he indicated to me in committee. But I think these matters have to be raised, because I, for one, do not want to see this bureaucratic return to what we have had in the past. I do not want to see that type of activity and I, for one, hope that the Supreme Court upholds Mr. Barlow's particular challenge.

Let me conclude with this: I think it is logically irrefutable that the bureaucracy back here in Washington often creates crises in order to create more bureaucracy, in order to have more control over all of us, I think to the detriment of everybody. OSHA has been, in the past, at least, a prime illustration of bureaucratic overreach at the expense of the people who really make this country grow and move.

With that, I am happy to yield to the distinguished Senator from North Carolina.

Mr. WILLIAMS. Mr. President, will the Senator yield to me just a second?

Mr. HELMS. Yes, I yield.

Mr. WILLIAMS. Mr. President, I ask unanimous consent that the yeas and nays may be ordered at any time on this nomination and, when ordered, that the vote occur at 1:15 p.m.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HATCH. Can we not have it earlier than 1:15?

Mr. WILLIAMS. There is another vote scheduled at 1 o'clock. For a good reason, this should come after that, because everybody has been put on notice about that vote.

Mr. HATCH. Will the Senator from North Carolina yield to me?

Mr. HELMS. I do not have the floor.

Mr. WILLIAMS. I yield the floor for a discussion.

Mr. HATCH. I just want to make one comment. That is that the Senator from Utah will not be able to be here for a 1:15 vote. If the vote occurs during my absence which is necessitated by a previous commitment to be out of town, may the record reflect I would vote against the Cottine nomination.

Mr. WILLIAMS. Mr. President, I withdraw my request.

The PRESIDING OFFICER. The request is withdrawn.

(The following proceedings occurred later and are printed at this point in the RECORD by unanimous consent.)

Mr. WILLIAMS. Mr. President, I ask unanimous consent that the order for the vote at 1 o'clock be vitiated; that when the yeas and nays are ordered on the Cottine nomination, it occur at 12:30, and that the Luna vote occur at 12:45.

Mr. HELMS. Mr. President, reserving the right to object—and I do not intend to object—I ask my colleague from North Carolina if that is agreeable to him.

Mr. MORGAN. I am sorry. I did not understand the request.

Mr. WILLIAMS. That the time on the Luna nomination be changed to 12:45.

Mr. MORGAN. Is there an order on the Cottine nomination as yet?

Mr. WILLIAMS. Not yet.

Mr. MORGAN. For the time being, I will object. I may be willing to agree later.

The PRESIDING OFFICER. Objection is heard.

(The following proceedings occurred later:)

Mr. WILLIAMS. Mr. President, will the Senator yield?

Mr. HELMS. I yield.

Mr. WILLIAMS. Mr. President, I renew the request that the order for the 1 o'clock vote be vitiated; that the yeas and nays be ordered on the Cottine nomination, with the vote to occur at 12:30; that the vote on the Luna nomination occur at 12:45.

The PRESIDING OFFICER. Is there objection?

Mr. HELMS. I have no objection.

The PRESIDING OFFICER. Without objection, it is so ordered.

(This concludes proceedings which occurred earlier.)

Mr. HELMS. Mr. President, the issue here is whether there will be even-handedness in the administration of OSHA. The distinguished Senator from New Jersey is absolutely correct; there were just as many complaints about OSHA under previous administrations as there are now.

So I join him in what I understand his implication to be—that the faults of OSHA, the heavyhandedness of the bureaucrats in OSHA, certainly are not new specters on the horizon.

Mr. President, let me say at the outset that there is nothing whatsoever personal in the Senator from North Carolina's objection to Mr. Bertram Robert Cottine. He has been nominated by the President of the United States to be a member of the Occupational Safety and Health Review Commission.

He undoubtedly will be confirmed by this Senate because, in the first place, only a scant number of Senators are here to hear the discussion as to the advisability of confirming this nomination; and secondly, partisan discipline is a fact of life.

This too often is the case. On so many occasions I have had Senators tell me a week or 10 days after a vote, or even sooner than that, that they wished they had been aware of certain information that would have been available to them if they had been on this floor and heard the debate.

But the operation of the Senate is not at issue here this morning except in an ancillary way. The question before us is the nomination of Mr. Cottine.

Mr. President, I recall that in 1976 we had two candidates for the Presidency, each of whom went across this Nation assuring small businessmen that if he were elected President of the United States something was going to be done about the "bureaucratic mess" in Washington, D.C.

One of these candidates was elected and he is now at bat. It is his judgment, and his judgment alone which in the end will determine who will operate that same bureaucracy about which he complained so fervently in 1976.

He has his chance now to straighten out the Federal bureaucracy by selecting fair and unbiased officials to operate the bureaucracy. He had a chance in the instance of the vacancy of the Occupational Safety and Health Review Commission.

Mr. President, it is no secret to any Senator, certainly it is no secret to any Senator who does no more than glance at his mail, that OSHA has become the symbol of a bloated bureaucracy gone berserk.

The Senator from Utah has described rather vividly the excesses of this Agency He alluded to many laughable and sometimes pathetic stories of OSHA absurdities which are not funny to the small businessmen and women who are harassed.

Mr. President, we hear so much talk these days about how petty bureaucratic harassment is going to end. There are pious proclamations on this floor that it must stop. There are constant political promises that Government is going to become more efficient and that only competent and well-qualified people will be chosen to serve in public office. Election day comes and goes, and the harassment continues. No wonder the American people are cynical and distrustful of politicians. Who can blame the people?

Scarcely ever does a Presidential news conference occur that this kind of pledge is not made explicitly or implicitly.

We are told, and by "we" I mean the American people, that recognition will be given to the economic consequences of excessive government regulation. The American people are repeatedly told that we are going to pursue excellence and efficiency.

Then comes the vacancy in the Occupational Safety and Health Review Commission, and what do we get? We get a nice young man, 30 years old, whose entire career, such as it is, has been devoted to the espousal of one-sided views, antibusiness views, antifree enterprise views, and yet the President sends his name up here to suggest that this man will provide balance.

The labor unions have their man on this Commission. So do the small businesses of this country. And now comes Mr. Cottine, as the President's recommendation, ostensibly to add balance. Balance? Surely the President is not serious.

Mr. President, laying aside any intent to criticize Mr. Cottine personally, and I do not, the nomination of this man for this job is laughable—if the President was sincere as a candidate for the highest office in this land in 1976, when he said, "I am going to restore balance to the Federal bureaucracy."

Will Rogers once said that he made his living telling jokes. He said:

> The difference between me and the Congress of the United States and the President of the United States is that when I tell a joke, I don't hurt anybody. But when they tell a joke, it becomes a law.

Or, the joke becomes a $50,000-a-year Federal bureaucrat.

I wish Will Rogers were here to help us chuckle about some of the doubletalk occurring these days in the political and governmental life of this country.

Mr. Cottine, I reiterate, is an attractive young man. He put his best foot forward. He was charming and gracious, and I tried to be in return. But then we got down to the nitty-gritty as to what was important and where he had stood in his short career.

He is only a few years out of law school, and here he is, nominated for an exceedingly important post that could have a life or death effect on the ability of the small businesses in this country to survive.

We discussed some of his statements and positions of the past. He said:

> Oh, well, I didn't mean exactly that. I'll be fair.

Hopefully he will try to be. But that discounts the important fact that the small businessmen of this country need some unmistakable reassurance from Washington that they are not going to have to just sit around and hope for evenhandedness but that they will in fact get it.

Mr. Cottine, by his record, by his narrowmindedness on so many issues, is singularly unqualified to hold the position for which he has been nominated.

Mr. President, I am sure that the President of the United States, with his busy schedule, really does not have the time to make a personal evaluation of every nominee recommended to him by his subordinates. Therefore, I want to believe that Mr. Carter has not examined the qualifications, or lack of them of Mr. Cottine. I cannot believe that the President of the United States, with a straight face, could say that in all this vast country of 218 million people, this is the best man available for this job. I just do not believe the President of the United States would take that position. Yet, I think it is essential that we remind the distinguished President of the United States that he repeatedly made a commitment to the small businessmen and women of this country in 1976 with respect to the very sort of thing involved in this nomination.

I had hopes that perhaps the President would find another spot for Mr. Cottine, in which he could perform adequately and usefully; that the President would withdraw this nomination to the OSHA post and send up the name of another American who is not biased, who is qualified to perform the job efficiently and evenhandedly.

The Review Commission passes on appeals from decisions of administrative law judges. It is the final administrative appellate tribunal in OSHA disputes. From this Review Commission, Mr. President, appeals are taken directly to the U.S. Circuit Court of Appeals, which is just one step below the U.S. Supreme Court. Its decisions affect thousands of workers in businesses and millions of dollars in cost. This is no place for an inexperienced novice, however zealous he may be.

Without wishing to be viewed as launching a personal attack on Mr. Cottine—which I shall not do, and I do not wish to do—I think it is nonetheless necessary to inquire as to what qualifications this young man has for this particular position. He is 30 years old. He has had his law degree about 5 years, and he has actually practiced law for almost none of that time. Yet, he has been nominated to sit on a high quasi-judicial tribunal which is two steps below the Supreme Court of the United States.

Mr. President, it is noteworthy that the administrative law judges whose decisions Mr. Cottine will review, if his nomination is confirmed, are required, under civil service guidelines, to have a minimum of 7 years practical legal experience before they can even be considered for the post of administrative law judge.

The Review Commission post is the equivalent rung on the ladder of a U.S. district judge. The American Bar Association recommends at least 15 years experience for that post. Yet, as I have said, Mr. Cottine has been licensed to practice law only about 5 years.

Mr. MORGAN. Mr. President, will the Senator yield for a question?

Mr. HELMS. I am delighted to yield to my colleague from North Carolina.

Mr. MORGAN. Do I understand the Senator to say that position that we are considering is equal to a U.S. district judge?

Mr. HELMS. Yes.

Mr. MORGAN. Who made this comparison?

Mr. HELMS. I say to the Senator that this position is equivalent to a U.S. district judge in that both positions are two steps below the U.S. Supreme Court.

Mr. MORGAN. Of course, in my own opinion, his qualifications should exceed that of a normal district judge inasmuch as there are only three of them serving on the review committee for OSHA for the whole Nation. But the Senator says that the American Bar Association recommends 15 years trial experience for a district judge, and we are talking about confirming this man who has only been out of law school how long?

Mr. HELMS. Five years.

Mr. MORGAN. For 5 years. And how much of that time has been involved in law practice?

Mr. HELMS. I am advised that less than half of that, and that is being generous to him in terms of his actual legal experience.

Mr. MORGAN. I guess we have to get down to the question of what constitutes legal experience.

Mr. HELMS. That is correct.

Mr. MORGAN. From what little information I can find from 1972 until 1975 he was a staff attorney for the Occupational Health Research Group in Washington. I doubt many people would call that the legal practice of law. Then he has only been in his present position and has served on the staff of the Assistant Secretary of Labor, Dr. Bingham, for a year. His résumé does not even contend that he served there in a legal capacity. It may be that he has.

I submit to the Senator that here is a man being nominated by the President, who is about to be confirmed by the Senate for one of the most important positions for industry all across the Nation, with almost no experience. Does the Senator concur with that thought?

Mr. HELMS. I absolutely concur, and I commend my colleague from North Carolina for elucidating it. It was a point I was trying to make.

A question may be asked: What does Mr. Cottine know about business? He and I discussed that, and I think that he would have to concede that it is a fair judgment that he knows practically nothing about business. He has never had to worry about sales, costs, expenses, and taxes. He has never had to worry about being laid off because his employer had become uncompetitive. To Mr. Cottine business is just a concept, a theory—not someone's livelihood, or the vehicle of their hopes and aspirations. But Mr. Cottine told me that he does not consider these deficiencies in experience to be of much consequence.

This is not to say that Mr. Cottine has not been interested in OSHA and occupational safety and health. To the contrary, he has been very interested—perhaps too interested. His entire background, such as it is, indicates that he is and always has been an avid partisan for the maximum amount of OSHA involvement and arbitrary action. He has demonstrated that he is totally lacking in objectivity or in any semblance of judicial temperament.

An examination of his background data and public statements reveal that Mr. Cottine has for years been an active and emotional advocate of unreasonably

severe enforcement, higher penalties, shortened abatement periods, disregard for economic factors, and disregard for the employees' good faith efforts at compliance and abatement. His attitude is characterized by his severe criticism of the Department of Labor and OSHA on the ground of insufficient inspections, and too low penalties, as well as OSHA's alleged eagerness to avoid contests by withdrawal of citations or compromise of penalties or abatement periods.

Mr. Cottine has charged that the Labor Department is concerned with the "statutorily irrelevant" economic impacts of standards. That will certainly be news to the small business people across this country. His astonishing philosophy is that an employer will never recognize the force of law behind standards so long as there are infrequent inspections, relatively mild penalties and long abatement periods.

The nominee has criticized both OSHA and the Review Commission for "overdevelopment" of due process.

Think about that, Mr. President, "overdevelopment" of due process. He has been regarded as blatantly antibusiness. Following Cottine's testimony before the Select Subcommittee on Labor on May 22, 1974, Representative Esch noted:

> Perhaps our point of disagreement is the blanket condemnation of all employers which says, in effect, that the only time they are going to try to protect their workers would be when you have big-brother government enforcing the law. I believe that there are other motivations, one of which, of course, is an economic motivation. But a more important reason is that many employers do have a very deep concern for the health and safety of individual human beings. I reject the blanket condemnation that you make of all employers.

Mr. Esch was referring to testimony by Mr. Cottine.

Mr. Cottine, while employed by Public Citizen's Health Research Group in 1975, coauthored a workers' handbook on enforcing safety and health standards entitled "Winning at the Occupational Safety and Health Review Commission." The following are selected statements from that handbook:

> Supposedly the Occupational Safety and Health Administration (OSHA) enforces your right by setting standards controlling work hazards and sending out inspectors to make sure these standards are met . . . Thus, if you value your life and health, don't depend on OSHA to enforce your rights.

While discussing employees' opportunity and importance in participating in Commission proceedings, he stated:

> Since out-of-court settlements are strongly encouraged by the Commission the case may be settled from underneath you before you have a real chance to develop and present your side . . . It is easy for a judge to get lost in a maze of legal arguments and forget the urgent problems of real people in real danger . . . Because your employer is aware that the Secretary knows very little about his operations, your employer can basically say whatever he wants when no one is there to contradict the statements.

Under a section entitled "Helping the Secretary's Lawyer" Cottine stated:

> Second, some of the Secretary's lawyers like to maintain comfortable working relationships with the Judges they appear before regularly. A tendency not to make too many waves obviously conflicts with your need for aggressive representation . . .
>
> Third, pressure on the Secretary's lawyers to settle cases tends to defeat the real purpose of the Act which is to make your workplace safe . . .
>
> Participation also improves your bargaining position by providing first-hand information on how your employer is selling his occupational safety and health program to OSHA. Some employers want to appear reasonable and concerned at the hearing. To maintain this appearance they may make commitments which can be effectively used at a later date. By participating, you can take note of these statements for use in future bargaining.

I submit, Mr. President, that these are not the kind of calm, objective, and reflective statements that one has a right to expect from someone nominated to fill a serious quasi-judicial position. Obviously, Mr. Cottine feels quite strongly about what he perceives to be OSHA enforcement deficiencies. Others may have different views. I am not at all convinced that Mr. Cottine can divorce his highly biased viewpoint from his new position where duty requires him to be unprejudiced and objective.

Since its creation under the Occupational Safety and Health Act of 1970, the Review Commission has emerged as an extremely important Federal agency in terms of its actual impact on the business community. The Commission's affirmance of a single OSHA citation could easily trigger the compulsory expenditure of literally millions of dollars in abatement costs for the employer involved.

Historically, efforts have been made to provide a proper philosophical balance on the Commission by attempting to assure that labor, management, and Government's interests are all fairly represented on the panel.

Presently, management's interests are represented by Commissioner (former Chairman) Barnako and the interests of labor unions are represented by Chairman Cleary. The slot which Mr. Cottine is nominated to fill was recently vacated by Robert D. Moran who was perceived to be the "public" member. But Mr. Cottine will not serve the role of the impartial "public" member. Rather, he will serve, along with Commissioner Cleary, as the second "labor union" member.

Now, Mr. President, the Senate can go ahead and confirm Mr. Cottine, as it no doubt will. Senators can ignore the fact that he is too inexperienced in the law, and an emotional and partisan advocate of the most extreme occupational safety causes. Yes, Senators can vote to confirm this nominee. But let me just say this, Mr. President. After they do and small businesses continue to document further unnecessary and unreasonable harassment by OSHA bureaucrats, and when we sink deeper into the quagmire of what is becoming chronic economic sluggishness caused in great part by the cost of excessive Government regulation, let those who vote for Mr. Cottine not then stand up here and utter pious platitudes about curbing the bureaucracy and being attentive to the needs of small business, because by their vote on this nomination the Senators will be taking their stand relative to small businessmen. For them to approve this nomination and then later come here and plead that they are for the small businessmen of this country will be something like the Homeric character Penelope, who unraveled by night what she wove by day.

I am glad to see that there is a trend toward weaving some sanity into the administration of OSHA. To now snuff out this small light of hope by stacking the Review Commission with an extreme antibusiness bias would be a great unraveling indeed.

Mr. President, I cannot in good conscience support this nomination, and I urge Senators to reject it.

Mr. President, I yield to the able Senator from South Carolina.

Mr. THURMOND. Mr. President, I wish to thank the able Senator from North Carolina for his courtesy.

Mr. President, traditionally, efforts have been made to provide a proper philosophical balance on the Commission by attempting to assure that labor, management, and Government's interests are fairly represented on the panel. Presently, management's interests are represented by Commissioner (former Chairman) Barnako and labor's interests are represented by Chairman Cleary. The slot which Mr. Cottine is proposed to fill was recently vacated by Robert D. Moran who was perceived to be the "public" member.

My point is perhaps best made by a statement made by Representative Esch on May 22, 1974 following Mr. Cottine's testimony before the House Select Subcommittee on Labor.

> Perhaps our point of disagreement is the blanket condemnation of all employers which says, in effect, that the only time they are going to try to protect their workers would be when you have big-brother government enforcing the law. I believe that there are other motivations one of which, of course, is an economic consideration. But a more important reason is that many employers do have a very deep concern for the health and safety of individual human beings. I reject the blanket condemnation that you make of employers.

Mr. President, I intend to vote against confirming Mr. Cottine as it is clear from his record that he would not be objective.

I wish to thank the distinguished Senator from North Carolina for yielding to me.

Mr. HELMS. I thank the Senator. I yield the floor.

Mr. JAVITS addressed the Chair.

The PRESIDING OFFICER. The Senator from North Carolina.

Mr. MORGAN. Mr. President, I want to join with my colleague from North Carolina in opposing this nomination.

Mr. President, I do not know anything at all about this young man's personal capabilities, but I firmly believe he does not possess the requisite qualifications to hold one of the most important positions with regard to the workers and businessmen of America.

Here he is nominated to be one of three members of an OSHA Review Commission, which is the highest administrative appeal board within OSHA, and there is hardly a businessman in America who has not experienced trying and difficult times with OSHA in the last few years.

As a matter of fact, there have been Members of this body defeated for reelection primarily because of the harassments, hassles, and objections that came about because of poor administration of OSHA, and that is not to say that it is a bad law. It is being administered in the State of North Carolina by the Department of Labor of North Carolina in a fair and impartial manner, in an even-handed manner, and one with which most businessmen are willing to work.

I think that is what we need. And we need to appoint some people who have been out in life and who know what it is like to deal with business and working men.

But the President of the United States has sent the name of a 30-year-young man who has never worked a day since he graduated from college, according to his biography that I have, for a profit-making institution, and yet his whole responsibility in this job will be dealing with people who are trying to make a profit in their businesses, and thereby provide employment for people.

I do not know what in the name of common sense the people at the White House were thinking of, when there are many competent lawyers and judges all around America, as well as business executives and others, who have experience and maturity, to send a man's name down here to hold one of three positions, very important, who has never, in my opinion, practiced law a day in his life.

He served 3 years or 2 years with some public service research-oriented group. He has served a year as a special assistant to an assistant secretary of labor, and no one has even claimed that he served there in a legal capacity.

But what offends me more than anything else, Mr. President, is that this man's name is sent down here, to occupy one of the three positions designated by Congress, as a neutral position when his whole career, everything about his public career, what little it is, has been one associated primarily with public interest groups, such as the Nader group.

The law requires that you have to have one who is business-oriented, and I think that is proper, and one who is labor-oriented, and then one who is neutral.

Here is a man who is sent down to us by the White House whose entire experience, all of his experience, is anything in the world except that of neutral.

I am sorry, Mr. President, that I am not in a better position to oppose this nomination. Frankly, I thought I had a hold on it. There have been no real reports from the committee. The data I have are basically some information of papers that he has filed. I assume that it includes about every brief he has filed or every legal document that might have been drafted in all of these years.

I just now am being handed the hearings on the nomination.

Frankly, I have asked for them earlier. They were printed last September. These were the hearings, and if I had not, Mr. President, made the mistake of agreeing to a time to vote, I would read them to the Senate.

I just want to say that if that is the kind of nominations my party is going to send down here to hold some of the most important positions in Government, then I am going to begin to take a second look at them, I do not care if they are sent by a President of my party, or who is proposing them. There are too many fine, qualified people in America of wide experience to have him send someone from a Nader-oriented group—that is what he has done—and then have the audacity to try to classify him as a neutral.

I know the Senate is not going to reject him, and this will not be the last of such nominations, though I would like to think it is.

We have a chance to look at the record of some of the hearings in the House, as published in the CONGRESSIONAL RECORD, and there he said:

> The protection afforded employees is dependent on real Federal presence. The (current) massive Federal effort . . . has been compromised by inadequate and uncertain budget commitments, wholesale delegation to the states of Federal enforcement authority. . .

I would like to know what he has to say about North Carolina's programs. I have heard it acknowledged right here on the floor of the Senate that North Carolina has a good program, but apparently he condemns the whole thing.

> . . . voluntary instead of compulsory compliance, and administrators unequal and insensitive to their responsibility.

His testimony condemns all that has been done, and then he says:

> The Department does not dare to protect working men and women . . ., rather (it) perceives itself as an arbitrator . . . with the end result the negotiation of the workers statutory right to "a safe and healthy workplace."

That is what he is saying about the Department he is going over there to review; and he is supposed to be neutral I am sure President Carter has not read this, and I am sure he has not been told about it. I imagine he would be as shocked as anyone else to know that he has sent down the nomination of a man to serve in a neutral capacity in this role who has only been out of law school for 5 years, and never worked for a profit-making institution a day in his life.

In another place in his testimony, he says:

> OSHA's * * * are indicative of the Department's unduly restrictive interpretation of its standard-setting authority, and its policy of administration delay, inadequacy, and deception.

If OSHA has not been carrying out its duties, then I would like to know why we have had so much debate and so many complaints from across the country. Apparently it is not doing enough for this young man.

> The Act (provides) the authority to identify and control health hazards by the exercise of his regulatory powers and to swiftly and completely eliminate these hazards by administrative penalties and court action.

I could go on, Mr. President, but I will just conclude by saying that the President of the United States campaigned last year and the year before last all across the Nation on trying to get the Government out of business, trying to relieve the administrative, bureaucratic redtape that is driving small businesses out of business every day. Yet every time I turn around, we are enacting more and more regulations, not only in this area but in every field. We seem to have the feeling that somehow or other we in Congress know what is best for the whole world, and that we are the only ones concerned.

Then, when we come along and send a person in to fill a neutral position who has never for 1 day been involved in the private sector of our economy, I think it is an affront to the working men and women and the businessmen of America, and I shall vote against the confirmation of the nomination.

Mr. JAVITS. Mr. President, I feel that very pertinent points have been raised by the Senators from North Carolina and other Senators in opposition. I initially had the same concerns they did. I interviewed Mr. Cottine personally, and I am not going to endeavor to give him a blanket endorsement.

On balance, notwithstanding his youth, I believe that he will be a good Commission member, provided that he keeps abreast of developments, and that he listens to what we tell him here. It is to that latter contribution that I would like to address my remarks.
